No. 1.

THE AUTOBIOGRAPHY OF JOSEPH JEFFERSON.

(Copyright, 1889, by JOSEPH JEFFERSON. All rights reserved.)

I.

MY FIRST PLAYHOUSE.

MAY almost say that I was born in a theater. At all events, my earliest recollections are entirely connected with one: it was a rickety old frame building with a broad gable, facing on a wide avenue, and situated in the city of Washington. The door from our back entry opened upon the stage, and as a toddling little chap in a short frock I was allowed full run of the place. So "behind the scenes" was my first playhouse. And what a playhouse it was, filled with all sorts of material for the exercise of my youthful imagination. At the back was the bay of Naples, with its conventional blue sky just faintly clouded with the distant smoke of slumbering Vesuvius. Upon one side stood long and stately rows of Corinthian columns, a triumphal arch, and next to that a Roman palace. These marvels of ancient architecture were all leaning up against the wall, not only in an uncomfortable position, but at a dangerous angle, looking as though they had been toppled over during the last days of Pompeii. Upon the other side, heaped in a compact mass, were many scenes of various countries—there a five-storied brown-stone front with modern improvements, and here a tiny thatched cottage of the eighteenth century, with a lovely little door in it just large enough for me to go in and out of, slamming it after me and pretending it was mine. Then there was that dear little white paling fence, exactly two feet high: no legitimate theater of the old school could possibly be complete without this curiosity, and nobody ever saw

such a thing anywhere else. Then came the throne-steps, with two Gothic arm-chairs set thereon for the king and queen, and in front of these the old familiar green bank from which stray babies are usually stolen when left there by affectionate but careless mothers. Upon the top of this were two flat swans hitched in double harness to a shell for traveling fairy queens. A little farther down there stood a low and dismal vault having a square, dark opening with some mysterious letters painted over it, setting forth, as I learned in after years, that it was the private "Tomb of the Capulets." Close to this was another piece of real estate belonging to the same family and known as "Juliet's balcony." In a dark corner stood a robber's cave with an opening through which old Ali Baba used to lug the bags of gold he had stolen from the Forty Thieves. Through the narrow and secluded pathways of "behind the scenes" I have often wandered out upon the open stage and wondered at this grove of wings and flats, and I could see that many ropes were hanging from above to which were fastened boats and baskets, tubs and chandeliers, and those sure tokens of bad weather, the thunder-drum and rain-box.

These were the kind of objects that my childish eyes were wont to look upon, and in this huge and dusty toy-shop, made for children of a larger growth, I got my first experience. I had seen many rehearsals, and sometimes got a peep at the play, having been taken on "in arms" as a property child in groups of happy peasantry. Naturally, therefore, I was stage-struck at an early age; and as I had a theater stocked with scenery and properties, I could indulge my passion at a small expense, especially as my stock company were volunteers consisting of two little boys and their sister, who used to play with me on

Saturdays. This was before the star system had set in, and at a period when combinations were unknown.

Of course I was stage-manager by the right of possession, and had to compile all of the plays. The plots were very simple and made to conform with what set pieces we could get at, or what properties we could secure and hide during the absence of the property man. If the set cottage was handy I would come out of the door as an old man (the age represented by a spinal affection) with a daughter and a market-basket: old man cross, daughter rebellious; old man locks daughter in cottage, goes off to market shaking his fist (spine still weak). The favored lover enters, claps his hands three times, daughter appears at window, kisses her hand; old man coughs outside, favored lover conceals himself; enter old man with market-basket full of gilded pasteboard goblets, accompanied by unfavored lover; they sit down and drink wine out of goblets till overcome. Favored lover steals key from old man's pocket, releases rebellious daughter; the sleepers awaken, general pursuit; favored lover and rebellious daughter escape over bridge, old man and unfavored lover fall into the water. Curtain.

Then there were the private boxes to play hide-and-peek in, with mysterious nooks and ample curtains to creep into, and such chances to kiss the little girl in the dark. I am quite convinced that there is no such playground as a deserted theater in the daytime.

In the green-room there was a noble mirror. I loved to stand in front of it and act. But I was not alone in this. Many of the great players, long since passed away, have stood before this stately glass; and often in the evening, when clad in my night-gown, I have escaped from the nurse, and stealing on tip-toe to the green-room door have peeped in and beheld these magnates with dignified satisfaction surveying themselves in their kingly robes: now a small man with piercing steel-gray eye, possibly the elder Booth; then a tall, gaunt figure, weird and majestic, Macready most likely; at another time a young and beautiful queen in white satin—this must have been Fanny Kemble; again a tall and graceful figure in a scarlet military coat posing with an extravagant swagger and evidently admiring himself—undoubtedly Tyrone Power, the great Irish comedian.

As a matter of course, being the son of the manager, and almost living in the theater, I was always pressed into the dramatic service whenever a small child was wanted. Even before I can remember I was taken on to do duty in long clothes; in fact, such was the histrionic ambition of my mother that I believe if Tilly

Slowboy had existed in those days I should have been confided to her tender mercies at the risk of colliding my head with the tea-kettle.

The first dim recollection I have of a public appearance comes before me as a startled child in a white tunic beautifully striped with gold bands, and in the grasp and on the shoulders of an infuriated tragedian crossing a shaky bridge amid the deafening report of guns and pistols and in a blaze of fire and smoke. To me the situation seemed perilous, and in order to render my position more secure I seized Rolla by the hair of his head. "Let go," he cried; but I was obeying the first law of nature, not Rolla, so I tightened my grasp upon his tragic top-knot. The battle was short but decisive, for in the next moment I had pulled off his feather-duster head-dress, wig and all, thereby unintentionally scalping the enemy; and as he was past the prime of life, the noble Peruvian stood baldheaded in the middle of the bridge before an admiring audience. This story has the flavor of an old anecdote, but I am credibly informed that I was the original scalper.

About this time—I was three years old—there dawned upon the public a new entertainment in the shape of the "Living Statues," by a Mr. Fletcher. I was much taken with these novel tableaux, and became so statue-struck that I could do nothing but strike attitudes, now posing before the green-room glass as "Ajax defying the lightning," or falling down in dark corners as the Dying Gladiator. These postures appear to have been so successful with the family that they were, as usual, tried upon the public. I am in the dark as to whether this entertainment was the "talk of the town" or not, but I fancy not: an attenuated child representing Hercules struggling with a lion could scarcely excite terror; so I presume I did no harm if I did no good.

To go from white to black, "Jim Crow," in the person of T. D. Rice, now burst upon the town. The legitimate drama has at all times been subject to startling innovations, and surely here was a great blow. The success of this the first and certainly the best knight of the burnt cork was quite marvelous; he drew more money than any star of the season. It is reported that his first hit in Washington was repeated in all the great cities of the country, and his advent in Europe even surpassed his career here. In London he acted in two theaters nightly, the same people in many instances following him from one theater to the other.

Of course this fantastic figure had a great influence upon me, and I danced Jim Crow from the garret to the cellar. The comedian saw my imitation of him, and insisted that I should appear for his benefit; so on that oc-

TYRONE POWER AS "CORPORAL O'CONNOR." (FROM THE LITHOGRAPH BY GOODING & GULLIFORD, AFTER THE PORTRAIT BY WAGEMAN.)

casian I was duly blacked up and dressed in a complete miniature likeness of the original. He put me in a bag, which almost smothered me, and carried me upon the stage on his shoulders. No word of this proceeding had been mentioned in the bills, so that, figuratively speaking, the public were as much in the dark as I was. After dancing and singing the first verse he began the second, the following being the two lines which introduced me :

O Ladies and Gentlemen, I'd have you for to know
That I 've got a little darky here that jumps Jim
Crow ;

and turning the bag upside down he emptied

me out head first before the eyes of the astonished audience. The picture must have been a curious one; it is as vividly before me now as any recollection of my past life.

Rice was considerably over six feet high, I was but four years old, and as we stood there, dressed exactly alike, the audience roared with laughter. Rice and I now sang alternate verses and the excitement increased; showers of pennies, sixpences, and shillings were tossed from the pit and thrown from the galleries upon the stage. I took no notice of this, but suddenly the clear, ringing sound of a dollar caught my ear, and as the bright coin was rolling from the stage into the orchestra I darted forward and

secured the prize. Holding it triumphantly between my finger and thumb I grinned at the leader of the orchestra as much as to say, "No, you don't." This not only brought down the house, but many half-dollars and dollars besides. At the fall of the curtain twenty-four dollars were picked up and given into my delighted hands. For years afterwards I was given to understand that this money was placed in bank to my credit, and I fear that I often borrowed small sums on the strength of my prospective wealth.

Our family about this time consisted of father and mother, my half-brother, Charles Burke, and myself; but there was one other member of the household who deserves special mention. She was not one of the family, certainly, but the group would be very incomplete without her. Her name was Mary. She was that strange kind of woman who, while housekeeper, nurse, friend, and attendant, will never take any wages—which I think must have been rather fortunate in this case—and whom everybody depends upon. We would not have parted with her for all the world, and could not have driven her away if we had tried—a faithful, loving, truthful friend, with no ambition or thought for herself, living only for us, and totally unconscious of her own existence. I have no doubt that there are some such beings attached to many families, but I know that our family was just that queer sort of party that could not have done without one. This lady (for she was a lady) was my foster-mother,—dear Mary,—always taking my faults on herself, finding excuses for my badness, and spoiling me, of course.

A year or two rolled by and I find we were in Baltimore, where my sister was born. She divided the honors with me then, and I was, in consequence of this new arrival, not made quite so much of. I remember as a boy I was always being injured,—at least, according to my account,—so that people were rather suspicious of me; and I find this theory holds good as we grow older: that whenever a man comes to us with a tale of his injuries we look on him with distrust, and as he recounts the details of his persecution the question revolves itself in our mind, "I wonder what rascality this fellow has been up to." The world has no time to injure any one; these unfortunate people injure themselves, and so turn into some other channel the current of happiness that might have flowed to them.

But to return to my early persecutions. A neighbor whose weak points I had discovered bestowed on me one day a smooth sixpence. I showed it to my brother Charlie, who, looking at it with some disparagement, said that in its present obliterated state it would pass for

only about four cents, but that if I would bury it for an hour the original figures would show themselves and it would pass for its full value; or, what would be better, let it remain in the ground for a day and it would grow to a shilling. This announcement struck me with wonder and delight, so off we started for the garden to plant this smooth sixpence. After making the interment and carefully marking it with a small headstone we departed. I went back to the house and whispered the whole affair into the ears of Mary; she denounced the operation as a fraud, and bid me hurry and get my sixpence if I ever expected to see it again. I started off at a full run for the garden. The headstone was there, but the sixpence had gone. The body-snatcher had accomplished his cruel work. Throwing myself on my back and kicking my heels in the air, I soon made the neighborhood ring with my frantic yells. The family rushed out and I detailed to them the dark plot of my guilty brother. I determined now that nothing short of a shilling should calm my feelings, and I yelled till I got it.

I am not quite sure as to dates, and many incidents come up before me in a confused form, while a number are traditional; but there are certain facts connected with my early life about which there can be no mistake, and it is quite clear that I was what is understood to be a bad boy and hard to manage. If I heard an oath I cherished it as a newly-found treasure and would practice it in private. All this was no fault of my bringing up, for both father and mother were very particular and exacting in the conduct of home. I was made to say my prayers every night, a good example was always set before me, and sound moral principles were continually instilled into my youthful mind. The prayers I used to rattle off—usually thinking of something else while I was saying them—as quickly as religious decorum and my mother would permit, and the sound moral principles and good examples seemed to have the effect of making me the champion executioner of all the stray cats in our neighborhood. The banging of a tin kettle tied to the tail of an unlucky dog was music to my childish ears; and much as I love animals now, in the innocence of childhood I pursued them with such energy that had Mr. Bergh held his commission in those days I should have been oftener seen in the police court than at Sunday-school.

II.

FURTHER RECOLLECTIONS OF CHILDHOOD.

My mother had a friend in Philadelphia, a Mrs. Neal, who kept a bookstore in Sixth street, near Chestnut; she was the mother

TYRONE POWER. (AFTER THE STEEL PLATE ENGRAVED BY C. TURNER FROM THE PAINTING BY JOHN SIMPSON. PUBLISHED BY W. KENNETH.)

of Joe Neal, the young author of the "Charcoal Sketches." I was a great favorite with her. She always wore a black dress with a white cap; the cap had a little fluted frill around it, very prim, and very much starched. She was a dear old lady, with a sweet smile and large, wide blue eyes, just the credulous and confiding sort of person that a boy of seven could wind around his little finger; consequently I could make her believe anything.

My imagination was wonderfully fertile: I could at the shortest notice get up a harrowing tale of woe that would make the stiff frills on her cap fairly tremble with benevolent agitation. Now it so happened about this time that I was in a state of insolvency, being heavily in debt at the candy-store, and sorely pressed by an exacting peanut-man at the corner. If I was short of a penny or two—usually the case with me—I would dishevel my hair, rush through the store into the back room, and, sinking in an exhausted condition into a little

chair by the fireplace, call for a glass of water. The startled old lady would jump up crying, "What's the matter, Joe?" "Don't ask me—water, water!" "Yes, in a moment, my dear boy." Then in a feeble voice, "Put some raspberry syrup in it, please, Mrs. Neal." "Yes, my darling." And now having been refreshed with this stimulant, I would in a tremulous voice—a little overacted, perhaps—relate some dire calamity that I had just witnessed, giving the full particulars; in fact, the greater the fabrication the more minute I was as to the details. I would perhaps tell her that I had just seen a lovely little girl with blue eyes and golden hair run over by fire engine No. 6; her head, severed from her body, had rolled from the middle of the street into the gutter, and lay smiling at my feet; or perhaps I had pulled the little girl from under the wheels just previous to decapitation and saved her life—refusing a large reward from her father. The shock had been so great that nothing short of an im-

OLD JEWISH BURYING-GROUND, PEARL STREET, NEAR CHATHAM, NEW YORK CITY.

mediate supply of peppermint drops would ever obliterate it from my mind—and where was I to get them? I was in disgrace at the candy-store and had no money. “My dear child,” the old soul would say, “there is a penny for you.” “Oh, no, I could n’t take it”—knowing very well that she would force it upon me. “Ah, Mrs. Neal, I do not deserve all your kindness,”—the only true words I had spoken to her,—“indeed I don’t.” I’m not at all sure that she swallowed all my romantic stories, and it is quite possible that she liked to draw me out just to enjoy my exaggerations.

I was one of those restless, peevish children who, no matter what they had, always wanted something else. The last new toy was always dissected to see what made it go, and the anticipated one kept me awake all night. “When will it be sent home?” “About two o’clock.” “Well, what time is it now?”—and so on, musing, fretting, discontented, and rude. Mother said it was badness, Mary said affection.

As I look back many strange images appear that puzzle me. Some of these scenes I know are real, and others appear to have been dreams. At times this confusion re-

solves itself into a chaos, and I fancy that I shall not be able to disintegrate the shadows from the realities. For instance, I perfectly well remember walking through the smoky ruins of New York with my father, after the great fire of 1835. While we were looking at this charred mass and watching the busy people hunting for half-consumed treasures, and fire-men pouring streams of water on the smoldering rafters, two Indians in theatrical costumes began dancing a war dance which they terminated by tomahawking each other in the most friendly way, and then bowing to the people, who applauded them. Now I am quite sure that the first part of this recollection was a reality, and it seems pretty clear that the latter part of it was a dream. It is quite possible, therefore, that in relating many of my juvenile adventures I may be led, or misled, into some unintentional exaggerations.

In referring to Ireland’s “Records of the New York Stage,” I find the following notice of my first appearance in that city:

Master Titus, whose songs and dances were much applauded, took a benefit on the 30th, when he appeared with Master Joseph Jefferson in a celebrated combat, it being this lad’s first appearance out of

Arthur J. Goodman
J. J. J. J.

(DRAWN BY ARTHUR J. GOODMAN AFTER A PHOTOGRAPH BY SARONY.)

the juvenile supernumerary ranks. This little fellow was the grandson of the great comedian of the same name, and is the third Joseph Jefferson known to our stage. He was born at Philadelphia, February 20, 1829.

I remember this circumstance quite well — not the birth, but the combat. Young Titus was attired as an American sailor, I being dressed to represent a Greek pirate. I was much smaller than my antagonist, but as the fight was for his benefit, good taste naturally suggested that he should overcome and slay me,—which he did,—and as the curtain came down I was flat on my back, and the American sailor, waving a star-spangled banner over me, placed his foot magnanimously on the chest of the vanquished Greek. The fight was encoored, so I had to come to life again — quite a common thing with stage pirates — and die twice. I rather delighted in being the vanquished foe: nothing could possibly be more manly than a slain pirate. Mr. Ireland mentions that the combat was “celebrated”; for what, I am at a loss to conjecture. In the accounts of our last war with the Greeks there is no mention made of this circumstance. If, therefore, the combat was “celebrated,” it must have been for historical inaccuracy. I remembered this battle with pride for years. The beneficiary must have remembered it too, as it was traditional in our family that I came near cutting off a big toe of little Titus in the conflict.

In New York we lived in the third story of No. 26 James street, next to the Catholic church, and opposite to the “Bunch of Grapes,” a hotel kept by one George Bickford. The second floor was occupied by John Sefton, the comedian and manager, and the lower part of the house by a Mr. Titus and his family. Our fence in the rear joined on to an old graveyard. How this curious old cemetery ever got wedged in between the buildings that surrounded it is a mystery. Perhaps in times gone by an old church may have stood at the outskirts of the little village of New York, and beneath these stones “the rude forefathers of the hamlet sleep.” Passing down the Bowery on the elevated railroad, by looking on the left-hand side, just after the train branches off towards Pearl street, this queer nook may be discovered, and if the inmates only had the power of noting the progress of the times, they would be considerably astonished to see their descendants whirled over their heads on a railroad in the air.

After school the boys with whom I fraternized would join me in this secluded spot for our evening games — the high tombstones for “I spy,” and the flat ones to act on. The place had long since ceased to be used as a

burial-ground, so our sports were uninterrupted. The boys in the neighborhood were like all other boys, in all neighborhoods — mischievous. My arrival had given a fresh impetus in this respect, and the graveyard offered a fine field for the indulgence of sacrilegious amusements. Ornamenting the tombstones was quite a specialty with one of our playmates. He had, previous to my advent, already painted a large red face, in a broad grin, on a headstone erected to the memory of the Rev. Jacob Boul. After consultation with the artist, I cocked a battered hat, sidewise, on the top of the face, and drilling a hole in its mouth, stuck a pipe in it, thus giving a cheerful tone to the monument, and almost robbing death of its sting.

Saturday, there being no school, was generally set apart as our “Decoration Day,” and it was rare sport to get a marking-brush with a pot of black paint and embellish the virtues of the departed sinners. We were astonishingly brave in the daylight, even defying the dead bones to arise and face us if they dared, but as twilight set in our courage cooled, and we would talk lower. Sometimes, as one boy after another would scamper home, leaving the place “to darkness and to me,” I would saunter slowly along with my hands in my pockets, whistling a nervous defiance to ghosts in general and these ghosts in particular, but taking care not to walk over the flat tombstones, upon which in the daylight I would dance with impunity. Now, as the shadows of night gathered around me, I would increase my pace, scampering faster and faster through the tall grass and rapidly climbing over the fence, fancying that the Rev. Mr. Boul would soon have me by the leg if I did not hurry.

III.

WESTWARD HO!

IN the year 1838 the new town of Chicago had just turned from an Indian village into a thriving little place, and my uncle had written to my father urging him to join in the management of the new theater which was then being built there. As each fresh venture presented itself my father's hopeful nature predicted immediate and successful results. He had scarcely finished the letter when he declared that our fortunes were made, so we turned our faces towards the setting sun. In those days a journey from Albany to Chicago was no small undertaking for a large family in straitened circumstances; certain cherished articles had to be parted with to procure necessary comforts for the trip. I really do not know how, but we got from Albany to Schenectady, where we acted for a few nights with a company that

JOSEPH JEFFERSON, FATHER OF JOSEPH JEFFERSON. (FROM A PAINTING, ARTIST UNKNOWN.)

was playing there. Several of the actors, who had received no salary for some time, decided to accompany my father and seek their fortunes in the West.

As I remember it, our journey was long, but not tedious. We traveled part of the way in a fast-sailing packet-boat on the Erie Canal, the only smoke issuing from the caboose stove-pipe. I can remember our party admiring this craft with the same enthusiasm that we now express in looking at a fine ocean steamer. She was painted white and green and enlivened with blue window blinds, and a broad red stripe running from bow to stern. Her name was the *Pioneer*, which was to us most suggestive, as our little band was among the early dramatic emigrants to the far West. The boat resembled a Noah's ark with a flat roof, and my father, like the patriarch of old, took his entire family on board, with this distinction, however — he was required to pay his passage,

it being understood between him and the captain that we should stop a night in Utica and one in Syracuse, give a theatrical entertainment in each place, and hand over the receipts in payment of our fare.

We acted in Utica for one night, and the receipts were quite good. My father and mother were in high spirits, and there is no doubt that the captain had hopes that the next night's entertainment in Syracuse would liquidate our liabilities, for there was a visible improvement in the coffee at breakfast, and an extra piece of pie all around for dinner. The next night, unfortunately, the elements were against us; it rained in torrents and the attendance was light, so that we were short of our passage money about ten dollars.

The captain being a strict member of the — church, he could not attend either of the performances, and as he was in his heart most anxious to see what acting was like, he pro-

CORNELIA JEFFERSON (MOTHER OF JOSEPH JEFFERSON) AS "JESSICA." (AFTER THE PAINTING BY NEAGLE.)

posed that if the company would "cut up" for him and give him a private show in the cabin he would call it "square." Our actors, being highly legitimate, declined; but my mother, ever anxious to show off the histrionic qualities of her son, proposed that I should sing some comic songs for the captain, and so ransom the rest of the actors. The captain turned it over in his mind,—being, I am afraid, a little suspicious of my genius,—but after due consideration consented. So he prepared himself for the entertainment, the cook and my mother comprising the rest of the audience. The actors had wisely retired to the upper deck, as they had been afflicted on former occasions. I now began a dismal comic song called "The Devil and Little Mike." It was not very brilliant but quite long, some twenty-five verses, each one containing two lines with a large margin of "whack fol de riddle." It was never quite clear whether the captain enjoyed this entertainment or not: my mother said he did,

for though the religious turn of his mind would naturally suppress any desire to applaud, he said even before I had half finished that he was quite satisfied.

On our arrival in Buffalo we found another pioneer company, under the management of Dean and McKenney. Here we staid over two or three days, waiting for the steamer to take us up the lakes. Marble was starring there; he was one of the first and best of the Yankee comedians. In those days the stage New Englander was acted and dressed in a most extravagant manner. I remember seeing Marble play, and his costume was much after the present caricature of Uncle Sam, minus the stars but glorying in the stripes.

In a few days we steamed up the beautiful lakes of Erie, Huron, and Michigan. The boat would stop sometimes for hours at one of the stations to take in wood, or a stray passenger, and then the Indians would paddle out to us in their canoes offering their beadwork and

moccasins for sale. Sometimes we would go ashore and walk on the beach gathering pebbles, carnelians, and agates. I thought them of immense value, and kept my treasures for years afterwards. What a lovely trip it was as I remember it! Lake Huron at sunset is before me now—a purple sky melting into a golden horizon; rich green foliage on the banks; yellow sand with many-colored pebbles making the beach of the lake; the clear and glassy water; groups of Indians lolling on the banks, smoking their pipes and making baskets, their little villages dotting the hills with tents made of skins and painted canvas; blue smoke curling slowly up in the calm summer air; and all the bright colors reflected in the lake. I stood there as a boy skimming flat stones over the surface of the water, and now as I write in the autumn of my life these once quiet shores are covered with busy cities; the furnaces glow with melted iron, the locomotive screams and whistles along the road where once the ox teams used to carry the mail, and corner lots and real-estate agents “fill the air.” When we think that all these wonderful changes have taken place within the last fifty years, it is startling to speculate upon what the next half-century may bring about.

IV.

CHICAGO IN 1839.—AN ADVENTURE IN SPRINGFIELD.

So day by day passed, till one night a light is espied in the distance, then another, and then many more dance and reflect themselves in the water. It is too late to go ashore, so we drop anchor. At sunrise we are all on deck looking at the haven of our destination, and there in the morning light, on the shores of Lake Michigan, stands the little town of Chicago, containing two thousand inhabitants. Aunt, uncle, and their children come to meet and welcome us. Then there is such a shaking of hands and a kiss all round, and “Why, how well you are looking!” and “Is this Charlie? How he has grown!” “Why, that’s not Joe? Dear me, who’d have believed it?” And then we all laugh again and have another kiss.

The captain said he had enjoyed a splendid trip, such fun, such music and singing and dancing. “Well, good-by all,” “Good luck”; and off we go ashore and walk through the busy little town, busy even then, people hurrying to and fro, frame buildings going up, board sidewalks going down, new hotels, new churches, new theaters, everything new. Saw and hammer, saw, saw, bang, bang,—look out for the drays,—bright and muddy streets, gaudy-colored calicos, blue and red flannels and striped ticking hanging outside the dry-

goods stores; bar-rooms, real-estate offices, attorneys-at-law—oceans of them.

And now for the new theater, newly-painted canvas, tack-hammer at work on stuffed seats in the dress-circle, planing-boards in the pit, new drop-curtain let down for inspection, “beautiful!”—a medallion of Shakspeare suffering from a severe pain in his stomach in the center, with “One touch of nature makes the whole world kin” written under him, and a large painted, brick-red drapery looped up by Justice, with sword and scales, showing an arena with a large number of gladiators hacking away at one another in the distance to a delighted Roman public; though what Justice had to do with keeping these gladiators on exhibition was never clearly explained by the artist. There were two private boxes with little white-and-gold balustrades and turkey-red curtains, and over each box a portrait of Beethoven and Handel—upon unfriendly terms, glaring at each other. The dome was pale blue, with pink-and-white clouds, on which reposed four ungraceful ballet girls representing the seasons, and apparently dropping flowers, snow, and grapes into the pit. Over each season there floated four fat little cherubim “in various stages of spinal curvature.”

My father, being a scenic artist himself, was naturally disposed to be critical, and when the painter asked his opinion of the dome, he replied:

“Well, since you ask me, don’t you think that your angels are a little stiff in their attitudes?”

“No, sir; not for angels. When I deal with mythological subjects I never put my figures in natural attitudes; it would be inharmonious. A natural angel would be out of keeping with the rest of the work.”

To which my father replied that it was quite likely that such would be the case. “But why have you made Handel and Beethoven frown at each other? They are not mythological subjects.”

“No, no,” said the painter. “But they are musicians, you know; and great musicians always quarrel, eh? Ha, ha!”

“Yes,” said my father; “but as Handel died before Beethoven was born, I don’t see how any coolness could have existed between them.”

The foregoing dialogue, while it may not be verbatim, is at least in the spirit of the original. I could not possibly remember the exact words of the different conversations that will naturally occur through these chapters; but I have placed them in their present form, as I believe it is the clearest and most effective way to tell the story. Many of the conversations and incidents are traditional in my family; I have good reason to take them for

granted, and I must ask the reader to share my confidence.

The green-room was a perfect gem, with a three-foot wavy mirror in the center and cushioned seats all around the wall—traps under the stage so convenient that Ophelia could walk from her grave to her dressing-room with perfect ease.

With what delight the actors looked forward to the opening of a new theater in a new town where dramatic entertainments were still unknown—repairing their wardrobes, studying their new parts, and speculating on the laurels that were to be won!

After a short season in Chicago, with the varying success which in those days always attended the drama, the company went to Galena for a short season, traveling in open wagons over the prairie. Our seats were the trunks that contained the wardrobe—those old-fashioned hair trunks of a mottled and spotted character made from the skins of defunct circus horses: "To what base uses we may return!" These smooth hair trunks, with geometrical problems in brass tacks ornamenting their surface, would have made slippery seats even on a macadamized road, so one may imagine the difficulty we had in holding on while jolting over a rough prairie. Nothing short of a severe pressure on the brass tacks and a convulsive grip of the handles could have kept us in position; and whenever a treacherous handle gave way our company was for the time being just one member short. As we were not an express mail train, of course we were allowed more than twenty minutes for refreshments; the only difficulty was the refreshment. We stopped at farm-houses on the way for this uncertain necessity, and they were far apart. If the roads were heavy and the horses jaded, those actors who had tender hearts and tough limbs jumped out and walked to ease the poor brutes. Often I have seen my father trudging along ahead of the wagon, smoking his pipe, and I have no doubt thinking of the large fortune he was going to make in the next town, now and then looking back with his light blue eyes, giving my mother a cheerful nod which plainly said: "I'm all right. This is splendid; nothing could be finer." If it rained he was glad it was not snowing; if it snowed, he was thankful it was not raining. This contented nature was his only inheritance; but it was better than a fortune made in Galena or anywhere else, for nothing could rob him of it.

We traveled from Galena to Dubuque on the frozen river in sleighs—smoother work than the roughly rutted roads of the prairie; but it was a perilous journey, for a warm spell had set in and made the ice sloppy and unsafe. We would sometimes hear it crack and see it bend

under our horses' feet: now a long-drawn breath of relief as we passed some dangerous spot, then a convulsive grasping of our nearest companion as the ice groaned and shook beneath us. Well, the passengers arrived safe, but, horror to relate, the sleigh containing the baggage, private and public, with the scenery and properties, green curtain and drop, broke through the ice and tumbled into the Mississippi. My poor mother was in tears, but my father was in high spirits at his good luck, as he called it; because there was a sand-bar where the sleigh went in, so the things were saved at least, though in a forlorn condition. The opening had to be delayed in order to dry the wardrobe and smooth the scenery.

The halls of the hotel were strung with clothes-lines and the costumes of all nations festooned the doors of the bedrooms, so that when an unsuspecting boarder came out suddenly into the entry he was likely to run his head into a damp Roman shirt, or perhaps have the legs of a soaking pair of red tights dangling around his neck. Mildew filled the air. The gilded pasteboard helmets fared the worst. They had succumbed to the softening influences of the Mississippi, and were as battered and out of shape as if they had gone through the pass of Thermopylæ. Limp leggings of scale armor hung wet and dejected from the lines, low-spirited cocked hats piled up in a corner, rough-dried court coats stretched their arms out as if in the agony of drowning, as though they would say, "Help me, Cassius, or I sink." Theatrical scenery at its best looks pale and shabby in the daytime, but a well-worn set, after a six-hours' bath in a river, presents the most woe-begone appearance that can well be imagined; the sky and water of the marine had so mingled with each other that the horizon line had quite disappeared. My father had painted the scenery, and he was not a little crestfallen as he looked upon the ruins: a wood scene had amalgamated with a Roman street painted on the back of it, and had so run into stains and winding streaks that he said it looked like a large map of South America, and pointing out the Andes with his cane, he humorously traced the Amazon to its source. Of course this mishap on the river delayed the opening for a week. In the mean time the scenery had to be repainted and the wardrobe put in order: many of the things were ruined, and the helmets defied repair.

After a short and, I think, a good season at Dubuque, we traveled along the river to the different towns just springing up in the West—Burlington, Quincy, Peoria, Pekin, and Springfield. In those primitive days, I need scarcely say, we were often put to severe shifts for a theater.

In Quincy the court-house was fitted up, and it answered admirably. In Terre Haute a large warehouse was utilized, but in Pekin we were reduced to the dire necessity of acting in a pork-house. This establishment was a large frame building, stilted up on piles about two feet from the ground, and situated in the open prairie just at the edge of the town. The pigs were banished from their comfortable quarters, and left to browse about on the common during the day, taking shelter under their former abode in the evening. After undergoing some slight repairs in the roof, and submitting to a thorough scouring and whitewashing, the buildings presented quite a respectable appearance. The opening play was "*Clari, the Maid of Milan*." This drama was written by John Howard Payne, and his song of "*Sweet Home*" belongs to the play. My mother, on this occasion, played the part of *Clari* and sang the touching ballad.

Now it is a pretty well established fact in theatrical history that if an infant has been smuggled into the theater under the shawl of its fond mother, however dormant it may have been during the unimportant scenes of the play, no sooner is an interesting point arrived at, where the most perfect stillness is required, than the "dear little innocent" will break forth in lamentation loud and deep. On this occasion no youthful humanity disturbed the peace, but the animal kingdom, in the shape of the banished pigs, asserted their right to a public hearing. As soon as the symphony of "*Sweet Home*" commenced they began by bumping their backs up against the beams, keeping anything but good time to the music; and as my mother plaintively chanted the theme "*Sweet Home*," realizing their own cruel exile, the pigs squealed most dismally. Of course the song was ruined, and my mother was in tears at the failure. My father, however, consoled her by saying that though the grunting was not quite in harmony with the music, it was in perfect sympathy with the sentiment.

Springfield being the capital of Illinois, it was determined to devote the entire season to the entertainment of the members of the legislature. Having made money for several weeks previous to our arrival here, the management resolved to hire a lot and build a theater. This sounds like a large undertaking, and perhaps with their limited means it was a rash step. I fancy that my father rather shrunk from this bold enterprise, but the senior partner (McKenzie) was made of sterner stuff, and his energy being quite equal to his ambition, the ground was broken and the temple erected.

The building of a theater in those days did not require the amount of capital that it does

now. Folding opera chairs were unknown. Gas was an occult mystery, not yet acknowledged as a fact by the unscientific world in the West; a second-class quality of sperm-oil was the height of any manager's ambition. The footlights of the best theaters in the Western country were composed of lamps set in a "float" with the counter-weights. When a dark stage was required, or the lamps needed trimming or refilling, this mechanical contrivance was made to sink under the stage. I believe if the theater, or "devil's workshop," as it was sometimes called, had suddenly been illuminated with the same material now in use, its enemies would have declared that the light was furnished from the "Old Boy's" private gasometer.

The new theater, when completed, was about ninety feet deep and forty feet wide. No attempt was made at ornamentation; and as it was unpainted, the simple line of architecture upon which it was constructed gave it the appearance of a large dry-goods box with a roof. I do not think my father, or McKenzie, ever owned anything with a roof until now, so they were naturally proud of their possession.

In the midst of their rising fortunes a heavy blow fell upon them. A religious revival was in progress at the time, and the fathers of the church not only launched forth against us in their sermons, but by some political manœuvre got the city to pass a new law enjoining a heavy license against our "unholy" calling; I forget the amount, but it was large enough to be prohibitory. Here was a terrible condition of affairs — all our available funds invested, the legislature in session, the town full of people, and by a heavy license denied the privilege of opening the new theater!

In the midst of their trouble a young lawyer called on the managers. He had heard of the injustice, and offered, if they would place the matter in his hands, to have the license taken off, declaring that he only desired to see fair play, and he would accept no fee whether he failed or succeeded. The case was brought up before the council. The young lawyer began his harangue. He handled the subject with tact, skill, and humor, tracing the history of the drama from the time when Thespis acted in a cart to the stage of to-day. He illustrated his speech with a number of anecdotes, and kept the council in a roar of laughter; his good-humor prevailed, and the exorbitant tax was taken off.

This young lawyer was very popular in Springfield, and was honored and beloved by all who knew him, and, after the time of which I write, he held rather an important position in the Government of the United States. He now lies buried near Springfield, under a monu-

ment commemorating his greatness and his virtues—and his name was Abraham Lincoln!

V.

HARD TIMES.

At the end of our Springfield season my father dissolved partnership with McKenzie, and my next remembrance finds us in the town of Memphis. Bad business had closed the theater, and my father had turned from scene painter to sign painter.

There had been an ordinance passed by the fathers of the city requiring that all carts, drays, and public vehicles should be numbered. By some accident I heard of this, and as I was on the alert to get work for my father, I called at the mayor's office to apply for the contract. The mayor had seen me on the stage, and, to my no small delight, recognized me. I explained to him that my father was an artist as well as a comedian, and that, the theaters being closed, he devoted his time to sign and ornamental painting; not, however, as an amusement. It was natural that the mayor—a jovial, and possibly not a very dignified or dreadful person—should be interested in a youngster having the effrontery and the promptness to be the first to apply for the contract.

My interview with the mayor was a success, and ended in my getting the contract for my father to paint the numbers. How delightful it was to go home with such good news! Then the charm of unfolding such an agreeable surprise to the family—what lovely revenge for the scolding my mother had given me the day before; and, above all, the tremendous round of applause that such an achievement must bring down.

My father was too sensitive and retiring to have ever dreamed of doing such a thing, and perhaps when I arrived at his age I might, under the same circumstances, have shrunk from it myself. But I was young and rash, and perhaps desperate; for if I had not received many hard knocks myself, my family had, and feeling the blows through them, I experienced a ferocious delight in doing battle with the world, and, as I was generally victorious, my success made me bold. The new industry furnished my father and myself with a month's work, so we were indebted to this stride in South-western civilization for at least a small addition to our income.

One of my father's ornamental signs, on which was painted an amiable tailor measuring a handsome young man for a fashionable suit of clothes, came under the notice of Mr. McAllister. This gentleman was the owner of a large billiard-saloon and bar-room, to which was attached a mysterious apartment where

late hours were kept. A large mahogany table covered with a suspicious-looking green cloth gave evidence of the kind of trade that was plied in this exchange, and strongly corroborated the popular tradition that Mr. McAllister's midnight visitors were "gentlemanly sports." The proprietor having, it seems, a turn for art, as well as for cards, arranged for my father to decorate his billiard-room first, and then his house. In the hall of the latter my father painted two landscapes from "The Lady of the Lake"—one representing Loch Katrine, with her ladyship paddling her own canoe in the distance, and a mountain torrent in the foreground with the bridge made famous by the combat of Fitz-James and Roderick Dhu. The subjects had been chosen out of compliment to Mr. McAllister, as he was of Scotch descent.

The time was drawing near for our departure from Memphis, as the season in Mobile was to begin in November, and the money due for decorating McAllister's house was necessary to defray the expenses of our journey down the river; but, to our great inconvenience, it was not forthcoming. Whether the "gentlemanly sports" had been more fortunate than the proprietor or not I am unable to say, but my father had written twice without receiving an answer, and I had been dispatched to make a personal appeal to him. We delayed our departure for two weeks, hoping to get some satisfaction; but no notice being taken of our demands, it was decided to wait no longer.

In our straitened circumstances we were forced to take a steerage passage on one of the steamboats between Memphis and New Orleans. This was both humiliating and inconvenient. But Mary was a host, and could, by her devotion and tact, have made us comfortable even under more trying conditions. I know that my mother's pride was wounded, and that in her mortification she wondered that my father could face the degradation with such fortitude; but from what I remember of him, and all that I have heard related in connection with his character, nothing short of sickness or death in his family could induce him to complain. This kind of philosophy can be learned neither from books nor from experience; it is a natural gift, and seems to come into the world hand in hand with the spirit that is to bear it company. No seed can sow it, and no soil can grow it; the quality is inborn, and is so deeply rooted that it defies cultivation or extermination.

After arranging ourselves as comfortably as we could, the mate gave notice that the boat would not start until late that evening. On hearing this my mother asked me some questions regarding Mrs. McAllister, whom, of course, I had seen and spoken with during the

time we had been engaged in the decoration of her house. My report of the lady being quite favorable, my mother started in company with myself to make an appeal. Mrs. McAllister, who had been out driving with her children, met us at the door. On my presenting my mother, we were asked into the house and proceeded with her to the drawing-room. My mother, after apologizing for our visit, explained the nature of it, calling the lady's attention to

When she placed the money in my father's hands he looked at it in amazement, and, after declaring that his wife was the most wonderful woman in the world, suggested that we should at once adjourn to the cabin; but the most wonderful woman in the world would not hear of it, and urged my father to bear the discomfiture, so that we might arrive at our journey's end with some means of support, dwelling upon the fact that otherwise he would have

JOSEPH JEFFERSON (GRANDFATHER OF JOSEPH JEFFERSON) IN THE CHARACTER OF "SOLUS," IN THE COMEDY "EVERY ONE HAS HIS FAULTS." (FROM THE PAINTING BY NEAGLE.)

the hard and honest work of her artist husband, and contrasting the elegant surroundings of the lady and her children with the degradation of her own. In an hour afterwards the lady left the house and returned with the money. Placing it in my mother's hand, she bade us Godspeed, and away we went with a heavier purse and lighter hearts.

We hurried to the boat with our treasure,—about two hundred dollars, I think,—and my mother was both delighted and triumphant.

to draw an advance from the manager on our arrival in Mobile, which not only would be humiliating, but might weaken his position. Of course he saw the force and wisdom of his wife's counsel, and I think rather reluctantly consented. As I reflect upon this situation, it seems strange that my mother, who felt most keenly this humiliation, was content to bear it rather than lose the means that would render our future position more secure; while my father, who could smile serenely at our con-

dition, would willingly have parted with all the money to have given us present comfort. It can be accounted for only by the extreme contrast in their natures: he was hopeful, my mother was apprehensive. May not generosity spring from one of these causes, and caution from the other?

As usual, my father was soon contented. This novel and uncomfortable mode of traveling, instead of depressing him, seemed to raise his spirits; for I can well remember that while the boat was steaming down the river he employed the time in studying some new parts that he was to act during the approaching season, and when it stopped to take in wood he would get out his tackle and fish from the stern of the vessel. One would suppose that this indifference to really serious inconvenience sprung from weakness, but this was not so; for though there was nothing of the tyrant in him, when he felt that it was time to make a stand he made a bold one, and was as solid as a rock.

We arrived at Mobile in October, 1842. The yellow fever was raging in the town, but we were forced to come before the rest of the company, as my father was the scenic artist as well as the comedian of the theater, and his presence was required at an early date, as the scenery needed repainting.

We had for years been traveling about the country and my father and mother congratulated themselves upon this present permanent situation, as it afforded them not only rest, but an opportunity of sending my sister and myself to school. Sadly enough the last wish of this hopeful man was shattered, for two weeks after our arrival he was stricken with yellow fever, and died on the 24th of November, 1842. I will not describe the effect of this awful blow on our family, not desiring to cloud the narrative of my life with the relation of domestic sorrow. It is sufficient to say that by this sad event we were deprived of a dear friend upon whom we depended for counsel and support.

My sister and myself were now engaged at the theater to act such children's parts as our size and talent warranted the manager in casting us in; appearing in fancy dances and comic duets, added to which I was to grind colors in the paint-room — assistant artist, I was called in the play-bill — and make myself generally useful, for which services we were each to receive six dollars a week. It was understood that this employment was given to us as a charity; but when I consider the numerous duties imposed upon us, and the small sum we received, my conscience acquits me of our being anything like an incubus upon the theater, and if there was any charity in the matter, I think it was on our side.

One of the programmes, I find, announces

that after the play Master and Miss Jefferson were to "execute a fancy dance." Now, as our terpsichorean education had been rather limited, it is quite likely that the execution was complete.

It was soon apparent that our charity salary was not enough to support us, so my mother cast about for some means of increasing our income. She had no heart for acting now, and decided to open a boarding-house for the actors. From leading lady to landlady was rather a come-down for her; but my mother was a brave woman and endowed with that kind of pride that preferred the degradation of earning an honest living to the more elegant profession of getting in debt. A house had to be taken, a month's rent paid in advance, and furniture hired to fit up the establishment — but where was the money to come from?

It is said that in France, when the Government made a call on the people for a loan to pay off the war indemnity, thousands of patriotic Frenchwomen stood in line a mile in length at the treasury, each bearing a long worsted stocking filled with gold, ready to assist their native land in its great financial emergency; and I am told that in Louisiana this domestic bank is used by many of the French inhabitants as a receptacle for both small and large hoardings. My mother was a Frenchwoman, at least by inheritance, and I have no doubt came honestly by this national characteristic; for when matters were in a desperate condition the dear lady would mysteriously draw forth a long, dark-blue worsted stocking in which there was always "just one little gold piece left."

Unfortunately for my mother's venture, the theatrical season — following in the wake of all others I had as yet been familiar with — was a failure. Naturally the settlement of the board bills was consequent upon the payment of the salaries; and as the latter occurrence was fitful and uncertain, the weekly bills of my mother's landlord and butcher were both subjected to the same intermittent conditions.

At the time of which I write there lived in Mobile a talented and beautiful lady by the name of Madame Le Vert. She was the belle of the city and courted by the first in the land; her brilliancy and wit had placed her in the center of a rich setting of which she was the shining jewel. Added to her worth and elegance was a kind and beneficent nature, always seeking new objects to bestow its bounty upon. She was, moreover, a patroness of art and literature; nothing was too high for her understanding, or too lowly for her kind consideration. I think all who remember this fascinating woman will indorse my description of her character. It is natural that I should have

a grateful remembrance of this lady, as what I shall relate will show.

My father's death and the failure of the boarding-house had attracted Madame Le Vert's attention. She called on my mother, and hinted in the most delicate manner that as the season was about closed she would like to get up a complimentary benefit at the theater for her children (though I think the widow was uppermost in Madame Le Vert's mind). Now, as the "stocking" was on the eve of suspension, my mother readily consented; so the belle of Mobile aroused the enthusiasm of her many friends, the public caught fire, and the benefit was a success.

In after years I remember to have seen Madame Le Vert surrounded by a circle of callers, entertaining them with wonderful grace

and tact, always saying the right things to the right persons, and at the proper time—a genius of society. But there came a day when this noble lady and her family were reduced in fortune; she whom I as a boy had known young and beautiful, surrounded by wealth and friends, was now an old lady in the unhappy condition of "genteel poverty." I am proud to say we were friends to the last.

During the war, or at its close, Madame Le Vert had made some enemies. It would have been impossible for a person of her prominence and ability to have done otherwise. I am not sure now which cause she espoused, and, in her case, I do not care. Her long and useful life has passed peacefully away, and her memory is honored by all who knew her.

And now we lost poor, dear old Mary. It

is perhaps vain for me to hope that I can interest the reader in any one of whom he knows so little; but how can I, her foster-son, who owe so much to her loving care, pass by her death without some tribute of affection? After sixteen years of disinterested domestic loyalty, attending us as friend, servant, and dear com-

ordinate position in the theater. He heard some one call me by name at the rehearsal, and turning around asked me if I was related to Joseph Jefferson of the Chestnut street Theater. I told him that I was a grandson of that gentleman. He said, "Let me shake you by the hand for the sake of my dear old friend."

MACREADY AS "WILLIAM TELL." (AFTER THE PAINTING BY HENRY INMAN, OWNED BY JOSEPH JEFFERSON.)

panion, this faithful creature died in my mother's arms. Who can say how high such a pure and loving spirit soars when it is released and takes its flight?

VI.

JAMES WALLACK, SR., THE ELDER BOOTH,
AND MACREADY.

JAMES WALLACK, Sr., played an engagement in Mobile, and one little circumstance occurred in connection with it that I have always remembered most pleasantly. He was an actor at the head of his profession and in the height of his fame. I was only a boy holding a sub-

The remark was made with much feeling, and the remembrance of it has, I think, often prompted me to do the like for others. James Wallack, Sr., was an actor of rare attainments; as a legitimate tragedian and comedian he ranked very high. The parts that I remember him in are those of *Alessandro Mazzaroni* in "The Brigand," and *Don Cesar de Bazan*.

Mr. Macready and the elder Booth both acted in Mobile during this season; and as the contrast between these tragedians was quite remarkable, I will introduce them here, although my judgment of them was formed upon a later experience.

The methods by which actors arrive at great

effects vary according to their own natures; this renders the teaching of the art by any strictly defined lines a difficult matter. Macready and the elder Booth offer striking examples of these distinctions. Macready depended upon the mechanical arrangement of the scene, while Booth relied almost entirely on the impulse of the moment, caring little for set rules. As soon as Macready entered the theater he began to assume the character he was going to enact. He would remain in his dressing-room absorbed with the play; no one was permitted to enter; his dresser was not allowed to speak to him, but stood outside ready to open the door just before it was time for the actor to go upon the stage. If the mechanism of the play remained intact, he became lost in his character and produced grand effects, but if by some carelessness he was recalled to himself, the chain was broken and he could not reunite it. He now realized that his acting would be tame, and then his rage knew no bounds; he would seize the unlucky actor who had "ruined him," shake him, throw him aside, and rushing to his dressing-room fall exhausted upon the sofa. This was not affectation, it was real; he could not conquer his unfortunate temper. In my youthful days it was the fashion of thoughtless actors to ridicule these "Macready tantrums," and I regret to say I often joined in the sport; but as I look back on his suffering and read the pages wherein he chastises himself for his ungovernable temper, and when I know how useful and benevolent he was in the closing scenes of his life, I feel a great sympathy for him. "He poured a flagon of Rhenish on my head once," but I forgive him.

I acted with Macready and Booth during this season, and an anecdote of each will serve to illustrate their different characteristics. Macready was acting *Werner*. I was cast for a minor part. In one scene a number of characters had to rush off, bearing lighted torches, in search of some delinquent. At rehearsal the tragedian particularly requested that we should all be sure and make our exit at night at just the same time and place, so that we might not disturb the arrangement of the scene. All went well up to the time for making our hurried exit, when to my horror I found *Werner* standing exactly in line with the place of my exit at rehearsal. I presume that when he had given his directions in the morning he had not observed me. What was I to do? The cue was given and there was no time for argument. I rushed past him, torch in hand. I heard his well-known groan; but as I flew by an unmistakable odor of burnt hair filled the atmosphere, and I knew that I had singed his

to see the effect. The enraged *Werner* had torn his wig from his head and stood gazing at it for a moment in helpless wonder. Suddenly he made a rush in my direction; I saw he was on the war-path, and that I was his game. And now the chase began. I dodged him up and down the stage; then around the wings and over "set" rocks and gauze waters. He never would have caught me but that, in my excitement I ran head first into the stomach of a fat stage-carpenter. Here I was seized. The enraged Macready was so full of anger and so out of breath that he could only gasp and shake his burnt wig at me. Of course I was disgraced and not allowed to act again during his engagement. To make matters worse, the whole affair got into the papers, and the next morning one of the critics remarked that he had never seen Macready act with so much fire! Now all of this could have been avoided if he had but moved six inches farther up the stage when he saw me coming; but no, he had never shifted from that spot before, why should he do so now? I believe if I had singed his very eyebrows he would have stood his ground.

Booth's whole nature was the reverse of Macready's. He would saunter into the theater just a few minutes before the play began; robe himself, sometimes quite carelessly; converse freely upon local matters in a plain, practicable way, or perhaps give some reminiscence of bygone years,—his memory was wonderful,—ending with an amusing anecdote, and in the next moment walk upon the stage in the full assumption of his character, overawing the audience by the fire of his acting. The following incident will serve to show the wonderful manner in which Booth could drop his character and instantly resume it.

I was acting *Sampson* in "The Iron Chest" to his *Sir Edward Mortimer*. During the play he spoke to me of my grandfather's playing the same part with him when he (Booth) was a young man. "He used," said he, "to sing the original song; it ran thus": and assuming a comical expression he began to sing in an undertone:

A traveler stopped at a widow's gate.

At this moment his cue was given and he rushed upon the stage, discovering *Wilford* at the chest. The scene is here very powerful, and I never saw him act it with more power. The audience was most enthusiastic, and as he rushed from the stage amid a storm of applause he met me at the wing, and, reassuming the comic expression of his face, began the song just where he had left off, while the approbation of the audience was still ringing in his ears.

It must not be understood by this that Booth never became absorbed in his character; on the contrary, he sometimes carried his intensity in this respect to an extreme. It is only meant to show that he had also the power of dropping

been ill for some time, and as he was held in high esteem his friends arranged for him a complimentary testimonial at the Holliday Street Theater. Mr. Booth was at that time manager of another theater, and, unsolicited,

JUNIUS BRUTUS BOOTH AS "RICHARD THE THIRD." (FROM A COPPERPLATE ENGRAVING AFTER A DRAWING BY C. SHOOSMITH. FROM THE COLLECTION OF EDWIN BOOTH.)

his character in the midst of his concentration, resuming it again at will. Macready had no such faculty whatever. The beam once kicked, the balance was destroyed beyond recovery.

In his private character Mr. Booth was simple, unostentatious, and benevolent. I know of an instance of a curious and somewhat eccentric kindness that occurred many years ago in Baltimore.

An old and retired actor and manager had

tendered a benefit at his establishment to the same gentleman. The house was crowded, Booth himself acting. After the performance he went to the box-office, collected the entire receipts, and, late as it was, took them to the house of the beneficiary, and spreading the money out on the table said to him, "There is your share."

"But will you not deduct the expenses?" said his old friend.

"The only expense incurred," said Booth, "has been the bringing of the money to you; but as I walked, the cost is merely shoe leather, and I will not charge for that." So saying he turned on his heel and left the room before he could be thanked.

VII.

OUR VOYAGE ON A FLATBOAT.

FROM Mobile we went to Nashville, Tennessee, and after a short season traveled through the State. Business was bad, and on one occasion the gentlemen of the company, myself included, walked from Gallatin to Lebanon—not, however, for the exercise.

Upon our return to Nashville it was time to think of going South, as most of the company had engagements in New Orleans, Mobile, and Texas, but the Cumberland River had fallen so low that no steamboat could navigate it. In this dilemma there was but one course left—the company must come together, buy a barge, fit up a cabin, caboose, and sleeping-apartments. This was done. Where the money came from to pay for the boat and the lumber I cannot tell, but this floating camp was put together, and we all departed down the river in the queerest looking craft that ever carried a legitimate stock company of the old school. To a boy of my age this was heaven. To stand my watch at night gave me that manly feeling that a youngster just before he grows his beard enjoys beyond everything.

We stopped at Clarksville and gave one entertainment, playing "The Lady of Lyons." I acted *Glavis*. This was another manly stride for me; I was getting on. The whole of this trip was to me delightful. It was in that rich and mellow season when the foliage seems to change from day to day. The river was full of ducks, which I could sometimes shoot from the deck of the flatboat; great flocks of wild pigeons filled the air for days together, so that I could supply our table well with game. There was a small set of scenery on board that had been brought in case of an emergency. We had used it only in Clarksville so far, but now the time came when it could be displayed and utilized in a manner "never attempted before in the annals of the stage." When we reached the Mississippi the river widened out, and some stretches were from five to six miles in length; so, if we had a fair wind blowing downstream, by hoisting one of the scenes for sail we could increase our speed from two to three miles an hour. A hickory pole was cut from the shore, and a drop-scene, with a wood painted on one side and a palace on the other, was unfurled to the breeze. The wonder-stricken farmers and their wives and children

would run out of their log-cabins and, standing on the river bank, gaze with amazement at our curious craft. It was delightful to watch the steamboats as they went by. The passengers would crowd the deck and look with wonder at us. For a bit of sport the captain and I would vary the picture, and as a boat steamed past we would first show them the wood scene, and then suddenly swing the sail around, exhibiting the gorgeous palace. Adding to this sport, our leading man and the low comedian would sometimes get a couple of old-fashioned broadswords and fight a melodramatic combat on the deck. There is no doubt that at times our barge was taken for a floating lunatic asylum.

We would often tie up the boat for a day and go fishing in some lake in the interior, stopping perhaps at a farm-house to replenish our stock of butter and eggs. Our voyage was continued to Cairo, where the Ohio River joins the Mississippi, and so on until we reached Memphis; here we deserted the barge and took a steamboat for New Orleans.

This season I acted at the St. Charles, under the management of Ludlow and Smith. Mr. and Mrs. Charles Kean, Mrs. Anna Cora Mowatt, and James H. Hackett were among the stars. At the end of the season—which does not seem to have been a very eventful one—our company, under the same management, traveled up the Mississippi River to St. Louis, acting there during the summer. The only occurrence worth noting so far as I was concerned happened on the night of the Fourth of July, when the company was called on by the management to sing "The Star-Spangled Banner." I was in a feverish state of excitement all day, having been selected to give the first stanza. I had studied it and restudied it so often that I knew it backwards; and that is about the way I sung it. But I must not anticipate. The curtain rose upon the company partly attired in evening dress; that is to say, those who had swallow-tail coats wore them, and those who were not blessed with that graceful garment did the best they could. We were arranged in the old conventional half-circle, with the "Goddess of Liberty" in the center. The "Mother of her Country" had a Roman helmet—pasteboard, I am afraid—on her head, and was tastefully draped with the American flag. My heart was in my mouth as the music started up, but I stepped boldly forward to begin. I got as far as "Oh, say, can you see?" and here the words left me. My mind was blank. I tried it again: "Oh, say, can you see?" Whether they could see or not, I am quite sure that I could not. I was blind with fright; the house swam before my eyes; the thousand faces seemed to melt into one huge, expressionless physiognomy. The audi-

ence began to hiss — oh, that dreadful sound! I love my country, and am, under ordinary circumstances, fairly patriotic; but at that moment I cursed our national anthem from on, Yo!" But "Yo" could n't go on, so "Yo" thought he had better go off. I bowed, therefore, to the justice of this public rebuke, and made a graceful retreat. My poor mother stood

J. B. Booth

FROM THE COLLECTION OF EDWIN BOOTH.)

the bottom of my heart. I heard the gentle voice of the Goddess of Liberty say, "Poor fellow!" The remark was kind, but not encouraging. The hissing increased. Old Muller, the German leader, called out to me, "Go

at the wings in tears; I threw myself into her arms, and we had it out together.

Of course I intend this anecdote to illustrate one of my early professional distresses, but it has another and a more important side

to it. The hissing and jeering that was so liberally bestowed on me will never be vented again in this country for so slight an offense. The well-dressed, decorous audience of to-day, when an accident occurs, sit quietly, bearing it with patience and consideration, and when it is righted they break forth in encouraging applause. Look at the decorum observed by the vast assemblages that go to witness our national games. Disturbances are very rare.

It would have been indecorous, if not dangerous, when I was a boy, for ladies and gentlemen to visit any public grounds containing such large masses of people, whereas now they can do so with perfect safety. What lies at the foundation of this improvement? People went to church in those days as readily as they do now, and the laws were administered quite as rigidly. There is only one solution to this problem—the free school has done this work.

(To be continued.)

Joseph Jefferson.

A DYING BUTTERFLY.

HERE in my path it struggling lies,
A small cloud made
To mar the crystal of my skies
With piteous shade.

Lie in my palm, frail creature, so;
Still the vain beat
Of thy poor heart, whose currents flow
So strangely fleet.

Ah, how it throbs! With that last throe
Of pain, it dies.
Think, for a butterfly to know
Such agonies!

How like a broken rainbow seems
Thy hanging wing;
Like the cleft promise of our dreams
On wakening.

Thy pinions' colors mock my dole,
They are so fair.
'T would seem, almost, thy brilliant soul
Were hovering there.

How mute, how pitiful the end
Of thy proud state!
Thou hadst not fallen so, fair friend,
Had I been fate.

Cannot proud Nature's power dare
Recall thy death?
Or the whole universe of air
Spare thee a breath?

Not one. Lie there upon the sod,
And that same hue
Will paint the summer flowers, as God
Hath painted you.

Louise Morgan Sill.

PRESENT-DAY PAPERS.—I.

THE PROBLEMS OF MODERN SOCIETY.

PREFATORY NOTE.

THE undersigned have formed themselves into a Group, for the purpose of discussing certain sociological questions at present engaging attention, or of consequence to the well-being of the community. The paper which follows is one of a series which they purpose to publish from time to time. Each of these papers, like this herewith presented, will bear the signature of the writer, and will be the expression of his opinions—modified it may be, but not necessarily, by those who are associated with him; but in any case opinions for which he alone is responsible, although he will have had, before publishing, the benefit of critical discussion on the part of the Group. The aim of the Group, whose names here follow, is the discussion of subjects of living interest, with such advantage as the exchange of opinions, and so the widening of individual views, may secure. It is intended, so far as may be, to bring scientific methods, with a Christian purpose and spirit, to the study of the questions to be considered.

CHARLES W. SHIELDS.

SETH LOW.

RICHARD T. ELY.

Every period has its own problems, every epoch its own issues, so our times are especially occupied with social questions. The best writing of the day is full of recognition of this fact, and of promise for the future. It is marked by a large outlook, by strong thinking, by practical purpose, and by spiritual energy.

The times are characterized, moreover, by a bold advance from an individualism, which had come to verge on disintegration, to a truer appreciation of the value of organic life. Our ablest moralists are now studying men in their mutual responsibilities and correlations; and public questions are more frequently approached from the standpoint of social loyalty and of unselfish public principle. The best religious thought of the day has begun to address itself earnestly to the social wrongs which remain the reproach of our professed Christianity; and there is good hope, therefore, of a social economy which proposes to itself something better than mere money-making, of a statesmanship which rises far above all mere party politics, of a philosophy which is at once carefully scientific and profoundly spiritual, and of a working Christianity which seeks less to bring others to share our convictions than to raise each individual to its own noblest standard and to bring both ourselves and others

more directly under the overmastering influence of the one supreme personality of Christ.

Grounds for the gravest concern there most assuredly are: for the breach is widening between the rich and cultured and the poor and degraded; brutality and crime are, it is to be feared, on the increase among us; and political power has indeed been passing steadily into the hands of those who seek and find their support in the more ignorant and lowest classes. But if there be, as we have been told, reason to fear a "renaissance of barbarism," so also is there reason to believe that the highest intelligence and moral earnestness of the land are quick to recognize the facts and resolute to deal with them. In public affairs, then, there is reason to look for nobler political principles; in business and in economics, for a more unselfish social philosophy; in religion even, for enlarged ecclesiastical conditions; in everything, for a more exalted loyalty, a deeper sense of mutual responsibility and trust, a new inspiration and a purer spirit.

The present age is, moreover, working a Baconian change in the methods by which such ends are pursued. A new generation is beginning to apply to the solution of social and political problems the scientific processes which the last generation has applied so resultfully to the investigation of physical laws. The students of the physical sciences are, in consequence, abating much of their aggressive negation of Christianity, while the Christian

community is at the same time coming to realize, as Professor Shields has so tersely put it, that "nature is a divine revelation, as well as Scripture." The prophets of God's physical laws and the prophets of his spiritual dealings with us are coming, then, to recognize more frankly each other's prophetic ministry.

Yet, none the less, the times delight more to honor raw haste than patient study, to applaud the sensational rather than the real and the profound; and the distinctive value of the thinker is therefore in danger of being overlooked. In material problems, indeed, it is freely admitted that scientific research should establish the principles of which the artisan shall afterwards avail himself; but there has been little practical attempt to apply the same philosophy to social research. There is, as yet, no fully recognized science of society; although surely, as the late Dr. Mulford was wont to say, "sociology is the coming science."

The general direction from which such a sociology must be approached is already plain. Its problems are closely interrelated; and of that interrelation the master key can be furnished only by a Christian philosophy, for there is no one of them which does not derive its cardinal importance from its bearing on one or other of the three divine institutions, the Family, the State, and the Church, which involve, directly or indirectly, all the various issues of life.

Sociology resolves itself, therefore, into the study of these three institutions: the first, the generator; the second, the organizer; the last, the regenerator, of society.

The *Family* is the source and fountain of all larger social life. It is the mold in which are cast, it is the workshop in which are fashioned, the constituent elements of both the state and the church. Nay, more, it is itself the power by which are largely fitted for their several functions all the various agents by whom all results are to be accomplished, and by whom also all influence, as well for evil as for good, is to be put forth. That which a man is or may be, whether to the state or to the church, he is made, primarily and above all, in and by the family.

Under the head of the *State* are embraced, for the present purpose, alike economic and political society; for even the government is not something distinct from, so much as a function of, the community. Whether acting formally in its more organic character, or inorganically and less formally, it is the state or the community that brings forward the successive problems whose solution is demanded of the times, that marshals the forces engaged in that solution, and that regulates the general conditions under which, if at all, it is to be reached.

It is the *Church* that is — or should be — the

great progressive, civilizing, ennobling, spiritualizing power of all society. Save when or where or so far as "the salt have lost his savor," it is the church that holds in trust the great inspiring, conserving, and, when needed, regenerating principles of all private and public life. It is through the church, normally, that alone comes to either that spiritual perception which recognizes all falling away from the ideal, and that spiritual energy which alone can resist the approaches of corruption or recover from it.

There is need, then, under the first head, of a searching revision of our shallow, individualistic, popular conceptions of the family.

It is here that a Christian and a reconstructive sociology must begin. For the cradle of society, so to speak, is the household hearth. Society is made up not merely of so many men, women, and children, but rather of so many families. The single person is not a social unit, but rather a constituent member of an actual, or a potential, or a frustrated family. Therefore any low ideas of marriage, any divorce legislation, any factitious claims for "women's rights," any narrow or perverted conception of education, or any abnormal conditions of living forced upon the working classes — any of these which tend practically to segregate the sexes one from the other, to relieve either from the mutual dependence which should unite them, to create distinct, and it may be antagonistic, interests, to weaken the sense of joint responsibility, or to make the home impossible, are essentially destructive and anarchic in their character; for the moral dissolution of the family which these threaten would sap the very foundations of all social order alike in state and church.

Even among intelligent people, there is too commonly a very poor realization of the meaning of sex and of the profounder responsibilities of marriage. A debased public opinion, finding expression in and confirmed by a raw and ignorant legislation, and, among the young, lamentably relaxed by a superficial and trashy literature, virtually assumes that marriage, if not a mere civil contract, is at all events a relation to be determined solely by mutual inclination or convenience. Comparatively few seem to be aware that it is based not only on divine commands, but also on laws of nature, both of which hold in force quite independently of human sanctions, and create a bond beyond the reach and competence of the laws of man to bind or loose at will. Much that regards itself as good society, thinking nothing essential to marriage but such civil sanctions, or at most solemnization, and allowed too frequently to hold even these in light esteem, knows therefore of no adultery but the violation of such formalities; and our

divorce legislation, which is the result of this ignorance and of our superficial ideas of the social and political significance of the family, is the scandal of Christendom.

So far as the popular estimate is concerned the whole current philosophy of marriage is empty and false; and even among the educated classes it falls far short of the requirements of a truly Christian sociology. There is need that its eternal laws, which no human legislature can repeal nor human willfulness escape, should be searchingly studied and taught in language which men cannot choose but hear.

Closely allied to this is the subject of education, which is not, certainly in its earlier stages, any part of the immediate responsibility of the political community. Sparta presents to us no illustration of an educational philosophy for a Christian people.

For real education is the development of distinct personalities, the fitting each one severally for his or her own life's work. This is not a result to be effected by contract or in the aggregate. In the family alone, and by or on the immediate responsibility of those parents by whom were imposed upon each child from before its birth the physical, mental, and spiritual conditions on which all true after education must be based, can an ideal early education be conducted. If, then, in practice it pass into other hands,—into those of the nursery governess, the school teacher, or the college,—it is and it can be only because of the inability, at some stage of the advance, of those individual parents or of that family for its best further discharge. The actual agent, whoever he may be,—even though it be the state assuming, for reasons of public policy, the partial discharge of a responsibility which would otherwise go undischarged,—can be regarded only as the representative deputy or the substitute for the family.

But no true and fully competent parents, united in the education of their children, would ever think of acting on the tacit assumption that there were no other than bodily differences between their sons and their daughters, no antitheses, no complementary characteristics to be regarded in such an education. It is therefore due to the fact that a purely political conception prevails, to the virtual exclusion of the family idea, that we have largely lost sight of the necessity for discrimination—for so emphasizing the education of the intellect of the boy on the one hand, and that of the intuitions and the moral sense of the girl on the other, as well in their respective highest as in their earliest training, that they shall still be unitedly one, and that “neither is the man without the woman, neither the woman without the man, in the Lord.”

Parallel considerations apply also to the Sunday-school. It is the duty of parents that *they* train their children in religious truth and righteousness, for they only can do this most effectively, illustrating and enforcing precept by example. It is the business of the Christian ministry to charge parents that they do this faithfully. For the young child, no pastor or other teacher can be an effective substitute for the priesthood of a Christian father in his own family; no other religious influence can so profoundly impress the inchoate character as that which surrounds the altar set up in the Christian household. So far as the Sunday-school has tended to supersede the family in this respect, and to relieve the parents of a due sense of their personal and immediate responsibility for the religious training of their children, it has been a notable loss to childhood and a serious wrong to the family itself.

The ideal education, therefore, whether secular or religious, and by whomsoever furnished, should adhere as closely as possible to the family idea. It should not only recognize the wholly distinct needs and characteristics of the sexes, but it should also, so far as possible, recognize the distinctions of personality, and, with due regard to those distinctions, educate the whole man—the eye and hand and the conscience, as well as the intellect and the reasoning powers. Certainly a merely political philosophy of education must logically result in the social obliteration of sex, in the gravest wrongs to women, called in grimmest sarcasm her rights, and, in the last analysis,—were it possible,—in the moral elimination of the family.

Such, at least, in the light of a Christian philosophy of the family, are some of the subjects which, for our future good and public safety, imperatively demand the most critical and profound sociological investigation.

It is but a single, though it seems a long, step forward, to pass from the scientific study of the family to that of the state.

Here there is little question of the need of an inductive treatment of certain great political problems which have thus far been left too largely to the platform, the committee-room, the legislative hall, and the cabinet; and which, in consequence, still press upon us all unsolved and, as it seems to many, almost unsolvable. It is now frankly admitted that the principles which underlie all public policy and true national prosperity, to be thoroughly understood and soundly applied, must be studied in a calmer and a more scientific temper than can be expected of those who are put in positions of influence and authority precisely because they are representative of conclusions already accepted, and to which they are pledged.

Political science has, therefore, in all its de-

partments, its already recognized place in the university proper, and it is there studied, as it will also be studied by more detached thinkers and sociologists; and the results of such thought and study will be given to the country, not as party but as abstract principles, for the practical statesman and politician, if he will, to take account of and to act upon.

If this is true of the whole range of political philosophy, no one need to be reminded of those distinct branches of that subject which at this time especially require such study; of those great politico-social problems which are now so imperiously demanding a solution. It is, for example, only sociological science which can furnish us the true principles upon which the analysis and synthesis of industrial society can be thoroughly mastered, and which can treat them on the basis of larger inductions than those furnished by economic considerations alone. The so-called labor question is surely quite as truly one of social ethics, if not one of Christian science. So also it is only an approximately exhaustive social analysis that can arouse the community to any real appreciation of the issues which are involved to society and to the state from a corrupt and corrupting foreign immigration which is forcing on us the realization that there is such a crime against posterity as political adultery.

To advance then still further.

The consideration of the social functions of the church leads us to recognize the essentially social character of another study, closely allied indeed to that of the family and of the state, but yet distinct from either; a science of which both the one and the other must take account, and which can, in either case, be neglected only at the cost of very serious errors in the conclusions to which we are brought.

We Americans are accustomed to separate church and state, even in our thoughts, so thoroughly, that we do not readily think of Christianity as having any necessary or direct bearing upon public affairs. We habitually regard religion as something that concerns only the individual; and when we seek for some public good we leave Christianity wholly out of the count — certainly if it be some perplexing problem of the labor question or of civil service reform. The late George P. Marsh once said that "in Italy, religion [is] an affair of state, the church a civil institution, to an extent which it is almost impossible to make intelligible to Americans." That either economic issues or those of civil policy should in this country ever come to be regarded as religious questions, or that the church should come to be regarded as after all a controlling factor in the solution of such problems, would be to most Americans quite inconceivable. But the

Italians are a practical people; they have a genius for public affairs beyond any people of the present day. Is it not then possible that in the philosophy of the subject they may be right and we ourselves wrong?

Certainly no premises could more fatally betray us than those which assume that Christianity is not concerned in our investigation of social and political questions. Because the state refuses to be formally allied or distinctively identified with any one out of a number of distinct Christian bodies,—because society affects a calmly impartial, or rather an utterly indifferent, neutrality between them,—it by no means follows that it is within the power of society, whether as represented by the family or by the state itself, so to stand aloof from Christianity that the church does not remain a positive and even a more or less potentially directing influence as well in the evolution of the one as in the history of the other.

Whatever may or may not be their private or personal relations to religious teachers or teaching, there are probably very few educated men who will not, on due reflection, freely admit that Christianity—or, to exchange the abstract for the concrete, the church—is even now, as a matter of fact, an important element, and that, on its own principles, it ought to be and might become by far the most powerful factor in the social and political life of the land. The positions, therefore, which most perfectly command the approaches to these sociological questions are those of which the church places the thinker in possession; and leaving all consideration of personal religion, for the present, wholly apart, no social philosophy has any claim to scientific thoroughness which omits or even underrates the scientific study of Christianity in its relations, direct and indirect, with the family and with the state.

"The religious side of this [labor] question," says a late writer, "is the most vital of all. If able to live on the plane of its sublime verities, it can lift labor to its levels. . . . The precepts, provisions, and spirit of true Christianity are the solution and sublime functions of all that makes man equal to his duties and his responsibilities. The verities of conscience, justice, divine government, life, death, and judgment are the same under a monarch's crown and a miner's cap."

But when we come to consider Christianity thus from without, we find that, according as we regard it from the intellectual, the ethical, or the social and political standpoint, it presents itself to us as theology, as ethics, or as ecclesiology. Theology is studied as a science. Ethics is also beginning to be so studied and so taught. But it is ecclesiology—*by which is here meant the science of organic Christianity—*

that wields the other two. For it is the church which is, as it were, the organization of Christianity — Christianity present among men, in the midst of their daily lives and of all the varied relations and interests of those lives, as an organic working power.

Ecclesiology, then, is the science of Christianity in that form in which it enters as a factor into public life, and in which it brings both theology and ethics to bear upon social interests and politics.

"So far," writes an eminent scientist, "the ecclesiastical body appears to me to have refused to do its share in our modern life. . . . What we want now is a treatment of Christianity as an art of living. . . . If the church is willing to take scientific ground and give its thought to the conduct of society, I believe it can become stronger in human affairs than it ever has been."

There has been no period in all history in which the church has not been a leading factor in the family in proportion as the family has itself been strong in its own distinctive moral life, and in its relations as such with civil society. There has been no such period in which current ecclesiastical affairs have themselves been more closely associated with social issues and with secular politics than they have been, are, and will be in that of which the past twenty-five years are but the introduction. The ecclesiastical events and the tides of religious and irreligious thought which have characterized these years, and which especially characterize the present time, have influenced and are now influencing social thinking and public institutions everywhere, in this country no less than in Europe, to a degree deserving the closest observation and the profoundest study from the economist, the statesman, and the social philosopher. Only the unthinking will suppose that, because no one special type of Christian organization is formally recognized among us by the civil law as apart from other types, therefore there are *no* relations existing between our social issues and religious institutions. In fact, while Protestant Christians are, for the most part, ignoring these relations and suffering their potential functions in society to go by default, the authorities of the Roman Catholic Church among us are slowly and carefully, and with far-sighted prescience, gathering into their hands, as any opportunity permits, the reins of future social power.

The sure decadence and the steadily approaching downfall of Mohammedan authority in Eastern Europe; the Papal encyclical and the syllabus of 1864; the culmination of ecclesiastical absolutism at the Council of the Vatican; the rise of Latin reaction in the Old Catholic movements of Germany, Switzerland,

and Austria; the convergent drawing, at once, in Greek, in Latin, and in Teutonic Christianity, which found its first distinct expression at the Bonn Conferences; the growing alienation of the secular power from religious institutions in Italy, in France, in Switzerland, in Germany, and even in England — an alienation which in some instances has already reached, and in others gives forewarning of, open hostility; and, on the other hand, the hope at least of closer relations and the beginnings of co-working in now divided Protestant Christianity; the so-called "All Saints' Encyclical" of Pope Leo XIII., accepting in principle that radical readjustment of the relations between civil society and the great church of which he is the head to which the course of politico-ecclesiastical affairs in Italy is inexorably forcing it; and, last of all in time, but far from least in significance, the great stirring of a common Christian enthusiasm which has been aroused by Cardinal Lavigerie — all these and many more events and utterances of scarcely lesser moment, considered in their interrelations and in their varied bearings, direct and indirect, upon the social and political life of the times, present a field for research, for scientific investigation, and for philosophic study the importance of which at this epoch can scarcely be exaggerated and cannot be safely ignored.

Such a study of the science of ecclesiology is a very different thing from that review of the sequences of religious history or the denominational use of that review which are common to all our schools of polemic divinity. Ecclesiology is, in this aspect, the science of tremendous moral forces of whose application to social and political issues sociology knows as yet almost nothing; for the applied mathematics and applied chemistry are no more distinct from the pure abstract sciences upon which they are based than such an ecclesiology as is here under consideration is distinct from the merely historic, or at most polemic, treatment of such subjects which is now provided for in the distinctively religious schools.

What, let us ask, — for these are practical questions of immediate and of social import, — what is the true relation of organic religion to the family, to society, and to the state? What were those relations in the Mosaic economy? What have they been in Christendom? How far have these relations been factitious, how far due to local and temporary causes, and how far were they a necessity of human society? Wherein is Christianity, how far is the Church of Christ to-day and in this land, a true guide, a warning, a saving power? How can it give, in terms of sociology or of political wisdom, a working exegesis of the dictum that "the nation or kingdom that will

not serve" God "shall perish"? What biological laws are involved in the second commandment of the Sinaitic summary? How far is the fourth a physiological and sociological revelation? What is the political philosophy of the fifth? What yet latent power has the church to lead us out of some inextricable maze of labor troubles or of party politics? How can Christianity be brought to bear, as an intermediate, to coördinate in one the now antagonistic and seemingly irreconcilable forces of the modern moneyed and the working classes?

These are some of the questions which the scientific study of ecclesiology, in its social and political relations, should enable us to answer. These are some of the practical problems which a scientific mastery of social and political ecclesiology can, perhaps, alone enable us to solve.

But the general subject of the relations of the church to many of these questions brings before us that which is not merely the great ecclesiastical question of questions, but perhaps equally the most pregnant *social* necessity of the day — that of the restoration of Christian unity. That which the church might be and which it is entirely within her power and charge to be to society — that, as a matter of fact, she is not, and that she cannot possibly be, because of the wretched divisions which so fearfully weaken her moral power and scatter her energies in internecine contests for the advantages of social place and preference. These contests in turn involve the church, to a degree of which few realize the gravity, in a surrender to the worldliness around which often stops but little, if indeed any, short of a debasing of her ideals, the betrayal of her trusts, and the virtual abandonment of the charge committed to her by her Lord. If, then,

it is the church which can alone so bring the social principles of Christ to bear upon the society of our day that the family shall be recovered to its integrity and the state guided through the perils and disorganizing influences which now beset her, it is imperatively necessary to put an arrest on our schismatic divisions and ecclesiastical strife, in order that as well the family as the state may so recognize the church that this service shall become once more possible.

Such, in its threefold aspects or departments, is the scope and practical importance of the scientific study of Christian sociology. If such a period as the present is preëminently one which stands in need of men who do not only their own thinking, but also much of the thinking for which the public and the "men of action" are waiting, it follows that the institutions which seek for and summon such thinkers to their chairs, and which contribute most to gather around them the children of the coming age, will be among the largest benefactors of that age itself. To establish such a school of Christian sociology would be to the lasting honor of any university in the land.

It would be a great and worthy ambition for any large-hearted, far-seeing, and patriotic steward of God's wealth to found such a school. Uniting in one faculty some of the first thinkers and students of the day, and placing itself in such relations to the ablest sociological thought and writing of the nation that it would become the working center of much of it — from such a school, and from the investigations of its staff and from their co-working, would go forth to the community lessons of scientific and social wisdom for which the leaders of many large social interests would have reason to be grateful and by which they would be largely guided.

Wm. Chauncy Langdon.

MY 71ST YEAR.

AFTER surmounting threescore and ten,
 With all their chances, changes, losses, sorrows,
 My parents' deaths, the vagaries of my life, the many tearing passions of me, the war of '63
 and '4,
 As some old broken soldier, after a long, hot, wearying march, or as haply after battle,
 At twilight, hobbling, answering yet to company roll-call, *Here*, with vital voice,
 Reporting yet, saluting yet the Officer over all.

Walt Whitman.

STREET LIFE IN MADRID.

THE unconscious life of a people, like that of individuals, is its most interesting expression; and habits and manners that are developed from the conditions of climate or of situation appeal more to the imagination than where costumes and peculiarities are accidental or factitious grafts from other races, or nations differently circumstanced.

In American cities the population is so complex that, beyond a few distinctive habits induced by climate, the people have as yet little that is picturesque in their out-of-door life. We see the Irish girl, who never before in her life had on a bonnet, walking off to church in the latest style from Paris, and the little Chinaman, with his pig-tail cut off or coiled out of sight, in as black a stove-pipe hat and polished boots as an English cockney or a Broadway "swell."

People complain even in the old cities of Europe of the disappearance of national costumes, and that everybody is getting to behave and dress like everybody else. This fact holds good in London, where the gay bonnet and flounced gown descend by degrees from the lady to the lady's-maid, next to the kitchen-girl, and so down to the lowest stratum of society, till the delicate hat has lost all color and nearly all form on the head of an old rag-picker.

But this is by no means true of every city, and, especially to an American, many places are still full of picturesque charm.

Madrid is not an old place, for it has nearly all grown up during the last three hundred years; but it looks in nearly all respects like a new city. Its fresh buff or pinkish rows of high stuccoed houses much resemble Paris, except that they lack mansard-roofs, and are mostly covered with flat-roofs made of red or yellow convex tiles. Little iron balconies project from every one of the French windows, and tier above tier of neat apartments rise over the little shops which form the *rez-de-chaussée*. Winding streets, narrow, and up and down hill, alternate with the broad, level avenues of the Prado and the Alcalá, while openings of every shape and size, from the beautiful Puerta del Sol to some trifling plot of grass and trees, surprise one at every turn or in whatever situation. Here and there the pedestrian comes across an old arch standing up with its light masonry against a background of the pure heavens, and

he observes that behind the arch heaps of brick or stone or the remains of an old cellar attest the fact that a convent has been removed or a palace destroyed. The churches, too, do not look like any others in Europe, except perhaps those in Italy, and with the flowing lines of their roofs stand jammed in among the other buildings, which they resemble only in size and color.

But while the city of Madrid possesses nothing very distinctive in its appearance, it is not so with the people who throng the streets at certain times of the day and evening.

One of the most significant sights of the population of Madrid is soon after sunset, and one night is much like another during the whole summer season. It was a warm Sunday evening when we first saw Madrid by gas-light, and in the brilliant heavens the full moon sailed with a luster and purity impossible in any climate less elevated and less free from moisture than that of the broad and lofty plateau in the midst of which Madrid is placed. A soft wind was blowing down the Prado, which is the great avenue of Madrid, and the air was dry and sweet. The shadows from the trees that line the footpaths in the center of the avenue lay black in the moonlight, while we saw the pale spires and domes about the city profiled in darkness against the silver shimmer of the night sky. On each side bright gaslights were dotted among the trees at the sides of the Prado, and in three or four directions, when other streets crossed this one, these gas-lamps marked their wide line as they dwindled away into a remote perspective. A very low murmur of voices sounded from the "salon" — that portion of the Prado set apart for society and not for walking or driving, where thousands of chairs accommodate the fashion of the Spanish population, and women in their black-lace mantillas, soldiers with steel helmets or gold lace and in black and scarlet, alternate with other men and with women and children to enjoy the freshness of the evening and one another's society.

The road at this point was also lined with open carriages, and the horses slowly passed, disclosing in one vehicle a couple of the black-eyed women of Spain with their lace head-dresses, in another three or four men with the bright spot of their lighted cigars glowing in the darkness, or again it was a family of children and their parents who were out to enjoy the night. Now and then a little

A DONKEY DRIVER.

tinkling of bells was heard and the rumble of a more rapid vehicle, and four or six little horses decked with red pulled along the fancy carriage of some young Spanish aristocrat.

In one part of the Prado, among the trees, was seen a festoon of gaslights as brilliant as those in the Champs Elysées at Paris, while a fountain of light poured down in some unaccountable way before the doors of a concert room which was hidden among the trees on one side of the Prado. A little farther along we were made aware of the presence of a Punch and Judy show by the striking of a bell which sounded like a hammer on an anvil.

These shows, of which there are many about the city, are always announced by this peculiar bell.

Coming out at one end of the Prado, the carriage passed the church of the Atocha, where the young Queen Mercedes was married. This church is a large one, standing at the head of a bluff which rises from a valley at one end of Madrid. From this point, in the daytime, the eye reaches far away over the country; and on the outskirts of the horizon, blue and indistinct, one discerns the distant ranges of mountains, and follows with delight the rich and lovely hues of buff and pink and purple of the broad plateau,

AN OLD STREET.

which form a splendid mosaic of tints, though one realizes that the dry surface of the land can afford neither drink nor food. But in the night all these peculiarities escape observation, and it is only the quivering light that one sees over the landscape and in the sky — the soft light of the large stars, which here shine with a peculiar effulgence. Driving slowly here and there where great patches of clear moonlight shine on the stone fountains, we catch sight of groups of *aguadores* lying and leaning about as still as statues, patiently waiting their turn to fill casks, jugs, or strange-shaped earthen water-coolers. These *aguadores* are among the most picturesque classes of people in Madrid, and the dresses of both men and women are often brilliant with every strong hue. Nowhere do they show to greater advantage than in the evening, when gathered around the stone basin of the fountain in the square of the Puerta

del Sol. An irregular circle of pink, buff, and gray houses surrounds this square, and their fronts reflect the dazzling glare of six immense electric-lights, which render the square, as well as the streets that diverge from it, as bright as day. The basin of the fountain, full of water to its brim, repeats the light of the lamps in its still surface, and one sees in its mirror the image of dozens of the *aguadores* in their pink, blue, and white dresses. Men and women stand out in almost magical relief in the brilliant light, which touches with an enchanting radiance the dark braids of hair of the women, or lights up the gold beads about their necks, or reveals a scarlet bodice or an embroidered petticoat. Goya's pictures are full of such scenes as this, only they want the full effect of nature produced by the intense blackness of the shadows, which relieve against these brilliant lights.

But what is this church on the avenue of the Alcalá? Hundreds of colored lanterns are festooned across its front, and the globe of each lantern, with its tiny star of flame at the top, gives the building a festive look. It is some saint's day, and in honor of the saint the interior of the church blazes with a thousand tapers. From the church-door all along the sidewalk of the Alcalá the houses cast one long, deep shadow. But, ranged as thickly as they can be set, multitudes of little booths edge the sidewalk, and in each of them a dull lantern is suspended. Heaps of fruit, flowers, nuts, and small confections cover the table of each

booth, and crowds of people of the lower classes hover about and chat and fill the sidewalk densely. The booths are erected for persons who have arrived for the fiesta at the church, and who here buy their lunches and suppers. All visitors to Naples will recollect how, on the road from that city to Pompeii, one sees of a summer morning men, women, and children stopping at the corners of the streets of Resina and the other little towns along the way, to procure a handful of potatoes from a pot which is boiling over a brazier on the sidewalk; or the traveler sees a man with his fist full of macaroni that he has purchased from another pot, while fresh fruit, figs, plums, or melons complete the breakfast of these simple people.

In Spain the same habits prevail, and at an early hour of the day, when the workman is going to his toil, little stands are set up for an hour or two where breakfast can be eaten in

the streets. The stands quickly disappear as the day advances.

Most cities have a mixed population of nationalities, and these diverse persons bring with them to some extent their own costumes; but in few cities are there so varied sets among the native population as are seen in Madrid. The streets are rendered still more gay by many different kinds of animals—ponies, mules, donkeys, and very fine horses, with trappings as varied as the dress of the owners. Across the forehead of the large, heavy ox a sort of helmet of thick wool or sheepskin, with its deep rich colors, looks like a bit of tapestry. The donkeys are often fairly laced over with a network of gay cords, while red, yellow, and blue tassels dangle over their heads, legs, and even down their tails, and form, with the multitude of little brass bells about their bodies, a most elaborate harness. Besides their harness, the donkeys are generally nearly covered with their big straw panniers, which hang on each side of them and reach nearly to the ground. Sitting at my window one morning, I was much amused in watching a market-woman and her donkey. The day was hot and the glare in the sunshine very great, while, as is so usual under such conditions, the shadows were very dark. The woman sat on the back of the little donkey, a party-colored handkerchief bound round her head, and with her red apron, her skirt, and two very big straw panniers, that reached nearly to the ground on the donkey's sides, jumbled together. Over her head was a white umbrella, which jerked about as the donkey stumbled along or she hitched at his bridle. The woman was on her way to market, and by and by I saw her cross the square on her way home. This time she was on foot, for her purchases filled the panniers of the donkey and loaded him down; but the woman had her beast by the tail, and alternately pulled and pushed at it to speed him on his way. One is constantly amused and surprised to see that the habits and manners of the Spanish people, as well as their faces, are precisely the same to-day as when Velasquez painted his sharp wiry faces in the "Buveurs," or Murillo his dark children, with their loose straw baskets beside them, their bare, dusty feet, and the cunning look of their long, wide mouths, their narrow, sharp black eyes, and their bony chins. Coming out from a morning spent in the Museo del Prado, where one lingers, if not with delight, at least with admiration over Velasquez's broad and free painting of peasants in the picture called "The Forge of Vulcan," or examines with astonishment the brilliant drawing of the

face of the old ragged "Æsop," whose prototype one finds at every turn in the street—an "Æsop" begs a *real* as the visitor leaves the gate, and men, women, and children are constantly met lying with their dark, Murillo-like faces supported on their arms or turned up towards the sky, similar to those seen in the pictures of the Spanish old masters.

In one place appears a group assembled around a fountain with their water-jugs; and the red, yellow, and blue handkerchiefs bound about the heads of the women, and the slouched sombreros and brown coats or capes flung over the shoulders of the men, make bright, Goya-like pictures against the glowing sky and the whitish colors of the road and the buildings near them. Hollyhocks and red oleanders give

A COUNTRYMAN.

an added glow to the landscape, and the dark green of the pines and other evergreens contrasts with the white flint of the roads and the light sky.

Each city has its own peculiar street-calls and sounds; but none can boast of a greater variety than Madrid. Long before day the notes of yellow-legged partridges, which are here tamed for pets, are heard with their hammering noise, while the see-saw of the donkey's braying, more or less remote, rasps the ear like

A STREET INCIDENT.

a saw cutting across the grain of a dry board. Guitars are played by blind beggar-men, and it is seldom that the strumming of one cannot be detected in the neighborhood. If street-calls teach nothing else, everywhere they all emphasize the fact that vowels are the only sounds we distinctly hear; and the dry air of Madrid seems to affect their particular intonation similarly to the climate of America. Often in an unconscious moment the ear is deceived by a call which in New York would be at once recognized as that of the boy with "Extras." Spanish voices are seldom sweet, and when a woman with her tambourine sings under the window some snatch of the opera or the music

of a bolero, the notes are generally of rather a hard contralto voice, and are by no means as pleasing as the sight of the woman herself in a strong-colored petticoat, gay apron, and a square of red or blue cloth bound round her head.

If one finds the subjects of Velasquez, Murillo, and Goya everywhere out-of-doors, within doors a stranger often chances unawares upon some scene, the objects, colors, and chiaroscuro of which could be transferred without a change upon the canvas of either of these masters, and which resembles a picture two or three centuries old stepping from its ancient frame into the present. One of the most vivid

A SPANISH LADY.

of these pictures which I came across was the interior of an old curiosity shop.

From a narrow, winding street, whose whitish houses were closely shut up except where an occasional red or blue striped curtain kept the heat out from the little shop within, we entered a long brick passage-way, so dark it could hardly be seen by any one coming from the glare of the street. A narrow stairway led to the floor above, and here a door made of a great many little wooden panels, which latter indeed formed nearly the whole wall, led into the curiosity shop. A stout, pale Spanish woman received and conducted us into an inner apartment. The room which we entered was dusky, but our conductor drew up a Venetian blind that formed a roof over a very large French window, and through the slats of which the rays of sunlight straggled into the room, lighting it imperfectly. Here in the shop were a multitude of curious articles that were streaked by the sunbeams or were dim in the shadow; but yet the articles were scarcely more numerous than the furniture of many a parlor. On a low oblong table in the center stood a fine brass filigree clock with two tall figures of brass beside it. Pieces of old velvet embroidered with

gold and floss formed a number of small covers to this table; while beside the table half a dozen tall-backed chairs with black stamped leather covering were enlivened with big brass nails. On the wall hung faded scenes in ancient tapestry, and some old mirrors and portraits of Spanish men and women were in fine deep carved wooden frames or frames of bright gilded open-work. Each of them was very wide in proportion to the size of the mirror or picture which it inclosed, which gave the effect of great richness. Italian cabinets of ivory and black inlaid work were here, with a multitude of little drawers and doors, and in one part of the room was a case filled with curious and rare glass and china. In some of the little amorini plates antique jewels glittered among the heads of loves and cupids on the old Majolica ware, while glass jars of sea-green color were as peculiar and beautiful in form and in tint as Venetian glass.

Hung all around the entrance to the room were a large number of plates of an iridescent luster enamel in Moorish, Persian, Spanish, and Arabic designs. My fancy turned to this pottery, which flickered, pink, green, and yellow, in the varying daylight and had an almost fairy-

like beauty. To exhibit her wares more perfectly, our cicerone first raised and then lowered the Venetian blind, and as the sun alternately went under the clouds or shone clearly, the old curiosity shop dimmed into gloom or glimmered with its gold and deep colors into splendor like a Rembrandt.

The owner of the shop was almost as amusing as her wares. She was about forty and her hair was thin and gray; but she concealed her scant locks very well and her bright black eyes shone beneath a "banged" bunch of black hair on her forehead, while plaited hair made a big coil on top of her head. Her teeth were good and her features regular, but her skin had the yellow, bloodless look so very common in Spain. The woman talked with animation, but did not urge us to purchase anything.

After a little while her husband came, a tall, good-looking Spaniard with a bald head and a long nose, and we went with him into a back room of a very picturesque kind. This chamber was a small one, and on one side was a big window that led out upon a narrow iron balcony and looked down into a court-yard. In addition to Venetian blinds, long curtains of queer patterns were hung like sheets against this window, and I saw that other balconies all round the court-yard were draped in the same way. A tall oleander in full blossom stood in the window, and pushing aside the curtain I stepped out-of-doors. Here was indeed a bit of old Spanish life.

The walls of the houses rose five or six stories high, and, wherever the numerous balconies with their varied hangings left spaces for them to appear, grayish-white plaster walls, spaced off irregularly by rough timbers, were seen in every direction. Where the curtains were drawn back quaintly furnished chambers became visible, with an occasional parrot or macaw and a flowering plant. The court-yard was not more than twenty feet across and the patterns on the queer curtains could easily be counted. One feature of these balconies was entirely new to me; for raised nearly to the top of each separate story a light lattice-work of canes or bamboo in Gothic shapes held the curtains in their places and prevented the strong winds of Spain from blowing them up into the next balcony or across to their neighbors. The court-yard below was not very neat and held old water-jugs, casks, and broken flower-pots. The curtain of the window where I was standing had caught my fancy, and I did not rest till I had bought this old piece of rough whitish linen, on which were embroidered in soft-colored flosses a handiwork of strange birds and flowers, queer and lovely hued.

While I was thus occupied, my companion was examining a most gorgeous gold cabinet

inlaid with colored stones or enamel; and afterwards we went back to the front shop.

Here a most lovely effect met our eyes. In our absence the old curiosity shop had put on a semblance of light and shadow like one of Blaise Desgoffe's still-life pictures.

A long ray of sunlight lay across the center of the room in a brilliant golden band, and in the mirror in the side of the apartment I saw an image of the curiosity shop worthy of Rembrandt. In the looking-glass were reflected the brass clock and the vases that stood in the center of the room, with each bit of chasing sharp and clear, lighted as they were by the yellow sunbeam. This brilliant and charming effect relieved sharply against blackish colors where the old tapestry and cabinets could scarcely be discerned in the gloom, and the effect was yet further heightened by the bits of embroidery that lay on the table, whose half-shadows brought out vividly their scarlet and blue patterns.

But charmed as I was with this strong and lovely picture made without intention, my heart was in trade, and I did not leave the room till one of the old reddish-gold platters, a Hispano-Moresque dish, was my own, as well as the flapping curtain with its embroidered plants, that had screened the inner chamber from the queerest little court-yard I had ever seen.

But while these common scenes constitute such charming genre pictures, no city affords more dignified nor stately crowds, fit companions for the great historical subjects which Titian, Paul Veronese, and Tintoretto painted.

Chancing to be in Madrid on the occasion of the great requiem mass for Queen Mercedes, I was a spectator of the street crowd in the neighborhood of the church where the mass was celebrated. The day, as all summer days in Madrid are, was clear, and the sunshine sharply defined the lights and shadows in the light yellow streets and on the stuccoed houses, and glared upon the listless aguadores hanging round the fountains, and on the numerous little donkeys struggling under their heavy panniers of fruit, water-jars, or clothes-baskets.

At an early hour great crowds of men, women, and children lined the principal avenues which lead to the Church of San Francisco, and nursing babies, dwarfs, men with one leg or with the stump of an arm, were crowded as a big background to the coaches of the nobles, the battalions of cavalry, and the liveried police who occupied the middle of the streets and the square before the church. The horses in Spain are fine, and on this occasion many of the best of them were attached to the carriages of the grandes who took part in the funeral celebration.

As we neared the church the crowd became more dense and also more interesting. A liveried driver on a coach with the arms of Portugal reined in his horses to allow a carriage filled with priests in purple robes to pass it, and I heard murmurs that these priests were the Cardinal Archbishop of Toledo and the Bishop of Salamanca. The great prelates of Spain,

had lived in every large capital in Europe. Their manners, as they stretched out their hands across one another or over women's shoulders to greet a comrade who had just arrived as especial ambassador for this occasion, had the heartiness and unconsciousness of men of the world, at home anywhere.

In our own country the women usually form

A SCAVENGER.

with their priestly dresses, mitered heads, and diamond rings, grasped their coach-windows or gesticulated to their lackeys, and looked out of the windows with full as impatient and excited an expression as was visible on the faces of their worldly neighbors whose horses or whose carriage-wheels had become entangled with their own. But this whirlpool of carriages gradually ran into a smooth stream, and as each ambassador or other dignitary at length drew up before the church-door he quietly descended beneath the canopy of black velvet that covered the entrance to San Francisco.

The group that was gathered in Madrid that day of the queen's funeral was very varied and brilliant. Here were diplomatists who

the bright feature of any gathering where both sexes are assembled. But in Spain it is quite different; and on this day especially the wives and relatives of the "Excellencies" all appeared in black, while Spanish nobles and the special envoys showed uniforms covered with orders made of every blazing precious stone, and their red and blue coats were thick with gold ornaments and gold lace. The chapeau under the arm of each one might almost have been made of the precious metal, so covered was it with gold embroidery.

As can be easily imagined, the effect of the crowd was like that of a fine picture—its background of the interior of the church hung in black velvet, and with a thousand blazing candles; and this background threw into a

A SPANISH GIPSY.

vague and curious light the gathered crowd within the church. Near at hand daylight mixed with the artificial glare of the candles, and the strong lights and shadows from the sunlight and the black canopy above the crowd in the vestibule of the church and around its entrance formed a picture which Rembrandt or Rubens, and even more especially Titian or Tintoretto, might have loved to paint. Either of these artists would have found in the contrasts of the candles and the velvet, the helmeted soldiery with their horses, and the peasants fit accessories for the dark Spanish women in their black lace mantillas, the burly blonde northern ambassadors, and the slender Spanish

noblemen covered with color, gold, and precious stones.

It is generally supposed that the special features of a face give it its beauty or ugliness; but artists are aware that charm lies in the general build and make-up of the countenance rather than in pretty eyes, nose, or mouth; to be pleasing the features must be set well. So far as we have seen, the faces of no nations are so harmonious as those of the Italians, the Turks, and the Moors of northern Africa. In them, and in the latter especially, the very ideal of beauty seems often to have been reached; and whether it be in the oval-eyed women of Perugia with their full eyebrows, oval cheeks, round

chin, gradual slope of ears, throat, and nose seen in the early pictures of Raphael, the noble and large sockets of the level-browed Roman women, or the heads of the Turks, each one of whom is fit to be cut in cameo, we find faces beautifully formed.

The Spanish type is quite different from any of these, and faces which might belong to the cunning Yankees are often met. Small eye-sockets, near together, and high, square cheek-bones, often inclose sharp little black eyes as cunning as a rat's; while the pointed and bony chin, the prominent nostrils, and the flattened forehead above the nose, which are the types of the peasants in the pictures of Velasquez and Murillo, are the prevailing forms here. These artists painted what they saw, and are no more to be blamed for their choice than are Leonardo and Raphael to be commended — they drew life as they found it.

But while such is the common type of Spanish face among all classes, many of the people are made in a different mold, or at any rate are modified from this one, and at the church that day I saw some beautiful women. If, as I said before, the Southern European faces have less in-

tellect, and possibly less conscience, in them than appears in northern countries, here in Spain it was in the passions and not in the appetites that the characters of the people seemed to be developed. Watching the grand Spanish women that day, so graceful, so self-contained, and so elegant under the slight shadow of their black lace mantillas, which lay in easy folds above the massy tresses of their glossy black hair and gathered about their white arms, bare to the shoulders except for the slight lace sleeves of their dresses, I saw faces which might haunt one in bad dreams. The little white chins were often hard and grim, and though their lips were full and soft, the muscles of their mouths contracted at times,—it might have been with malice or it might have been with envy,—and the delicate thin nostrils of their small noses looked made more to show cruelty than fun. Often their eyes blazed with a brilliant glow, yet I felt they lived rather through the passions, such as love or hate, than for greediness of food, slothfulness, or the physical comfort which deaden or stupefy the German and English race so often.

Susan N. Carter.

"IS THERE ANY WORD FROM THE LORD?"

(Jer. xxxvii. 17.)

DAYLONG a craven cry goes up:
 "The people drink a bitter cup,
 They languish, gathering stones for bread,
 Brave faith is fallen, the old hope dead."
 The babblers will not cease:
 "The people have no peace."

Trust is outworn, naught can be done,
 There is no good under the sun,
 The blue sky fades, the old faiths fail,
 The strong hand shakes, the warriors wail;
 Daylong the craven cry,
 "The people faint, they die."

Are we, forsooth, so helpless, we
 That vanquish air, and earth, and sea?
 The sun shines yonder; somewhere glows
 The old first hope, bright as it rose,
 The hope whose accent high
 Shall brand this whining lie.

If doubts, risen idols of the Nile,
 Again the hallowed land defile,
 Thunder yet clothes green Horeb's crown;
 Let Sinai speak, and smite them down.
 Life nests yet in the clod,
 Israel has still his God.

The seers, the prophets, poets — they
 See yet the good gold in the day:
 They of his line that conquered Saul
 Can crowd small cowards to the wall,
 They that were Athens' might
 Can put pale wraiths to flight.

Poets, still red at heart, arise,
 Sing back the blue into the skies,
 Sing back the green into the grass,
 And bid these skulking phantoms pass:
 You, dauntless sons of song,
 Can blast this dastard wrong.

Once more, blest messengers, declare
 That love still lives, that life is fair;
 Say knowledge knows not, trust is all,
 And crush these wise which writhe and crawl;
 Wake, wake, your strains of fire,
 God's for us — strike the lyre.

John Vance Cheney.

THE "MERRY CHANTER."

BY FRANK R. STOCKTON,

Author of "The Lady, or the Tiger?" "Rudder Grange," "The Hundredth Man," etc.

I.

MY CAREER IS ENDED.

CAPTAIN TIMON MUCHER.

FOR two years Doris and I had been engaged to be married. The first of these years appeared to us about as long as any ordinary year, but the second seemed to stretch itself out to the length of fifteen or even eighteen months. There had been many delays and disappointments in that year.

We were both young enough to wait, and both old enough to know we ought to wait; and so we waited. But, as we frequently admitted to ourselves, there was nothing particularly jolly in this condition of things. Every young man should have sufficient respect for himself to make him hesitate before entering into a matrimonial alliance in which he would have to be supported by his wife. This would have been the case had Doris and I married within those two years.

I am by profession an analyzer of lava. Having been from my boyhood an enthusiastic student of mineralogy and geology, I gradually became convinced that there was no reason why precious metals and precious stones should not be found at spots on the earth where nature herself attended to the working of her own mines. That is to say that I can see no reason why a volcano should not exist at a spot where there were valuable mineral deposits; and this being the case, there is no reason why those deposits should not be thrown out during eruptions in a melted form, or unmelted and mixed with the ordinary lava.

Hoping to find proof of the correctness of my theory, I have analyzed lava from a great many volcanoes. I have not been able to afford to travel much, but specimens have been sent to me from various parts of the world. My attention was particularly turned to extinct volcanoes; for should I find traces of precious deposits in the lava of one of these, not only could its old lava beds be worked, but by artificial means eruptions of a minor order

might be produced, and fresher and possibly richer material might be thrown out.

But I had not yet received any specimen of lava which encouraged me to begin workings in the vicinity in which it was found.

My theories met with little favor from other scientists, but this did not discourage me. Should success come it would be very great.

Doris had expectations which she sometimes thought might reasonably be considered great ones, but her actual income was small. She had now no immediate family, and for some years had lived with what she called "law kin." She was of a most independent turn of mind, and being of age could do what she pleased with her own whenever it should come to her.

My own income was extremely limited, and what my actual necessities allowed me to spare from it was devoted to the collection of the specimens on the study of which I based the hopes of my fortunes.

In regard to our future alliance, Doris depended mainly upon her expectations, and she did not hesitate, upon occasion, frankly and plainly to tell me so. Naturally I objected to such dependence, and anxiously looked forward to the day when a little lump of lava might open before me a golden future which I might honorably ask any woman to share. But I do not believe that anything I said upon this subject influenced the ideas of Doris.

The lady of my love was a handsome girl, quick and active of mind and body, nearly always of a lively mood, and sometimes decidedly gay. She had seen a good deal of the world and the people in it, and was "up," as she put it, in a great many things. Moreover, she declared that she had "a heart for any fate." It has sometimes occurred to me that this remark would better be deferred until the heart and the fate had had an opportunity of becoming acquainted with each other.

We lived not far apart in a New England town, and calling upon her one evening I was surprised to find the lively Doris in tears. Her tears were not violent, however, and she quickly dried them; and, without waiting for any inquiries on my part, she informed me of the cause of her trouble.

"The *Merry Chantor* has come in," she said.

"Come in!" I ejaculated.

"Yes," she answered, "and that is not the worst of it. It has been in a long time."

I knew all about the *Merry Chanter*. This was a ship. It was her ship which was to come in. Years ago this ship had been freighted with the ventures of her family, and had sailed for far-off seas. The results of those ventures, together with the ship itself, now belonged to Doris. They were her expectations.

"But why does this grieve you?" I asked. "Why do you say that the coming of the ship, to which you have been looking forward with so much ardor, is not the worst of it?"

"Because it is n't," she answered. "The rest is a great deal worse. The whole affair is a doleful failure. I had a letter to-day from Mooseley, a little town on the sea-coast. The *Merry Chanter* came back there three years ago with nothing in it. What has become of what it carried out, or of what it ought to have brought back, nobody seems to know. The captain and the crew left it the day after its arrival at Mooseley. Why they went away, or what they took with them, I have not heard, but a man named Asa Cantling writes me that the *Merry Chanter* has been lying at his wharf for three years; that he wants to be paid the wharfage that is due him; and that for a long time he has been trying to find out to whom the ship belongs. At last he has discovered that I am the sole owner, and he sends to me his bill for wharfage, stating that he believes it now amounts to more than the vessel is worth."

"Absurd!" I cried. "Any vessel must be worth more than its wharfage rates for three years. This man must be imposing upon you."

Doris did not answer. She was looking drearily out of the window at the moonlighted landscape. Her heart and her fate had come together, and they did not appear to suit each other.

I sat silent, also, reflecting. I looked at the bill which she had handed to me, and then I reflected again, gazing out of the window at the moonlighted landscape.

It so happened that I then had on hand a sum of money equal to the amount of this bill, which amount was made up not only of wharfage rates, but of other expenses connected with the long stay of the vessel at Asa Cantling's wharf.

My little store of money was the result of months of savings and a good deal of personal self-denial. Every cent of it had its mission in one part of the world or another. It was intended solely to carry on the work of my life, my battle for fortune. It was to show me, in a wider and more thorough manner than had ever been possible before, what chance there

was for my finding the key which should unlock for me the treasures in the store-house of the earth.

I thought for a few minutes longer and then I said, "Doris, if you should pay this bill and redeem the vessel, what good would you gain?"

She turned quickly towards me. "I should gain a great deal of good," she said. "In the first place I should be relieved of a soul-chilling debt. Is n't that a good? And of a debt, too, which grows heavier every day. Mr. Cantling writes that it will be difficult to sell the ship, for it is not of a sort that the people thereabout want. And if he breaks it up he will not get half the amount of his bill. And so there it must stay, piling wharfage on wharfage, and all sorts of other expenses on those that have gone before, until I become the leading woman bankrupt of the world."

"But if you paid the money and took the ship," I asked, "what would you do with it?"

"I know exactly what I would do with it," said Doris. "It is my inheritance, and I would make use of it. I would take that ship and make our fortunes. I would begin in a humble way just as people begin in other businesses. I would carry hay, codfish, ice, anything, from one port to another. And when I had made a little money in this way I would sail away to the Orient and come back loaded with rich stuffs and spices."

"Did the people who sailed the ship before do that?" I asked.

"I have not the slightest doubt of it," she answered; "and they ran away with the proceeds. I do not know that you can feel as I do," she continued. "The *Merry Chanter* is mine. It is my all. For years I have looked forward to what it might bring me. It has brought me nothing but a debt, but I feel that it can be made to do better than that, and my soul is on fire to make it do better."

It is not difficult to agree with a girl who looks as this one looked and who speaks as this one spoke.

"Doris," I exclaimed, "if you go into that sort of thing I go with you. I will set the *Merry Chanter* free."

"How can you do it?" she cried.

"Doris," I said, "hear me. Let us be cool and practical."

"I don't think either of us is very cool," she said, "and perhaps not very practical. But go on."

"I can pay this bill," I said, "but in doing it I shall abandon all hope of continuing what I have chosen as my life work; the career which I have marked out for myself will be ended. Would you advise me to do this? And if I did it would you marry me now with

nothing to rely upon but our little incomes and what we could make from your ship? Now, do not be hasty. Think seriously, and tell me what you would advise me to do."

She answered instantly, "Take me, and the *Merry Chanter*."

I gave up my career.

II.

SHE IS HE, AND IT IS OURS.

A MAN and wife stood upon Asa Cantling's wharf at Mooseley, gazing with wide-open eyes at the *Merry Chanter*. All claims had been paid. The receipt was in my pocket.

"I will not look upon the ship," Doris had said, "until it is truly ours; until every taint of debt shall have been wiped away."

How long, how high, how big it was! It had two towering masts. As I gazed upon it my heart swelled. It was a career!

Doris suddenly seized me by the hand. "Come," she said, "there he is!"

"Who?" I exclaimed.

"The *Merry Chanter* himself!" she cried, running with me towards the bow of the vessel, which on our first approach had been concealed from us by a pile of barrels.

We went upon the narrow space between the barrels and the wharf and stood close to the *Merry Chanter*, the wooden figure-head which gave the name to the ship.

He was a stalwart fellow eight feet high, and so firmly fastened to the bow of the vessel that the waves of the sea and the winds of the air had never been able to move him. But long voyages in storms, in glowing heat, or in icy spray had had an effect on his physical organization. When young he had probably been of pleasing colors, but now every trace of paint had vanished; even the mahogany brownness of his nose and cheeks was probably due to the natural hue of the wood of which his head was formed. The rest of him was of a uniform weather-beaten grayness.

The rest of him must be understood to mean what remained of him; the whole of his original self was not there. His head was thrown back; his long hair hung upon his shoulders; and his mouth was open, as if in the act of trolling out some jolly sea song. His right arm had been stretched out after the manner of one who is moved by the spirit of the words he sings, but the greater part of that arm was now gone. Some wild, rollicking wave had rushed to meet him, taken him by the hand, and gone off with his arm.

His other arm held a short cloak about him and still remained entire, but he had no feet and one of his knees had been knocked away, but still he stood up, bold and stout, chanting

his brave roundelays, which one could hear only when waves were tossing or winds roaring. What if his nose was split, his chin dented, and his beard broken—the spirit of the *Merry Chanter* was still there.

How many a wave crest must have swashed into that open mouth as the chanter boldly chanted, and the ship plunged! But how merrily he rose, all dripping, and sang on!

The eyes of Doris were glowing as she looked upon him. "He shall lead us to fortune," she said, taking my hand. "Shall he not?"

The spirit of the chanter and of Doris was upon me. "Indeed he shall!" I answered, warmly.

Asa Cantling, or as he was called in the village, Captain Asa, now came upon the wharf and asked us if we would like to go on board. Like to! Of course we would! To go on board was the dominant purpose of our souls.

Captain Asa was an oldish man, but reaching up to some iron bars which projected from the vessel he clambered up her side with the monkey-like agility which belongs to a sailor. In a few minutes he lowered a ladder with a hand-rail, by which Doris and I went on board.

"She's a good schooner yet," said Captain Asa, as with swelling hearts we stood upon our deck. "She's too big for us, but she's got good timbers in her; and if you'll have her towed to New Bedford, or Gloucester, or some such port, I don't doubt you'd get more for her than you've paid."

I looked at Doris. Her eyes flashed, and her nostrils dilated, but she made no answer to these cold-blooded words. We walked the length of our deck. How long it was! Captain Asa pointed out the various objects of interest as we passed them—windlass, galley, capstan, wheel; all nautical, real, and ours.

"I've kept the hatches down," said Captain Asa, "skylights shut, and everything stowed away ship-shape. I'd ask you to go below, but we must come again for that."

Almost with one voice we besought the captain not to let us keep him a moment from his dinner. We would remain on board a little longer. We were not ready for our dinner. We watched him as he went down the ladder and into the village, and then we sat down on a double-pointed log that was bolted to the deck. The bulwarks were so high that we could not be seen.

"We did not sit long. Up sprang Doris. "Let us go below!" she cried. I followed her, and after entering the cook's galley by mistake, we found the door at the head of the stairs which led below, and hurried down.

The air below was close, and the ship's

smells were of an old and seasoned sort; but everything was excitingly interesting. We ran from one end to the other of this lower deck. We looked into what must have been the captain's cabin. It was cozy to an extreme that made Doris clap her hands. We looked into the sailors' bunks. We looked at the great masts which came from below and went up above — our masts!

We examined everything forward, amidships, and aft, and then I lifted a hatch and we looked down into the dark depths of the hold. We could not see much and did not dare to descend without a light, but the cool air which came up to us smelled as if all the odors of Araby and the spicy East had been tarred and salted and stowed away down there.

When at last we reascended to the deck Doris stood still and looked about her. Her face and eyes shone with a happy glow. Stretching out her right arm she exclaimed: "All hail to our *Merry Chanter*! We shall sail in him to the sunny seas of the south, and, if we feel like it, steer him into the frozen mysteries of the north. He shall give us fortune, and, what is better still, we shall go with him wherever he goes, getting all manner of fun and delight out of him while he is lifting us to opulence. And now I think it must be a good deal past our dinner-time, and we'd better go and see about it."

As we walked through the village to the little hotel where we had taken lodgings, two ideas revolved themselves in my mind. The first of these I mentioned to my wife.

"Doris," said I, "as we own a ship, and intend to sail on it, we should be more nautical, at least in our speech. You should not speak of a ship as 'he.' 'She' is the proper expression."

"I don't agree with you," said Doris. "I think it is all nonsense calling ships 'she' without regard to their real gender. It is all very well to call the *Sarah Penrose* 'she,' or the *Alice*, or the *Mary H.*,"—pointing to fishing-vessels in the little harbor,— "but when you speak of the *Royal George* or the *Emperor William* as 'she,' it is silly and absurd. The *Merry Chanter* is a man. He gave his manly name to our ship. Our ship is not a female."

"But," said I, "every sailor calls his ship 'she.' It is tradition, it is custom; in fact, it has become law."

"It is all stuff and nonsense," she said. "I don't care a snap for such tradition and such law! Sailors ought to have learned better by this time."

"But you don't want to be laughed at, do you?" I asked.

"No, I don't," she answered promptly. "We cannot have proper authority in our ship if we

are laughed at, and I will do this: I will consent to call the ship 'it,' but I will never consent to call it 'she.'"

And with these words we entered the hotel.

The other idea which entered my mind was a more important one. I had noticed, especially when we were on board the ship, that Doris was taking the lead in everything. It was she who had declared what we should do, where we should go, that one thing should be done or another left undone. Now this was all wrong. It was a blow at the just constitution of matrimony. Of course, in these early days of our married life I was glad to let my bride talk and plan as she pleased; but she was going too far. If this thing were allowed to continue it would become a habit.

What step I should take to nip in the bud this little weed which might grow until it overshadowed our happiness I could not immediately determine. It must be a quick, vigorous, and decided step. It must settle the matter once and for all time. Of course I would be tender, but I must be firm. As soon as possible I would decide what the step should be.

That afternoon we went to see Captain Asa to ask him what sort of marine traffic he thought we would better begin with.

"You see," said Doris, "we want to engage in some coastwise trading, in order that our profits may enable us to set out upon longer and more important voyages."

"That is the state of the case," said I. "My wife agrees with me entirely."

"Now, what shall we load with first," said Doris, "hay, fish, or ice?"

Captain Asa smiled. "As for fish," he said, "our own boats bring in all the fish that can be turned into money in this town, and if we send away any they've got to get to market while they are fresh, and it may be the railroad 'll get 'em there quicker. And as for hay, we don't get much hay from along the coast—that is, if we want the cattle to eat it. That generally comes from the West, by rail. Ice? Well, this is n't the season to ship ice."

"But there must be other things," said Doris, anxiously.

"Yes," said the captain, "there is. Now I 'll tell you what would n't be a bad thing. Sail your vessel up to Boston and get a load of flour. You can afford to bring it down cheaper than the railroad can. There 'd be some took in this town. I 'd take a barrel. And a good deal might be sold along the coast if you put it cheap enough. Then, again, when you get to Boston you may have the good luck to sell your vessel."

"The *Merry Chanter* is not to be sold," said Doris, emphatically.

"All right," said the captain. "That point

sha'n't be touched upon ag'in. Well, if you're goin' to set out on tradin' v'yages, you 'll want a crew."

"Yes," said I, "of course we shall want a crew."

"A crew costs a good deal, does n't it?" asked Doris.

"That depends," said Captain Asa, "on the kind of crew you get. Now an out-and-out crew for that schooner —"

"But we don't want an out-and-out crew," interrupted Doris; "and if you tell us what such a crew will cost it will simply drive us stark mad, and the whole thing will come to an end."

"You must understand, Captain," I said, "that we wish to make a very quiet and inexpensive beginning. We can spend but little money at first, and cannot afford to employ large bodies of men."

"It is the management of sails that occupies a good deal of the time of a crew, is n't it?" asked Doris.

"Yes," answered the captain. "That's a good part of it."

"Well, then," continued Doris, "my idea is this: we 'll sail the *Merry Chanter* at first with as few sails as possible, and then we need only have enough men to work those sails."

"All right!" said the captain. "Things can often be done one way as well as another if you have a mind to. There's many a good ship been sailed short-handed. You can't make quick v'yages that way; but as you are the owners, that's your business."

We both agreed that we had no intention at present of making the *Merry Chanter* a greyhound of the sea; and, after some further consideration of the subject, Captain Asa said he would talk to some people in the town and see what he could do towards getting us a crew of the sort we wanted.

III.

WE SHIP A CREW.

EARLY the next morning an elderly personage introduced himself as Captain Timon Mucher. He was a man of medium height, gray hairs, and a little bowed by years; but he had sharp bright eyes, and a general air of being able to jump about a yard from the floor. His storm-beaten features were infused with a modest kindness which instantly attracted Doris and me.

"Cap'n Cantlin," said he, "told me that you're lookin' for a crew for that schooner o' yourn. Now, sir, if you're agreeable, I'd like to go in her as skipper. Everybody in this town knows what sort o' skipper I am, and they 'll tell you. I did think I'd about give

up navigatin', but when I heerd yesterday that that schooner that's been lying so long at Cantlin's wharf was goin' to sea, there come over me the same kind of hanker for outside rollin' and pitchin' that I used to have when I happened to be ashore without a ship. I've got a good cat-rigged fishin'-boat and I go out in her every day that's fit. And there is times when I get a good deal of outside pitchin' and rollin'. But pitchin' and rollin' in a cat-boat is n't what a man that's been brought up to the sea lays awake more 'n half an hour and hankers for. If there had n't been no schooner goin' to sail from this port and wantin' hands I guess I'd stuck pretty quiet to the cat-boat; but now there is a schooner sailin' from here and wantin' hands I'd like to go in her as skipper."

Doris and I looked at each other, and then at the old man. Instinctively we both stretched out our hands to him. He was captain of the *Merry Chanter*.

It was plain enough that Captain Timon Mucher was delighted with our decision.

"Well, now," said he, "it just tickles me to sail with owners like you, who knows your own minds and settles a bargain as quick as a squall tips over a sail-boat full of young fellers from town."

I did not like to break in on the old man's satisfaction, but I felt bound to state that the bargain was not yet completed.

"Bother bargains!" said Doris. "We're going to have the captain anyway! Did n't we say so?"

"But it is possible," said I, "that he may expect a — a salary larger than we can afford to pay."

"As to that," said Captain Timon, "there need n't be no words about that; I 'll go sheers with you if you like."

This was reasonable, and pleased the owners. We were very willing to give him part of the profits.

"What share would you require?" I asked. "Well," said he, "we can divide what we make each v'yage into six parts, and I 'll take one of 'em. Does that strike you as fair?"

It struck us as quite fair.

We now had a long talk with our captain and got all sorts of information. At length he left us; but in about an hour he, with Captain Asa, came just as we were about to start out for the wharf, and brought with them three elderly men, evidently of the seafaring class. These were presented to us as Captain Retire Garnish, Captain Jabez Teel, and Captain Cyrus Bodship.

The three stranger captains gravely came forward and shook hands with us. As I have said, they were all elderly men; the youngest-

looking of them, Captain Cyrus Bodship, must have been sixty. Strange to say, my wife and I were both struck by a certain similarity in these men, a sort of family likeness. This must have been due to the fact, Doris afterwards remarked, that they were all sons of Mother Ocean, for, in fact, they were not at all alike. Captain Garnish was large and tall, Captain Teel was of a sparish figure, while Captain Cyrus Bodship was short, and inclined to be stout.

In one respect they were alike: each wore a very large and stiffly starched shirt-bosom with a black silk neckerchief, and each one looked uncomfortable in his suit of Sunday clothes. In this respect Captain Cyrus Bodship had a slight advantage over his companions, for he had on a pair of black velvet slippers embroidered with red.

"These gentlemen," said Captain Asa, "would like to ship as your crew."

Doris and I could not help smiling. "Crew?" said I. "I thought they were all captains."

"So they are, so they are," said Captain Asa. "But they can speak for themselves."

We now all seated ourselves in the little parlor, and Captain Garnish, without any hesitation, began to speak for himself.

"As for me, I 'm a captain if ever anybody was one. Since my thirty-second year I 've been skipper on one craft or another till four years ago last April I settled down here and took to fishin'. That 's my history. When I heard that Cap'n Timon here was goin' to be skipper of your schooner I says to myself: 'I 'd like to sail with him. There ain't nothin' about a ship I don't know, there ain't nothin' about a ship I can't do. I 'd rather go to sea than fish, and I 'm ready to sign the papers.'"

"All that 's about the same with me," said Captain Jabez Teel; "only I did n't get to be captain till I was thirty-eight, and I came here nigh on to five years ago. Otherwise Cap'n Garnish and me is in the same boat, and I 'm ready to sign papers."

Captain Cyrus sat silent a moment with a jolly sort of grin on his face. "I 've been tryin' to think what year it was I was fust made captain, but it 's too fur back; I can't put my finger on it. As for other partic'lers I 'm pretty much in the wake of Cap'n Garnish and Cap'n Teel here. Perhaps I 'm a good ways astern, but I 'm younger than they is, and may overhaul 'em yit. I 'm ready to sign papers."

The situation was interesting and amusing. "Do you mean to say," I asked, "that you three will make a sufficient crew for our vessel?"

Captain Timon immediately spoke up. "Yes, sir. They are all the crew I want. With them three I 'll sail your schooner, and there won't

be no complaint. Yes, sir; that 's what I say."

Engaging three old men as our crew seemed to us a serious matter, and I asked Captain Asa to step with me into a back room. Doris followed.

"Do you really think," I asked the captain, "that these three can work our ship?"

"Of course they can do it," said he. "Each one of 'em is worth three ordinary seamen; they 've got heads on 'em, they has! And they 're as lively as old cats besides. Now there 's Cap'n Garnish. He 's sailed vessels on every sea on this globe. He 's the man that run his vessel—a three-masted schooner she was—from the Straits of Malacca to Madras, nigh on to fifteen hundred miles, on one tack with a stiff nor'-easter, and a hole in her starboard quarter as big as that table. There wa' n't no time to have his ship docked if he wanted to save his cargo, and a hole like that could n't be patched up by him and his crew. And so twenty minutes after he was run into he set every inch of canvas there was a spar for, and drove her right slam across the Bay of Bengal, with her lee scuppers mostly takin' in water, but her weather-quarter with the hole in it high and dry. When he came into port at Madras they would n't believe that he 'd raced across the Bay, with his ship stove in like that."

Doris had listened with admiration. "But could he do that now?" she asked.

"Do it?" said Captain Asa. "Of course he could! He could do it with a hole twice as big! And there 's Cap'n Teel," he continued. "He was friz up two years in Melville Straits when he was commandin' of a whaler; and, more 'n that, he has had his ships wrecked under him eleven times, which is four more than anybody in this State can say; and he and his crew came out all right every time, either trampin' off on shore or bein' picked up. What he has n't been through is n't worth goin' through!"

"And there 's Cap'n Cyrus. Now Cap'n Cyrus is the luckiest seaman that ever sat on a thwart. He never had nothin' happen to him. He 'd always run into his home port with the same old grin that he set sail with. Once, bound to Australia,—I think it was in '59,—he had his three top-gallant masts blown away by a typhoon. Now, Cap'n Cyrus said to himself that he guessed he 'd got it this time, and that he 'd be long overdue at port, for he did n't carry no spare spars along, havin' got out o' the way of carryin' 'em on account of his bein' so lucky and never havin' no need of 'em; but this did n't make him feel grumpy, for, as he said to himself, a little change would do him good. But, would you believe it?

when he anchored at an island to take in fresh water, he went on shore himself, and, climbin' a little hill, he saw, on the other side of the island, another ship takin' in water, and the skipper was his wife's cousin, Andrew Tinkey, with plenty of spare spars aboard; and Cap'n Cyrus's vessel bein' rigged up in double-quick time by both crews, she got into port a week before she was looked out for. I tell you what it is, an owner has got to hunt a long while before he finds three such cap'ns as them!"

In spite of my admiration of these noble fellows I could not help being practical. I could not believe that they would be able to do everything. But when I asked if some younger persons would not be needed on the ship, Captain Asa answered very decidedly: "No, sir; no young fellows nor boys won't be needed. If you shipped a bigger crew the profits would have to be cut up into smaller sheers, and the cap'ns would n't stand that."

"But suppose we don't make any profits," said Doris. "That would be a great loss to these brave old sailors."

"Oh, they won't lose nothin'," said Captain Asa. "They've all got good houses, and they rent 'em out for the summer to city people. I've got the lettin' of them. They're all widowers, from two to three times over, except Cap'n Cyrus, and his wife has been livin' for nigh on to five year at West Imbury, so he's as free as a sandpiper, and no funeral in the family nuther."

Again my practical mind asserted itself. "Look you, Captain," said I. "Is it expected that we are to furnish provisions for the crew as well as ourselves, and to supply money for the purchase of the cargo when we get to Boston? If that is the case, I think that two-sixths of the profits is but a poor return."

"Oh, bother the profits!" cried Doris. "I want to hoist anchor and put to sea!"

Captain Asa looked at her admiringly. "You're just like them cap'ns," said he. "They're all hankerin' to feel the ship heave and to smell bilge-water. But what you say is worth considerin', sir. I'll go and speak to 'em about it."

In a few minutes he returned and stated that the captains allowed that what I said had sense in it, and that they all agreed to chip in and each pay one-sixth of expenses for stores and cargo.

"Good!" cried Doris. "Now everything is settled, and let us be on board and away."

But there was a good deal to be done before we could be "on board and away." The captains, however, were as anxious as Doris to be away, and lost no time in the necessary preparations. They knew just what to do and what to get, and naturally we left everything to them.

But the whole of the little town took an in-

terest in the fitting out of the *Merry Chanter*, the stout old ship that had lain so long at Cantling's wharf. Doris received much advice and some small presents from the women, while the men gave a good deal of voluntary service which we well knew was all for the sake of their old mates, the four captains.

Some things I could not help thinking of, and standing by Captain Timon on the wharf, I asked him if a wooden ship lying so long in the water did not accumulate a great many barnacles on her side, which would impede her sailing.

A shade of uneasiness passed over the face of the old man. "Of course," said he, "when a vessel's been tied up for two or three years in salt water it's no more 'n nat'ral that she'd have barnacles on. Natur' is natur' and there's no gettin' round it, and of course if the barnacles was cleaned off her she'd make more knots an hour than she would with 'em on her. But I tell you what it is, sir, if you begin with barnacles there's no tellin' how fur you'll have to go on, nor where you'll stop. Why, sir, if she was my ship, and things was as they is, I would n't do as much as to paint the door of that galley. If you begin anywhere, barnacles or paint, you're bound to go on, and there'd be no v'yage made in that ship this year. It would be like old Tom Duffin of Scap's Neck. Tom was about as well off as anybody in these parts. He had a good house and a big sloop-rigged fishin'-boat. She wa'n't as fast as some, but she was so big and safe-lookin' that the city people who came down here always wanted to go sailin' with Tom, and he charged 'em high, he did, for in some ways he wa'n't no fool. But bein' with these fine people so much kinder twisted Tom's head, and one day he went off and bought himself a new shiny black silk hat. That was Tom's turnin'-p'int. With that hat on his head, his Sunday clothes, which ought to have lasted him all his life, wa'n't good enough, and he got new ones. Then his wife's clothes wa'n't good enough to go along with them, and she got new ones. Then the children's clothes wa'n't good enough to go along with them, and they got new ones. And then his furnitur' wa'n't good enough to go along with all them fine clothes, and new had to be got. And that made the house look mean, and Tom set to work to build a new one. There ain't no use carryin' the story all along, but Tom went straight from that new silk hat to the Bremport poor-house, where he is now; and his wife a nurse in the chronic ward, and his children out to service in Boston. Now, sir, I look upon them barnacles as just the same as that black hat. If you begin on them you may not bring up at the poor-house, but there's no knowin'.

"WE NOW ALL SEATED OURSELVES IN THE LITTLE PARLOR."

where you will bring up. The only thing anybody can know is that there will not be no v'yage this year."

I could readily understand Captain Timon's meaning and his anxiety to start on our voyage. If we undertook to put the *Merry Chantier* into good repair the chances of those four old captains feeling the heave of the seas and smelling bilge-water would be small indeed.

"From what you say I suppose you can sail the ship, barnacles or no barnacles," I said.

"Sail her!" he exclaimed. "Just you wait and see! And the best thing we can do is to hurry up her stores and get sail on her. The longer she lies here the more barnacles she 'll get."

When I repeated this conversation to Doris she declared that Captain Timon was exactly right. "We have no money to bedeck and adorn the *Merry Chantier*," she said, "and if we had I would n't do it. If we got her all into sleek and shiny ship-shape I suppose we 'd have to have a regular ship-shape crew, and I would n't have that for the world. Let us get on board with our four lively old captains and sail away before anything turns up which will positively have to be done."

IV.

THE "MERRY CHANTER" SETS SAIL.

As soon as possible Doris and I took possession of our quarters on the *Merry Chantier*. We occupied the captain's cabin, and our good skipper bunked forward with the crew.

"If they was common seamen," said he,

I would n't do it; but as they 're all captains as well as me, I don't mind."

While busily engaged in arranging our cabin one morning we were informed that some one wanted to speak with us, and we went on deck. There we found a person whom for some days we had noticed walking up and down on the wharf, and showing an evident interest in our ship and our preparations. He was a fresh-looking, smooth-faced young man, over thirty perhaps, who stood up very erect and whose general air indicated that he was one who, having found out what was good and what was bad in this world, had been content to act upon his knowledge, but at the same time to give himself no airs of superiority to other people who had not found out what he knew. This was a good deal for anybody's air to indicate; but Doris told me afterwards that it was what she thought this man's air indicated. His manner of speaking to us was at the same time independent and respectful.

"Would it suit you," he said, "to take me on board your ship as a passenger?"

We were somewhat surprised. "Where do you wish to go?" I asked.

"I have been told that you sail for Boston," said he.

I replied that Boston was our destination.

"Very good," said he. "Then I wish to go to Boston."

"But, sir," said Doris, "you can go a great deal quicker by train, you know."

"I do not wish to travel by land," he said. "I

wish to sail by sea. I do not care very much to be in Boston, but I wish to go there on a ship."

"Are you a sailor?" I asked.

"No, sir," he said; "I am a butcher. For four years and a half I have carried on butchery in this neighborhood. You can inquire of anybody as to my character. I do not wish to butcher any more, at least for the present. I have saved some money and I intend to travel, and it struck me that I'd rather begin my travels on your ship than in any other way. I do not wish to work, but to pay my passage. Of course, if there's a wreck, or a man overboard, or the ship takes fire, I'm willin' to do my part as man to man. But otherways what I want is to pay my way, and to be beholden to no man, nor to have him beholden to me, exceptin' in such things as are understood to be owed by man to man."

We asked for a little time for consideration, and retired to the cabin, whither we summoned Captain Timon.

"He speaks us fair," said Doris. "I think he would make a good passenger."

Captain Timon thought so too. "He's a very respectable young man," said he; "straight-forward and honest, and means what he says. If he wants to get the worth of his money travelin', I guess he knows as well as we do that he can get it on board this schooner; and the money he pays will be somethin' sure to count on."

"What shall we charge him?" asked Doris.

"Well," said Captain Timon, "if you make it somethin' that can be divided even into six parts I'll be satisfied, and I know the others will."

I then made a suggestion based upon the ordinary fare to Boston, which, after some modification, was agreed to; and I went on deck to inform the young man that for so much money we would take him as passenger to Boston.

The butcher instantly agreed to my terms, consented to bunk forward with the crew, and went ashore to fetch his baggage. In two or three hours he returned, bringing his effects in a cart. They consisted of a large trunk, a small trunk, a square, leather-covered box, two long oblong boxes, a package wrapped in an oil-skin cloth, and a market-basket, the cover of which being slightly raised I saw to be full of boots and shoes. Besides these he carried in his hand a cage containing a sandpiper, with one wing carefully bandaged to its body.

"It looks like a good deal of baggage," he said to me, "just for a trip to Boston. But it is n't only to Boston that I want to go. I've set out to travel just as long as I can keep it up. I've sold my horse and wagon, and what's here is all the property I have, and wherever I go I take it with me. As for this bird," he said, "I saw him on the beach with

a broken wing, and I caught him, and now I'm tryin' to cure him up. When animals is too small to butcher, I'm fond of 'em."

And thereupon, assisted by his carter, he carried his property below.

Doris and I were getting very impatient to start on our voyage, but there seemed to be no end of delays, the principal of which was connected with the shipment of stones—cobblestones of varied sizes. As the *Merry Chanter* could ship no cargo at Mooseley, for the reason that there was nothing there to ship, it was necessary that she should go to Boston in ballast, and these stones were her ballast.

"They are filling it up from one end to the other!" cried Doris. "I never saw anything like it! This waiting for bread and getting stones is more than I counted on, Captain Timon," she cried. "If there are so many barnacles on the ship I should think they'd serve for ballast."

The skipper shook his head. "It won't do to trust to barnacles," he said, "though I don't doubt there's a good many of 'em. But don't be afraid, ma'am. We'll get her off before you know it."

It was on the morning of a Wednesday, the third of June, that Captain Timon came to us rubbing his hands and declared that the *Merry Chanter* was ready to sail. He called the ship the *Chanter*, but that was an abbreviation my wife and I never allowed ourselves to adopt.

"Hurrah!" cried Doris, before I could find words to express my satisfaction. "And now, dear Captain, let every sail be set, and hoist our ensign to the topmost peak."

A smile came over the face of the good skipper. "I guess we won't set every sail," said he. "They won't be needed with this wind; and as to ensign, I don't know as we've got one aboard."

"That is too bad!" said Doris. "As soon as we are fairly off I'll go to work and make one myself."

Everything being now all ready, and Captain Timon having done everything that should be done for a schooner clearing for Boston, we hoisted anchor; that is to say, we cast off the cables which for so long had held the *Merry Chanter* to Cantling's wharf.

It seemed to me as if the whole town had turned out to see us off and to help us get off. More willing hands than were really necessary helped the captains to hoist the foresail, the mainsail, and two jibs; and when this had been done the owners of the willing hands scuttled down into their boats, made fast to a line from the *Merry Chanter*, and vigorously pulled her bows around so that she might take the wind.

It was a long time before her bow got around or she took the wind; but Doris and I and the butcher scarcely noticed this, so busy were we waving our handkerchiefs and shouting good-byes to the women, the children, and the old men on the wharf, who in return waved their handkerchiefs, their hands, or their hats to us, wishing us a lucky voyage, fair winds, and smooth water.

At last the *Merry Chanter* was got around, the wind filled her sails, the boats cast off, and, pulling to a little distance, their occupants waved their hands and cheered; there was a slight inclination of the deck to leeward, and our ship was under way.

It is seldom, I think, that a ship goes to sea with a crew composed entirely of captains, but the consideration of the fact gave us great comfort. Here were men with long lives of experience. Whatever might happen, they would know exactly what to do. These noble seamen had been from pole to pole; they had known the desolation of the icy north; they had sailed through the furious typhoons of the tropics; and with sound ships, or ships with

and lively seamen, were our captains. No one could imagine that years hung heavy upon them. Captain Timon stood at the helm with the bold, bright eye of an old sea-king. Captain Garnish, acting as mate, strode tall and strong along the deck, looking up at the sails and rigging with the air of a man who knew exactly what each inch of canvas, each stick of timber, and each piece of cordage should at that moment be doing, and ready, if he saw the least thing amiss, to roar out condemnation.

Captain Teel had assumed the duties of cook, and was now shut up in the galley; but Captain Cyrus, as lively as a squirrel, and still wearing his embroidered velvet slippers, was here, there, and everywhere, stowing away this, coiling up that, and making things generally ship-shape, and always with a pleasant grin upon his face as if it were all an old story to him and he liked it.

Doris ran forward to see how the *Merry Chanter* himself was getting on, and I followed. We leaned over the bulwarks of the bow and looked at him. There he stood, part of his right arm still extended, his head thrown back, and his long hair appearing ready to float in the breeze, while his open mouth seemed drinking in the fresh salt air.

"Look at him!" cried Doris. "He is all ready for the tossing waves, the roaring gale, and the brave sea song. How grand it must be to stand there with nothing but the sea before him, catching everything first, and afraid of nothing!"

Seizing my hands, Doris danced away with me over an almost level deck. "Is n't this grand?" she said. "And treading our own deck! Let's pipe all hands to grog!"

I entered into the enthusiasm, but demurred to the grog-piping.

On the opposite side of the deck walked up and down the butcher, clad in an immaculately clean white gown of the kind peculiar to his trade, and worn probably with the idea of keeping the dust off his clothes.

"How do you like the sea?" asked Doris as we passed.

"I think I shall like it when we get there," said the butcher.

"Get there?" she exclaimed. "Don't you call this the sea?"

"No," said he, "this is Mooseley harbor. When we get round that point, two miles below here, then we are really out to sea."

Captain Teel now appeared and informed us that dinner was ready. It had been decided that the butcher, as a passenger, should mess with us. Captain Timon was also to be one of our company, but he declined to leave the wheel for the present.

THE OWNER OF THE "MERRY CHANTER."

battered sides, they had dashed in safety through maddened waves from port to port. And not only the best of good seamanship, but the best of good luck, we carried with us. In all his life Captain Cyrus had never had anything serious happen to his ships; and why should he begin now? It was especially consoling to me, as I looked at my lovely wife, to think of these things at the outset of our wedding trip.

Not only seamen of vast experience, but able

The butcher appeared at the table in a neat suit of new clothes, having removed his gown. He was, indeed, a very tidy and proper-looking fellow. As he was used to that sort of thing, I invited him to carve.

"No, sir," said he quietly, but with decision; "I have shut the shop door behind me."

We had fine sea appetites for our meal, but Doris ate hurriedly. "I am so afraid we 'll pass around the point while I am down here,"

to look over our little stock of literature; and while so engaged we heard a great sound of flapping and banging upon deck. Hurrying up, we found that the sails were loosely swinging and hanging, and that the crew, assisted by Captain Timon, were engaged in pulling them down.

"What is the matter?" we cried.

"Nothin' is the matter," replied Captain Cyrus, cheerily. "We 're goin' to fish."

"LOOK AT HIM!" CRIED DORIS."

she said. "I would n't for the world miss our actual passage out on the bosom of Mother Ocean!"

When we ran on deck we looked about and beheld the point still ahead of us.

"Why, Captain Timon," cried Doris, "have we sailed a bit?"

"Oh, yes," he said cheerily; "we 're gettin' on, we 're gettin' on. We have n't lost no head-way so fur. 'This wind 'll freshen before long, and then you 'll see.' And, leaving the helm in care of Captain Garnish, he went below.

Whether the wind fell off instead of freshening, or whether, as Doris surmised, we had become accidentally anchored, we certainly made but little progress, and there were times when it seemed as if the distant point were actually becoming more distant.

As there was no probability of an immediate rush out upon Mother Ocean, we went below

Doris sat down on something. "Fish!" she gasped.

Captain Timon now came towards us. "You see," said he, "it ain't no use tryin' to make head-way against this flood tide; and so we thought we 'd a great sight better anchor and fish. The fish 'll be comin' in lively with the flood. The tide will turn about six o'clock, and then we can go out on the ebb and pass the p'int in just the prettiest time of the evenin'. And if you want to fish, there 's lines enough on board for everybody."

For some minutes we were disgusted to the point of not being able to say how disgusted we were. Then Doris, seeing the captains gathered at the stern all busy in preparing their lines, sprung to her feet and declared that she might as well make the best of it, and that she was going to fish.

Captain Cyrus took charge of her, baiting

her hook, and cheerily giving her all needful help and advice. As for me, I did not care to fish; and as for the butcher, he did not care to fish; and, together, we walked forward.

"It's my opinion," said he, confidentially, "that this is a stone ship. I'll lay two to one there's barnacles on her like the foundation walls of a church, and inside they've loaded her up with stone enough for a monument. If she ever sticks fast on a bar she'll be solid enough to build a lighthouse on."

"You don't seem to have faith in the sailing qualities of our ship," said I. "You must be sorry you took passage with us."

"Oh, no," said he. "I've come on board with all my belongin's, and I intend to stick to her as long as anybody else does. Stone ship, or wooden ship, I don't go back on my bargain."

The *Merry Chanter* was lying two or three miles from Mooseley and about a mile and a half from the point. The wind and tide together had swung her around so that she lay almost broadside to the distant town. Looking in that direction we saw, far away, a little boat.

The butcher gazed a few moments in silence, and then he said: "There's a skiff comin' after us from town. Perhaps they think something's happened. I'll go down and get one of the spy-glasses and see who it is."

When he returned with the glass he leveled it at the boat. For a few moments he gazed, and then he said, forcibly, but in an undertone, "I'll be knocked in the head if that is n't Captain Cyrus's wife!"

"What do you suppose she wants?" I asked. "Why does she come?"

"No man can tell you that," he answered. "She hates sea air, and won't live with him. But since I've been in these parts she's come down four times to see him, and every time he has been away on a fishin' cruise or something. You know Captain Cyrus goes for the luckiest man in the world. But, my conscience! she made it hot for the neighbors when she saw the way his house was kept. And now she's found him off again; but bein' anchored, she's come after us. I'll go and report to the skipper."

So saying, he walked aft, and taking Captain Timon aside, he stated what he had seen. I followed, and I perceived that this intelligence had a wonderful effect upon our skipper.

"Don't say a word to Captain Cyrus," he whispered to us. "We must get out of this in no time." And, without a moment's delay, he piped all hands to haul up fishing-lines, weigh anchor, hoist sail, and get under way.

In these hurried preparations I did what I could to help; and the butcher looked as if he would like to follow my example, but was

restrained by the proprieties of his position as a passenger.

"If there's any danger of that boat catchin' up," said he, "I'll lay hold and work like a good fellow; for her comin' aboard will be worse than a ship afire."

The skipper was now at the wheel. "We're goin' to run her before the wind," he said, "and we won't try to double the p'int. That land off there makin' the sou'-west line of our harbor is an island, and there's an inlet between it and the mainland that we can run through. Wind and tide will both favor us, and I reckon we can get away; and Captain Cyrus won't never know nuthin' about it. That boat can't pull across the bay after us; she's huggin' the shore now on account of the tide. Them's two colored men that's been waiters at a hotel that's pullin' her. There ain't a man belongin' to our town that would get out his boat to take Captain Cyrus's wife after him."

"But will not Captain Cyrus suspect something from your sudden change of plans?" I asked.

"He knows the fish would n't bite," said the skipper, "and that ought to be reason enough."

The situation had been explained to Doris, and she was wildly anxious to have every stitch of canvas crowded upon the *Merry Chanter* that she might speed across the bay, and away from that little boat.

"What she wants is to come aboard," said Doris, "and we can't have a woman like that on the *Merry Chanter*. If she wants to scold her husband let her wait until he gets home. It is n't far to Boston and back."

Captain Timon smiled at this remark. "We're not on a straight line for Boston just now, but if we try to double that p'int she'll catch us sure."

"Then let us forget there is a point," said Doris, who in this matter was exactly of my opinion.

It did not seem the *Merry Chanter's* habit to dash through the water, but with a good wind behind her and a tide more in her favor than against her she sailed across the bay at a rate considerably greater than that of a boat rowed by two inexperienced oarsmen. When the little boat saw what we were about she left the shore and steered as if to cut us off. But it was easy to see that the tide was carrying her back towards the town.

The tide also carried us in a somewhat retrograde direction, but by the aid of the wind we laid a straight course for the inlet of which Captain Timon had spoken.

Captain Cyrus was kept busy forward and suspected nothing of his pursuit by the little boat.

"She has about gin up the chase," said

Captain Timon, looking back at the boat. "Them fellows can't catch a schooner sailing afore the wind, and I don't believe they want to try much nuther. We was at anchor when they put out from town."

I had known oarsmen who, I thought, would be able to catch that schooner even were she sailing before the wind.

In about two hours we reached the inlet, and Doris and I were surprised to find how narrow it was. It was like a small river.

"Do large ships often go through here?" I asked of the skipper.

"T ain't common," said he, "but me and the other captains knows every inch of this inlet and every stage of the tide, and you can rest sure there 'll always be a foot of water between her keel and the bottom."

The inlet, we were told, was three miles long and opened into Shankashank Bay. For a great part of this distance the incoming tide carried us through, and when we met the flood from the bay the inlet had widened so that we were enabled to take advantage of the wind for the rest of the way.

It was nearly dark when we emerged into Shankashank Bay, but we could see well enough to judge that it was a large expanse of water.

"We may as well anchor here," said the captain, "and make ourselves comfortable for the night. Even if she can get anybody to row her, it's not likely she can come through that inlet after us. The tide runs in at both ends of it, and meets in the middle, and unless she strikes it just at high tide or low tide she 'll find a reg'lar mill-race ag'in' her fur half the way, no matter whether it is flood or ebb."

The captains were all busy anchoring the schooner and getting down the sails when the butcher came up the companion-way and beckoned me apart.

"Look here!" said he,—and I noticed that he appeared somewhat agitated,—“do you know that there is a stowaway aboard?”

"What?" I exclaimed.

"Yes, there is," he continued; "a regular one. I was down below where it was pretty dark, bein' only one lantern, when I heard a voice comin' from I did n't know where, and sayin', 'Butcher, ahoy!' I give a jump and looked about lively, I can tell you. And directly

I see a straw hat a-stickin' up from the edge of a hatchway. 'Look you, butcher,' says some one under the hat, 'can't you get me somethin' to eat?' 'Who are you?' says I. 'I am a stowaway,' he said; 'and as you are neither a captain nor an owner, I hope I may persuade you to get me somethin' to eat, for I am very hungry. When the ship is fairly out to sea I will come forth, but until then I beg you will keep my secret.' Now what sort of a stowaway do you call that, sir?" asked the butcher earnestly.

"A very odd one," I answered. "What did you say to him?"

"I did n't say no more, but come right upstairs to speak to you; and he don't know whether I've gone to get him grub or to report him to the skipper."

"Of course we ought to tell Captain Timon," said I.

"I don't know about that," said the butcher, shaking his head. "Sea captains are mighty severe on shipboard. It's ten to one they'd drag him out and pitch him overboard, and it's too dark for him to see to swim ashore. I think it will be better to give him somethin' to eat and let him stay aboard till mornin', and then we can put him ashore decently."

"But don't you think it will be dangerous to have such a man on board during the night?"

"You need n't be afraid of him," he said. "I've brought my butcher tools along. And, what's more, that fellow ain't got no call to come out. What he wants is to keep shady."

We talked a little more on the subject, and I then agreed that the butcher should give the stowaway something to eat, and that nothing should be said to the captains or to my wife until the morning.

I was ill at ease, however, and did not sleep well that night. After tossing about a good deal, I quietly arose and peeped out of the cabin door. By the dim light of the lantern I saw, not far away, the butcher, sitting on a chest. His arms were folded; his eyes were open, gazing thoughtfully into the surrounding darkness; and by his side lay a bright and heavy butcher's cleaver.

He did not see me; and I softly closed the door, got into my berth, and fell into a sound sleep.

(To be continued.)

ODE TO A BUTTERFLY.

THOU spark of life, that waviest wings of gold!
 Thou songless wanderer mid the songful birds!
 With nature's secrets in thy tints unrolled
 Through gorgeous cipher, past the reach of words,
 Yet dear to every child
 In glad pursuit beguiled,
 Living his unspoiled days mid flowers and flocks and herds.

Thou wingèd blossom! liberated thing!
 What secret tie binds thee to other flowers
 Still held within the garden's fostering?
 Will they too soar with the completed hours,
 Take flight and be like thee
 Irrevocably free,
 Hovering at will o'er their parental bowers?

Or is thy luster drawn from heavenly hues,
 A sumptuous drifting fragment of the sky
 Caught when the sunset its last glance imbues
 With sudden splendor; and the tree-tops high
 Grasp that swift blazonry,
 Then lend those tints to thee —
 On thee to float a few short hours, and die?

Birds have their nests; they rear their eager young
 And flit on errands all the livelong day;
 Each fieldmouse keeps the homestead whence it sprung;
 But thou art nature's freeman,— free to stray
 Unfettered through the wood
 Seeking thine airy food,
 The sweetness spiced on every blossomed spray.

The garden one wide banquet spreads for thee,
 O daintiest reveler of the joyous earth!
 One drop of honey gives satiety,
 A second draught would drug thee past all mirth.
 Thy feast no orgy shows,
 Thy calm eyes never close,
 Thou soberest sprite to which the sun gives birth!

And yet the soul of man upon thy wings
 Forever soars in aspiration; thou
 His emblem of the new career that springs
 When death's arrest bids all his spirit bow.
 He seeks his hope in thee
 Of immortality.
 Symbol of life! me with such faith endow.

Thomas Wentworth Higginson.

THE WINTER CAMP—A DAY'S RIDE FROM THE MAIL.

PICTURES OF THE FAR WEST.—XI.

SINCE the West began to call for specialists the life of the frontier has offered peculiar inducements to young men of technical training. It combines the inspiration that comes of action with opportunities for practical experience and early responsibility. It would be surprising to note the ages of some of the men in positions of tried sagacity in the West, not to mention the phenomenal successes of those who have gone up on a wave of chance. It is also the life of conspicuous tests, moral and physical. A few months will effectually place a new-comer with one or the other of the primitive forces that divide the suffrages of every new community, or leave him on that modern pillory, the unhappy middle-ground of postponed issues and divided judgments.

Of these tests there is one which might be given greater prominence in pictures of Western life. It is a very commonplace ordeal, to be met with anywhere by the least interesting of us; but it is a peculiarly searching experience under the conditions of life on the frontier. It is assumed that every person in these new communities has some practical reason for being there and does not mean to "get left." But occasionally it happens that a man's life pauses in the West, even if he be not altogether "left." The pause may last for months or for years; in the course of it hope and faith in the purpose which brought him there alternate with a sense of absurdity and defeat. His situation is not unlike that of a man in the trenches on a field of battle. The balls are flying over his head; his part is to lie low and wait for orders. He jokes with the man next him; he shifts from one attitude of constraint to another; he wonders how long this sort of thing is going to last.

We enforce upon children the saying that one can always "find something to do"; but the capable man with his hands tied, in a community where life means nothing if not action, finds there is a bitter difference between the "something" that takes the place of work—that is invented, nursed, stooped to, as a sick man carves jack-straws or pastes scrap-books—and the divine gift of a man's own work that

comes to him like the angel to Peter in prison, with the keys of deliverance.

We read in an engineering journal, a year or two ago, an account of the ceremonies at the opening of a canal for irrigation, unlocking to settlement an immense valley of rich but arid land. It was made a great occasion, with bands of music, and "tributes" to the persons chiefly concerned in the achievement. We learned that this great success had been fifteen years in coming, and that it had not come to all of those who were joined to its fate in the beginning. The originators had held it up for ten years, and when they could no longer support the burden a new combination carried it on to its completion. It did not appear what share the originators had in the triumph; but during those ten years of bondage to a scheme they must at least have got some experience, of the sort that all triumphs do not supply.

It would be too much to imply that always in the West success is the child of failure, and that back of every five years of fortunate activity one may look for ten years of unrewarded waiting. The best things are not always those that come hardest; but it may be accepted that a certain proportion of all the young men who rush into the fields of action west of the Missouri will have to wait for their success, without the privilege of laboring while they wait. In stories and pictures of the West we see these young men on horseback, on forced marches or exploring expeditions, engaged in exploits of love or war or money-making. A survey of the actual field of observation as regards the college graduate would find a good many of him much less picturesquely employed. He is quite as likely to be found "holding down a claim" in some sun-baked valley a day's ride from the mail, or in charge of a suspended mine or comatose smelter, or wearing out the winter in an engineer's camp waiting for orders—becalmed in heart-sick idleness. There is no prayer for him in the church service; he is not a sick person or a malefactor or in peril of his life. But mothers and wives know the peculiar nature of his trial, and pray that he may be remembered in the hour of the march forward, or that he may be loosed from the vow, the enchantment, the delusion—whatever the spell may be that keeps him, dreaming of activity, fast bound in the toils of suspense and enforced idleness.

BENOZZO GOZZOLI (1420-1498).

(ITALIAN OLD MASTERS.)

BENOZZO DI LESE, surnamed Gozzoli after his death, was a favorite pupil of Fra Angelico. Vasari's somewhat amusing commentary on him is that he was "of great invention, very fertile in animals, in perspective, in landscapes, and in ornament. He produced so much during his life that it is plain he cared for no other occupation; and although compared to others who surpassed him in drawing he was not very excellent, yet the amount of work he did placed him ahead of all his contemporaries, because, *in the multitude of his works, some turned out well.*"

At the age of twenty-four he became apprenticed to Ghiberti, to work for three years on the bronze gates of S. Giovanni in Florence, and either during these years, or before 1444, he painted an altar-piece for the Company of S. Marco, and another panel for the church of S. Frediano, both of which have perished. At about this time he visited Rome, where he decorated the chapel of the Cesarini with the history of St. Antonio of Padua, which has also disappeared.

From Rome, Benozzo went to Orvieto with Fra Angelico, his master, to paint the chapel of the Madonna of S. Brizio in the Duomo. In July of 1449 he was again in Orvieto, but alone. Of his work there nothing remains. In 1450 and 1452 he was painting at Montefalco in Umbria, in 1456 in Perugia, and in 1459 he was again at Florence, decorating the chapel of the Riccardi palace with a representation of a journey of the Magi, which occupied three walls of the chapel, the fourth being taken by an Adoration, which is now removed to make place for a window. We know the date of this painting from three letters addressed to Piero Cosimo de' Medici, at his villa of Careggi, in which the artist gives an account of the progress of the fresco.

This work is one of the most remarkable of its epoch, not only for its own qualities, but for the fortunate circumstances which have protected it. It occupies the two sides and entrance end of a small chapel which seems to have been partitioned off from a hall of the palace. Most probably there was originally no window and the chapel had its lighting from lamps, the window being modern; and the ceiling must have been put on after the fresco was

done, as there would otherwise have been no light to do it in. Even with the present window it is difficult to see all of it. It represents the procession of the Magi to the stable of Bethlehem, the Adoration being given in the altar-piece, which occupied the place of the present window and is removed. The procession has moved from the right of the altar and ends with the crowd of all conditions of people which bring up the rear. The retinue includes probably all the Florentine personages of the day, in contemporary costume, on foot and on horseback; knights in rich, embroidered coats, valets and squires with hounds and hawks, a hunting leopard figuring among the accessories, camels, etc.,—an immense and gorgeous array, winding through a rich and well-invented landscape, up mountain paths, and around in a continual line to the other side of the altar, where they were supposed to offer their gifts. This order was broken by some barbarian of the Riccardi dynasty, who cut through the fresco to put in a passage-way and a door, destroying a portion of the procession and moving another, though the original door remains as Benozzo arranged for it.

The progress shown in this picture in the naturalistic movement, in the direction pointed out by Fra Filippo, is most remarkable. The landscape is still purely subjective and devoid of the qualities of outdoor work; but there appears a most noteworthy distinction of specific character in the trees, the evergreen and deciduous pines and cypresses especially being recalled with landscape feeling, and the foreground plants being done in the sentiment of a lover of nature. Though recorded as the pupil of Fra Angelico,—and so far as the processes of his art may be concerned he may have been so, as Fra Angelico was an admirable master of the fresco and tempera processes,—in the spirit of his work, his intellectual and artistic tendencies, Benozzo is the son and heir of Fra Filippo, and his successor in the line which Masaccio had pointed out and the Frate had walked in. There is not only the recognition of the individual type in all his personages, but there is the distinct and undeniable indication of the use of the model through drawings made for all the figures in his compositions. There is no advance towards realism, but a complete abandonment of the visionary and ecstatic type so marked in Fra Angelico. We come down

to plain flesh and blood, and every personage in this long procession has posed for the drawing made for it. It is the most extraordinary agglomeration of *pose-plastique* in all the range

of these heads and all the principal figures careful drawings must have been made from life. Every figure says, "I am being drawn by Benozzo for his great picture of the Magi."

GROUP OF ANGELS, BY BENOZZO GOZZOLI. (FROM THE FRESCO IN THE CHAPEL OF THE RICCARDI PALACE, FLORENCE.)

of the Renaissance ; and in the densest part of the crowd, and no matter what his action, every actor turns his face more or less so as to be seen and recognized by those who know him. There is no mistaking that for every one

It is such a collection of unquestionable portraits as I do not know elsewhere in the world.

The groups of worshiping angels at the right and left of the altar are exquisite testimonials of the influence of Fra Angelico, and

their loveliness is rendered by Mr. Cole's selection, as the manner of portraiture is by the head from the crowd at the end of the procession which Benozzo marked as his own. One

ing around the room,—the majesty of composition that he had learned from Masaccio. It is a work in all its qualities *sui generis*. The exclusion of light and weather from it has

PORTRAIT OF BENOZZO GOZZOLI, BY HIMSELF.
(FROM THE FRESCO IN THE CHAPEL OF THE RICCARDI PALACE, FLORENCE.)

sees that it is caught from life, but in the way that a sculptor would have studied it, for pure form and character.

In color the work has neither the gaiety of Fra Angelico nor the elementary harmony of Fra Filippo; nor has it, from the very nature of the subject,—being a long procession trail-

preserved this great work so completely that we probably see it much as it was when finished.

Gozzoli's frescos in the Campo Santo of Pisa are more deliberately planned and are works of a higher order; but unfortunately, owing to their exposed position and the want of care in

times past, they are comparative wrecks, and keep the record, not of their achievement, but of their intention. Here we recognize the influence of Masaccio in the studied and masterly composition, in which the "Noah," the first painted of the series of Bible histories which were his themes,—and which it is said he painted to show his hand,—is one of the most admirable examples in the range of Italian art, a classic for all the subsequent generations of painters.

In all we have of Benozzo's work there is a cheerful sense of the influences of nature, and a love for children and animals such as we have not before him; and in his painting of children he seems especially happy. In his Campo Santo series he introduces them on every convenient occasion. The individuality of his heads, and even the character of his figures, have that air of unmistakable likeness which belongs to earnest portraiture, and to a degree not indicated in any previous Italian work or in any contemporary prior to Giovanni Bellini, who was eight years the junior of Benozzo.

For the next eight years the artist seems to have been in Florence and its vicinity painting innumerable panels and frescos. For the Company of S. Zenobius he executed a panel; in the church of S. Agostino in San Gimignano a "St. Sebastian delivering the Land from Pestilence," seventeen frescos from the life of St. Agostino, and in the same town a fresco of the martyrdom of St. Sebastian. In 1464 he was enrolled among the doctors and apothecaries of Florence. In 1466 he restored some frescos of Lippo Memmi in the town-hall of San Gimignano and painted various panels for churches in and near that town.

In 1468 Benozzo went to Pisa for the great series of frescos there and worked for sixteen years, but probably not continuously; and there is a popular tradition that he took only two years over the whole. There were twenty-four

in number, and most of them are well enough preserved to follow the intention of the painter; two or three are defaced almost entirely. Vasari speaks most highly of them, though they were not of the taste of his time, and he mentions an ass in the sacrifice of Abraham which was very cleverly foreshortened. In recognition of his skill the Pisans placed an inscription of flattering purport in the midst of his work and gave him a place in the Campo Santo for his grave. As in the procession of the Magi, he introduced in these frescos many portraits, of which Vasari mentions those of Marsilio Ficino, Argiropoulos the Greek scholar, and the artist's own figure on horseback. In Pisa, Benozzo also painted many other frescos and panels, which have disappeared for the most part. One panel, which Vasari considered the best the painter had executed, and which was in the Duomo, a St. Thomas Aquinas disputing with many learned men over his works, is now in the Louvre.

Benozzo was sixty-one when he finished his great task in the Campo Santo. Of the last seventeen years of his life we know very little. In 1484 he was at work on a tabernacle at a place not far from Castel Fiorentino, and in 1497 he is recorded as being called on with other artists to give judgment on the works of Baldovinetti in the Gianfigliuzzi Chapel, and in the next year he died, "to the great sorrow of the whole city," as Vasari says, and as one can well imagine; and we are told that during his residence there he had built himself a house which he bequeathed to one of his daughters, and that he had lived a godly and industrious life and was long remembered in the city. The following epitaph was engraved on his tomb:

Hic tumulus est Benotii Florentini qui proxime has
pinxit historias
Hunc sibi Pisanorum donavit humanitas MCCCC-
XCVIII.

W. J. Stillman.

THE VALLEY OF THE WINDING WATER.

THE valley of the winding water
Wears the same light it wore of old.
Still o'er the purple peaks the portals
Of distance and desire unfold.

Still break the fields of opening June
To emerald, in their ancient way.
The sapphire of the summer heaven
Is infinite, as yesterday.

My eyes are on the greening earth,
The exultant bobolinks wild a-wing;
And yet, of all this kindly gladness
My heart beholds not anything.

But in a still room far away,
With mourners round her silent head,
Blind to the quenchless tears, the anguish,
I see, to-day, a woman dead!

Charles G. D. Roberts.

FRIEND OLIVIA.

BY AMELIA E. BARR,

"The Bow of Orange Ribbon," etc.

“Breathe on us for the passing day
The charm of ancient story.”

I.

THE KELDERS OF KELDERBY.

“ Though God as one that is an householder,
 Called these to labor in his vineyard first,
 Before the husk of darkness was well burst :
 though the worst
 Burthen of heat was theirs, and the dry thirst ;
 Though God has since found none such as these
 were
 To do their work like them : because of this,
 Stand ye not idle in the market-place.”

WHEN Oliver Cromwell held the scepter of England, Odinel Kelder was baron of Kelderby and Swaffham. He was not ignorant of the ancestors who had mingled his clay and tempered the spirit within him.

For seven hundred years he knew their names and their deeds. The furthest away of whom he had knowledge he spoke of as "my fore-elder Jahl," and owned the peculiar blessings of his lot to be the result of Jahl's nobility of nature and of his adventurous spirit.

For Jahl Kelder had been one of that earliest band of pilgrims who to escape the tyranny of Harald Haarfager sought liberty of mind and person among the eternal snows of Iceland. A few years later Jahl joined his friend Toddi, or Dodd, in that southward search for a fairer home which resulted in their settlement on the shores of Cumberland and in the dales of Westmoreland. Toddi found the Whitehaven, and bought from the monks of St. Bees the great woods and lonely dales stretching back to Ennerdale. Jahl reached the solitary seaward stretches of Silverdale, the very region of mystic forgetfulness, with its rounded hills and wooded wastes, and its great expanse of ribbed and wrinkled sand-flats—a dim, misty sea, where the flood glides up to the land swift and treacherous, or, beaten by conflicting winds, is white with phantom foam and vexed with spray and spindrift.

Behind him was a waste of sullen moss and

craggy mounds, unfruitful solitudes so bare and desolate that he called them *Hardanger* — the old Norse name for a place of hunger and poverty. But Jahl asked little of the land; he looked to the sea. It raced round its numerous promontories and lay sleeping in its bays; and he saw the gray wings of his ships peopling the pallid waste. They were his hands. They would reach him the good things that were not within his grasp. He built his big stone hall on the height of Silver Scar, and the lonely land, and the misty waves bowling in and out of the fog, became dear to him.

Once his friend Toddi sailed southward to keep a feast with him, and he said, "Jahl, thou art not wise to build so high; every wind of heaven will smite thee."

But Jahl answered, "This is what I think, Toddi—the birds that build on the ground make very poor nests."

Jahl built for his generations. They sat in his place and trod in his footsteps and kept his memory green. They married into the great Saxon families of Swaffham and Millom, and twice the Norman De Burgs added the quicksilver of their race to the life stream of the Scandinavian stock; and as one or the other of the race distinctions predominated, so was the Kelder of his day. In the course of seven centuries the original stone hall had become a fine seat. Not that all the Kelders had been wise life-tenants of it, but that the potency of the Saxon element had been frequent enough to repair losses and accumulate capital. So that at the beginning of the seventeenth century the Kelders were one of the great families of the North Country.

Odelin, the nineteenth of his name, differed widely from his ancestor Jahl, but the differences were mainly in the inner man. Outwardly he had the great Norse frame, the lofty stature, and the blonde complexion of his northern kin. His mother had been a De Burg, but he owed nothing to her except the high-bred nose and the haughty upper lip of the Norman race. He had a large compact forehead, eyes like tempered steel shining with

a steady gleam, a square chin, a firm mouth, and a manner at once benignant and austere—the manner of a true liegeman of Duty, kind, faithful, and intrepid. If he clasped hands, it was with a flesh-and-blood warmth of grip; if he smiled, it was with the large, clear sincerity of a man without guile. He had the heartiness of the Norse nature, the breadth of the Norse imagination, and the refreshing atmosphere of one who lived in the open air, who went alone into the heart of the mists, and into the silence of the starry sky, who knew the visionary majesties of the mountains and the pale, pensive glooms of the valleys, and who loved the flavor of the brine and the damp fresh air of the northern ocean.

He was sixty years of age, and he had played the man in Israel on every battlefield for liberty from long Marston Moor to Worcester. Life had been a stirring story to him. He was sitting one evening very quietly on his hearthstone talking it over with the man within him. This mighty *I* was truth itself. It told him plainly that at Marston he might have been more merciful; that at Dunbar, in that great strait between the sea and the Lammermuirs, he might have been more trustful; that in the red streets of Worcester he might have been more just. And he was humbled amid his valiant memories, silently appealing from the accuser to Him who had made the atonement.

The tall black chair in which he sat had been the baron's own for generations. One foot was on its footstool, the other pressed down the soft white wool of the hearthrug. His left hand lay upon the basket hilt of his long rapier, his right hand shaded his eyes, his fine head drooped slightly forward. But though silent and motionless, he was not alone. On the opposite side of the rug Lady Kelder was spinning flax. The little black wheel, richly carved and tipped with silver, was at her knee, and between it and the snowy flax her white hands made monotonously graceful movements. She wore a dress of black silk with a lawn kerchief pinned across her breast, and a black-silk hood lined with white fell slightly backward from her white hair. A handsome woman of an unchanging countenance, compact and conscious, who knew what she meant and what she wanted and in what she believed.

But though she spoke not she glanced frequently towards her husband, and presently he caught her glance and a loving smile flashed echo-like from face to face. Then she said:

"Nathaniel stays away so much longer than was spoken of. What think you, dear heart?"

"I think, Joan, that he will have business to be his excuse. Between here and London are many hard miles."

"And also he may come by Kendal. Our cousin De Burg has a very fair daughter. I have heard that Anastasia has bettered all expectations of her beauty; she may be reason enough to stay even a wise man."

"Anastasia has Charles Stuart in all her thoughts. A Puritan gentleman is her mock, and nothing else. What agreement can there be between her and our son?"

"In troth and peace love has no politics. Any side will suit him."

"Nathaniel's politics are the complexion of his creed. Joan, think not evil of your son."

"As for creeds, he may take to one you think not of. There is a beaten path now between Kelderby and Sandys, and Mistress Prid—"

"Mistress Prideaux is a Quakeress. Dear Joan, keep a rein on your thoughts. Nathaniel will give you a betterly sort of daughter than that."

"I have the fear in my heart day and night, a fear unfaceable. There are things I would never submit to; that is one of them. A Quakeress in Kelderby! God forbid!"

"Calmly, Joan. 'T is said they have spiritual gifts."

"What is the Protector doing to suffer them? I would he were more faithful to the truth."

"A Quaker may privately enjoy his conscience, in both opinion and practice; sure that is but reason. As for Nathaniel, I think he is such a man as will take his own way if it sorts with his faith and duty."

He rose as he spoke and began to walk slowly about the long low room, for the housekeeper Jael and a serving-man had entered, and the woman put aside Lady Kelder's spinning, and the man began to lay the table for the evening meal. Jael was a noticeable woman fifty years old, fresh and sturdy, the right hand of her mistress in all domestic concerns, the loyal friend of the Kelders, bound so willingly by the kindly traditions of many generations. She pushed the logs together and added fresh ones, and then straightening herself watched for a moment the arrangement of the fine pewter service upon the table. This being satisfactory, she turned so as to face her mistress and said:

"My Lady, Susan of Lambrigg and Jock the second shepherd want to marry; it puts me about a bit."

"It is a fit marriage, I think, Jael."

"True, my Lady, but not a fit time, with the spring cleaning to do in Kelderby, and the sheep casting their lambs on every fellside. It is n't reasonable. But what signifies talking? You can't think what a couple of fools they be. They stand to wedding through thick and thin."

"Then wedding it will have to be. Dear me, Jael, how girls will run into trouble! Is it raining?"

"Dreeping wet, and very airy; the wind being nor'ard and west'ard. You can hear the billow-bluster at the foot of the Scar."

"Your young master is somewhere on the road between here and London. I pray God he come to no ill."

"Ill keeps its own road, my Lady, and my young master is never found on it. He'll be here anon. Perhaps," and she stooped to move the logs as she spoke — "perhaps he is safe at Sandys."

"Jael!"

"Yes, my Lady; facts will be."

"Facts give way to stronger facts. See that all the men and maids come in to prayers. Some have made a breach in the good custom lately. I will have them all in."

"Speak to them yourself, my Lady; it will be a long way better. They have been backening badly in every right thing lately. I am often hard set to manage them."

At this moment supper was served, and Jael threw a lamb's-wool shawl around her lady's shoulders and placed her seat at the table.

In the midst of the meal she saw a sudden change on the face of the serving-man. The loutish chaos of his countenance colored into life, and a gleam of pleasure brightened his pale eyes. He had heard a footstep that no one else had heard, and the pasty in his hand was only saved from a fall by his mistress's look of sharp inquiry. Before a word could be said the door opened with a swift, noiseless movement, and Captain Nathaniel Kelder entered.

No one could have been more welcome; but there was a calm gravity in his manner which repressed any extravagant demonstration of feeling. Lady Kelder, however, had a kiss and a whispered word of tenderness which brought tears of joy to her eyes, and the baron such a grasp and glance as interprets the greeting of kindred souls. Then the meal was finished to that hurry of general conversation which usually follows an arrival. It flitted here and there, to persons and things and events, but touched none of the real subjects of interest until prayers were over and the servants dismissed with the usual blessing:

"God be with you, each and all!"

"And with you and yours, master."

The head-man lingered a few minutes to render his account and to receive orders for the following day, and during this interval Lady Kelder looked with a fond speculation at her son. She thought of his cousin Anastasia de Burg, and of lovely Mistress Prideaux, and wondered if he really was in love with

either. She never doubted but both were in love with Nathaniel. If this opinion wanted any confirmation in her mind, she found it instantly in the beauty of the young man, leaning with unstudied grace against the high chimneypiece of black oak.

It has long been the false and silly fashion to ridicule the Puritan garb; it is now full time to acknowledge that Puritan gentlemen were dressed gracefully and picturesquely and in the most perfect sobriety of good taste. They thought that dark or black garments were fittest for grave and earnest men. We are now all of the same opinion. They thought laces, perfumes, and jewelry marks of vanity and foppishness. Every true gentleman in Christendom now thinks with them. They thought it more rational to cut their hair a comfortable length than to wear it in womanish curls down the back. What sensible man of to-day will contradict them? High Churchmen who still delight to nickname them "Roundheads" make a point of cutting their own hair much closer. Yes, even in the matter of dress, the Puritan was wise and brave beyond his time.

Nathaniel Kelder could have chosen no dress more becoming, even if dress had been a subject about which he was troubled. His jack-boots covered his knees. His breeches were of black leather dressed until it was as soft as velvet. His dark doublet showed undersleeves of white linen, and round his neck was a scarf of fine lawn brodered at the edge with a band of needlework done by his mother's fingers. He was very tall, and had a bright, spiritual face set in soft brown hair — a face so fine that it gave the impression of being formed of some rarer thing than flesh and blood. A smile made it luminous. His gray eyes were large and dreamy, the downward sweep of the eyebrows towards the lashes of the eyes when they were raised indicating not only a tender heart, but a disposition to melancholy. A mouth of great refinement, candid and loyal, softened the threat of his resolute chin, and he had an air of distinction which was not consequent alone to the condition of his good birth, but was partly the result of acquired self-restraint. Nathaniel Kelder had the mastery over his spiritual man. He could cross his will without a mutiny.

It was a relief to the family when the door was closed upon them and they could speak freely together, for servants if more faithful in those days were not less curious, and Master Nathaniel's journey to London had been a matter of speculation among them.

"There be a woman in it," the head-man said among his fellows; "there be a woman in it. I met De Burg's man in Kendal market, and I dilly-dallied an hour with him, talking

of Mistress De Burg and what gentlemen were her servants now; but at the long end, what signified? He let no light into things. I could make naught of him, back nor edge."

"You had much to do to name young master with Mistress De Burg—a proud-souled madam that is hey-go-mad for the Stuarts and their kind."

"There's no need to be put about, Jael. It breaks no squares to say that whether Stuart or Cromwell be master, we be servants; and I do think that young master have been in London about the De Burgs. It'll turn out so, you'll see it will."

Primitive natures who trust to their natural instinct are rarely mistaken. Nathaniel Kelder had been to London in the interest of the De Burgs. For although the friendship between the families had been broken by political differences, the tie of kinship was of stronger stuff; and when De Burg was threatened by the law, and his lands in danger of confiscation, Kelder had voluntarily offered himself as his cousin's security.

"What success, Nathaniel?" he asked.

"Better than was to be hoped for, father. I had two interviews with the Lord Protector, and at the first moment he remembered you. He said, 'Kelder's word is bond for a dukedom'; and then he asked how you fared, and anon he turned to his desk and wrote somewhat concerning the business; afterwards he bid me dine that night at the palace."

"What think you of him now?"

"What I ever have thought. There is no man in England to stand beside him. The glance of his eyes pierced me like a spear. While I was present an officer entered with a report concerning the plot of the Fifth Monarchy Men. His anger was great, but he shut close his mouth, and I saw he was reining up by a strong effort the prancing passions within him."

Kelder was much moved by this information. In his own heart was a strong leaning towards these fervent visionary watchers for the visible coming of Christ the King and the reign of the saints on earth. Unknown to any soul he had cherished the same longing. There was a high hill behind Kelderby, and many a morning he had climbed it, and, looking towards the east, watched for the glory of the Second Advent. He was sorry that those who watched with him should take up carnal weapons and make divisions, and could hardly believe it until Nathaniel said:

"This officer brought with him the standard which they had prepared—a fine one truly. 'T was folded close, but Cromwell, with a strange power, shook it open. So I saw that it was a lion couchant, and the motto written,

'Who shall rouse him up?' I would you had seen the Lord Protector as he stood holding the standard. His face was like a battle-cry, but oh, the sadness in his eyes! I shall never forget it."

"Sure 't is a wonder so great a man should think of dining; but I'll warrant he kept his dinner-hour, plots and standards and all to them! And pray what palace honors he now?"

"He is at Hampton Court, mother."

"Those Cromwells at Hampton Court! Sure 't is a sight to make one think. Elizabeth Cromwell in the seat of the queen! I marvel not if she forget whence she came."

"Dear heart, let the women alone. Oliver holds the scepter of England by right divine, and Mistress Cromwell is a godly consort to him."

"He has long wanted the king's place; he has gotten it then, it seems."

"The place wanted him. I, and many of my judgment, know that England is pleased and well content that he should be there."

"Not all content, as these Fifth Monarchy Men show."

"Such out of a godly jealousy misunderstand him. In time he will make his work clear."

"But herein others are of a like dissatisfied mind," said Nathaniel. "Many Christians of good quality complain of the spiritual bondage in which he leaves them. A deputation of the people called Quakers was waiting at Hampton Court. I saw not its manner of reception, but they also say that 'Cromwell understands them not'; nor are they wiser concerning his way of dealing with them."

"'T is most likely," interrupted Lady Kelder, scornfully. "They are a silly set, so full of themselves that they have no room for the grace of God. Quakers, forsooth! God give us patience when we speak of them! And as for the Lord Protector being beyond their wisdom, 't is most likely. A down day for General Cromwell when he can fold himself to their size! If you will tell me shortly what is to be done with your cousins De Burg I will leave you to discuss the Cromwells. I find them not so pleasant a subject for my sleeping thoughts."

"De Burg has permission to remain within his domains. He is not to go beyond them."

"God knows he will cross seas whenever he has matter to carry the king. I mean Charles Stuart."

"He is to give his word not to cross seas."

"His tenfold oath would not bind him."

"Then you must know that my father is surety for his word. If it cannot be depended upon, we stand to lose ten thousand pounds forfeit."

"Baron, you have done a wicked thing.

Why should you endanger your own estate to save De Burg's? Conceive how merry a business it will be for him to cheat and mock his Puritan cousin! I say, it was ill done to pledge your land."

"Dear Joan, I pledged my word. I will pillar my word with my land. Is my land worth more than my word? I trow not."

"De Burg called you traitor, and in the beginning of this fight he did you many an ill turn. The Lord of Hosts has given our side the victory; 't is an open insult to his mercy to make friends with your foes."

"De Burg was my cousin before he was mine enemy. My mother was his mother's sister."

"David says—"

"Joan, I go not back to Sinai. He that came out of Nazareth said, Love your enemies; do good to them that do ill to you."

Then there was a little silence. Lady Kelder was trembling with anger. A verse of Scripture may bring a wise decision in a question of right or wrong, but it oftener comes like a sword than as a peacemaker. So though it was impossible for her at the moment to dispute so plain an order, she felt that there were ways of meeting it, and she held these in reserve.

Then Nathaniel leaned forward and took her hand, and his bright face drove away the gathering shadows on her brow. "We had a poor dinner," he said. "If I had been curious about my food, I should have wished myself at your table, dear mother."

"Mistress Cromwell knows neither how to cook nor how to let cooking alone. 'T is a strange ordering which puts her in royal rooms and royal dress; but many heads have learned to lift themselves not before used to it."

"She is very quiet, and her dress not so brave nor so becoming as your own. A black velvet she wore, but shabby; and the lawn broiery poor and darned, and wanting that spotless purity which is better in my eyes than broiery bands."

"I have heard that Mistress Cromwell was not too neat—a bad fault in a woman; and the Lord Protector was but a sloven ere the days of wearing steel corselets and of scepter holding."

"As for the room, there were some fine tapestry hangings, and window curtains of scarlet baize, and a couch covered with fly-colored damask. And the Lord Protector had an elbow chair, and there were backed stools for the rest of the company. But the long black table compares not with the carved oak table and chairs of this room; and the andirons were neither so heavy nor so bright as these"; and Nathaniel, as he laid a fresh log across them, lightly touched the brass hearth furnishings which were his mother's pride. So the brass

andirons and the carved oak furniture, though but dumb comforters, softened the first stinging sense of the baron's improvident translation of the great Nazarene's command.

In the morning it was decided to inform De Burg as early as possible of the mercy shown him, especially as it was necessary to be explicit concerning the restraints and obligations upon which it was to be continued. "'T is only kind to ride over to Kendal at once, Nathaniel," said the Baron. "Suspense is ill company, and De Burg must be an anxious man."

"'T is you, Odiel, that should be the anxious man," said Lady Kelder. "De Burg counts the years of Cromwell's life, and assures himself that with Cromwell dies the Commonwealth. His estate is now loaded with debt. The king returning will cancel all claims. King or Cromwell, he need not fret himself very much. And why go not you yourself? 'T is but right he should take the favor from your hands, and the orders which bind it; right also that he should give you thanks for your kindness. I think not of his promises. I trow he will keep none that sort not with his interest and his inclination."

"De Burg hates an obligation, especially from me. Why force him to say words he means not? I have the approval I want already."

"Consider your own unreason, Baron. You will keep De Burg out of the temptation to say false words, and you will send your own son into snares laid by the flesh and the devil hard for any man to resist."

Nathaniel smiled. "Vainly is the net spread in the sight of any bird, mother. My cousin Anastasia is known to me. I acknowledge her beauty, but I feel it not."

"Nathaniel, the self-confident fall before they know that they are in danger. Anastasia suffers no man to escape her wicherics."

"I have seen her frequently; I am not bewitched."

"The pitcher goes often to the well, and gets broken at last."

"Anastasia will not break my heart, dear mother. I can watch all her wiles, and slip away from them."

"From afar things appear so easy to do. But if you are determined to try experiments with yourself, Nathaniel, at least do it with deliberate question and answer."

Then the horses were brought to the door, and Nathaniel kissed his mother's hand and mounted. His father was to ride part of the way with him, and the two men went slowly together across the moor and up the hill. A couple of lurchers flashed like gray snakes through the bracken around them; and the colts came whinnying with staring eyes and

streaming manes to watch and wonder at the splendid thrall of their bridled kind. Indifferent to all such matters, they went calmly forward, talking not so much of the business with De Burg as of the Lord's great dealings by General Cromwell.

And afar off Lady Kelder watched them winding round the fells. "I wish this day's work bring not misfortune and ruin," she whispered, and her heart sighed as she passed inside the door with that still, drawing step too often prelusive of sorrow. She was a brave woman by nature, and yet she tainted the sweet spring air with whispers of apprehension. Oh, how difficult it is to speak good-omened words!

II.

BLAME THYSELF.

"O woman, woman, woman! All the gods
Have not such power of doing good to men,
As you of doing harm."

"A generous fierceness dwells with innocence,
And conscious virtue is allowed some pride."

Who will pity a charmer that is bitten with a serpent, or any such as come nigh wild beasts? . . . An enemy speaketh sweetly with his lips, but in his heart he imagineth how to throw thee into a pit: he will weep with his eyes, but if he find opportunity he will not be satisfied with blood. — Ecclesiasticus xii. 13–16.

NATHANIEL entered Kendal early in the afternoon. It was then a very aristocratic town, full of fine houses built of the mountain limestone. The ripple of the swift running Kent, the pleasant stir of the fresh wind in the poplars, the jubilant notes of the church bells—all these sounds but deepened the silence and peace of the proud and beautiful city. It seemed to be a proper home for gentlemen and gentlewomen who lived at their ease and who had given their own air of serenity and spotlessness to the place.

In Stricklandgate Nathaniel met the great beauty Mary Bellingham. She was riding a superb Barbary mare, walking it slowly up the wide street, pleasantly conscious of her own loitering and of the creature's impatience at it. It lifted high its dainty feet and let them fall with distinct yet rebellious efforts to realize its rider's dreamy mood. Nathaniel passed her bareheaded, and the royalist beauty vouchsafed him the shadow of a cold smile. In the thoughtless days of childhood she had once chosen Nathaniel for her valentine. What heartburnings, what loss of life and love, lay between that hour and the present! Ere he reached De Burg Hall many sad thoughts had followed that glimpse of the lovely face of his boyish sweetheart.

De Burg was an old ecclesiastical house, and was built, as such houses were apt to be, in the snug shelter of a rich valley. High hills surrounded it, but the long, low building of gray stone spread itself among green meadows and under the shade of ancient sycamores. It had been granted to the De Burgs at the time of the great spoliation in the reign of Henry VIII., and hitherto they had gripped tight to it.

Even in this crisis of his family Stephen de Burg did not worry himself greatly as to his possessions. He had a firm belief in the downfall of Cromwell; a firm conviction that the science of government was impossible to the mechanical classes. A few years, more or less, and the king would come to his own, and be received gladly by them. A Puritan confiscation might be troublesome, an imprisonment in the Tower even more so, but at any rate they would be claims upon King Charles which he would abundantly pay.

Such ideas made him tolerably comfortable until the Puritan hand was upon his estate and the Puritan threat of imprisonment in his ear. Then he had found his kinsman Kelder to be sufficient for his necessity. He had, however, no gratitude for this gracious interference in his fate; for De Burg not only loved to go a motive-hunting, but he also deliberately hunted for the very worst motive he could find.

"Cousin Kelder has become my bondsman! Nathaniel has gone to London to get the old brewer's assurance of quit and safety! What of that? These godly fellows have plenty of worldly wisdom. Never trust me if Kelder sees not that the king must soon come back. Then he will expect De Burg to protect Kelderby and Swaffham. Will I? I never pretended to wisdom, but I should be the perfectest fool if I paid such back debts." And De Burg laughed with harsh amusement at the thought. "As for Nat Kelder, I'll swear he has been in love with Asia since he was as high as my top-boots, and he thinks 't would be 'a comfortable dispensation' to add De Burg to Kelderby and Swaffham. Fair and softly, my young cousin. 'T will be a miracle if you compass it. Here he comes, with all the assurance imaginable. Lord, how I hate such complaisance!"

For to this mental criticism De Burg had been watching the approach of Nathaniel. He turned with the last exclamation and went to the gate to meet him. More anxious than he would admit, Nathaniel's promiscuous face lifted an unacknowledged weight off his heart. He could not help reciprocating the smile of his visitor as he held out his hand, and said almost merrily:

"Well, sir, are you come to turn me out

of house and home? Am I to visit Tower Hill? Is my head wanted for Westminster or Temple Bar?"

"I come with no such unhandsome news, cousin. Your undoing is in your own hands, and in none other. In your house and within your boundaries and your native town you are as much lord as ever. Only cross not seas or hold communication with Charles Stuart; if you do, it will be at your life's peril."

"Faith! I would as lief hold life from Beelzebub as from Oliver. A pretty topsy-turvy world, when an old fen farmer and brewer says 'thus and so' to English nobles!"

"You offend uselessly, cousin. I dispute not that it is a large bill on your patience; but it must be discharged, or worse consequences. And for my father's sake sure you will carry yourself wisely."

"I will carry myself as suits myself. Fear not; I will make shift to endure it."

"Let me tell you soberly—"

"Nay, then, I swear I will have no sober talk from you. All your wisdom won't mend my humor. I am fallen out with the whole world to-day; but I am mightily obliged to my cousin Kelder, and for his sake—and yours also—I shall think better of a Puritan as long as I live. I pray you go in and refresh yourself. You will find Asia in the garden with two of her present servants. And we will meet at table for further discourse."

Nathaniel had in his mind a plan far more to his liking, but he did not care to provoke disputings about it. De Burg was bound for the hills. In their silent places he could safely swear out his passion at the world and the ruling of it. He stimulated his anger with memories of the days in which he had lounged about Whitehall and Hampton Court and drank deeply of every cup of sinful enchantment; when he had swaggered and bullied with all that mad crowd, and laughed himself into the belief that the solid Saxons of the fen country were a handful of clowns scarce worthy the swords of the courtly nobles.

He was a swarthy man, a little corpulent, fiery, credulous, and false, with the insolent manners which belong to natures so vulgar that they cannot endure any one above them, be it prince or God. There had been times when he had hated the late king as heartily as he now hated Cromwell—as heartily as he would hate any one who could put a check upon the license of his will and way. So it had been hard for him to assume any decent amount of gratitude, and Nathaniel, in spite of his lovable disposition, felt that he could have borne a real injury easier than this neglect of a self-evident right.

When De Burg turned away from him he

entered the house. A servant took him to a chamber, and he washed his face and hands and put on a clean band, and then refreshed himself with some cold roast beef and a measure of ale. But it was not a satisfactory meal. The continued absence of Anastasia deepened his feeling of resentment, especially as he heard at intervals the shrill mockery of her laugh and the willful vibrations of her clear, resonant voice.

He ate with conscious deliberation. If his restless disappointment arose from any remembrance of love for his cousin, it was his duty to cross its demands. And he did so with an over-exacting fidelity. The servants wondered at his slow precision and his thoughtful dallying with a very ordinary dinner. He was really speculating as to whether Anastasia knew of his presence; he was listening for her step, he was involuntarily watching the door. Every time it moved he was expecting to see the dark, piquant, provoking face of Asia de Burg.

But she came not, and when his meal could be no further prolonged he walked with a slow indifference to the door opening into the garden. Really the indifference was not altogether affected; he had been telling himself that to go to Anastasia was to go deliberately into temptation, and he preferred the temptation to come to him. Somehow the folly that takes us unawares seems more excusable than the folly we premeditate. But why suffer himself to be tried in either way? De Burg had felt the commonest form of gratitude to be a trial. Anastasia had a pride equal to her father's. If she did not wish to express her obligation, why should he compel her to do so? It was ungenerous. He might at least try to emulate that noble not-caring of the Divine heart which sendeth rain and sunshine alike on the thankful and the unthankful. Thinking thus, he resolved to leave De Burg at once.

But even while Wisdom spoke to him, her words were silenced by a clear, peremptory call. It filled the chambers of his ear and the chambers of his heart. He blushed like a girl when she hears for the first time the call of Love, and he answered it as promptly as if it had been the Lord General's bugle on the battlefield. His feet seemed to move without his option; he stamped them on the gravel to assure himself of his own will in the matter, and as he went the same penetrating call urged him again and yet again:

"Nathaniel! Nathaniel! Nathaniel!"

There were three terraces, and she was on the lowest one, but the clear lingering syllables appeared to fill all the space around him. He went rapidly from terrace to terrace, taking the low broad steps he knew not how. On the outermost edge of the lowest there was a fish-pond surrounded by a wide margin of green turf,

bordered with sweetbrier now full of its spring-tide scent. The thyme's perfumed sprig and the delicious odors of wall-flowers and auriculas seemed to make a part of the voice. He could not separate sound and scent; nor did he try.

In a moment or two he saw Anastasia standing on the turf. She was playing battledore with two gentlemen, and with face and arm uplifted was bending slightly forward to catch the feathered toy. In the act she let the battledore drop to the ground and turned towards Nathaniel. Her face and throat and bosom were rosy with the exercise, her eyes glinting with mirth, her dark hair tossed into a picturesque mass of curls falling so low as to cover her shoulders and even partly veil her bosom. Her dress was of fawn-colored satin adorned with a great number of pink bows, and there were large pink rosettes upon the insteps of her shoes, and long streamers of pink ribbon upon the shepherdess hat which she had flung upon the grass.

She came to meet him radiant, wearing all her enchantments. The touch of her jeweled fingers, the scent of her garments, the darting light from her eyes, the slight pout of her beautiful lips, the caressing tones of her voice, took him captive at once. Squire Chenage and Captain Bellingham, with whom she had been playing, watched with a dark scorn a meeting so little to their liking from many points of view. Hating each other cordially, they still more cordially agreed in their hatred of Captain Kelder. With marked hauteur they went to the side of the pond and engaged in a meaningless conversation about the size of the pike and the tench. Nathaniel heeded not the movement; he was scarcely conscious of their presence until Anastasia dropped his hands and went to give them a courteous dismissal.

"My cousin Kelder," she said, "has been to London on our affairs, and I am in the humor of being pleasant to him. As 't is the greatest conquest I shall ever make of my pride, you must give me leave to practice the new virtue."

Captain Bellingham took his discharge with good-humored raillery. Squire Chenage looked darkly at Kelder and avowed his intention of "playing the game out with him."

"You had better not, Squire," answered Anastasia, with snapping eyes and emphasis. "He is swifter than you dream of."

It was a trying situation for the two gallants, and they did not bear themselves to advantage in it. Nathaniel's beauty and air of confidence and Anastasia's cool indifference flustered and irritated them. It brought out the bravo in Bellingham and the bully in the ruder Squire; and somehow their satin doublets and their scented lovelocks gave to their mien of real

anger an air of swagger and fanfaronade which was altogether unjust.

Dimly conscious of this effect, they hurried across the terrace, swinging their feathered hats and feeling in the hot passion of the moment their ribboned points and boots trimmed with ruffs of Flemish lace to be quite out of keeping with the rude greeting they would have been delighted to exchange with the young Puritan. Both of them glanced at Nathaniel as they passed him. He stood by one of the pillars which supported the lower steps, and against the white limestone his tall, dark figure was a graceful and conspicuous object. Their glance met an instant and courteous response. Nathaniel lifted the high, plain hat which was such an offense to courtly taste, and in so doing revealed more distinctly the strong yet delicate beauty of his countenance and the close clustering curls of his bright brown hair.

It is not necessary to record the few emphatic words with which Chenage and Bellingham expressed their feelings; those of Anastasia, though sweet and pleasant, had a deeper malice, a more enduring and far-reaching unkindness. She stood at Nathaniel's side the incarnation of mocking beauty, watching the two young men out of sight. It was not necessary for her to speak; Nathaniel understood the glint of her eyes, the almost unconscious rhythm of her body, caricaturing the ungraceful walk of the be-ribboned swains.

"I admire how these men dress like women," she said at length. "Give me, cousin, the privilege to ridicule them a little. For my own liking I would that men ever wore leather or steel. Chenage in his leather hunting-suit is very much of a man, and Bellingham in his uniform not so laughable as in purple and white satin. Upon my word, cousin," and she looked steadily in his face, "I find you extremely handsome and extremely well dressed. Come now, sit down, and you shall tell me how Mistress Cromwell lives in the king's house. 'T is said she goes into the palace kitchen, and is never so happy as when among the pots and pans. People that pretend to know say so."

Then Nathaniel spread his cloak upon the lowest step of the flight, and they sat down together. But he told her first of the Protector's clemency, and explained the easy terms upon which it was proposed to save the lands of De Burg. He passed by as lightly as possible his own and his father's share in the arrangement, and Anastasia was not generous enough to acknowledge it. Still it was easy to see that in spite of her affected recklessness she had been exceedingly anxious as to the result of the visit to London.

"It is simple salvation," she said. "I have

been planning a life for myself when I should be turned out of De Burg."

"You would have come to Kelderby. The house is big enough for six families. There are even rooms which I have never seen open."

"Haunted rooms, or my life for it. All the rooms in De Burg are haunted. I have seen the ghosts many a time and oft."

"Asia!"

"I'll swear it. Old abbots and monks gliding about, looking for the souls they have lost. But I should not have gone to Kelderby. I should have gone to the king at Paris. 'T is but a beggarly court he keeps there; but he hath a gay heart, and by all accounts there are merry times. I can sing a song with any one. When women can't work, they can sing. Heigh-ho! 'T is a queer world, dear cousin." And she moved closer to him and gently stroked his hand.

Every caressing movement made life in its innermost room tremble with pleasure. He was speechless under her charming. If he could have spoken he might have broken her spell. But he sat passive, watching the rich carnation of her cheeks and the sensitive play of her tempting lips.

"Yes, I could have sung the king out of a dukedom; and though you sit dumb as an owl, I vow I will sing you out of a chorus." She darted like a bird across the band of turf and took from the margin of the pond a lute. "Listen!" she cried. Then a wild sylvan melody was flung into the air, a melody that seemed to be made of the glad rustling of trees and the gurgling of running waters. Her voice lifted the tinkling notes higher. She came forward slowly, singing as if her whole being was nothing but a song:

"A North Country lass
Up to London did pass,
Although with her nature it did not agree;
Which made her repent,
And so often lament,
Still wishing again in the North to be.
Oh, the oak and the ash and the bonny ivy tree,
They flourish at home in the North Country!"

"Sing, cousin,

"Oh, the oak and the ash and the bonny ivy tree!"

"Sing, cousin, sweet cousin, sing,

"Oh, the oak and the ash and the bonny ivy tree,
They flourish at home in the North Country!"

She was standing before him, her eyes were searching his, she stooped slightly forward, and the witchery of the bright impassioned face was irresistible. His lips parted at her next imperative glance, and, willing or unwilling, without any conscious consent, he was mingling

his voice with hers, and telling all the flowers and birds around them,

"Oh, the oak and the ash and the bonny ivy tree,
They flourish at home in the North Country!"

They sang the whole song through, and at every verse they drew closer together. When she laid down the lute her head was on Nathaniel's shoulder and his arm was around her waist. She had sung her soul into her face. It was gazing passionately from her eyes, it was beating at the door of her lips. For a few moments speech was the most impossible and the most unnecessary of things, the significant language of music had said so much more than common words would have ventured upon. That *Da Capo* of the last two lines had broken down the floodgates of feeling and let both hearts flow together.

The silence which followed was to Nathaniel even sweeter than the song. He did not venture to break it. But in a few moments Anastasia wearied of the tension, the light faded from her face, the enthusiasm of the strife was over. She felt that she had conquered, and she made haste to claim the spoils.

"Nathaniel!"

"Asia! I believe you have been playing upon my heartstrings. I am in a trance of—"

"You are going to say, 'I love you.' I swear you shall not say such foolish words. I am weary of hearing them."

"What then shall I say?"

"Say nothing. What will you *do* for me?"

"What is it you wish me to do?" He spoke almost in a whisper, and with a singular soul-reluctance.

"Ah, me! Help me about my brother John. If you help me not, he and I are both undone." Her eyes were brimming with tears, she gazed pitifully into Nathaniel's face, and then gave way to unrestrained weeping.

Nathaniel was shaken soul and body between his pity for the woman and his indignation at the thing she had asked him to do. From his earliest youth John de Burg had been a reprobate. Hating the discipline of his father's authority, he had fled to sea when but fourteen years old and joined the Turkish pirates who at that time ravaged the west coast of England. For the tyranny and extravagance of King Charles had left all the forts and castles of the west unguarded; their villages were frequently plundered, and many Christian men and women were captured and sold into a cruel and hopeless captivity.

And John de Burg had led these infamous pirates to the coasts of his own county. His boyish form had been recognized in several attacks. 'T was even said that he had lured four of his father's tenants to the ship, which

had carried them away. Such an apprenticeship to crime had brought forth its natural results. He was now a man of thirty-eight, and he had made his name a terror to all merchant vessels. For he attacked indifferently English or foreign crafts, and the dollars and doubloons of Spanish galleons, or the sugar and timber of Bristol and Colchester ships, were alike his prizes. He had even taken the spoils of the sea from the hardy fishers of Newfoundland. As for the sailors of the captured vessels, a miserable choice of fates was given them—they could join De Burg's fleet of pirates and slavers, or be sold into slavery, or die.

King Charles, whose clemency could generally be bought, had been compelled to pass sentence of outlawry on De Burg, and Cromwell had sent a ship to take him on the high seas and hang him at the yard-arm of his own vessel. It was evident, then, that he had been badly pressed. Nothing but a feeling of desperation could have driven him off the sea and back to a home in which he had not a friend but the half-sister who had seen him only twice, and then by stealth.

Yet Anastasia had never felt so true sympathy for any living creature as for this graceless brother. The tie of blood, now so much weakened by the selfishness engendered by civilization, had then its primitive strength; and upon this basis she had built up a wonderful and mysteriously romantic affection. For though she had seen so little of her brother, he had not suffered her, after their first stolen interview, to forget him. Strange men had brought her at intervals presents from him which she thoroughly appreciated—jewels and brocades and fine lace, curious boxes and scents, and not infrequently little leather bags full of gold pieces.

And John de Burg really had for his sister a feeling more akin to unselfish love than seemed possible in a nature so perverted. In their clandestine and dangerous interviews she had charmed him. He felt proud of the fair girl who gave him her heart without inquiries or stipulations, and who never reproached him with the past or asked anything for the future. He had frequently taken great risks to send her tokens of his remembrance, and when at last he found himself forced to fly from his enemies, instead of fighting them, he had thrown himself without a doubt upon her love and resources.

Hitherto she had defied suspicion by her very boldness. She had secreted him under his father's roof for six weeks. Nor had she found it very difficult to do, for she had ever ruled her household with careless prodigality. There was in De Burg Hall none of that methodical

surveillance which was the custom and delight of the ladies of that time. De Burg lived for his outdoor sports, and was satisfied if the demands of his appetite were met in a way which his taste approved. His dining-room and his sleeping-room were the only apartments in his house he visited, unless there was company of sufficient degree or number to make it necessary to open the guest parlors and chambers. But during the last four years such occasions had been rare. The king in exile drained his loyal nobles and gentry of money; they had little left for private entertainments.

As for Anastasia, she lived only for her own delight. She ate delicately, and dressed beautifully, and read the ponderous romances of the day, or amused herself with the peculiarities of her lovers. She held the reins of the household in a very slack hand, and the servants naturally took their lives as easily as possible. None of them, at least, thought it necessary to clean rooms which were not to be used; and Anastasia was now thankful to herself for her indifferent housekeeping.

John de Burg had therefore unmolested possession of a chamber in the main wing, and he kept the key, so that it could not be carelessly entered from the outside. It also communicated by another empty room with a small corridor upon which Anastasia's own apartment opened. At first she had found difficulty in procuring a sufficiency of food; but she soon hit upon the plan of asking her lovers to eat with her, and then giving them the credit for the plenteous meals which disappeared from her table. And she made so many adroit suggestions and such merry talk about their able appetites that no one for some time suspected her sincerity in the matter.

But within the last week a strange uneasy feeling had been growing in the household. A personality cannot be long unfelt, and the personality of John de Burg was too potent not to find out and penetrate the human element surrounding it. De Burg was the first to become restless under this unseen influence.

"I'll swear I heard a strange footstep last night, Anastasia—on the chamber's floor." And he looked at his daughter with a glance the deeper interrogatory of which she perfectly understood.

But she met his suspicious inquiry with a mocking raillery.

"None of my present servants have the spirit to venture so far. I was reading 'Polexandre,' the wearifullest of books, I think; and I heard nothing but the rats and the mice. I pray goodness they eat not up the velvet and leather furniture."

"Then concern yourself a little about it."

"I have a month's mind to do so—if one

only knew what might come of cousin Kelder's interference in our affairs."

This conversation had occurred a week previously, and since then first one servant and then another had either by look or word shown a sense of something unusual. They could not define, they could not localize, the influence, but they felt its presence.

So then it had become evident to Anastasia that her brother must remove, and as soon as she saw Nathaniel she fixed upon him as a proper person to rely on. She remembered his passionate adoration of her in days past; she believed that she could yet move him to carry out her will. But between those days and the present hour lay a lifetime of action and emotion. The youth had become a man. When she played with his heart nine years before, Nathaniel was but twenty-two, full of enthusiasms and unbroken faiths. And Anastasia, then in her sixteenth year, had still illusions left, and possible longings after things lovely and lovable.

She forgot the stern school in which her young lover had since been graduated. She had not seen him at that burial which thrilled the stoutest hearts in England, when the Puritan hosts marching bareheaded laid the great Hampden in the chancel of his parish church. As they carried the hero to his grave, thousands of human voices were uplifted together in the lofty melancholy measures of the ninetyeth Psalm:

"Lord, thou hast been our dwelling-place in all generations."

That psalm had been Nathaniel's consecration hymn. To its pathetic imploration he had given his heart to God and his sword for England's freedom.

But Anastasia could have no conception of such a scene; still less could she imagine that miraculous covenant between his soul and its Maker which made that hour the most solemn of Nathaniel's life. For he had been alone with God, though surrounded by an army; and through the mighty human chorus, rising and rolling like a flood until it was lost in the upper spaces and the farthest horizons, he had heard the still small voice of the Divinity.

Anastasia remembered only his youthful infatuation, his eagerness to do for her any impossible thing. She took no account of the fact that he had since known all the fierce joy of battlefields, where lofty enthusiasms fought in very deed against principalities and powers and spiritual wickedness in high places, and where piety, exasperated to warlike vehemence, bound "kings with chains, and their nobles with fetters of iron," and contended to the death for "the faith once delivered to the saints."

The old Nathaniel was dead, and Anastasia

knew not the one she was trying to mold to her wishes with blandishments and tears. He looked at her indeed with a kind of pity, but also with shame and anger. Had she come to him in grave and sorrowful womanhood, acknowledging her brother's crimes and pleading for some space for his repentance, he could have respected her claim and perhaps persuaded his conscience to err on mercy's side. But it humiliated him to be sought with fleshly enticements. Would he grieve the Holy Spirit within him for a wanton love? Would he sell his honor for a woman's kiss? He was in arms against her beauty even while she laid her hand in his and looked with bewitching entreaty into his eyes. Yet all his senses trembled to her touch; he knew that he could hold no parley with the temptress. He rose, and standing before her asked:

"What do you wish, Asia? Tell me plainly."

"For God's sake, take John back to Kelderby with you! You offered father and myself a home if — if that old knave in London had taken our own from us. Well, then, I have every reason to expect that you will give John a single room and find him bread and water till his ship comes for him. He has had word that within ten days it would be by Barrow. Nathaniel, hide him until he can get off to sea; and then if you want a loving heart, you will be sure to find it here."

"Do you know what you ask, Asia? John de Burg has been outlawed by both the king and the Commonwealth. Herein you would make me the aider and abetter of his crimes. Your father —"

"My father would kill John on sight. You pretend to religion; have mercy then. No one will suspect you; not even Old Noll."

"It is beyond belief that I should use the honor of my father's name to cover a villain. Nor will I so far wrong the clemency of the Lord Protector. I have indeed neither list nor leisure to meddle with John de Burg, for he is a high-sea robber, a man-stealer, a woman-stealer; he has committed more murders than he can remember."

"'T is the fashion of the time to steal and kill. John is no worse than many who gain honor by the trade." She spoke with a pointed emphasis that made Nathaniel tingle; she put tears scornfully away and looked with a blazing but beautiful defiance at him.

"You must know that your brother lured into hopeless slavery three men who had been his playfellows — betrayed them, like another Judas, with a kiss."

"Faith, they had once told lies on him. He owed them a grudge, and he paid it. He did right; and you will be wise not to put yourself in like danger. O Nathaniel!" and

she rose and placed her hands upon his shoulders, "dear Nathaniel, for my sake take John with you."

Her lovely face was close to his; he flushed and trembled and felt an almost irresistible desire to kiss the sweet pouting lips and fold the pleading woman to his heart. A moment's hesitation would have made him her slave; but he did not hesitate. Though troubled and quivering through all his being, he gently removed the small hands which would have bound him, lifted his hat, and without a word made her a parting salutation with it.

The high, uncompromising hat typified the man's determination. She looked at Nathaniel, and then gave up the battle. He was ascending the steps of the terrace; she realized that she had totally failed. Then a storm of anger and scorn overwhelmed her, and as she could not relieve herself in speech she followed Nathaniel's slow but determined steps with a railing song —

"A brewer may be a Parliament man,
For there the knavery first began,
And brew most cunning plots he can,
Which nobody can deny."

Nathaniel was but a few steps before her, but he neither hurried his pace nor looked be-

hind, though the mocking words followed him with a shrill intensity:

"A brewer may be as bold as Hector,
Tipsy-bold with his own nectar,
A brewer may be a Lord Protector,
Which nobody can deny."

Nathaniel was as one who heard not. He turned from the terrace into the court-yard with the saucy tones ringing in his ears, and was thankful to find his horse saddled and ready to mount.

A great depression had fallen upon him. He galloped furiously from the place; he felt the stress of a man fleeing for his life. His heart ached for the woman he had just left; and his conscience, that unseen judge, accused, accused, and accused him. Of what folly and self-sufficiency he had been guilty! At that hour he understood why David asked to be delivered from "presumptuous sins." The Holy One had taught men to ask, "Lead us not into temptation"; but Nathaniel knew that he had defied and dallied with temptation, and if he had escaped, it was as a bird from the snare of the fowler. The fear of the struggle was still on him, and though he rode hard, conscience was never behind him. To all his excuses it had the one inexorable answer, "Blame thyself."

(To be continued.)

Amelia E. Barr.

CLOVELLY AND TINTAGEL.

TENDEREST Clovelly, sweet of name and face,
Nursling flower-soft of Devon's balmiest airs,
With what a womanly port and witching grace
O'er those rich lawns remote from jars and cares
Thou look'st far forth! How well those rocky stairs
Descend that gorge! With what a soft embrace
Those pendent woods shadow yon cliff's gray base,
Yon sea that woos the rose, the myrtle spares!
Westward, Tintagel's keep of Arthur's might
Bears record stern. Beauty holds banquet here:
Yon azure bay so gladdening and so bright
Smiles on us as with eyes of Guinevere
Ere yet her queenly front, a realm's delight,
Had known a guilty shade, her cheek a tear.

Aubrey de Vere.

NOTE.— Few spots so near each other stand in such singular contrast as Tintagel and Clovelly, the most remarkable scenes on the northern coast of Cornwall and Devonshire— Tintagel, a storm-beaten, almost insulated rock, descending in precipices to the waves, and crowned by the rude walls of King Arthur's castle, if we may trust the old romances; Clovelly, the Cumæ of England, cradled amidst woodlands above a bay as bright as that of Baia.

A CONNECTICUT YANKEE IN KING ARTHUR'S COURT.

BY MARK TWAIN.

[Here follow a few incidents from an impending book of mine which bears the above title.¹ The Yankee tells his own story, and in his own language, beginning with this brief description of himself.]

AM an American. I was born and reared in Hartford, in the State of Connecticut — anyway, just over the river, in the country. So I am a Yankee of the Yankees — and practical; yes, and nearly barren of sentiment, I suppose — or poetry, in other words. My father was a blacksmith, my uncle was a horse-doctor, and I was both along at first. Then I went over to the great Colt Arms factory and learned my real trade; learned all there was to it; learned to make everything — guns, revolvers, cannon, boilers, engines, all sorts of labor-saving machinery. Why, I could make anything a body wanted — anything in the world, it did n't make any difference what; and if there

was n't any quick, new-fangled way to make a thing, I could invent one — and do it as easy as rolling off a log. I became head superintendent, and had a couple of thousand men under me. Well, a man like that is a man that has got plenty of sand — that goes without saying.

[The first chapter explains how, by a curious accident, he was flung back thirteen centuries and landed, whole and sound and very much surprised, in the midst of the quaint and primitive England of King Arthur and the Knights of the Round Table; the five succeeding chapters relate his first adventures at Arthur's court, and close with his escape from death at the stake by means of a "miracle" — at least he passes the thing off on those simple and superstitious people as a miracle. And of so mighty a sort is his miracle that it raises him at once to the dignity of chief minister and executive, and at the same time so damages Merlin's stock as an enchanter that Merlin becomes his enemy, and a bitter struggle for supremacy in magic ensues between the two which lasts to the end of the book, Merlin using the absurd necromancy of the time, and the Yankee beating it easily and brilliantly with the more splendid necromancy of the nineteenth century — that is, the marvels of modern science.]

Inasmuch as I was now the second personage in the kingdom, so far as political power and authority were concerned, much was made of me. My raiment was of silks and velvets and cloth of gold, and in consequence was very showy, also uncomfortable. But habit would soon reconcile me to my clothes; I was aware of that. I was given the choicest suite of apartments in the castle, after the king's. They were aglow with loud-colored silken hangings, but the stone floors had nothing but rushes on them for a carpet, and they were misfit rushes at that, being not all of one breed. As for conveniences, properly speaking, there were n't any. I mean *little* conveniences; it is the little conveniences that make the real comfort of life. The big oaken chairs, graced with rude carvings, were well enough, but that was the stopping-place. There was no soap, no matches, no looking-glass — except a metal one, about as powerful as a pail of water. And not a chromo. I had been used to chromos for years, and I saw now, that without my suspecting it a passion for art had got worked into the fabric of my being, and was become a part of me. It made me homesick to look around over this proud and gaudy but heartless barrenness and remember that in our house at East Hartford, all unpretending as it was, you could n't go into a room but you would find an insurance chromo, or at least a three-color "God Bless Our Home" over the door; and in the parlor we had nine. But here, even in my grand room of state, there was n't anything in the nature of a picture, except a thing the size of a bed-quilt, which was either woven or knitted (it had darned places in it), and nothing in it was the right color or the right shape; and as for proportions, even Raphael himself could n't have botched them more formidably after all his practice on those nightmares they call his "Celebrated Hampton Court Cartoons." We had several of his chromos; one was his "Miraculous Draught of Fishes," where he puts in a miracle of his own — puts three men into a canoe which could n't have held a dog without turning over. I always admired to study R.'s art, it was so fresh and unconventional.

¹ Now in press — Charles L. Webster & Co., publishers.

There was n't even a bell or a speaking-tube in the castle. I had a great many servants, and those that were on duty lolled in the ante-rooms; and when I wanted one of them I had to go and call for him. There was no gas, there were no candles; a bronze dish half full of boarding-house butter with a blazing rag floating in it was the thing that produced what was regarded as light. A lot of these hung along the walls and modified the dark — just toned it down enough to make it dismal. If you went out at night, your servants carried torches. There were no books, pens, paper, or ink, and no glass in the openings they believed to be windows. It is a little thing, glass is, until it is absent; then it becomes a big thing. But perhaps the worst of all was, that there was n't any sugar, coffee, tea, or tobacco. I saw that I was just another Robinson Crusoe cast away on an uninhabited island, with no society but some more or less tame animals, and if I wanted to make life bearable I must do as he did, invent, contrive, create; reorganize things, set brain and hand to work, and keep them busy. Well, that was in my line.

One thing troubled me along at first — the immense interest which people took in me. Apparently the whole nation wanted a look at me. It soon transpired that the eclipse had scared the British world almost to death; that while it lasted the whole country, from one end to the other, was in a pitiable state of panic, and the churches, hermitages, and monk-eries overflowed with praying and weeping poor creatures who thought the end of the world was come. Then had followed the news that the producer of this awful event was a stranger, a mighty magician at Arthur's court; that he could have blown out the sun like a candle, and was just going to do it when his mercy was purchased, and he then dissolved his enchantments and was now recognized and honored as the man who had by his unaided might saved the globe from destruction and its peoples from extinction. Now, if you consider that everybody believed that, and not only believed it, but never even dreamed of doubting it, you will easily understand that there was not a person in all Britain who would not have walked fifty miles to get a sight of me. Of course I was all the talk; all other subjects were dropped; even the king became suddenly a person of minor interest and notoriety. Within twenty-four hours the delegations began to arrive, and from that time onward for a fortnight they kept coming. The village was crowded, and all the countryside. I had to go out a dozen times a day to show myself to these reverent and awe-stricken multitudes. It came to be a great burden as to time and trouble, but of course it was at the same time

compensatingly agreeable to be so celebrated and such a center of homage. It turned Brer Merlin green with envy and spite, which was a great satisfaction to me. But there was one thing I could n't understand — nobody had asked for an autograph. I spoke to Clarence, the page, about it. By George, I had to explain to him what it was! Then the lad said nobody in the country could read or write but a few dozen priests. Land! think of that.

There was another thing that troubled me a little. Those multitudes presently began to agitate for another miracle. That was natural. To be able to carry back to their far homes the boast that they had seen the man who could command the sun, riding in the heavens, and be obeyed, would make them great in the eyes of their neighbors and envied by them all; but to be able also to say they had seen him work a miracle themselves — why, people would come a distance to see *them*. The pressure got to be pretty strong. There was going to be an eclipse of the moon, and I knew the date and hour, but it was too far away — two years. I would have given a good deal for license to hurry it up and use it now when there was a big market for it. It seemed a great pity to have it wasted so, and come lagging along at a time when a body would n't have any use for it, as like as not. If it had been booked for only a month away, I could have sold it short; but as matters stood I could n't seem to cipher out any way to make it do me any good, so I gave up trying. Next, Clarence found that old Merlin was making himself busy on the sly among those people. He was spreading a report that I was a humbug, and that the reason I did n't accommodate the people with a miracle was because I could n't. I saw that I must do something. I presently thought of a plan.

By my authority as executive I threw Merlin into prison, — the same cell I had occupied myself, — and I did n't thin out the rats any for his accommodation. Then I gave public notice by herald and trumpet that I should be busy with affairs of state for a fortnight, but about the end of that time I would take a moment's leisure and blow up Merlin's ancient stone tower by fires from heaven; in the mean time whoso listened to evil reports about me, let him beware. Furthermore, I would perform but this one miracle at this time and no more; if it failed to satisfy and any murmured, I would turn the murmurers into horses and make them useful. Quiet ensued.

I took Clarence into my confidence to a certain degree, and we went to work privately. I told him that this was a sort of miracle that required a trifle of preparation, and that it

would be sudden death ever to talk about these preparations to anybody. That made his mouth safe enough. Clandestinely we made a few bushels of first-rate blasting powder, and I superintended my armorers while they constructed a lightning-rod and some wires. That old stone tower was very massive, and rather ruinous, too, for it was Roman, and four hundred years old. Yes, and handsome, after a rude fashion, and clothed with ivy from base to summit as with a shirt of scale mail. It stood on a lonely eminence, in good view from the castle, and about half a mile away.

Working by night, we stowed the powder in the tower—dug stones out on the inside, and buried the powder in the walls themselves, which were fifteen feet thick at the base. We put in a peck at a time in a dozen places. We could have blown up the Tower of London with these charges. When the thirteenth night was come we put up our lightning-rod, bedded in one of the batches of powder, and ran wires from it to the other batches. Everybody had shunned that locality from the day of my proclamation; but on the morning of the fourteenth I thought best to warn the people, through the heralds, to keep clear away—a quarter of a mile away. They added, by command, that at some time during the twenty-four hours I would consummate the miracle, but would first give a brief notice; by flags on the castle towers if in the daytime, by torch-baskets in the same places if at night.

Thunder-showers had been tolerably frequent of late, and I was not much afraid of a failure; still, I should n't have cared for a delay of a day or two: I should have explained that I was busy with affairs of state yet, and the people must wait.

Of course we had a blazing sunny day—almost the first one without a cloud for three weeks; things always happen so. I kept secluded and watched the weather. Clarence dropped in from time to time and said the public excitement was growing and growing all the time, and the whole country filling up with human masses as far as one could see from the battlements. At last the wind sprung up and a cloud appeared—in the right quarter, too, and just at nightfall. For a little while I watched the distant cloud spread and blacken, then I judged it was time for me to appear. I ordered the torch-baskets to be lighted and Merlin liberated and sent to me. A quarter of an hour later I ascended to the parapet and there found the king and the court assembled and gazing off in the darkness towards Merlin's tower. Already the gloom was so thick that one could not see far; these people, and the old turrets, being partly in deep shadow and

partly in the red glow from the great torch-baskets overhead, made a good deal of a picture.

Merlin arrived in a sinister mood. I said:

"You wanted to burn me alive when I had not done you any harm, and latterly you have been trying to injure my professional reputation. Therefore I am going to call down fire and blow up your tower, but it is only fair to give you a chance. Now if you think you can break my enchantments and ward off the fires, step to the bat; it's your innings."

"I can, fair sir, and I will. Doubt it not."

He drew an imaginary circle on the stones of the roof, and burnt a pinch of powder in it which sent up a small cloud of aromatic smoke, whereat everybody fell back and began to cross himself and get uncomfortable. Then he began to mutter and make passes in the air with his hands. He worked himself up slowly and gradually into a sort of frenzy, and got to thrashing around with his arms like the sails of a windmill. By this time the storm had about reached us; the gusts of wind were flaring the torches and making the shadows swash about, the first heavy drops of rain were falling, the world abroad was black as pitch, the lightning began to wink fitfully. Of course my rod would be loading itself now. In fact, things were imminent. So I said:

"You have had time enough. I have given you every advantage, and not interfered. It is plain your magic is weak. It is only fair that I begin now."

I made about three passes in the air, and then there was an awful crash and that old tower leaped into the sky in chunks, along with a vast volcanic fountain of fire that turned night to noonday and showed a thousand acres of human beings groveling on the ground in a general collapse of consternation. Well, it rained mortar and masonry the rest of the week. This was the report; but I reckon they added on a couple of days.

It was an effective miracle. That great bothersome temporary population vanished. There were a good many thousand tracks in the mud the next morning, but they were all outward bound. If I had advertised another miracle I could n't have raised an audience with a sheriff.

Merlin's stock was flat. The king wanted to stop his wages; he even wanted to banish him, but I interfered. I said he would be useful to work the weather, and attend to small matters like that, and I would give him a lift now and then when his poor little parlor-magic soured on him. There was n't a rag of his tower left, but I had the government rebuild it for him, and advised him to take boarders; but he was too high-toned for that. He was a

THE YANKEE'S RECEPTION IN ARTHURDOM.

rather hard lot, take him how you might ; but then you could n't fairly expect a man to be sweet that had been set back so.

[A few chapters are here devoted to the events of the next two or three years. The closing incident is a misunderstanding at a tournament, where the Yankee makes a remark about Sir Dinadan the Humorist which Sir Sagramour le Desirous imagines was meant for him, wherefore he challenges the Yankee to mortal combat, this fight to take place when Sir Sagramour gets back from seeking the Holy Grail—an expedition which usually occupies several years and does n't result in any Holy Grail, either. Meantime the Yankee is very busy; for he has privately set himself the task of introducing the great and beneficent civilization of the nineteenth century, and of peacefully replacing the twin despotisms of royalty and aristocratic privilege with a "Republic on the American plan" when Arthur shall have passed to his rest.]

I was pretty well satisfied with what I had already accomplished. In various quiet nooks and corners I had the beginnings of all sorts of industries under way—nuclei of future vast factories, the iron and steel missionaries of my future civilization. In these were gathered together the brightest young minds I could find, and I kept agents out raking the country for more, all the time. I was training a crowd of ignorant folk into experts—experts in every sort of handiwork and scientific calling. These nurseries of mine went along smoothly and privately undisturbed in their obscure country retreats, for nobody was allowed to come into their precincts without a special permit.

Yes, I had made pretty handsome progress when Sir Sagramour's challenge struck me.

Four years more rolled by—and then! Well, you would never imagine it in the world. Unlimited power *is* the ideal thing when it is in safe hands. The despotism of heaven is the one absolutely perfect government. An earthly despotism would be the absolutely perfect earthly government if the conditions were the same; namely, the despot the perfectest individual of the human race, and his lease of life perpetual. But as a perishable, perfect man must die, and leave his despotism in the hands of an imperfect successor, an earthly despotism is not merely a bad form of government, it is the worst form that is possible.

My works showed what a despot could do with the resources of a kingdom at his command. Unsuspected by this dark land, I had the civilization of the nineteenth century booming under its very nose! It was fenced away from the public view, but there it was, a gigantic and unassailable fact—and to be heard from yet, if I lived and had luck. There it was, as sure a fact and as substantial a fact as any serene volcano standing innocent with its smokeless summit in the blue sky and giving no sign of the rising hell in its bowels. My schools and churches were children four years before; they were grown-up now; my little shops of that day were vast factories now; where I had a dozen trained men then, I had a thousand now; where I had one

A MAN-AT-ARMS.

brilliant expert then, I had fifty now. I stood with my finger on the button, so to speak, ready to press it and flood the midnight world with intolerable light at any moment. But I was not going to do the thing in that sudden way. It was not my policy. The people could not have stood it.

No; I had been going cautiously all the while. I had had confidential agents trickling through the country some time, whose office was to undermine knighthood by imperceptible degrees, and to gnaw a little at this and that and the other superstition, and so prepare the way gradually for a better order of things. I was turning on my light one-candle power at a time, and meant to continue to do so.

I had scattered some branch schools secretly about the kingdom, and they were doing very well. I meant to work this racket more and more as time wore on, if nothing occurred to interrupt me.

Clarence was twenty-two now, and was my head executive, my right hand. He was a darling; he was equal to anything; there was n't anything he could n't turn his hand to. Of late I had been training him for journalism, for the time seemed about right for a start in the newspaper line; nothing big, but just a small weekly for experimental circulation in my civilization nurseries. He took to it like a duck; there was an editor concealed in him, sure. Already he had doubled himself in one way; he talked sixth century and wrote nineteenth. His journalistic style was climbing steadily; it was already up to the back-settlement Alabama mark, and could n't be told from the editorial output of that region by either matter or flavor.

[The next thirty chapters tell the adventures of a trip which the king and the Yankee make on foot through England disguised as peasants; the statesman's idea being to observe with his own eyes the condition of the masses, instead of putting up with doubtful, second-hand evidence in planning for their weal; and the king's idea being that here was a romantic new deal in the line of adventure, and doubtless a perilously good time to be got out of it. After long absence they at last wander back to the Capital, and find that Sir Sagramour, minus the Grail, has just got back too.]

Home again, at Camelot. A morning or two later I found the paper, damp from the

press, by my plate at the breakfast-table. I turned to the advertising columns, knowing I should find something of personal interest to me there. It was this:

DE PAR LE ROI.

Know that the great lord & illustrious knight, SIR SAGRAMOUR LE DESIROUS having c&ndesended to meet the King's Minister, Hank Morgan, the which is surnamed The Boss, for satisfaction of offence anciently given, these will engage in the lists by Camelot about the fourth hour of the morning of the sixteenth day of this next succeeding month. The qattle will be a l'ouTrance, sith the said offence was of a deadly sort, admitting of no composition.

DE PAR LE ROI.

Clarence's editorial reference to this affair was to this effect:

It will be observed, by a glance at our advertising columns, that the community is to be favored with a treat of unusual interest in the tournament line. The names of the artists are warrant of good entertainment. The box-office will be open at noon of the 13th; admission 3 farthings, reserved seats 5; proceeds to go to the hospital fund. The royal dair and all the Court will be present. With these exceptions, and the press and the clergy, the free list is strictly suspended. Parties are hereby warned against buying tickets of speculators; they will not be good at the door. Everybody knows and likes The Boss, everybody knows and likes Sir Sag; come, let us give the lads a good send-off. Remember, the proceeds go to a great and free charity, and one whose broad benevolence stretches out its helping hand, warm with the blood of a loving heart, to all that suffer, regardless of race, creed, condition or color—the only charity yet established in the earth which has no politico-religious stop-cock on its compassion, but says Here flows the stream, let all come and drink! Turn out, all hands! fetch along your doughnuts and yout gum-drops and have a good time. Pie for sale on the grounds, and rocks to crack it with; also circus-lemonade—three drops of lime juice to a barrel of water.

N. G. This is the first tournament under the new law, which allows each combatant to use any weapon he may prefer. You want to make a note of that.

Up to the day set, there was no talk in all Britain of anything but this combat. All other topics sunk into insignificance, and passed out of men's thoughts and interest. It was not because a tournament was a great matter; it was not because Sir Sagramour had found the Holy Grail, for he had not, but had failed; it was not because the second (official) personage in the kingdom was one of the duelists; no, all these features were commonplace. Yet there was abundant reason for the extraordinary interest which this coming fight was creating. It was born of the fact that all the nation knew

that this was not to be a duel between mere men, so to speak, but a duel between two mighty magicians; a duel not of muscle, but of mind; not of human skill, but of superhuman art and craft; a final struggle for supremacy between the two master enchanters of the age. It was realized that the most prodigious achievements of the most renowned knights could not be worthy of comparison with a spectacle like this; they could be but child's play contrasted with this mysterious and awful battle of the gods. Yes, all the world knew it was going to be in reality a duel between Merlin and me, a measuring of his magic powers against mine. It was known that Merlin had been busy whole days and nights together imbuing Sir Sagramour's arms and armor with supernal powers of offense and defense, and that he had procured for him from the spirits of the air a fleecy veil which would render the wearer invisible to his antagonist while still visible to other men. Against Sir Sagramour, so weaponed and protected, a thousand knights could accomplish nothing; against him no known enchantments could prevail. These facts were sure; regarding them there was no doubt, no reason for doubt. There was but one question: might there be still other enchantments, *unknown* to Merlin, which could render Sir Sagramour's veil transparent to me, and make his enchanted mail vulnerable to my weapons? This was the one thing to be decided in the lists. Until then the world must remain in suspense.

So the world thought there was a vast matter at stake here, and the world was right; but it was not the one they had in their minds. No, a far vaster one was upon the cast of this die — *the life of knight-errantry*. I was a champion, it was true, but not the champion of the frivolous black arts; I was the champion of hard, unsentimental common sense and reason. I was entering the lists either to destroy knight-errantry or to be its victim.

Vast as the show-grounds were, there were no vacant spaces in them outside of the lists at ten o'clock on the morning of the 16th. The mammoth grand stand was clothed in flags, streamers, and rich tapestries, and packed with several acres of small-fry tributary kings, their suits, and the British aristocracy; with our own royal gang in the chief place, and each and every individual a flashing prism of gaudy silks and velvets — well, I never saw anything to begin with it but a fight between an Upper Mississippi sunset and the aurora borealis. The huge camp of beflagged and gay-colored tents at one end of the lists, with stiff standing sentinels at every door and a shining shield hanging by him for challenge, was another fine sight. You see, every knight

was there who had any ambition or any caste feeling; for my feeling towards their order was not much of a secret, and so here was their chance. If I won my fight with Sir Sagramour, others would have the right to call me out as long as I might be willing to respond.

Down at our end there were but two tents — one for me and another for my servants. At the appointed hour the king made a sign, and the heralds, in their tabards, appeared and made proclamation, naming the combatants and stating the cause of quarrel. There was a pause, then a ringing bugle-blast, which was the signal for us to come forth. All the multitude caught their breath, and an eager curiosity flashed into every face.

Out from the tent rode great Sir Sagramour, an imposing tower of iron, stately and rigid, his huge spear standing upright in its socket, and grasped in his strong hand, his grand horse's face and breast cased in steel, his body clothed in rich trappings that almost dragged the ground — oh, a most noble picture! A great shout went up, of welcome and admiration.

And then out I came. But I did n't get any shout. There was a wondering and eloquent silence, for a moment, then a great wave of laughter began to sweep along that human sea, but a warning bugle-blast cut its career short. I was clad in the simplest and comfortablest of gymnast costumes, flesh-colored tights from neck to heel, with blue silk puffings about my loins, and bareheaded. My horse was not above medium size, but he was alert, slender-limbed, muscled with watch-springs, and just a greyhound to go. He was a beauty, glossy as silk, and naked as he was when he was born, except for bridle and ranger-saddle.

The iron tower and the gorgeous bed-quilt came cumbrously but gracefully pirouetting down the lists, and we tripped lightly up to meet them. We halted; the tower saluted, I responded; then we wheeled and rode side by side to the grand stand and faced our king and Guenevere, to whom we made obeisance. The queen exclaimed:

"Alack, Sir Boss, wilt fight naked, and without lance or sword or —"

But the king checked her and made her understand, with a polite phrase or two, that this was none of her business. The bugles rang again, and we separated and rode to the ends of the lists, and took position. Now old Merlin stepped into view and cast a dainty web of gossamer threads over Sir Sagramour which turned him into Hamlet's ghost; the king made a sign, the bugles blew, Sir Sagramour laid his great lance in rest, and the next moment here he came thundering down the course with his veil flying out behind, and I went whistling through the air like an arrow to meet

"GREAT SCOTT! BUT THERE WAS A SENSATION."

him, cocking my ear, the while, as if noting the invisible knight's position and progress by hearing, not sight. A chorus of encouraging shouts burst out for him, and one brave voice flung out a heartening word for me — said:

"Go it, slim Jim!"

It was an even bet that Clarence had procured that favor for me — and furnished the language too. When that formidable lance-point was within a yard and a half of my breast, I twitched my horse aside without an effort and the big knight swept by, scoring a blank. I got plenty of applause that time. We turned, braced up, and down we came again. Another blank for the knight, a roar of applause for me. 'This same thing was repeated once more; and it fetched such a whirlwind of applause that Sir Sagramour lost his temper, and at once changed his tactics and set himself the task of chasing me down. Why, he had n't any show in the world at that; it was a game of tag, with all the advantage on my side. I whirled out of his path with ease whenever I chose, and once I slapped him on the back as I went to the rear. Finally I took the chase into my own hands; and after that, turn, or twist, or do what he would, he was never able to get behind me again; he found himself always in front at the end of his maneuver. So he gave up that business and retired to his end of the lists. His temper was clear gone now, and he forgot himself and flung an insult at me which disposed of mine. I slipped my lasso from the

horn of my saddle, and grasped the coil in my right hand. This time you should have seen him come! It was a business trip, sure; by his gait there was blood in his eye. I was sitting my horse at ease, and swinging the great loop of my lasso in wide circles about my head. The moment he was under way I started for him. When the space between us had narrowed to forty feet, I sent the snaky spirals of the rope a-cleaving through the air, then darted aside and faced about and brought my trained animal to a halt with all his feet braced under him for a surge. The next moment the rope sprung taut and yanked Sir Sagramour out of the saddle. Great Scott! but there was a sensation.

Unquestionably the popular thing in this world is novelty. These people had never seen anything of that cowboy business before, and it carried them clear off their feet with delight. From all around and everywhere the shout went up:

"Encore! encore!"

I wondered where they got the word; but there was no time to cipher on philological matters, because the whole knight-errantry hive was just humming now, and my prospect for trade could n't have been better. The moment my lasso was released and Sir Sagramour had been assisted to his tent I hauled in the slack, took my station, and began to swing my loop around my head again. I was sure to have use for it as soon as they could elect a suc-

cessor for Sir Sagramour, and that could n't take long where there were so many hungry candidates. Indeed, they elected one straight off—Sir Hervis de Revel.

Bzz! Here he came, like a house afire. I dodged; he passed like a flash, with my horse-hair coils settling around his neck; a second or so later, *fst!* his saddle was empty.

I got another encore; and another, and another, and still another. When I had snaked five men out, things began to look serious to the iron-clads, and they stopped and consulted together. As a result, they decided that it was time to waive etiquette and send their greatest and best against me. To the astonishment of that little world, I lassoed Sir Lamorak de Galis, and after him Sir Galahad. So you see there was simply nothing to be done, now, but play their right bower—bring out the superbest of the superb, the mightiest of the mighty, the great Sir Launcelot himself!

A proud moment for me? I should think so. Yonder was Arthur, King of Britain; yonder was Guenevere; yes, and whole tribes of little provincial kings and kinglets; and in the tented camp yonder renowned knights from many lands; and likewise the selectest body known to chivalry, the Knights of the Table Round, the most illustrious in Christendom; and, biggest fact of all, the very sun of their shining system was yonder couching his lance,

the focal point of forty thousand adoring eyes; and, all by myself, here was I laying for him. Across my mind flitted the dear image of a certain hello-girl of West Hartford, and I wished she could see me now. In that moment down came the Invincible with the rush of a whirlwind, the courtly world rose to its feet and bent forward, the fateful coils went circling through the air, and before you could wink I was towing Sir Launcelot across the field on his back, and kissing my hand to the storm of waving kerchiefs and the thunder-crash of applause that greeted me.

Said I to myself, as I coiled my lariat and hung it on my saddle-horn, and sat there drunk with glory, "The victory is perfect, no other will venture against me; knight-errantry is dead." Now imagine my astonishment, and everybody else's too, to hear the peculiar bugle-call which announces that another competitor is about to enter the lists! There was a mystery here; I could n't account for this thing. Next, I noticed Merlin gliding away from me; and then I noticed that my lasso was gone. The old sleight-of-hand expert had stolen it, sure, and slipped it under his robe.

The bugle blew again. I looked, and down came Sir Sagramour riding again, with his dust brushed off and his veil nicely re-arranged. I trotted up to meet him, and pretended to find him by the sound of his horse's hoofs. He said:

SIR SAGRAMOUR'S DISCOMFITURE.

"Thou 'rt quick of ear, but it will not save thee from this!" and he touched the hilt of his great sword. "An ye are not able to see it, because of the influence of the veil, know that it is no cumbrous lance, but a sword—and I ween ye will not be able to avoid it."

His visor was up; there was death in his smile. I should never be able to dodge his sword, that was plain. Somebody was going to die this time. If he got the drop on me, I could name the corpse. We rode forward together and saluted the royalties. This time the king was disturbed. He said:

"Where is thy strange weapon?"

"It is stolen, sire."

"Hast another at hand?"

"No, sire; I brought only the one."

Then Merlin mixed in:

"He brought but the one because there was but the one to bring. There exists none other but that one. It belongeth to the King of the Demons of the Sea. This man is a pretender, and ignorant; else he had known that that weapon can be used in but nine bouts only, and then it vanisheth away to its home under the sea."

"Then is he weaponless," said the king. "Sir Sagramour, ye will grant him leave to borrow."

"And I will lend," said Sir Launcelot, limping up. "He is as brave a knight of his hands as any that be on live, and he shall have mine."

He put his hand on his sword to draw it, but Sir Sagramour said:

"Stay, it may not be. He shall fight with his own weapons; it was his privilege to choose them and bring them. If he has erred, on his head be it."

"Knight," said the king, "thou 'rt overwrought with passion; it disorders thy mind. Wouldst kill a naked man?"

"An he do it he shall answer it to me," said Sir Launcelot.

"I will answer it to any he that desireth," retorted Sir Sagramour, hotly.

Merlin broke in, rubbing his hands and smiling his low-downest smile of malicious gratification:

"T is well said, right well said! And 't is enough of parleying. Let my lord the king deliver the battle signal."

The king had to yield. The bugle made proclamation, and we turned apart and rode to our stations. There we stood, a hundred yards apart, facing each other, rigid and motionless, like horsed statues. And so we remained, in a soundless hush, as much as a full minute, everybody gazing, nobody stirring. It seemed as if the king could not take heart to give the signal. But at last he lifted his hand, the clear note of the bugle followed,

Sir Sagramour's long blade described a flashing curve in the air, and it was superb to see him come. I sat still. On he came. I did not move. People got so excited that they shouted to me:

"Fly, fly! Save thyself! This is murder!"

I never budged so much as an inch till that thundering apparition had got within fifteen paces of me; then I snatched a dragoon revolver out of my holster, there was a flash and a roar, and the revolver was back in the holster before anybody could tell what had happened.

Here was a riderless horse plunging by, and yonder lay Sir Sagramour, stone dead.

The people that ran to see him were stricken dumb to find that the life was actually gone out of the man and no reason for it visible, no hurt upon his body, nothing like a wound. There was a hole through the breast of his chain-mail, but they attached no importance to a little thing like that; and as a bullet-wound there produces but little blood, none came in sight because of the clothing and swaddlings under the armor. The body was dragged over to let the king and the swells look down upon it. They were stupefied with astonishment, naturally. I was requested to come and explain the miracle. But I remained in my tracks, like a statue, and said:

"If it is a command, I will come; but my lord the king knows that I am where the laws of combat require me to remain while any desire to come against me."

I waited. Nobody challenged. Then I said:

"If there are any who doubt that this field is well and fairly won, I do not wait for them to challenge me, I challenge them."

"It is a gallant offer," said the king, "and well beseems you. Whom will you name first?"

"I name none, I challenge all! Here I stand, and dare the chivalry of England to come against me—not by individuals, but in mass!"

"What!" shouted a score of knights.

"You have heard the challenge. Take it, or I proclaim you recreant knights and vanquished, every one!"

It was a "bluff," you know. At such a time it is sound judgment to put on a bold face and play your hand for a hundred times more than it is worth: forty-nine times out of fifty nobody dares to "call," and you rake in the chips. But just this once—well, things looked squally! In just no time five hundred knights were scrambling into their saddles, and, before you could wink, a widely scattering drove were under way and clattering down upon me. I snatched both revolvers from the holsters and began to measure distances and calculate chances.

Bang! One saddle empty. Bang! another one. Bang-bang! and I bagged two. Well, it was nip and tuck with us, and I knew it. If I spent the eleventh shot without convincing these people, the twelfth man would kill me, sure.

And so I never did feel so happy as I did when my ninth downed its man and I detected the wavering in the crowd which is premonitory of panic. An instant lost now could knock out my last chance. But I did n't lose it. I raised both revolvers and pointed them; the halted host stood their ground just

about one good square moment, then broke and fled.

The day was mine. Knight-errantry was a doomed institution. The march of civilization was begun. How did I feel? Ah, you never could imagine it.

And Brer Merlin? His stock was flat again. Somehow, every time the magic of fol-de-rol tried conclusions with the magic of science, the magic of fol-de-rol got left.

[However, it is only fair to the late Merlin to say that he got one more chance at the Yankee—and made exceedingly good use of it, too.]

Mark Twain.

A THANKSGIVING HYMN.

FOR bud and for bloom and for balm-laden breeze,
For the singing of birds from the hills to the seas,
For the beauty of dawn and the brightness of noon,
For the light in the night of the stars and the moon,
We praise thee, gracious God.

For the sun-ripened fruit and the billowy grain,
For the orange and apple, the corn and the cane,
For the bountiful harvests now gathered and stored,
That by thee in the lap of the nations were poured,
We praise thee, gracious God.

For the blessing of friends, for the old and the new,
For the hearts that are trusted and trusting and true,
For the tones that we love, for the light of the eye
That warms with a welcome and glooms with good-bye,
We praise thee, gracious God.

That the desolate poor may find shelter and bread,
That the sick may be comforted, nourished, and fed,
That the sorrow may cease of the sighing and sad,
That the spirit bowed down may be lifted and glad,
We pray thee, pitying Lord.

That brother the hand of his brother may clasp
From ocean to ocean in friendliest grasp,
That for north and for south and for east and for west,
The horror of war be forever at rest,
We pray thee, pitying Lord.

For the blessings of earth and of air and of sky,
That fall on us all from the Father on high,
For the crown of all blessing since blessing begun,
For the gift, "the unspeakable gift," of thy Son,
We praise thee, gracious God.

S. E. Adams.

POE'S COTTAGE AT FORDHAM.

HERE lived the soul enchanted
 By melody of song ;
 Here dwelt the spirit haunted
 By a demoniac throng ;
 Here sang the lips elated ;
 Here grief and death were sated ;
 Here loved and here unmated
 Was he, so frail, so strong.

Here wintry winds and cheerless
 The dying firelight blew
 While he whose song was peerless
 Dreamed the drear midnight through,
 And from dull embers chilling
 Crept shadows darkly filling
 The silent place, and thrilling
 His fancy as they grew.

Here, with brow bared to heaven,
 In starry night he stood,
 With the lost star of seven
 Feeling sad brotherhood.
 Here in the sobbing showers
 Of dark autumnal hours
 He heard suspected powers
 Shriek through the stormy wood.

From visions of Apollo
 And of Astarte's bliss,
 He gazed into the hollow
 And hopeless vale of Dis;
 And though earth were surrounded
 By heaven, it still was mounded
 With graves. His soul had sounded
 The dolorous abyss.

Proud, mad, but not defiant,
 He touched at heaven and hell.
 Fate found a rare soul pliant
 And rung her changes well.
 Alternately his lyre,
 Stranded with strings of fire,
 Led earth's most happy choir
 Or flashed with Israfel.

No singer of old story
 Luting accustomed lays,
 No harper for new glory,
 No mendicant for praise,
 He struck high chords and splendid,
 Wherein were fiercely blended
 Tones that unfinished ended
 With his unfinished days.

Here through this lowly portal,
 Made sacred by his name,
 Unheralded immortal
 The mortal went and came.
 And fate that then denied him,
 And envy that decried him,
 And malice that belied him,
 Have cenotaphed his fame.

John H. Boner.

THE GROLIER CLUB.

THE GROLIER ARMS.

ONCE upon a time M. Francisque Sarcey, wishing to express his abhorrent contempt for a poor play, doubted whether it would please even the inhabitants of Carpentras or of New York. I think we New Yorkers may fairly protest against this likening of our fellow-citizens to the dwellers in the Bœotia of France, even though we do not dare to call our city the Athens of America. In the noisy and futile discussion as to the future literary capital of these United States, one agreement was clear above the din, that this country had not as yet such a focus of intellectual, political, and material activity as London was in the days of Queen Elizabeth; and to the want of one such here Mr. Lowell attributes much of the "backwardness and provincialism of our own literature." Although there is, fortunately, a centrifugal tendency in our system of politics and education, aiding in the starting of little literary centers here and there throughout the land, it is clear also, I think, that there is quite as strong a centripetal tendency towards the concentration of a large portion of the intellectual, material, and political activity of the United States here in the city of New York. And it will be well for us if the intellectual activities are not pushed aside and thrust under by the overmastering stress of material or political activities.

The fact that most of the leading American publishing houses are in New York may bear witness chiefly perhaps to the material activity of the city; but the fact that most of the best magazines and reviews (weekly and monthly) issue hence, and that most of the exhibitions and sales of pictures are held here, goes to show that the intellectual movement is not sluggish. This movement is strengthened and sustained by many clubs and associations of all sorts and

for all purposes, made up of little knots of men interested in one or another manifestation of literature or art. I need not refer to the Authors Club, housed, oddly enough, over the Fencers Club, and having so many members in common with it that the fighting editor is no myth and the quarrels of authors under this roof are briefer and more pointed and less acrimonious than those recorded by Disraeli. I need do no more than note the disputatious Nineteenth Century Club; the venerable Century and the revived University Clubs; the Tile Club; the kindred Salmagundi and Kit-Cat Clubs; the old Greek Club and the new Library Club; the Architectural League and the Fellowcraft Club; the Aldine Club of the men who make books, now established in Lafayette Place; and the Players (the Garrick Club of New York), with its beautiful home in Gramercy Park and its fine gallery of histrionic portraits, both presented by Mr. Edwin Booth. A rare wealth of material will lie ready to the hand of the Dr. Francis of the twentieth century who may write about old New York clubs; but I doubt if he shall find anywhere in his catalogue a more interesting association than the Grolier.

The Grolier Club is a gathering of those who love books for their external beauty—for the choice quality of the paper, for the graceful firmness of the type, for the even

Thursday Evening

A CARD OF INVITATION FOR WHIST.

clearness of the press-work, for the harmonious elegance of the illustrations, and for the decorative skill bestowed on the binding. Its constitution declares that "its object shall be the literary study and promotion of the arts pertaining to the production of books." That is to say, the Grolier Club is interested in books not as literature but as works of art. It is with the art and mystery of the book-maker, the printer, the engraver, and the binder, and not with the secrets of authorship, that the members of the Grolier Club concern themselves, although many of them are scholars and students of literature. They are true book-lovers, and not mere book-hoarders; they are bibliophiles, not bibliomaniacs; they love a book for its intrinsic beauty, not for its accidental rarity; they cherish a volume because of its charming vignettes or its vigorous press-work, not because it belongs to "the good edition—the one with the two misprints":

Ah, je la tiens ! — Que je suis aise !
C'est bien la bonne édition
Car voilà, pages quinze et seize,
Les deux fautes d'impression
Qui ne sont point dans la mauvaise.¹

The Grolier Club is named after Jean Grolier de Servier, Viscount d'Aguisy, Treasurer-General of France, who was not, as many imagine, a bookbinder by trade, but a book-lover choosing the best impressions of the best editions of the best books and having them bound by the best binders under his own supervision. Grolier was one of the earliest of the great bibliophiles of France. The French have always been first in their affection for choice tomes, and they have been foremost also in the skill and the taste of their book-making. Mr. Lang, in his delightfully easy and learned treatise on "The Library," has quoted Dante's reference to "the art that is called illuminating in Paris":

L'onor di quell' arte
Ch' allumare è chiamata in Parisi.

In the century and a half which elapsed between Dante's death and Grolier's birth printing had been invented, and the art which

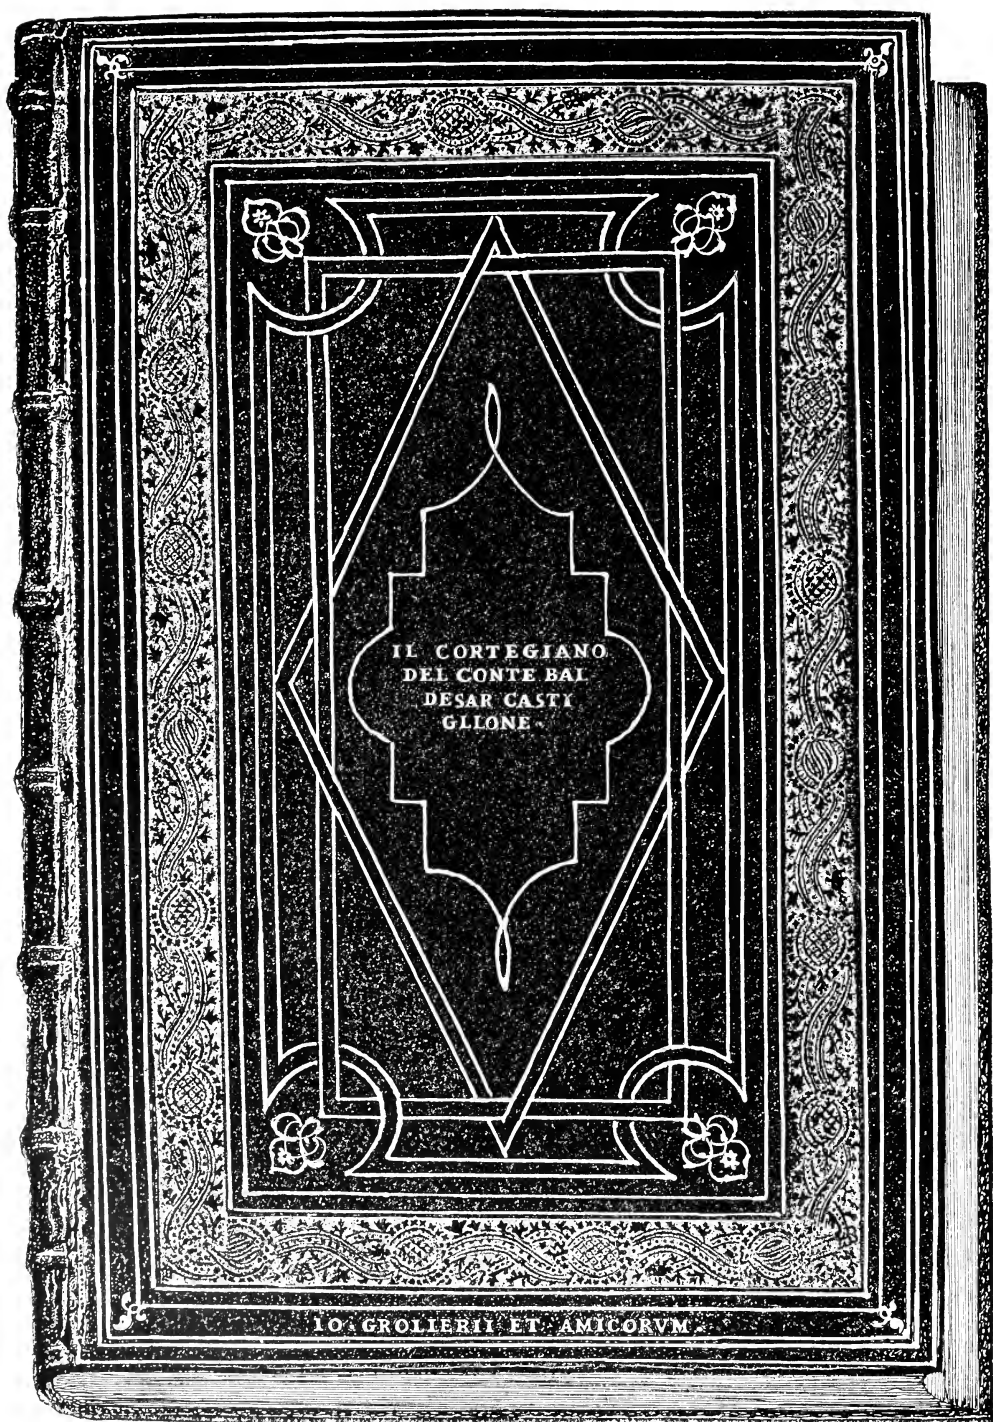

is called illuminating had begun to be neglected, but without impairing the supremacy of Paris. Grolier was of Italian origin and he served for years in Italy, at Milan first and then at Rome. In 1534 he had been appointed French ambassador to Clement VII., and it was then that he began to collect books. After his return to his own country he held several high offices, and he was Treasurer-General of France when he died in 1565 at the age of eighty-six. His library remained intact until 1675, when it was sold and scattered. The researches of M. Le Roux de Lincy, Grolier's biographer, enable us to declare that it was the library, not of a collector of literary varieties, but of a scholar who wished to have at hand the best books of his time. Apparently there were on Grolier's shelves few or none of the books which, in M. Alphonse Daudet's sharp phrase, are "intended for external use only." Unlike many modern collectors, Grolier read the treasures he had garnered; and their contents were worthy of the artistic casing he gave them. He was the comrade of the chief scholars of his time. Erasmus praised him; and Aldus Manutius, the great printer, dedicated a book to him. A friend of authors, editors, and publisher-printers, Grolier was not like the man scornfully referred to in Dr. Burton's "Book Hunter" as knowing nothing at all about books—unless, it might be, their insides. Grolier knew the insides of his books; perhaps he knew them inside out, but he knew the outsides also; and it is by the outsides of his books that he is now best remembered. He was wary in his picking of copies, and he had a provision of fine paper whereon a special impression was made for him alone where the common edition did not satisfy his fastidiousness. These chosen sheets were then clad in leather suits by the best binders of the day, who decorated them with designs full of the delightful freedom of the richest period of the Franco-Italian renaissance.

It is small wonder that a library called into being with such exceeding care and so adorned by the cunning of the most adroit workmen should have high repute, and that when it was dispersed, a hundred years and more after Grolier's death, the separate books were eagerly purchased at what in those days seemed full prices. But in the two centuries since the sale the value of these volumes has been rapidly rising, until a single tome has been sold by auction for

Io. Grolierij Lugdunē
et amicorum .

AUTOGRAPH OF GROLIER FROM CAPELLA'S "ANTHROPOLOGY."
(OWNED BY MR. SAMUEL P. AVERY.)

¹ This epigram, by Pons de Verdun, is quoted here from M. Octave Uzanne's lively and amusing "Nos Amis les Livres" (Paris, 1886).

"IL LIBRO DEL CORTEGIANO," VENICE, 1528. FOLIO, $12\frac{3}{4} \times 8\frac{5}{8}$ INCHES; BROWN MOROCCO. (FROM LIBRI COLLECTION. OWNED BY MR. BRAYTON IVES.)

nearly six thousand dollars—this is the noble copy of Heliodorus owned by Mr. Hoe and reproduced herewith. In Paris the National Library, and in London the British Museum, are fortunate in the possession of books bearing Grolier's philanthropic motto; and in New York others may be seen in the library of Columbia College and in the Astor Library. Of a few which are owned by members of the Grolier Club engravings are here given; and these plates will show far better than any wandering words of mine the characteristics of the famous Grolier bindings. But although these reproductions reveal the grace and the delicacy of the design, they cannot revive the noble richness of the gildings nor the artful contrast of the colors.

THE origin of the Grolier Club of New York is recorded in the first volume of its transactions. A little gathering of men interested in the arts "entering into the production of books" was held at the house of Mr. Robert Hoe, Jr., in January, 1884. They determined to organize a club, and to that end they appointed committees to present a name and to prepare a constitution. Early in February the members adopted a constitution which declares that the founders of the club are William L. Andrews, Theodore L. De Vinne, Alexander W. Drake, Albert Gallup, Robert Hoe, Jr., Brayton Ives, S. W. Marvin, Edward S. Mead, and Arthur B. Turnure; and then they elected Mr. Hoe, President, and Mr. Brayton Ives, Vice-President. A club device, including the arms of Grolier, was provided a fortnight later. Then the club, having a name, chose a local habitation at No. 64 Madison Avenue, where the council first met about the middle of April—less than three brief months after the first conference. Here, in rooms simply and most tastefully decorated and furnished, the Grolier Club has made its home ever since; here it has taken root and flourished and brought forth fruit; here its members have listened to a series of lectures as instructive as they were interesting; and here they have held separate exhibitions of etchings, of manuscripts, of original designs for book illustration, of bindings, and of early printed books. The President is now Mr. William L. Andrews, and Mr. De Vinne is the Vice-President; and the club is about to move into a house of its own, No. 29 East 32d street, where it will have more ample accommodation for its many new members. The architect, Mr. Charles W. Romeyn, has considered the special needs of an association of this sort: that he has succeeded in giving the club-house a dignified and characteristic physiognomy of its own, the accompanying sketch will show plainly enough.

Of the founders of the club, some were merely book-lovers from taste and some were book-makers by trade—printers and publishers; and thus the club began with a novel and fertile alliance of the dilettante and the professional, an alliance likely to be of lasting benefit to both. The object of the club was in reality twofold—to bring together those interested in the arts of book-making, that there

might be a stimulating interchange of suggestions and experiences; and also to further these arts in the United States. Although there are an increasing few in America who know a beautiful book when they see it, there are also, alas! not a few who dwell in outer darkness, and in whose eyes the simple typographic beauty of the American edition of Mr. Lowell's "Democracy," or of the English edition of Mr. Lang's "Letters to Dead Authors," is no better than the ill-made tawdriness of the American edition of Mr. Locker's "Lyra Elegantiarum"—a most feeble attempt at bespangled splendor. There are not a few, I fear me greatly, who know not the proper proportions of a printed page, and who do not exact

"BENEDETTI'S ANATOMY," 1537. OCTAVO, 4 X 6 $\frac{3}{4}$ INCHES;
BROWN CALF. (FROM SAUVAGE COLLECTION.
OWNED BY MR. SAMUEL P. AVERY.)

that the cruel knife of the reckless and mercenary binder shall never shear a hair's-breadth from width or height; who do not consider whether the fair white space of the outer and lower margins shall be precisely twice as full as the inner and upper margins; and who take no care that the width of the page of type shall be strictly one-half of the length of the diagonal of the page. There are not a few to whom these niceties are unknown—not a few in these United States and not a few in England.

So far as I know, the Grolier Club is the first society founded to unite book-lovers and book-makers and to gratify the needs and wishes of both classes of its members by collecting and exhibiting the best works of the great artists of the past and by producing new books which may serve as types of the best that modern skill and taste may do. This double function of the Grolier Club I do not find in any other organization either in America or in Europe. Neither in England nor in France is there any society exactly equivalent to this New York club. In London, the Burlington Fine Arts Club was formed "to bring together amateurs, collectors, and others interested in art; to afford ready means for consultation between persons of special knowledge and

experience in matters relating to the fine arts; and to provide accommodation for showing and comparing rare works in the possession of the members and their friends"; and during the past twenty years it has held nearly forty special exhibitions of works of art, and perhaps ten of these special exhibitions have been akin in subject to those held at the rooms of the Grolier Club. But the Burlington Fine Arts Club extends its interest over all the fine arts, and it is as likely to gather and display bronzes or ivories, porcelains or paintings, as it is to show wood-cuts, etchings, or illuminated manuscripts; while the Grolier Club confines its attention solely to the arts pertaining to the production of books.

In Paris the Société des Amis des Livres declares that its aim is "to publish books, with or without illustration, which, by their typographic execution, or by their artistic selection, shall be an encouragement to the painters and to the engravers as well as a motive of emulation to the French printers," and also, "to create a friendly feeling among all bibliophiles by means of frequent reunions." The Society of the Friends of Books is limited to a membership of fifty with an addition of twenty-five corresponding members non-resident in Paris. Ladies are eligible for membership, and the first name on the list in alphabetical order is that of Madame Adam. Among the other members are the Duke d'Aumale, M. Henri Beraldi, M. Henri Houssaye, M. Auguste Laugel, M. Eugène Paillet, Baron Roger Portalis, and M. Octave Uzanne. The sumptuous tomes prepared with loving care and untiring toil by the Society of the Friends of Books are known to all bibliophiles through the world as examples of the highest endeavor of the art of book-making in France to-day.

The Burlington Fine Arts Club does not publish books, and only a few of its valuable exhibitions are devoted to the arts pertaining to the making of books. The Société des Amis des Livres publishes books and holds no exhibitions. The Grolier Club unites the three qualities to be found in differing degrees in one or the other of these European clubs: it has frequent meetings at which its members may talk shop and free their souls; it gives exhibitions; and it prints books. (I open a parenthesis here to note that there is an unpretending little Book Fellows' Club here in New York which prints a tiny tome now and again; and to record that there is a dining club in London called the Sette of Odde Volumes, for whom a few pretty books—mostly of a personal interest and of varying value—have already been printed. But neither of these can fairly be called a rival of the Grolier Club.)

I am forced to consider the meetings of the Grolier Club before discussing the books it has published, because certain of its publications have had a previous existence as lectures delivered before the members. During the winter of 1884-85, the first whole season that the club was in full possession of its rooms, Mr. Theodore L. De Vinne lectured on "Historic Printing-Types," Mr. Hoe on "Bookbinding Artistically Considered," and Mr. William Matthews on "Practical Book-binding." In 1885-86 Professor Chandler lectured on "Photo-Mechanical Processes," Mr. Elbridge Kingsley on "Modern Wood-Engraving," and Professor Knapp on "Thierry Martens and the early Spanish Press." In 1886-87 Mr. W. J. Linton spoke on the "Wood-Engravers of the XVth and XVIth Centuries," Professor R. R. Rice on "The Etchings of Storm van 's Gravesande," Mr. Brayton Ives on "Early Printed Books," and Mr. Heromich Shugio on "Oriental Books." In 1887-88 Professor West discussed the "Philobiblon," Professor R. Sturgis "Turner's 'Liber Studiorum,'" and Mr. W. Lewis Fraser considered "Nearly Two Hundred Years of Book-illustrating in America." In 1888-89 Mr. George Hannah lectured on "Early Printed Books Relating to America," and Mr. H. Mansfield on "The Etched Work of Alphonse Legros."

The first publication was aptly chosen; it was a reprint of "A Decree of Starre-Chamber, concerning printing, made the eleventh day of July last past. 1637." By declaring it unlawful, without special authorization, to make, buy, or keep types or presses, or to practice the trade of a printer, publisher, or bookseller, the men who were misruling England sought to render printing too full of risk to be profitable, and they hoped thus to prevent the expression of the discontent with which the people were boiling. As it is neatly put in Mr. De Vinne's vigorous and lucid preface to this reprint: "Annoyed by a little hissing of steam, they closed all the valves and outlets, but did not draw or deaden the fires which made the steam. They sat down in peace, gratified with their work, just before the explosion which destroyed them and their privileges." This decree was issued in 1637; four years later the Court of Star Chamber was abolished; and in 1649 King Charles

was beheaded. The reprinted decree is an admirable piece of book-making. The type is an old style great primer, with Dutch capitals for the italic letter. The paper is Dutch also, as becomes the first publication of the organized bibliophiles of the city which was once New Amsterdam. The cover is of Japanese paper, folded in the style made popular in Paris by M. Jouaust, and having imprinted

AN ILLUSTRATED LECTURE AT THE GROLIER CLUB.

on it in gold a facsimile of a book cover designed by Roger Payne.

The second publication is less interesting because the reason of its choice is not apparent. It is a reprint of Edward Fitzgerald's "Rubaiyat of Omar Khayyam." It is not unlike the "Decree of Starre-Chamber" in make-up, differing chiefly in that it is on Japanese paper and adorned with head-bands printed in colors from Persian designs. The cover, also from an Oriental model, was also printed in colors. Beautiful as this book is, it is less satisfactory than its predecessor, because there was no imperative need for it. Although Oriental art in verse and decoration is profoundly suggestive, the issuing of yet another new edition of the "Rubaiyat," however worthy it may be of the noblest setting, might seem rather the task of an English Burlington Fine Arts Club than of an Amer-

ican Grolier Club. The French Society of the Friends of Books confines its labors to the reproduction and adornment of French books, and there is no apparent wisdom in the departure of the American Grolier Club from a like rule to reprint chiefly those books of American authors which lend themselves best to appropriate decoration.

No better choice could the Grolier Club have made than the work selected as its third publication. This is Washington Irving's "His-

lisher. It seems to me that this cheerful issue of "Knickerbocker's 'History of New York'" is worthy to stand beside M. Conquet's noble editions of Stendhal's two great novels, "*Le Rouge et le Noir*" and "*La Chartreuse de Parme*"—the models of modern book-making, and altogether the best that French taste and French skill can accomplish in this difficult art. I do not say that the American volumes are quite equal to the French; they lack, for one thing, the tender and brilliant etchings which serve as head-pieces for every chapter of Stendhal's stories; and again, they are without the final refinement of the recurring title water-marked in the lower margins of the page. Perhaps the American books have not all the soft richness and easy grace of M. Conquet's masterpieces, but yet they brave the comparison boldly.

From cover to core there is a delightfully Dutch flavor in these two comely tomes. The boards in which they are bound are clad in orange, as befits the garb of the only true account of the decline and fall of Dutch rule in America. The paper within is Dutch; and Dutch, too, are the types, facsimile of those used by Elzevir at Leyden in 1659—only five years before New Amsterdam experienced a change of heart and became New York, after Colonel Nichols, taking Peter Stuyvesant by surprise, had captured the city. The frontispieces to the two volumes are etchings from drawings of "The Battery in 1670," and "The Governor's Representative," by Mr. George H. Boughton, who was once a schoolboy in the Aurania of the Dutch. The other two etchings are views of "Fort New Amsterdam, 1651," and of "New Amsterdam in 1656," this last being a reproduction of the earliest known print of New York. The half-titles, head-bands, tail-pieces, and initial letters are some of them from Dutch models and all of them are most pleasantly Dutch in spirit; two of them were designed by Mr.

Howard Pyle and the rest were drawn by Mr. Will. H. Drake. It remains only to note that the original manuscript of Irving's careful and elaborate revision of "Knickerbocker's 'History of New York'" is now owned by a member of the Grolier Club, and that advantage was taken of this to indicate in an appendix the minor and yet always interesting changes and suppressions of the author.

Except a useful pamphlet of "Transactions," the "Knickerbocker's 'History of New York'" was the only publication of the Grolier Club during the season of 1885-86; and during the next winter the club confined itself to the printing of certain of the lectures delivered before it. The first of these had been by the

"COLLOQUIES OF ERASMUS," BASLE, 1537. QUARTO, $7 \times 4\frac{3}{4}$ INCHES; BROWN CALF. (FROM BLENHEIM COLLECTION. OWNED BY MR. BRAYTON IVES.)

tory of New York, from the Beginning of the World to the End of the Dutch Dynasty, by Diedrich Knickerbocker." Here was a most happy solution of the claims of locality and the claims of literature. Most fitly could the Grolier Club bend its energies to the preparation and production of a rich and worthy edition of a book about New York by the greatest of New York authors. By good fortune the humorous chronicle of the learned and gentle Dutch antiquary lends itself easily to abundant illustration and decoration; and of the opportunities offered by the late Diedrich Knickerbocker the present Grolier Club has been swift to avail itself. No better piece of book-making has ever been sent forth by an American pub-

President, Mr. Robert Hoe, on "Bookbinding as a Fine Art," and it was the first to appear as a book. When Mr. Hoe spoke before the club, he illustrated his remarks by specimens of the work of many of the most noted binders, all selected from his own library, photographs of which were thrown on a screen by the stereopticon; and the published lecture is made more valuable by sixty-three "Bierstadt artotypes" of these bindings of Mr. Hoe's. Although the plates reveal the extraordinary richness of the lecturer's collection, not all the examples were worthy of reproduction; and, no doubt, more characteristic illustrations might have been procured had a call been made for the best specimens obtainable from other members of the club.

The second lecture was on "Historic Printing-Types," by Mr. Theodore L. De Vinne. Delivered in January, 1885, it was published by the Grolier Club with additions and with new illustrations. As all know who have read Mr. De Vinne's "Invention of Printing," he is a master not only of his own trade, but also of the more arduous art and mystery of authorship. Mr. De Vinne's style as a writer is as clear and as simple, as firm and as vigorous, as is his press-work as a printer. His wide and deep knowledge of the subject has been so thoroughly digested and it is so pleasantly presented, that I think a merely casual reader, having a Gallio-like indifference to type-setting and type-founding, would find his interest aroused at the beginning of Mr. De Vinne's essay. It is the more fortunate that the subject should have fallen into hands so accomplished, as there is, so we read in the introduction, "no popular treatise about book-types; nothing that gives us in succinct and connected form information about their designers and makers, and that tells us why styles once popular are now obsolete." It is the want of such a treatise that Mr. De Vinne has filled, all too brief as his paper is. As the author is his own printer, it is needless to say that the book in which the lecture appears is a masterpiece of American book-making, a marvel of the most admirable simplicity. The paper, the type, the press-work, the size and the shape of the page, the adroit arrangement of the marginal notes, the due subordination of the foot-notes, the ample and properly proportioned margins, even the novel and dignified binding—all these testify to the guiding touch of a master of the craft.

In 1888 the club published, "as a sort of New Year book," so a report calls it, a dainty edition of the late Charles Reade's histrionic tale, "Peg Woffington," suggesting in its mechanical execution the book-making of the century when the lovely Mistress Margaret

flourished; the two little tomes were pretty enough, but one wonders exactly why this English story should be chosen for reproduction by an American club. In 1889 the first book of the year was far more appropriate; it was Mr. De Vinne's delightful account of the Plantin printing-house, reprinted from this magazine with additions and notes, all Mr. Pennell's picturesque sketches being printed in varying tints.

The most important publication of the club, even more important than the "Knickerbocker," is that which it has now in hand, and which is no less than the "Philobiblon" of Richard de Bury. The good bishop of Durham holds perhaps the foremost place among all British book-lovers, just as Grolier holds the foremost place among all French book-lovers; and it is most fit and appropriate that a company of American book-lovers named for the Frenchman should choose for reverent reproduction the masterpiece of the Englishman. The task was honorable but laborious; and it has been undertaken not lightly or in a spirit of levity, but with courage, determination, and forethought. The mechanical execution was confided to Mr. De Vinne, than whom no one was worthier. The literary labor was undertaken by Professor Andrew Fleming

HEAD-PIECE FROM GROLIER CLUB EDITION OF "KNICKERBOCKER'S 'HISTORY OF NEW YORK.'" (DRAWN BY HOWARD PYLE.)

West of Princeton, who had already lectured before the club upon the book he was to edit. Professor West shrunk not from the toil of a dutiful comparison of manuscripts and early editions that a proper text might be established; and this proper text, most devoutly amended and revised, the club has sent forth as the first volume. In the second is contained Professor West's sturdy and precise rendering of the original Latin into our later English. These two volumes, long delayed by the ardent and arduous labors of the editor, are at last in the hands of the subscribers; and a third volume will not tarry, in which there will be found an introduction, an account of the author, and such notes as may be needful for the elucidation of the work.

The edition is limited to two hundred and ninety-seven copies on paper and three on vellum, one of which latter is properly reserved for the library of the club. The volumes are clad in pure vellum covers, stamped with the gold seal of the good bishop, while within there is a novel lining-paper, rich in color and congruent in design. The form is a small quarto, with a page six inches wide and a little less than eight inches long. The paper, a so-called "white antique," is American hand-made by the Brown company, and Mr. De Vinne re-

gards it as whiter, clearer, and better than any English, Dutch, or Italian printing paper. The typography is not merely decent and seemly; it is as exact and as beautiful as the utmost skill and loving care could make it. The type of the first volume, which contains the Latin text, is a pica black-letter; the second volume, which contains the English translation, being set in modern Roman (not old style) small pica. The black-letter types were got out of the vaults of Sir Charles Reed's Sons for Mr. De Vinne by Mr. Talbot Baines Reed, and they are drives of punches believed to have been cut in France in the first half of the sixteenth century. There are rubricated initials, of a full-bodied vermilion not often seen nowadays. There are head-pieces and tail-pieces, some of them, and the more ingenious, having been devised by Mr. G. W.

NOAH'S LOG-BOOK — HEAD-PIECE FROM GROLIER CLUB EDITION OF "KNICKERBOCKER'S 'HISTORY OF NEW YORK.'" (DRAWN BY W. H. DRAKE.)

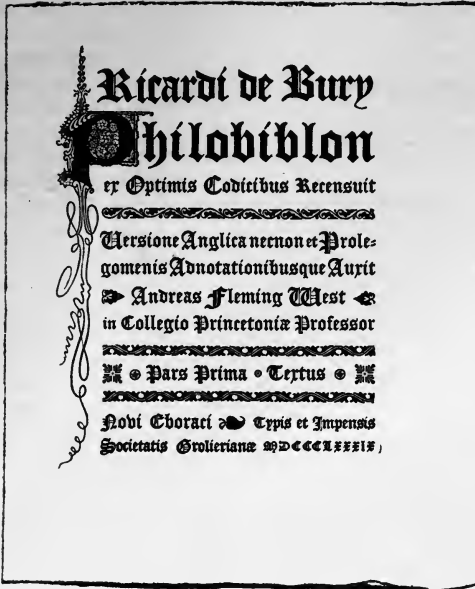

Edwards. There is a page of fair proportion (as we have seen), and there is a type rightly adjusted thereto; and there is the very perfection of press-work, alike impeccable in impression and in register. Herein indeed we see the final superiority of the best modern printing by improved machines when guided by a fine artistic sense; such registry as this would be absolutely accidental, not to say impossible, on

the hand-presses of the early printers.

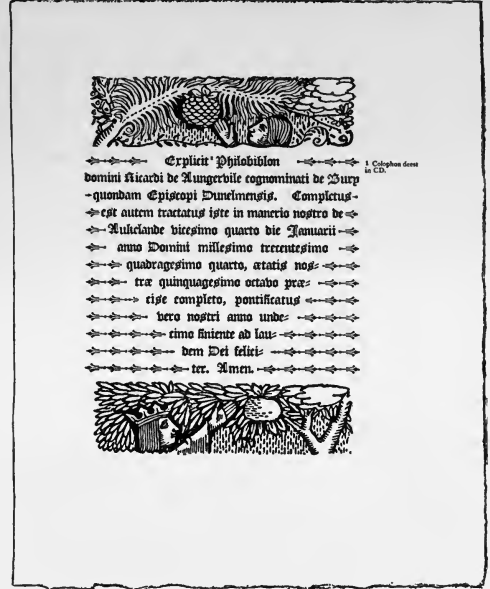

In the manufacture of this edition of the "Philobiblon" there is the full harmony which comes from a union of knowledge, skill, and taste. It is a delight to the eye, to the hand, and to the mind. At last the book of Richard de Bury has a goodly outside, as becomes the words of wisdom within.

LATIN EDITION OF "PHILOBIBLON."

To love books and to own a book like this is to have a foretaste of the book-lovers' heaven. To study a book like this in an edition like this leads away from vice and conduces to virtue. Indeed we read therein (cap. xv.) that "no man can serve both books and mammon."

The membership of the Grolier Club was at first limited to one hundred (it has now been enlarged to allow of two hundred and fifty resident members), but the editions of its publications have generally somewhat exceeded the smaller number, and the unfortunate outsider has sometimes been able to acquire these treasures by the aid of a friend at court. This liberality is in proper accord with the spirit of the inscription stamped on Grolier's own books, — *Io. Grolierii et amicorum*,— setting forth that they belonged to Grolier and his friends. Surely an altruism like this is as rare as the selfishness of Scaliger, who quoted Scripture on

his book plate,— *Ite ad vendentes*,— bidding his friends to "go rather to them that sell and buy for yourselves." To grant or to withhold, the question is equally difficult — *æque difficulter*. When all book-owners shall freely lend and send their most precious tomes with ungrudging speed, then will be the book-lover's millennium, which the founding of the Grolier Club here in New York may haply help to bring to pass. And in the meanwhile its members may pine for that book-man's Paradise:

There treasures bound for Longepierre
Keep brilliant their morocco blue,
There Hookes' "Amanda" is not rare,
Nor early tracts upon Peru!
Racine is common as Rotrou,
No Shakspeare Quarto search defies,
And Caxtons grew as blossoms grew,
Within that Book-man's Paradise.

Brander Matthews.

SEAL OF RICHARD DE BURY ON THE OUTSIDE COVER OF "PHILOBIBLON."

ADVENTURES IN EASTERN SIBERIA.

awakened the inmates of the zemski kvartir (zem'skee kvar-teer'), or official lodging-house, warmed and refreshed ourselves with tea, and lay down to sleep, as usual, on the hard, vermin-infested plank floor of the travelers' room. Monday morning we called upon Captain Demidof (Dem-mee'doff), the commanding officer of the post, and, at our request, were conducted at once to the prison. It consisted of two old, weather-beaten log buildings of the common

AFTER having visited and inspected the gloomy mine and the wretched, dilapidated log prison of Kadaiya (Kah-dy'yah), Mr. Frost and I proceeded across an apparently interminable series of bare, snowy mountain ridges to the mining settlement of Gorni Zeren-tui (Gor'nee Zer-en-too'ee), which is situated in a wide, treeless valley about forty miles north of the Kadainski (Kah-dy-in'skee) mine, and thirty miles from the boundary line between Eastern Siberia and Mongolia. We reached our destination at a late hour in the night,

East-Siberian type, and presented nothing that was either new or interesting. One hundred and eighty convicts were confined in the two buildings, and about as many more, who had finished their terms of probation, were living outside in the free command. A new three-story brick prison was in process of erection a short distance away, but work upon it had apparently been suspended or abandoned. It was already ten years old, and in view of the corrupt, shiftless, and inefficient management of prison affairs throughout Eastern Siberia, it

THE HUTS OF THE FREE COMMAND AND THE PRISONS AT GORNI ZERENTUI.

seemed to me altogether likely that work upon it would drag along for five or six years more. At the time of our visit the structure had neither floors nor roof and was still surrounded with scaffolding. Meanwhile 180 idle convicts were being slowly poisoned to death by bad air in the overcrowded *kameras* of the log prison that the brick building was intended to replace.¹

It is hard for an American to understand or make allowances for the shiftlessness, indifference, and inefficiency that are everywhere manifested throughout the Nerchinsk silver-mining district. The mines themselves are not half worked; hundreds of hard-labor convicts lie idle, month after month, in dirty, overcrowded cells; plans and estimates for new buildings go back and forth, year after year, between the mines and St. Petersburg; and when, at last, a prison like that at

Gorni Zerentui is authorized, work upon it drags along, in a lazy, shiftless fashion, for a whole decade, without the least apparent reason. I said one day to the resident mining engineer at the Kutomarski Zavod (Koo-to-mar'skee Zah-vod'): "Why don't you provide yourself with suitable iron machinery, furnish your laborers

THE SAVENSKI MINE.

with improved modern tools, set up steam pumping, hoisting, and ventilating apparatus,

¹ Upon my return to St. Petersburg in the spring of the following year, I had an interview with Mr. Galkin Vraskoi (Gal'kin V rass'koy), the chief of the Russian Prison Administration, in the course of which I ventured to call his attention to the condition of the prisons in the Nerchinsk (Ner'chinsk) silver-mining district, and to the unfinished prison at Gorni Zerentui in particular. He admitted that the necessity for new places of confinement at the Nerchinsk mines was evident as early as 1872, and said that in 1874 a special construction committee was appointed to investigate, report, and submit plans. When he (Galkin Vraskoi) made a tour of inspection through Siberia in 1881—seven years later—he found that this specially appointed committee had spent 74,318 rubles in the erection of two or three small log buildings and in temporary repairs to a few others, had pocketed 61,090 rubles for salaries and expenses, and had not furnished to the Prison Administration a single plan or estimate. (These facts were set forth in the annual report of the Prison Administration for 1882, pp. 72, 73.)

"Well," I said, "what was done in view of this state of affairs?"

"I recommended," he replied, "that the construction committee be abolished."

"And was it abolished?"

"It was."

"I did not see anything at the Nerchinsk mines," I said, "to show for the 74,000 rubles that the committee is supposed to have expended, except one small log prison that appeared to be new at the mine of Pokrofski (Po-kroff'skee) and the unfinished brick building at Gorni Zerentui. Why has the latter been so long—ten years—in process of erection?"

"The delay has been due in part," he replied, "to repeated changes of plan. The building ought not to have been made of brick, in the first place. Careful estimates show that a brick prison for 300 convicts will cost at the mines about 160,000 rubles, while a good log prison, to accommodate the same number of men, can be built for 52,000 rubles. A brick prison has no advantage over a wooden one in point of permanency, because when the mine near which it stands has been worked out, the building must, of necessity, be abandoned; and it is less wasteful, of course, to abandon a log prison than one made of brick. The prison at Gorni Zerentui, however, was so far advanced when I assumed the direction of the prison department that it hardly seemed worth while to suspend work upon it and begin another."

Neither Mr. Galkin Vraskoi nor his assistant, Mr. Kokovtsef (Ko-kov'tsef), gave me any satisfactory explanation of the delays, mistakes, and bad management generally that seemed to me to characterize the administration of prison affairs in the mining district of the Trans-Baikal. They were doing, they said, all that they could do to improve the situation; but they had inherited most of the existing evils from their official predecessors, and time enough had not elapsed for complete and sweeping reforms. It is possible that I did not fully appreciate the difficulties and embarrassments with which they had to contend; but it seemed to me that many, if not most, of the evils of the exile system in general, and of the prison administration in particular, were the result of indifference, inefficiency, and a complicated bureaucratic method of transacting public business.

and work your mines as they ought to be worked? What is the use of pottering along in the way you do?"

"My dear sir," he replied, "do you know what iron costs here? We have to bring it with horses from Petrofski Zavod (Pe-troff-skee Zah-vod'), a distance of more than 600 versts, and it costs, delivered here, $5\frac{1}{2}$ rubles a pood [about $7\frac{2}{3}$ cents a pound]. We can't afford to put in iron machinery."

miles from the village. The buildings at the mouth of the shaft were cheap and insignificant, as usual, but one of them contained a small steam engine—the first and only machine of the kind that I saw in the Trans-Baikal. While Mr. Frost was making a sketch of the buildings and of the dreary arctic landscape, I went through the mine, but found little to reward me for the labor of climbing up and down the icy ladders. The shaft was less than a hundred

BUTIN'S HOUSE AT NERCHINSK.

"But," I said, "is n't there iron ore in this vicinity?"

"Yes," he replied; "but it has never been gotten out."

"Why don't you get it out, set up smelting furnaces, and make your iron here on the ground where you need it? More than half of your convicts lie constantly idle in their cells—why don't you utilize their labor?"

"We can't open an iron mine," he replied, "without a *razreshenia* [a permit or an authorization] from St. Petersburg."

"Then why don't the proper authorities give you a 'razreshenia'? What is the reason that a useful and necessary work of this kind cannot be accomplished? I don't see how the present state of affairs can be profitable to anybody."

His only reply was a shrug of the shoulders, which I interpreted to mean either that he did not know or that it was not his business.

From the prisons of Gorni Zerentui we drove in Captain Demidof's droshky to the Savenski (Sah'ven-skee) mine, which we found on a snowy, desolate mountain slope about two

feet in depth; the galleries were so low that I could not anywhere stand upright; the atmosphere was damp and chilly; and the roofs and walls were thickly incrustated with frost or ice. Only thirty-five convicts were at work in the mine, and most of them seemed to be engaged in carrying ore in small wicker baskets to the hoisting shaft, emptying it into square wooden buckets holding about a bushel each, and then raising it to the surface, a bucketful at a time, by means of a clumsy old wooden windlass. I doubted whether methods more primitive were employed even by the aborigines who worked these silver veins three centuries earlier. Certainly none more primitive had ever come under my observation. I said to the *ustavshchik* (oo-stav'shchik), or overseer, who conducted me through the mine, "Why don't you set more men at work here? I have just come from the prison, where I found at least 150 convicts idle."

"We have n't room for more than thirty-five or forty men in the galleries," he replied soberly.

"But you can extend the mine, can you not?"

I inquired. "Fifty or a hundred more laborers could soon make room for themselves by digging and blasting. If the ore is there, why not extend your operations and get it out as rapidly as possible? You ought to widen and heighten your galleries, lay down tramways in them, improve your hoisting apparatus, employ horse power, and work on a larger scale."

The *ustavshchik* made no reply, but looked at me in a surprised way, as if he regarded my ideas as utterly wild and impracticable.

The number of hard-labor convicts in the Nerchinsk silver-mining district at the time of our visit was approximately 952, distributed as follows: at the Alexandrofski Zavod, 188; at the mine of Algachi, 150; at the Pokrofski mine, 70; at the Kadainski and Smirnov mines, 184; and at the Savenski and Gorni Zerentui-ejski mines, 360. Probably not more than one-third of these men, and certainly not more than half of them, were actually engaged in hard labor. The rest lived, month after month, in enforced idleness, notwithstanding the amount of work that there was everywhere to be done. The only reasons I could get for this state of affairs were, first, that room could not be found for the idle men in the mines; secondly, that the convoys of soldiers were not strong enough to guard large parties of convicts on the roads or in the forests; thirdly, that it would cost more to erect new prisons with convict labor and under official supervision than to have them built by contract;¹ and fourthly, that the convicts could not be set at work in any of the ways that I suggested without a *razreshenia*, or authorization, from St. Petersburg. None of these reasons had, to my mind, the least force or validity. The idleness of the convicts, and the failure of the authorities to do any one of the scores of things that needed doing, were the direct result, it seemed to me, of official indifference, incapacity, or lack of enterprise. An energetic American with plenary powers and a capital of \$10,000 or \$15,000 would take the 950 convicts imprisoned in the Nerchinsk silver-mining district, and in less than two years would have a new prison built at every mine in the whole region, and in less than five years would double, if not quadruple, the productive capacity of the mines themselves, without calling upon the imperial treasury for a single dollar in the shape of extraordinary expenditure. Such, at least, was the opinion that I formed on the ground, after as careful

an examination as I could make of the working methods of the local officials.

The Savenski mine was the last one that we visited in Eastern Siberia. Monday afternoon, November 23, we drove to the Nerchinski Zavod, or Nerchinsk Works, a large village about ten miles from Gorni Zerentui, and Tuesday morning we set out on our return journey to the Shilka River and the town of Nerchinsk, distant about two hundred miles. It is not necessary to describe in detail our long, tedious, and exhausting ride. The country through which we passed was a dreary desert of low, rolling mountains, thinly covered with snow; the thermometer ranged constantly from zero to twenty-seven degrees below; the roads were generally rough, hard-frozen, and bare; the telegas and tarantases furnished us were the worst, most uncomfortable vehicles of their kind in all Eastern Siberia; and we suffered from cold, hunger, jolting, and sleeplessness until we were reduced to a state of silent, moody, half-savage exasperation, in which life—or at least *such* a life—seemed no longer worth living, and we were ready to barter all our earthly rights and possessions for a hot bath, a good dinner, and twelve hours of unbroken sleep in a warm, clean bed.

At four o'clock Thursday morning, a little more than forty hours after leaving the Nerchinski Zavod, we reached the post station of Biankinskaya (Byan-kin'skah-yah), on the bank of the Shilka River, and, transferring our baggage for the first time from a wheeled vehicle to a sledge, we continued our journey to Nerchinsk over the ice in a temperature of twenty degrees below zero. We had had for several days very little to eat, and in the absence of nourishing food the intense cold forced me to put on, one over another, no less than three heavy sheepskin shubas, which extended from my neck to my heels and transformed me into a huge perambulating cotton bale surmounted by a fur cap and a dirty, unshaven, frost-bitten face. Even under all my furs I was cold to the very marrow of my bones; and Mr. Frost, who had only two warm coats and wore only one, suffered much more than I did. When we reached Nerchinsk, late that forenoon, we found that there was no snow in the streets, and as our underfed and feeble horses could not drag us over bare ground, we alighted from our sledge and waddled ingloriously behind it into the city,

¹ This reason was based on the admitted incompetence and dishonesty of the local officials under whose supervision the work would have to be done. There are cases on record in which the local Siberian authorities embezzled the whole of the sum appropriated for the erection of a government building and reported such building as completed and occupied when even its foundations had not been laid. Such a case—that of the Ukirski étape—is cited in the Verkhni Udinsk corre-

spondence of the St. Petersburg "Eastern Review," No. 2, January 12, 1884, p. 8. A well-known photographer in Siberia showed me a photograph of a new government building which he had just taken, he said, upon an order from St. Petersburg, and which he was about to send to the higher authorities in that city as a proof that the structure, which had been ordered and paid for, was really in existence and had been built in accordance with the plans.

like stiff-jointed arctic mummies marching after the hearse in a funeral procession.

At Nerchinsk, for the first time in a month, we stopped in a hotel; but in point of cleanliness and comfort it was far inferior to the zemski kvartirs in which we had slept at the mines. It was, in fact, the very worst hotel that we had seen in Siberia. The main hall, which divided the one-story log building into halves, was dark and dirty, and had been fitted up with shelves in order that it might serve also as a butler's pantry; the room to which we were shown was chilly and bare, and its stale, heavy atmosphere was pervaded by a faint odor of "ugar" (oo-gar'), or charcoal gas; half of the paper had fallen or been torn from the walls and was hanging here and there in ragged strips; yellow, dirt-incrusted paint was peeling in flakes from window sashes and casings that apparently had never been dusted or washed; the rough, uncovered plank floor was not only dirty, but had sunk unevenly in places and was full of rat-holes; cockroaches were running briskly over the tea-stained, crumb-besprinkled cotton cloth that covered the only table in the room; there was no bed upon which the tired wayfarer might repose, nor mirror in which he might have the melancholy satisfaction of surveying his frost-bitten countenance. The only servant in the establishment was a half-grown boy in top-boots and a red flannel shirt; and the greenish-yellow brass pan that he brought us to wash our hands and faces over had evidently been used habitually for another and a much more ignoble purpose, and had never been rinsed or cleaned. Tired, cold, and hungry as we were, and accustomed as we were to dirt, disorder, and discomfort, we regarded this cheerless, neglected hotel with dismay; but it was the only one that the place afforded, and we were compelled to make the best of it. The proprietor was an exiled Pole named Klementovich (Klem-en-to'vitch), and I could not help thinking that if he kept in Poland such a hotel as he maintained in Nerchinsk, there were reasons enough, based upon sound public policy and a due regard for the general welfare, to justify his banishment by administrative process to the most remote part of Siberia, regardless of his political opinions. After a breakfast of tea, sour rye bread, and greasy pancakes, we set our dress to rights as well as we could before a diminutive mirror that the proprietor finally brought us, and walked out to take a look at the town and deliver one or two letters of introduction.

The town of Nerchinsk, which has about 4000 inhabitants, is situated on the left bank of the Nercha (Ner'chah) River, two or three miles above the junction of the latter with the Shilka, and about 4600 miles east of St. Petersburg. In point of culture and material prosperity it seemed to me to compare favorably with most East-Siberian towns of its class. It has a bank, two or three schools, a hospital with twenty beds, a library, a museum, a public garden with a fountain, and fifty or sixty shops, and its trade in furs and manufactured goods from European Russia amounts to about \$1,000,000 per annum. The most striking feature of the town to a new-comer is the almost palatial residence of the wealthy mining proprietor Butin (Boo'tin), which is shown in the illustration on page 100, and which would compare favorably not only with any house in Siberia, but with most houses in the capital of the Empire. The Butin brothers were in financial difficulties at the time of our visit to Nerchinsk, and all of their property was in the hands of a receiver; but we had a note of introduction to the latter from the younger member of the firm, and upon presentation of it we were allowed to inspect the deserted but still beautiful mansion. Going into it from Klementovich's hotel was like going into Aladdin's palace from an East-Siberian étape; and as I entered the splendid ball-room and caught the full-length reflection of my figure in the largest mirror in the world,¹ I felt like rubbing my eyes to make sure that I was awake. One does not expect to find in the wilds of Eastern Siberia, nearly 5000 miles from St. Petersburg, a superb private residence with hard-wood marquetry floors, silken curtains, hangings of delicate tapestry, stained-glass windows, splendid chandeliers, soft oriental rugs, white-and-gold furniture upholstered with satin, old Flemish paintings, marble statues, family portraits from the skillful brush of Makofski (Mahkof'skee), and an extensive conservatory filled with palms, lemon trees, and rare orchids from the tropics. Such luxury would excite no remark in a wealthy and populous European city; but in the snowy wilderness of the Trans-Baikal, 3000 miles from the boundary line of Europe, it comes to the unprepared traveler with the shock of a complete surprise. The house had not been occupied for several months, and of course did not appear at its best; but it seemed to me that I had rarely seen more evidences of wealth, refinement, and cultivated taste than were to be found within

¹ This huge pier-glass was bought by Mr. Butin at the Paris Exposition in 1878, and was then said to be the largest mirror in existence. It was taken half around the world by sea to the East-Siberian port of Nikolaievsk (Nik-o-ly'evsk) and was thence trans-

ported up the rivers Amur (Am-moor') and Shilka to Nerchinsk in a barge made expressly for the purpose. It is now in the ball-room of Mr. Butin's house, and does not look at all out of place or out of harmony with its surroundings.

its walls. The ball-room, which was the largest room in the house, was about sixty-five feet in length by forty-five in width, and over it, in a large semicircular gallery reached by a grand stairway, there was an orchestration, as big as a church organ, which played sixty or seventy airs and furnished music for the entertainments that the Butins, in the days of their prosperity, were accustomed to give to the people of the town. The library, which was another spacious apartment, was filled with well-selected books, newspapers, and magazines, in three or four languages, and contained also a large collection of Siberian minerals and ores. Adjoining the house were the offices and shops where the Butins carried on the various branches of their extensive and diversified business, and where they had accumulated the wealth that the house partly represented or embodied. In addition to gold mining, they were engaged in trading, distilling, iron manufacturing, and the construction of steamers, and their business operations extended to all parts of Eastern Siberia, and gave employment to many hundreds of men.

After thanking the receiver, Mr. Pomazkin (Po-maz'kin), for his courtesy in going through the house with us, we returned to the hotel, and later in the afternoon called upon Messrs. Charushin (Chah-roo'shin) and Kuznetsov (Kooz-net-soff'), two political exiles who had served out terms of hard labor at the mines, and had then been sent as forced colonists to Nerchinsk, where they were living with their families in comparative comfort. We found them both to be intelligent, cultivated, and very companionable men, and during our three-days' stay in the town we passed with them many pleasant hours. They had had a very hard experience at the mines of Kara, but after their arrival at Nerchinsk they had been treated with reasonable courtesy and consideration, and had even been permitted to engage in branches of business, such as teaching and photography, that by law are closed to political offenders. All of their correspondence was still "under control,"—that is, subject to official supervision and censorship,—but they were not constantly watched, regulated, and harassed by the police, as political exiles are in so many other parts of Siberia, and it seemed to me that their life, although hard and lonely, was perfectly tolerable. Mr. Charushin, before his banishment, spent four years and a half in solitary confinement, and for two years and a half lay in one of the bomb-proof casemates of the Petropavlovski (Pet-ro-pav'lov-skee) fortress. His offense was carrying on a revolutionary propaganda among the factory operatives in one of the suburbs of St. Petersburg. When he was

finally sent to Siberia, in 1878, his wife voluntarily accompanied him, and at the mines of Kara she lived alone in a wretched little cabin at the Lower Diggings until, upon the expiration of his term of probation, Mr. Charushin was permitted to join her. He was one of the nine political convicts of the free command sent back to prison by order of Loris Melikof (Mell'ee-koff) on the 1st of January, 1881, and it was in his house that poor Eugene Semyonovski (Sem-yon'of-skee) committed suicide on the eve of that day.

Sunday morning, November 29, after bidding good-bye with sincere regret to Mr. and Mrs. Charushin, whose warm hearts and lovable characters had won our affection and esteem, we left Nerchinsk in a sleigh for Chita (Chee'tah), the capital of the Trans-Baikal.

The icicles that hung from the nostrils of our frost-whitened horses, the sharp metallic creaking of the crisp snow under our sledge-runners, the bluish, opalescent tints of the distant mountains, and the high, slender columns of smoke that stood, without waver or tremble, over the chimneys of the houses, were all evidences of a very low, if not an arctic, temperature; and I was not surprised, when I looked at our thermometer, to find the mercury stationary at twenty-seven degrees below zero. As night came on, the intensity of the cold increased until it was all that we could do to endure it from one post station to another. We drank three or four tumblers of hot tea every time we stopped to change horses; but in the long, lonely hours between midnight and morning, when we could get no warm food and when all our vital powers were usually at their lowest ebb, we suffered very severely. We had no difficulty in getting post horses until just before dark Monday evening, when we reached the station of Turinopovorotnaya (Too-rin-o-po-vo-rote'nah-yah), about fifty miles from Chita, and found the whole village in a state of hilarious intoxication. Sleighs filled with young men and boys were careering hither and thither with wild whoops and halloos; long lines of peasant girls in bright-colored calico dresses were unsteadily promenading back and forth in the streets with their arms around one another and singing *khoro vod* songs; the station-house was filled with flushed and excited people from neighboring settlements, who had evidently been participating in a celebration of some kind and were about starting for their homes; the station-master, who perhaps had not finished his celebration, was nowhere to be found; there was not a driver about the stables; and the "starosta" (stah'ro-stah),¹ a

¹ A "starosta," or elder, is the head of a Siberian village.

short, fat old man, who looked like a burgher from Amsterdam, was so drunk that even with the aid of a cane he could hardly stand on his feet. In vain we tried to ascertain the reasons for this surprising epidemic of inebriation. Nobody was sober enough to explain to us what had happened. From the excited and more or less incoherent conversation of the intoxicated travelers in the station-house, I learned that even the village priest was so drunk that he had to be taken home in a sleigh by the soberest of his parishioners. If the station-master, the starosta, the village priest, the drivers, and all of the inhabitants were drunk, there was evidently no prospect of our being able to get horses. In fact we could not find anybody who seemed sober enough to know the difference between a horse and his harness. We therefore brought our baggage into the crowded station-house and sat down in an unoccupied corner to study intoxicated humanity and await further developments. Every person in the house was drunk, except ourselves and one small baby in arms. The father of this baby, a good-looking young Russian officer in full uniform, wandered unsteadily about the room, animated apparently by a hazy idea that he ought to be collecting his scattered baggage so as to be in readiness for a start; but the things that he picked up in one place he dropped feebly in another, and every minute or two he would suspend operations to exchange with his intoxicated companions fragmentary reminiscences of the day's festivity. Finally he seemed to be struck by a happy thought, and making his way in a devious course to one corner of the room he took up his saber, which was leaning against the wall, and carrying it to his intoxicated wife committed it solemnly to her care with directions to take it out to the sleigh. She was sober enough to remark, with some asperity, that as she had a young baby in her arms, and as the temperature out-of-doors was twenty degrees below zero, he had better take the saber to the sleigh himself. At this he clasped the sheathed weapon dramatically to his breast, rolled his eyes in a fine frenzy upward, and declared with emotion that the saber was his first bride, that he never would forsake it, and that, in view of all the circumstances, he *would* take it out to the sleigh himself. A moment later, however, he dropped it, and but for the supervision of his second bride would have forgotten it altogether.

About eight o'clock, after watching for an hour or two such performances as these, I succeeded in capturing the starosta, and addressing to him some very energetic remarks I sobered him sufficiently to make him understand that we must have horses at once or

there would be trouble. While I stood over him with a verbal club, he entered us in the station-house book as "Mr. Kennan and companion, citizens of Neighboring States";¹ and then going out on the front steps he shouted, as every sleigh-load of drunken men went past, "Andre! Nikolai! Loshedei sei chas!" ["Horses, this moment!"] The only replies that he received were wild howls of derision. At every such outburst of hilarious contempt for authority, he would raise his shaking hands as high as his head with a feeble and comical gesture of helplessness and despair, and exclaim in maudlin tones: "Fsei pyánni! Shto prikázhtie dyélet? Chisto nakázánia!" ["They're all drunk! What do you order done? It's a regular punishment!"]

About nine o'clock the noise, tumult, and shouting in the village streets began to subside; the station-master, whose intoxication had taken the form of severe official dignity, suddenly appeared, and in a tone of stern menace wanted to know where the post drivers were and what all this disorder meant; the young Russian officer, who by this time had reached the affectionate stage of inebriation, kissed all the women in the room, crossed himself devoutly, and meandered out to the sleigh, followed by his wife with the baby and the saber; two intoxicated priests in long gowns, and high, cylindrical, brimless hats draped with black crape, alighted from a droschky in front of the door, allowed their hands to be reverently kissed by the inebriated young officer and his friends, and then rode off in a post sleigh driven by a peasant who could hardly keep his seat on the box; and finally, when we had almost abandoned the hope of ever getting away, a really sober man in a ragged sheepskin coat emerged from the darkness and reported in a business-like manner to the station-master that the horses were ready for us. The drunken and irate official, who seemed desirous of vindicating his dignity and authority in some way, overwhelmed the unfortunate driver with abuse, and ended by fining him fifty kopecks—whether for being sober or for having the horses ready, I do not know. We piled our baggage into the sleigh, climbed in upon it, and rode out of the intoxicated settlement with thankful hearts. As the last faint sounds of revelry died away in the distance behind us, I said to the driver: "What's the matter with everybody in this village? The whole population seems to be drunk."

"They've been consecrating a new church," said the driver, soberly.

¹ The Russian words for "neighboring" and "united" bear a superficial resemblance to each other, and the poor intoxicated starosta had never heard, evidently, of such a country as the United States.

"Consecrating a church!" I exclaimed in amazement. "Is that the way you consecrate churches?"

"I don't know," he replied. "Sometimes they drink. After the services they had a *gulaïnia* [a sort of holiday promenade with music and spirituous refreshments], and some of them crooked their elbows too often."

"Some of them!" I repeated. "All of them, you mean. You're the only sober man I've seen in the place. How does it happen that you're not drunk?"

"I'm not a Christian," he replied, with quiet simplicity. "I'm a Buriat."¹

As a Christian—if not a member of the Holy Orthodox Church—I was silenced by the unconscious irony of the reply. The only sober man in a village of three or four hundred inhabitants proved to be a pagan, and he had just been fined fifty kopecks by a Christian official for not getting drunk with other good citizens and thus showing his respect for the newly consecrated edifice and his appreciation of the benign influence of the Holy Orthodox Faith!

About ten o'clock on the morning of Tuesday, December 1, we drove into the town of Chita and took up our quarters in a small, one-story log-hotel kept by a man named Biachinski (Byah'chin-skee) and known as the "Hotel Vládíivostók." There was in Chita, as I have said in a previous article, a tolerably large and very interesting colony of political exiles. We had made their acquaintance and had had some conversation with them on our outward journey; but as we were then making every effort to reach the mines of Kara before the setting in of winter, we could not spend as much time with them as we wished to spend, and we therefore decided to stop for ten days or two weeks in Chita on our return. Most of these exiles were forced colonists who had already served out terms of hard labor at the mines and who belonged to the class that the Government regarded as particularly dangerous. In view of this fact, and of the official attention that our investigations had already attracted at Kara, it seemed to me necessary to proceed with more than ordinary caution and to cultivate the most friendly possible relations with the authorities. It was more than likely that Captain Nikolin (Nee-ko'lin), the gendarme commandant at the mines of Kara, had informed the acting-governor at Chita of our surreptitious visits to the politicals of the free command, and, if so, it was quite probable that our later movements would be watched. What would be the result of a discovery that we were visiting the politicals in Chita every

day, I did not know; but as we were still apprehensive of a police search, it seemed prudent to take every possible precaution. I called at once upon Colonel Svechin (Svay-chin'), who was then acting as governor in the absence of General Barabáš (Bar-a-bash'), gave him a tolerably full account of our experience at the mines,—omitting, of course, the episode with the political convicts,—and outlined to him our plans for the future. He was very pleasant and courteous, asked no inconvenient questions, and when I bade him good-day and bowed myself out of his reception-room I felt quite reassured. Either he was not aware of the extent of our intercourse with the political exiles in his province, or he regarded such intercourse with indifference as a matter of little consequence.

Two or three days after our arrival, a wealthy merchant of the town named Nemerof (Nem'er-off), whose acquaintance I had made through a casual call at his place of business, invited us to go with him to an amateur theatrical entertainment to be given for some benevolent object in the small theater connected with the official club. Hoping to make a few useful acquaintances, and desirous, at the same time, of showing ourselves in public as much as possible with "trustworthy" people, we accepted the invitation. Between the acts of the rather clever and creditable performance we promenaded in one of the lobbies, made the acquaintance of a number of civil and military officials, received a pleasant greeting from the acting-governor, and attracted general attention as "distinguished Americans," well known to the higher authorities of the place and upon friendly terms even with the acting-governor and chief of staff. No one, we hoped, would suspect that these distinguished foreigners had stopped in Chita for the express purpose of extending their acquaintance with political convicts, nihilists, and terrorists.

Among the army officers to whom I was introduced between the acts was a certain Colonel Novikof (No'vee-koff), who, accompanied by several other officers in full uniform, was walking back and forth in the lobby. As soon as he caught my name he looked at me curiously, and, without any preliminary leading up to the subject, said, "I hear that you have been at the mines of Kara."

"Yes," I replied, with some surprise and uneasiness; "I have just come from there."

"What did you find good there?" he inquired, looking sharply into my face.

I hardly knew what reply to make to such a question as this; but I thought that it would be safe at least to speak well of the officials, so far as I could conscientiously do so, and I

¹ The natives in Siberia known as Buriats are nearly all Lamaists.

therefore replied promptly that I found a good man, namely, Major Potulof (Po'too-loff).

"Humph!" grunted the colonel, contemptuously. "I suppose he showed you everything in the most favorable light?"

"There are some things that cannot be shown in a very favorable light," I replied, feeling more and more uneasy, but determined to take the bull by the horns.

"Did you go through the prisons?" he demanded.

"Yes," I said; "we saw most of them."

"Did they show you the 'naked command'?"

"No; I don't even know what you mean by the 'naked command.'"

"I mean a cell full of prisoners without clothing. When I first went to Kara and made a visit of inspection to the prisons, I found a *kamera* in which there were twenty-five convicts stark naked. This body of men was then known as the 'naked command.'"

"What was the explanation of it?" I inquired.

"I don't know," replied the officer, with a shrug. "They simply had n't any clothes to wear.¹ Did your *good man* [a contemptuous reference to Major Potulof] show you the solitary-confinement cells in the Middle Kara prison?"

"He did not," I replied. "What is there remarkable about them?"

"Oh, nothing," said the colonel, with assumed indifference, "except that they are not high enough to stand up in nor long enough to lie down in. You evidently did n't see anything except what they wanted you to see. I wish that I had been there; I would have shown you things as they *are*, not as your *liubeznoi khozain* [amiable host] showed them to you."

By this time I was in a state of some bewilderment and perplexity. Could Colonel Novikof be sincere? Or was he merely laying a trap for me in order to ascertain what I really thought of the Kara prisons and the prison administration? I hardly dared say anything, for fear of making a mistake. Without waiting, however, for any remarks from me, Colonel Novikof said, "I lived at Kara as commander of the Cossack battalion for three years and a

¹ I subsequently learned that the "naked command" was composed of convicts who made a regular practice of selling the clothing furnished them by the Government, in order to get money with which to gamble and buy liquor. As a punishment for this offense they had been shut up together in a large cell and deprived of clothing altogether. Of course the prisoners could not have disposed of their garments and bought liquor with the proceeds unless they had been aided in so doing by the prison officials. The existence of a naked command, therefore, showed the corruptibility, rather than the cruelty, of the prison administration. Colonel Novikof seemed desirous of giving me a contrary impression.

² I think I quote Colonel Novikof's words with almost perfect accuracy. They made upon me, of course, a very deep impression, and I wrote them down in my

half; and when I was finally relieved from duty there, a few months ago, I was so glad that I had a special thanksgiving service read in the church.

"Do you see my beard?" he demanded abruptly after a moment's pause. "It is all sprinkled with gray, is n't it? That 's the result of the human misery that I was compelled to witness at the mines. When I went there, there was n't a white hair in it. How old do you think I am?"

I replied that I should take him to be about fifty-five.

"I am only forty-five," he said bitterly; "and when I went to Kara I was as young-looking a man as you are."

He paused for a moment, as if in gloomy retrospection, and I ventured to ask him what was the nature of the misery to which he referred.

"Misery of all kinds," he replied. "The wretched convicts are cruelly treated, flogged with rods and the *plet* [a sort of heavy cat], and worked for the benefit of their overseers, who enrich themselves at the convicts' expense. As for the suffering and injustice, I will give you an instance of it. While I was there the wife of the warden of one of the prisons accidentally discovered that her lover—a convict of the free command—was carrying on an intrigue with one of her servants, a good-looking girl belonging also to the criminal class. Enraged by jealousy, she made such representations to her husband the warden as to induce him to have the servant girl flogged. The girl received 150 blows with the stick on her bare body, and then when she went to the *zaveduyushchi* [the governor of the penal establishment] and complained of the cruel treatment to which she had been subjected, she got 90 blows more with the *plet*,—240 blows in all,—and I stood by and saw those executions carried out. Do you think that 's a pleasant thing? I have n't much hair left [stroking the top of his head], but all that I have has stood on end at the sights I have been forced to witness at those accursed mines. To see what one must see there one ought to have nerves of iron wire."²

The reader must not suppose that these extraordinary statements were made to me note-book as soon as I returned from the theater. Some allowance must be made, however, for personal animus on the part of the speaker. His relations with other officers at the mines, and particularly with Major Potulof, had evidently been unpleasant, if not hostile, and he may have exaggerated, or thrown into undue prominence, evils for which they were responsible. The remarks that I have quoted are, nevertheless, interesting and significant as coming from an officer of high rank who had the best possible means of knowing the truth, and I give them for what they may be worth. Colonel Novikof is the same officer who told me that he would punish political offenders with the *shpitzruten*—a barbarous running of the gauntlet in the course of which the sufferer receives from two thousand to seven thousand blows from light rods.

quietly and confidentially in a corner. We were walking back and forth in the crowded lobby of a theater with three or four other officers, and Colonel Novikof talked excitedly and loudly enough to be heard not only by them, but by any one who cared to listen. It may seem strange that a Cossack officer of Colonel Novikof's prominence should make, voluntarily, to a stranger and foreigner, such damaging admissions with regard to the working of the Russian penal system; but this was not the only time that I was surprised and puzzled by such frankness. At a later hour that same evening another officer came to me between the acts, introduced himself, and began to question me about our experience at the mines of Kara. In less than five minutes he made the same inquiry that Colonel Novikof had made, viz., whether we had seen the solitary-confinement cells in the Middle Kara prison. I replied as before in the negative, whereupon he gave me the same information with regard to their dimensions that I had already received, and added that these horrible cells had been used as places of confinement for political offenders, and even for cultivated women. Madame Rossikova (Ross'ee-ko-vah), he said, had languished in one of those dungeons until the prison surgeon had pronounced her dying. He invited me to call upon him, and said that if I was interested in prisons and the exile system he thought he could furnish me with some material. I am not at liberty to name this officer, nor to indicate the position that he held; but I can say, without breach of confidence, that I did call upon him, and that I am indebted to him for many of the facts set forth in the four preceding articles. He confirmed most of the statements made to me by the political convicts at Kara, gave me an account of the shooting of Governor Ilyashevich (Ill-yah-shay'vitch) that did not differ in any essential respect from the narrative of Madame Kutitonskaya (Koo-tee-ton'ska-ya) herself, and permitted me to see official documents of the utmost interest and value. If he had in view any other object than the establishment of the truth, I do not know what it was.

During our stay of nearly two weeks in Chita I spent a large part of every day with "trust-worthy" citizens and officials, in order to avert suspicion, and then devoted the greater part of every night to the political convicts. We met the latter, as a rule, in a carpenter-shop maintained by some of them as a means of self-support in a large two-story log-house once occupied by the famous Decembrist exiles of 1825. About nine o'clock every evening, ten or fifteen politicals would assemble in a spacious upper room over this carpenter-shop, and there, at a somewhat later hour, Mr. Frost and I

would join them. Fanny Morenis (Mo-ray'niss), a bright and very pretty girl about twenty years of age, generally acted as hostess; Madame Gélis presided over the samovar; and by half-past ten o'clock every evening we were all grouped about a big table on one side of the room, smoking, drinking tea, relating our adventures, and discussing all sorts of social and political questions. Among the exiles in Chita were some of the brightest, most cultivated, most sympathetic men and women that we had met in Eastern Siberia; and I still remember, with mingled feelings of pleasure and sadness, the hours that we spent with them. We were not always depressed and gloomy, nor did we always look on the dark penal side of Russian life. Sometimes Mr. Lazaref, or Mr. Valuief (Val-loo'yef), would take up an old battered guitar, and sing, to its accompaniment, a melodious Russian romance; sometimes Mr. Frost and I gave the exiles a spirited if not a finished rendering of "Bingo," "The Bull-dog," "Solomon Levi," or some other rollicking college melody; and sometimes we all sang in chorus the stirring words and music of the "Little Russian Marseillaise," the quasi-revolutionary and prohibited song "On the Volga there is a Cliff," or the martial strains of "John Brown."

Sooner or later, however, we invariably reverted to the topics that most interested us all — the condition of Russia, the Russian revolutionary movement, and the life of political exiles in prison, on the road, or at the mines. Here I obtained many of the facts that I have set forth in previous articles, and here I heard, for the first time, the terrible history of the Kharkoff Central Prison, and the narrative of the desperate hunger-strike of the four women in the prison at Irkutsk.¹ Stories more ghastly and pathetic I had never read nor imagined; and night after night I went back to the hotel in a state of emotional excitement that made it impossible for me to sleep, and equally impossible to turn my thoughts into any other channel. All that I could do was to lie for hours on the floor, picturing to myself in imagination the scenes and events that had been described or related to me with such torturing vividness. It is one thing to read in cold, expressionless type such narratives of suffering, injustice, and bereavement as those that I have tried to reproduce in the present series of articles. It is another and quite a different thing to hear them from the trembling lips of the men and women who have been actors in the tragedies described, and who have themselves gone down into the valley of the shadow of death. If, while listening to such stories, my eyes

¹ Mesdames Kavalskaya, Rossikova, Bogomolets, and Kutitonskaya.

filled with tears and my hands were clenched in fierce though silent and helpless indignation, I am not ashamed of it—it would have been a relief to me sometimes if I could have cried.

The emotional strain of our East-Siberian experience was perhaps harder to bear than the mere physical suffering. One can endure cold, hunger, jolting, and fatigue with a certain philosophic cheerfulness; but emotional excitement—the constant appeal made by suffering to sympathy—exhausts nervous strength with great rapidity and eventually depresses all the vital powers. In our case there was not only the emotional strain, but the strain of constant anxiety and apprehension. We were liable, at almost any moment, to be arrested and searched; and what the consequences of such a misfortune would be we could only conjecture. No attempt had yet been made to watch or follow us, so far as we were aware; but the room adjoining ours in the hotel was occupied by four officers, including a captain or colonel of gendarmes, and Mr. Frost thought that he had more than once heard, through the thin intervening partition, a conversation among these men with regard to the real object of our Siberian journey, and a discussion of methods by which our papers might be secured, or at least subjected to police inspection. One night, during our second week's stay in Chita, I came back to the hotel about two o'clock in the morning from a visit to the political exiles' carpenter-shop. There was not a sound nor a suggestion of life in the deserted streets of the little provincial town, the windows of the hotel were all dark, the servant who admitted me was only half awake, Mr. Frost was slumbering peacefully on a wooden bench in our room, and perfect stillness prevailed throughout the building. Everybody had apparently been asleep for hours. The room occupied by the four officers was separated from ours by a thin paper-and-lath wall only, through which there happened to be an intercommunicating door. Under this door was a vacant space of three or four inches, which, with the flimsiness of the partition, permitted sounds to pass from room to room with almost perfect freedom. Excited by the ghastly story of the murder of the political offender Somof (So'moff) in the Odessa prison, which I had just heard from one of the exiles, I could not sleep, and lighting a candle, I lay down on the floor with my head to the partition wall and tried to divert my thoughts by reading. For at least half an hour the only sound that came to my ears was Mr. Frost's soft, regular breathing. Suddenly the stillness, which was so profound as to be almost oppressive, was broken by the loud "Bang!" of a revolver al-

most opposite my head, on the other side of the partition. Surprised and startled, I raised myself on one elbow and listened. Nothing could be heard except a faint rustle, made apparently by plaster-dust falling from the partition wall where the bullet had pierced it. Mr. Frost, roused from sound sleep, sat up and inquired, "What was that?"

"Somebody has just fired a revolver at our partition," I replied in a low tone.

"What time is it?"

"About half-past two. Keep quiet and listen."

With strained attention we waited fully two minutes without hearing the faintest sound. The hotel had become as still as before, and yet I knew that there were four men in the room from which the pistol shot had come. If one of them had committed suicide—which was the first thought that flashed through my mind—why did not the others get up and strike a light? The report of the revolver was loud enough to rouse the whole hotel, and the perfect stillness that followed it was even more extraordinary and mysterious than the shot itself.

"Let's call to them and find out what the matter is," whispered Mr. Frost.

"No," I replied in an undertone; "let somebody else find out. We're not hurt."

I had great fear of becoming involved in some mystery or tragedy that would give the police an excuse for taking us into custody and overhauling our baggage or summoning us as witnesses, and it seemed to me best to "lie stiller than water and lower than grass," as the Russian peasants say, and await developments. Whatever might be the significance of the pistol shot, it was none of our business unless the weapon had been aimed at us—and that seemed extremely improbable.

After the lapse of perhaps three minutes, I heard in the officers' room the clicking made by the cocking and uncocking of a revolver, followed in a few seconds by low whispering. Then one man in an undertone asked another how many more cartridges he had. Some inaudible reply was made, after which there was whispering again for a moment or two, and finally silence. We did not hear another sound from the officers' room that night. Why that revolver shot was fired through our partition from a perfectly dark and still room at half-past two o'clock in the morning, we never ascertained. My own impression is that somebody desired to experiment upon us for fun; and if any one had questioned me about the incident on the following day, I should have said that pistol shots in the night were so common in American hotels as to excite little or no remark, and that the only thing

EAST-SIBERIAN FREIGHT SLEDGES.

which surprised us was the absence of a dead body in the morning.

Whether or not the police discovered, during our stay in Chita, that we were visiting the political convicts every day, I have no means of knowing. That they became aware of it afterward, I infer, from the fact that the only letter I subsequently received from there, a perfectly innocent communication from the merchant Nemerof, was delivered to me open — the end of the envelope having been cut off with a pair of scissors.

Up to the time of our arrival in Chita I had carried the most important and compromising of my papers and documents in a leathern belt around my body; but they finally became so bulky and burdensome that it seemed necessary to make some other disposition of them, and in view of the possibility, if not the probability, of a police search, I determined to conceal them. The greater part of them I put into the hollow sides of a wooden box that I made for the purpose, and that was ostensibly intended to keep our dishes and tea-things in. Such a box I could carry from our sleigh to the house at every post station without appearing to set any particular value upon it, and I could thus keep it constantly under my eye without exciting either the suspicion of the police or the cupidity of thieves. All travelers carried such boxes, and it was highly improbable that anybody would ever wonder what was in it. It explained itself. The remainder of my documents, and a few letters from political exiles to their relatives in European Russia, I bound into the covers of books. As we were traveling with very little baggage, I had no books of my own; but the exiles in Chita furnished me with an English copy of "David Copperfield," a bound volume of a Russian magazine which contained an article upon the exile system, and an old

book of logarithms. We felt sure that "David Copperfield" and the logarithms would excite no suspicion, even if our baggage were overhauled, and we hoped that the article upon the exile system would carry the Russian magazine. Finally, I put one very important letter into a small square piece of board, upon which was mounted an oil portrait of one of the Decembrist exiles of 1825. This portrait had been found in one of the houses of the Decembrists at Chita, and as I was a collector of curious and interesting relics, it was natural enough that I should be in possession of it. Altogether it seemed to me that my papers were very skillfully and successfully hidden. The police certainly could not find them without breaking or tearing to pieces nearly everything that I had.

Wednesday night, December 9, we sang with the political exiles in Chita for the last time the plaintive but beautiful song of the Russian revolutionists, "On the Volga there is a Cliff," distributed among them as mementos all the trinkets and small articles of value that we had, and then, with deep and sincere regret, bade them good-bye forever. Twelve hours later we were posting furiously towards Irkutsk, the capital of Eastern Siberia. For five days and nights we traveled westward at the rate of eight miles an hour, stopping only to change horses, and suffering from cold, hunger, and sleeplessness until it seemed to me that I could endure no more. We found Lake Baikal still open, but the last steamer for the season had gone, and we were forced to take the high, picturesque cornice road around the lake at its southern end. Monday evening, December 14, we were stopped only fifty or sixty miles from Irkutsk by the absence of post horses. For almost three months we had been cut off

SIBERIAN POST SLEIGHS.

from all communication with the civilized world, for ten weeks we had not received a letter nor read a newspaper, and furious with impatience at finding ourselves stopped so near the capital, we hired a peasant to carry us and our baggage on a low sledge to the next station. We little knew what a night of misery we were preparing for ourselves. The cold was intense;

stream to close; but as it then showed no disposition to do so, we resolved to descend its right, or eastern, bank to a point about a hundred miles nearer the Arctic Ocean, where, according to the reports of the peasants, a gorge had occurred and an ice bridge had formed. On Friday, January 8, having sold our old tarantas (tar-an-tass') and purchased with the

proceeds a comfortable pavooska (pah-voss'kah), or winter traveling sleigh, like that shown in the illustration on page 109, we sent to the post station for a troika of horses and set out by way of the Alexandrofski (Al-ex-an-drof'skee) Central Prison for the ice bridge across the Angara.

The Alexandrofski Central Prison, which at the time

the road ran across a series of high, massive, and densely wooded mountain ridges; the peasant's horses proved to be half dead from starvation, and after the first three miles absolutely refused to draw us up hill; we walked almost the whole distance, in a temperature of twenty degrees below zero, and finally reached the next station, more dead than alive, at two o'clock in the morning. If I fell down once I fell down twenty times from weakness and exhaustion on the slippery slopes of the last hills. Tuesday, December 15, we reëntered the city of Irkutsk, drove to the post-office and then to the Moscow Hotel, and without waiting to wash our hands, change our dress, or refresh ourselves with food, sat down to read forty or fifty letters from home. The most recent of them were two and a half months old, and the earliest in date nearly six.

It was late in the Siberian winter when we reached Irkutsk, and the thermometer had indicated temperatures as low as thirty and thirty-five degrees below zero; but the Angara River was still open in the middle, and as there was no bridge, and the ferry-boats had ceased running, we could not get across. For more than three weeks we waited impatiently for the rapid

of our visit had the reputation of being one of the best as well as one of the largest institutions of its kind in Eastern Siberia, is situated on the right bank of the Angara River about forty miles below Irkutsk, and was built and occupied for a time as a distillery. It was remodeled and turned into a prison in 1874, and since then has been used as a place of confinement and of nominal hard labor for about a thousand convicts. I was particularly anxious to see it, because acting-governor Petrof (Pe-troff') in Irkutsk had described it to me as "almost a model prison," and I had not thus far seen any prisons in Siberia to which such a description would apply. After a pleasant and comfortable ride of eight hours from Irkutsk we reached the prison settlement about half-past nine o'clock Friday night, drove at once to the post station, and, after having warmed ourselves with three or four tumblers of hot tea, went to bed on the floor, as usual.

CONVICTS GRINDING RYE IN THE ALEXANDROFSKI CENTRAL PRISON.

Saturday morning we called upon the prison warden, Mr. Sipiagin (See-pyag'in), who had already received notice of our coming from the authorities in Irkutsk, and asked permission to go through the institution of which he was in command. Mr. Sipiagin, a pleasant, intelligent, cultivated officer, thirty-five or forty years of age, received us with the most cordial hospitality, insisted upon our taking a late breakfast with him, and after we had refreshed ourselves with tea, bread and butter, and delicious cutlets served with gravy and delicately browned potatoes, he went with us to the prison.

The Alexandrofski Central Prison is a large, two-story brick building with a tin roof, standing in a spacious inclosure formed by a high, buttressed brick wall. It is somewhat irregular in form, but its greatest length is about 300 feet

and its greatest width about 100, with a rather spacious court-yard in the middle. It contains fifty-seven general *kameras*, or cells, in which a number of prisoners are shut up together, ten solitary-confinement cells, and five *secretni*, or "secret" cells, intended for the isolation of particularly important or dangerous criminals. It contained at the time of our visit 992 convicts, while about 900 more, who had finished their terms of probation, were living outside the prison walls in the free command. We were taken first to the mills, which were large vaulted apartments in the first story, where 75 or 100 convicts were grinding rye into meal for their own use. The air here was fresh and good; the labor, although hard, was not excessive; and the men who turned the cranks of the clumsy machines were relieved by others as fast as

A VISIT TO THE ALEXANDROFSKI CENTRAL PRISON AT NIGHT.

they became tired. This, the warden informed me, was the only hard labor that the inmates of the prison were required to perform, and it occupied only three or four hours a day. From the mills we went to the *kameras*, which filled the greater part of the large building, and which were occupied by from 15 to 75 men each. They varied greatly in size and form, but all were large enough for the number of convicts that they contained; the ceilings in them were high; the air everywhere was good; the floors and sleeping-benches were scrupulously clean; and nothing seemed to call for unfavorable criticism except perhaps the lack of bedding. In all the cells I noticed ventilators, but some of them had been stopped up with rags or articles of clothing by the prisoners themselves. The corridors into which the *kameras* opened were high, spacious, and fairly well lighted, and the air in them seemed to be almost as pure as that out-of-doors. From the

kameras we went to the kitchens, where food was prepared every day for more than a thousand men, and where I could discover nothing that was out of harmony with the neatness and good order that prevailed in other parts of the building. I tasted some of the bread and soup furnished to the prisoners and found both palatable and good. The convict ration, Mr. Sipiagin informed me, consisted of three pounds of rye bread, about seven ounces of meat, and three ounces of barley per day, with potatoes or other vegetables occasionally. Tea and sugar were not supplied by the Government, but might be purchased by the prisoners with their own money. When we came out of the kitchens the warden asked us if we would not like to see the school-room. I replied that we certainly should, inasmuch as we had never seen such a thing as a school-room in a Russian prison, and did not suppose that such a thing existed. Mr. Sipiagin laughed, and conducted us to a clean,

CROSSING THE ICE BRIDGE.

well-lighted apartment in the second story, which had been fitted up by the convicts themselves with rude desks of domestic manufacture, and had been furnished by the prison authorities with a black-board, a large globe, a wall map of Siberia and another of the Holy Land, and a few cheap lithographs. There were no scholars in the room at the time of our visit to it, but the warden said that the convicts frequently came there to read, sing, or listen to instructive talks from the priest. They were greatly in need of books. They had a few tracts and testaments, left there some years before by the Rev. Mr. Lansdell,¹ but they wanted school-books and a library. From

¹ This was the only place in Siberia where I found any trace of the books and tracts that Mr. Lansdell distributed.

the school-room we went to the shops, where 25 or 30 tailors, shoemakers, and carpenters were hard at work, and where the air was filled with the pleasant odors of fresh pine shavings and Russia leather. The convicts were at liberty, the warden said, to do any work that they were capable of doing, and they received two-thirds of all the money that they earned. One-third was turned over to them, or held by the warden subject to their order, at the time payment was received for the products of their industry; one-third was withheld, to be given to them at the expiration of their terms of probation; and one-third was retained by the Government. After paying a visit to the hospital, which contained only forty-two patients and which was clean, well ventilated, and in perfect order, we expressed ourselves as sat-

ished with our inspection of the prison, and returned to Mr. Sipiagin's house. The warden seemed to be very much gratified when I said to him frankly and honestly that I had inspected fifteen prisons in Eastern Siberia, that the one under his command was by far the best of them all, and that I did not see how anything more could be done by local and personal effort to make it better. It was not a "model prison," but it would at least serve as a model for the rest of Siberia.

prove in Siberian prisons generally, and I am glad to have an opportunity to praise where praise is deserved.

Monday morning, after having thanked Mr. Sipiagin and his bright, intelligent wife for their courtesy and hospitality, we bade them good-bye and resumed our journey. The road, which lay along the edge of the river, under the high, abrupt hills that bound the Angara on the east, had been overflowed by the backing up of the water due to the formation of the ice

THROUGH THE ICE ON THE ANGARA RIVER.

At a late hour Sunday night Mr. Sipiagin, Captain Makofski, the prison surgeon, Mr. Frost, and I went through the prison again to see what was the state of things after the prisoners had retired. The convicts were lying asleep in rows on the plank nares without pillows or bed-clothing, and as we entered their dimly lighted cells many of them started up in surprise and alarm, as if afraid that we were about to drag somebody out to execution; but none of them spoke, and we went through six or seven *kameras* in silence. There were *paráshas*, or excrement-buckets, in all the cells, and the air seemed more contaminated than it had been in the daytime; but even at its worst it was better than in any other prison we had visited. Taken altogether, the Alexandrofski prison seemed to me to be in the highest degree creditable to its warden, Mr. Sipiagin, and not discreditable to the Russian Prison Administration. It gives me great pleasure to say this, because I did not find much to ap-

prove, and it was with the greatest difficulty that we could make our way at all over the huge cakes of ice with which it was bestrewn, or along the steep hillside above it. The slope of the bank finally became so steep that our horses could no longer stand upon it, and we were forced to drive out upon the thin, treacherous ice of the half-frozen river. While we were going at a brisk trot just beyond the village of Olon, the ice suddenly gave way under us, and with a great crash horses, sleigh, and all went through into the deep, swift current of the river. Fortunately, the widely extended outriggers of our sleigh prevented it from sinking at once, and by the exercise of agility and good judgment we all succeeded in getting out of it and securing a foothold on the solid ice. We cut our horses free from their harnesses, dragged them out one by one, hauled out our sledge with fresh horses, and returned to Olon to repair damages. After consultation with the villagers we decided that

A STORM AT NIGHT IN THE MOUNTAINS OF THE ANGARA.

it would not be prudent to continue our journey down the river in that way. Night was coming on, the river road was impassable, and if we should break through the ice again, in the darkness and away from help, the consequences might be more serious. Late in the evening a good-looking young peasant, tempted by an offer of fifteen rubles, which was about five times the usual rate, agreed to take us to the next village below by a circuitous and difficult route over the mountains. There was no road; but as the snow was not very deep, he thought he could make his way through, and at half-past ten o'clock we started. In all our East-Siberian experience I remember no night more

full of hardship, anxiety, and suffering than the one that followed. About midnight a storm came on with high wind, flying snow, and a temperature of fifteen or twenty degrees below zero; we lost our way in the darkness, capsized into ravines, floundered for hours in deep snowdrifts, and lifted and tugged at our heavy, unwieldy sleigh until we were utterly exhausted and half frozen. About four o'clock in the morning I began to feel, at every respiration, a sharp, cutting pain in my right lung, and in less than half an hour I found myself completely disabled. Leaving Mr. Frost and the driver to struggle with the snow-drifts and the exhausted, dispirited horses. I crawled back

into the half-capsized sleigh, pulled the sheepskin robe over my shivering body, and gave myself up to gloomy forebodings of pneumonia. What happened between that time and morning, I do not remember. Just before daybreak I was aroused by the barking of dogs, and, looking out, was gladdened by the sight of fire-lighted smoke and sparks from the chimneys

of three or four log-houses. It was the small peasant village of Pashka. After warming and refreshing ourselves with tea, we pushed on to the settlement of Kamenka, and late in the afternoon crossed the ice bridge over the Angara, and stopped for the night in the comfortable post-station house on the great Siberian road.

George Kennan.

THE CASE OF JOHN VAN ARSDALE.

SEVERAL years have passed since the newspapers were full of the D— murder case. It was particularly remarkable on account of the social prominence and previous high reputation of the accused and the strange circumstances which followed his trial. The story offers promising material for a penny dreadful, but I do not recall it to the attention of the public on that account. I had peculiar opportunities for knowing the alleged criminal, and he had exhibited to me, more perhaps than to any one else, the state of his mind. I then believed that I owed it to psychological science to give some report of the case, and with that intention I made some memoranda at the time. On looking over these notes I am still of the opinion that they should be published. My readers may think that I have thrown a little too much of myself into the tale, but they must recognize the fact that to understand testimony we must understand the witness. As we see through his eyes, we must know his point of view. I will make no attempt to draw my subject's character, but merely recount his conversation and actions as accurately as I can. I have disguised the names of persons and places in order that I may give as little offense as possible to the friends of the *dramatis personæ*.

1.

I HAD not seen John Van Arsdale for twelve years. We had been playfellows in petticoats, and afterwards we went daily together to the military school which is one of the chief prides of Albansborough. We coasted together down the slippery streets at the risk of our lives. It would have been better if one of us had been taken off then. I remember him in his gray school uniform — a well-made, strong, normal boy; intelligent, ready to study, but fonder of sport. His disposition was cheerful, yet at times there was a wistful look in his eyes which was hard to explain. I was of another tempera-

ment; my health was good, but I was somewhat lacking in muscular development. While I was no coward, I did not love fighting for fighting's sake, and was more of an adept at my books. His social position too was different from mine. His ancestors on both sides, Van Arsdals and Hasbroucks, boasted the bluest blood which could be derived from the cabbage-gardens and brew-houses of two centuries ago, but his father found it somewhat difficult to keep out of debt and yet continue to live in an "ancient" family mansion which had been built at least sixty years before. John's cousin, Henry Hasbrouck, who was several years our senior, kept up the family traditions and already promised to become a leader in society. He was handsome and affable and sometimes condescended to join us in our sports, but I do not think that we altogether liked him. My father, unlike John's, was a rich manufacturer, of humble origin, who lived in a brand-new house, and I have been told that he constituted one of the main topics of conversation among the good matrons of Albansborough. They never saw him or his house or his family without referring to the fact that his father used to sell thread and needles over the counter to their mothers; "but," Mrs. Van Arsdale would add frigidly, "I have no doubt he is an excellent man," condemning him by tone and expression to that limbo of vulgarity which a Hasbrouck could not contemplate with equanimity. To do these dames justice, I must admit that they cared as little for money as they did for brains. I felt my position keenly at times, and those early impressions may have had a tendency to make me misanthropic and morbid. My social status, however, changed completely. My friendship with John Van Arsdale opened the most reluctant doors, and I even drew my sisters after me into a position at least of tolerance. When John and I were both nineteen he entered Harvard, and I went abroad with my family. I little thought then that I should stay away for twelve years. I had a tutor in

England; tried Cambridge for a year or two; studied at Leipsic and Berlin; passed winters at Paris, at Pau, at Rome, on the Nile; spent my summers in Norway, Switzerland, and Scotland; and at last went home because I had nothing else to do.

An American must live as an exotic in Europe, and if he spends a dozen of the best years of his life there, as I did, he will find that he cannot strike root again at home. He will continue to exist like a plant in a flower-pot. The English seem to be an agreeable race at first, but they have a provincial way of considering every one provincial but themselves, and they are almost as exclusive as the first families of Albansborough. The French and Italians are so many human balloons. You have a craving for stability when you are among them, which grows rather than diminishes. And as for the Germans, with all their merits, they hold the same relation to the French that beer does to champagne. I was dissatisfied with Europe because the Europeans were unlike me; and I found, to my chagrin, when I came back to America, that I had become unlike my fellow-countrymen. I should gladly have forgotten those twelve years, but I could not escape the effect of them.

I found in America an unfinished condition of things which, before I left home, if noticed at all, would have roused my energy to assist in completing them, but which now spoke only of failure. The perfect finish of Europe dwarfs the imagination. Our castles in the air are fully represented there in stone. As we look at cathedral or garden or park, we have to add nothing to give perfection. Here it is different. We see all things as they are to be. We unconsciously indulge in the healthy exercise of picturing improvements. We judge of everything by its capabilities. It is their lack of this faculty which makes Europeans criticize us unfavorably; and I felt an unwelcome sympathy with them as I returned, a foreigner, to my home. Albansborough itself, picturesque town that it is, seemed to have shrunk; the hospitable dwellings of Main street appeared smaller, and the old wooden buildings between them looked comically out of place. The streets were narrower, the hills steeper, the Square shabbier, than they used to be. The great State House was as lonely and forbidding as Mount Sinai in the desert. The men were engrossed in their bread-winning occupations. The women, though the kindest of hostesses, were still engaged in discussing the social standing of other people's grandfathers. The newspapers—but I have learned by sad experience that it is unwise to criticize them. They reserve to themselves the exclusive right of censuring one another, and it is a right which they are not slow to exercise. Now I do not mean for a

moment to say that these strictures on Albansborough are well founded; but merely that so the city appeared to my mind, distempered as it was by foreign life, and having no aim or occupation around which all things could properly group themselves.

II.

I WAS sitting alone in the club one evening soon after my arrival, idly fingering the pages of a magazine, when a young man entered the room and approached me. He was tall, broad-shouldered, good-looking. There was nothing striking in his appearance except his full brown beard. As soon as he spoke my name, I knew that it was John Van Arsdale.

"Why, John," said I, "I was just longing to see you. I was wondering if you had changed, like everything else. I don't believe you have."

"What has changed in Albansborough, I should like to know," he answered, as he took a chair. "It never changes. The angel of sleep broods over the place."

"It is a bustling place compared with Rouen or Verona," I said. "They are sleepy indeed."

"No, no; they are dreamy, not sleepy. Here at Albansborough it is the dreamless sleep of death."

"Tut, tut, John! But how have you passed all these years? Let me see: we each wrote one letter and there it stopped. I hope the legal profession has turned out better than our correspondence."

"Oh, yes; very well. I like the law, and I am making good headway."

"And what about politics? You always used to say you would be a statesman. Here at the State capital you have a fine chance. Henry Hasbrouck is State senator, is he not?"

His face flushed a little, and for a moment he was ill at ease.

"No," said he. "I did think of trying politics, but I have given it up. There is something about it distasteful to me."

"Oh, I see. You are another Coriolanus, of course. The old families don't take kindly to ward politicians."

Twelve years before I might have said this with some bitterness, but now it all seemed so ridiculous that I smiled with good-humored irony.

"No, it is not that," he answered. "I can recognize the man in any one, and that is all that any one wants. All men feel social distinctions; and those who affect to have no respect for those whom they ought to respect really feel the distinctions most. I think one can be dignified and yet not be condescending."

"Well, then," said I, "what objection have you got to politics?"

"You may laugh at me for saying so, but it is the disgusting corruption of the whole business. Not that I should have to be corrupt, but I should have to treat a lot of thieves as if they were honest. I can't shake hands cordially with a man who has a bribe in his pocket; I can't laugh at jokes about 'boodle'; and I should hate myself if I could."

"But how are politics to be improved, if decent men are to wash their hands of them?"

"I am sure I don't know. That argument always seems sophistical to me. Fortunately, perhaps, few honest men agree with me. It is a disappointment to me, too, to give it all up. I have my own idea about politics. I think I could make my mark, and that without any special ability."

"How?" I asked.

"Why, just by saying what I think. Of course one must have some position to speak from—either the legislature or Congress. That seems a simple enough recipe for success. But is there a man in politics now who says what he thinks? They are all afraid of a bugaboo called public opinion, or, worse yet, party opinion. It would be refreshing to see a man cut loose from it all."

"But don't you believe in public opinion, *vox populi, vox Dei*, and all that sort of thing?"

"Fudge!" said John. "That's true enough of what people think, but not of what they say. What they call public opinion is not what people think, but what each of them thinks the others are thinking. It is a huge bubble of hypocrisy. Any intelligent public man can prick it by fearlessly proclaiming his own views. He would find sympathy where he least expected it; and when he had at last made a reputation for sincerity, he would have the good opinion even of those who disagreed with him."

"I wish you would try it," I said. "I should like to watch the experiment. Why should not you go into politics as well as Henry Hasbrouck? They say that he is popular with everybody and that he will have a brilliant future."

The same troubled look that I had noticed before came over his face. It turned red, and then very pale. He bent over towards me and said:

"I have one favor to ask of you. Please do not mention *his* name to me again."

There was something in my friend's voice that forbade all questioning. I began to talk lightly of my European experiences. He gradually recovered his composure, and we parted late at night, after unconsciously riveting again the bonds of our former friendship.

Several days passed before I saw Van Arsdale again. I was taking a solitary stroll in the park. It was my favorite part of the town. In less than a hundred acres it presented a beautiful variety of hill and dell, lawn and grove. The old elms gave a touch of antiquity, and nothing can surpass our May skies. While I was sauntering along, I met John. His cheeks were ruddy with exercise. His whole physique was full of vigor; yet I thought that I detected in his eyes the old far-away look which I had seen in them in his boyhood, but now bearing a distinct trace of sadness. We walked a short distance together, and then sat down on a bench where we might talk and enjoy the landscape.

"John," said I, recurring to our former conversation, "if you have dropped politics, have you transferred your ambition to law?"

"Not exactly. I think I have given up ambition. It is only an insatiable desire for applause."

"Perhaps so," I said. "Still, it gives the same zest to life that betting gives to a game of whist."

"But you would not call a gambler's pleasure happiness, would you?"

"No; but do you still expect happiness? I thought that all men of thirty had given up the idea. I am satisfied now with being diverted instead. What is happiness, after all? Thousands of men at this moment think that it consists in the absence of toothache, and to-morrow, when the toothache has gone, they will change their minds."

"You are altogether too cynical," said Van Arsdale. "I don't agree with you. I fully believe that ambition never makes a man happy, but aspiration does—the earnest desire to be something better: in politics, for instance, to use one's influence for the public good; to regard office as an opportunity, not an end; to nurse and train one's powers. That is what I am trying to do with the law. I make no attempt to get more of a practice than I can fully master, but I am laying in a store of knowledge that will stand me in good stead. I mean to be a thoroughly good lawyer."

He stopped suddenly. Once again his face showed the deep embarrassment which I had seen before. I could not account for it, until I saw that Henry Hasbrouck was approaching, with whom I had spoken for a moment a few days before. He walked down the path towards us smiling, nodded politely to John, and as I rose shook my hand, said a pleasant word or two, and passed on. He did not seem to notice Van Arsdale's sullen, yet nervous, expression, and the cold response to his salute. Hasbrouck was tall and of commanding appearance, but his eyes were too near to each other and never met another's directly. There was in his polite-

ness something a little too unctuous, and in his conversation he showed an exaggerated interest in the welfare of his hearers. He seemed to me a skillful flatterer, and I wondered at the popularity of a man who was so evidently insincere. But I could not divine what had come between him and John.

We sat down together again, and I waited in silence until Van Arsdale became sufficiently at ease to speak.

"I see that I must tell you something," he said at last, with deliberation, "if we are to be friends. You must understand me. Do you see anything peculiar in Henry Hasbrouck?" He hesitated at the name, and his manner became excited.

"Nothing particular. I don't understand you."

"Strange!" he muttered. "No one seems to see it."

"See what?" I asked.

"Why, that he is a—a snake—a viper—a—"

His words stuck in his throat. His mouth was almost contorted. Was his mind affected?

"What is it, John?" I said, putting my hand on his arm. "Be calm. Tell me quietly what you mean."

"Oh, it seems so clear to me!" he cried. "It is all on the surface, and yet I have to tell you. Can't you see beneath the skin? He is loathsome—dishonor, meanness, sin itself"; and his face showed a stronger disgust than his words. "For years he has been sucking at my heart's blood like a vampire. I can stand it no longer. Even his name nauseates me."

"But what has he done? How has he shown this horrid character? When did you find it out? You never spoke so of him when we were boys."

He looked puzzled.

"Boys are only half rational," said he. "The truth grew upon me by degrees. There is no one conspicuous fact to refer to. He was always contemptible at heart. I knew it always, but I took it as a matter of course. Such things hurt a child only for a moment. I knew how to forget. But at last the idea dawned on me that he hated me as a possible rival. I never knew why, except that we both looked forward to a political life. He tried to prevent me from going to Harvard. He insinuated to my mother that the influences there were heterodox. He assumed an amazing fondness for me, but I saw plainly that he merely wished to keep me from having the advantages which he had. When I went to Harvard, to my surprise I was blackballed in a freshman society. Henry condoled with me, but I discovered afterwards that he had told lies about

me and was at the bottom of it all. And so he continued to be a thorn in my side. Here at Albansborough he secretly threw obstacles in my way when I entered politics. Principally on his account I gave up that career. I could not bear to meet him so often and be friendly with him. I have dropped society because of him. He has kept clients away from me. If he were a lawyer, and my practice brought me into contact with him, I should give up the bar. If it were not for my mother, I should have left here long ago. He is so plain to me now. I read it all in his face. It is not what he has done, but what he is."

"But," said I, "are you sure that you are not mistaken about him? Your reasons seem trivial to me. He seems to have no enemies."

"Do you call that a virtue?" he shouted. "The public man who has no enemies is sure to have no friends, and he has none. He deceives everybody, because he lets no one get close enough to him to see into him. He is a consummate actor. He has under complete control every tone of his velvety voice, every cat-like gesture, every sickening smile. It is horrible."

"Do you have any such feeling towards any one else?" I asked with some curiosity.

"No, because no one else is like him. I have my likes and dislikes, as you know. I can't put up with make-believe. But he is the only insincere man I ever met who had not one redeeming trait to make him tolerable. He is not a man; he is a fiend"—he shuddered—"he is slime—slime—slime."

"John," said I, "I never saw such hatred."

"Oh, how can you misunderstand me so? I do not hate him. All that I ask is to have him blotted out of my life. I wish him no harm. I feel as if what he has done to me had been done to some one else. I only abhor him. If I never saw him, if his image could only be dimmed in my mind, I would be content to have him thrive forever like hell itself. But you cannot feel it. You must take me on faith. Let us never speak of this again."

We rose and walked silently for a time while his passion cooled. He must be partly insane, I thought. After a while we began talking about some book he had been reading, and his conversation, bright, quick, and yet sound and full of moral weight, was as inspiring to me as the spring air. As I left him at his door, I could not but believe that his mind was as clear as my own, and in many respects clearer. This man, with his high aims, his loyalty to his better self, his love of truth, and yet with this inexplicable aversion to Hasbrouck, was indeed an enigma. A week later I left Albansborough and went to New York, where I became a member of the Stock Exchange in the

hope of killing my ennui. During that week I saw John frequently. We avoided all reference to Hasbrouck, and I found him one of the sanest, most delightful of companions.

III.

My attention was not particularly called to Van Arsdale again for over five months. In the mean time Hasbrouck had been unexpectedly nominated for governor of the State by the Republicatic party. He had secured the support of his own county, and expected nothing more than a complimentary vote. The convention, however, was very evenly divided between the two leading candidates. Neither of them could secure a majority, and the result was a deadlock with Hasbrouck holding the balance of power. At last the supporters of one of the principal candidates came over to him and he was nominated.

One morning late in October, as I sat at breakfast reading the "Daily Lyre," the great Republicatic organ, my eyes were attracted by sensational headlines describing a murder at Albansborough. I saw the name Van Arsdale. As I absorbed, rather than read, the news, the facts slowly took shape in my mind. It seemed that John Van Arsdale had been talking with three politicians in the corner of the reading-room of the Danvale House. They had been discussing the political situation, and in some way Van Arsdale got into an altercation with one of them. At last they came to blows, and, according to the report, John struck his opponent, crying, "I will kill you!" and throwing him down deliberately seized his head and dashed it against an iron steam-heater, fracturing the skull. The man became unconscious at once and died in half an hour. No one saw the tragedy except the two other politicians. The whole disturbance lasted only a few seconds, and there had been no time for a crowd to collect. Van Arsdale was of course arrested, and committed without bail. He declined to talk of the encounter. The newspaper went on to say that the prisoner was a member of one of the first families and a man of high reputation. His behavior was inexplicable, unless his mind had been unsettled by the recent death of his mother, his last near relative.

I was overcome with horror. Of course I had to go to Albansborough at once, as I might be of service there. I telephoned to my office, packed my valise, and was on the express train in an hour. As soon as I arrived at my destination I went to the jail and was taken to his cell. I saw at the first glance that he was fearfully changed. His face was thin and haggard. He had evidently been weeping. There was

a look of despair in his eyes. He clasped my hand in his.

"How good it was of you to come!" he said. His voice was hollow and strange.

"What can I do for you, John?" I responded, with tears in my eyes.

"Oh, nothing. It is all too awful. I do not understand it myself. I have been so careful this last month. I have not spoken of politics to any one. I stopped reading the papers. But I could not help hearing, and it made my blood boil. I could think of nothing else but this election; and then somehow I forgot myself and got talking with these men, and one of them praised *him* so that I could not help speaking out. He struck me and I rushed at him, and I remember no more. The whole suppressed agony came out. That is all I know."

"Poor fellow! Have you retained counsel?"

"Yes—Mr. Campbell. He was here this morning."

"I will call on him," said I, "and we will see what can be done."

"He does not understand me any better than you do," he responded. "It is very, very sad that that unfortunate man should have died, but I cannot help thinking that I had great provocation. I could not have acted otherwise. I should think that any twelve jurymen would see it; but if they are like you and Campbell, I am not so sure."

He had become remarkably calm, and was apparently resigned to his fate. I explained to him that my affairs required my presence in New York, but that I would return whenever he wanted me.

From the jail I went to Mr. Campbell's office. He was a well-known advocate, famous in the criminal courts, and I had great confidence in him. He was very hopeful about the case.

"He is evidently insane," he said. "His conversation with me this morning was proof enough of it. Hasbrouck's name almost gave him a fit. Self-defense will not do. He says that he was struck first, but both of the men who saw it say that he gave the first blow. He is right, very likely, because they naturally side with the other man; but no jury would believe him against them under the circumstances. I shall apply for a commission, and have him put in an asylum."

This was indeed a sad alternative, but we could hope for nothing better. Mr. Campbell promised to keep me informed of the various stages of the case, and to send for me if I were needed.

I did not return to Albansborough for over two months. My private affairs were pressing, and the delays of the law left the case of the

People *versus* Van Arsdale *in statu quo*. The prisoner fortunately passed the time as well as could have been expected, although, to his sorrow, Hasbrouck was elected governor in November. He was the youngest man who had ever been so honored.

Early in January Mr. Campbell wrote to me that a commission had been appointed to examine into the question of Van Arsdale's lunacy. Two of the commissioners were physicians; one of the two the most distinguished alienist in the State. They would make their report on the 15th of January, and the trial—which would not take place if they found him insane, as they doubtless would—was set down for the 17th. The district attorney's case was simple and he was ready to go on, and Mr. Campbell saw no reason for further delay.

I was once more in Albansborough on the 15th. I wished to hear the report of the commission before seeing Van Arsdale. I went to Mr. Campbell's office and found him much discouraged. The report declared that Van Arsdale was perfectly sane. He had shown strange excitement and anger at the mention of Governor Hasbrouck's name, but it was a passion which by all the rules of medico-legal science should have been completely under control. The case seemed to be hopeless. The lawyer was afraid to put his client on the stand, because the district attorney would, by questioning him with reference to the governor, excite and exhibit all his bitter and unreasonable feeling, and this—the plea of insanity being discredited—would only prejudice the jury against him. They would see in him a furious, ill-tempered man, and would easily believe that he was a murderer. The only thing to do was to break down the witnesses of the prosecution if possible, prove Van Arsdale's good character, and play upon the sympathies of the jury.

The next day I saw John at the jail. He was quiet, but confinement was telling on him. The strange look in his eyes, which I had noticed before whenever he heard Hasbrouck's name, was now permanent—a troubled, restless look, full of pain and pathos. His peaceful demeanor evidently covered an anxious, turbulent heart. He spoke little.

"I have won the first tilt," he said, with a sad effort at cheerfulness. "They wished to make me out insane. I am not insane, but I sometimes think every one else is. I may not be so fortunate in the verdict to-morrow."

He asked me not to come to the trial. It would be easier for him to undergo it without me. I consented reluctantly, and went to my hotel with a heavy heart.

The trial occupied three days. It was difficult to get a jury, for the issue was quasi-po-

litical and many had formed opinions. I went each afternoon to Mr. Campbell's office and received the daily report from him when he came from court. The two witnesses for the State could not be shaken. One of them swore positively to the words "I will kill you," on which the prosecution relied for proof of intent, and the other thought he had heard them. They were both sure that the prisoner had struck first and that his passion was aroused by their praise of Hasbrouck. Van Arsdale wished to take the stand, but his well-trained legal mind was at last persuaded that his denials would have no effect, and he had already become convinced that his feelings towards the governor would meet with no sympathetic response.

On the last day of the trial—it was well known that it would be the last—I waited with intense anxiety in Mr. Campbell's room. He was very late. The jury must be out, thought I. At last I heard his step on the stairs. I was afraid to receive him. He entered. One glimpse of his face was enough. I saw that the worst had happened. He almost fell into his chair. His voice was scarcely articulate, but I heard the words, "Murder in the first degree." I gathered from him at last the sad events of the day. The jury were out only an hour. The testimony to John's good reputation failed to move them. They were probably partisans of the governor. The verdict stunned Van Arsdale, who, it seems, had bravely hoped to the end. Mr. Campbell returned with him to the jail, but was not allowed to go in, as it was after the hour for closing. John would be sentenced to death at ten the following morning, and he could see no visitors until after that time. An appeal would be taken at once, and Mr. Campbell added that he would be much pleased if I would see the governor with reference to a pardon. It was not a pleasant task, but I undertook to attend to it.

IV.

THE next afternoon I went to the jail. I never passed a sadder hour. John was completely broken down.

"And this is the end of all my hopes and plans," he exclaimed. "Why was I born for such torture? The physical shrinking is enough, but the ignominy, the shame, the injustice."

I was in tears myself, but I tried to comfort him.

"Oh, cheer up, John! You can appeal."

"It is no use. The judge's charge was correct. It was all a question of fact, and the jury has settled that."

"But you have been punished enough. I will see the governor. I am sure he will pardon you."

In a moment his despair had turned to anger. "Do nothing of the kind," he cried. "I ask for no pardon. Promise me that you will not go to him."

"I cannot promise that, John."

"You must; you must. We must all die. Why should I not die now? What have I to live for? I should prefer to die."

But I would not promise, although he begged me on his knees, and at last I had to tear myself away from him.

It was Saturday. About noon on Monday, I called at the Executive Chamber. The governor received me with the most elaborate courtesy. I explained my mission in a few words.

"Did he send you to me?" he asked.

When I answered in the negative, he seemed displeased, but in a moment his stereotyped smile came back.

"I had already determined to pardon him," he said. "The papers will be sent to the jail this afternoon. You will oblige me by letting it be known that I gave the pardon unasked."

Was I prejudiced, or was his expression that of a man who was gloating over the opportunity of humiliating an enemy, and of increasing his own popularity by an act of apparent magnanimity?

I hastened to the jail.

"John," said I, "your pardon will be here at four o'clock. You will be a free man to-night."

"You have done me a wrong," he cried indignantly. "I shall not accept the pardon."

"And why?"

He turned on me furiously.

"Do you think I would take one day of life from *him*? I should rather hang ten thousand times than owe him a minute. It would be a living death. I am surprised you should think of it."

"You are carrying this too far," I replied.

"The governor only acts for the State. If you are pardoned, you will have to go free. You cannot help yourself."

"But I will not accept it, and no one can make me. It is like a deed unless I accept it, it is worthless. I have not studied law for nothing."

"That is nonsense," said I, getting angry in my turn. "I will come for you at half after four."

I returned at that hour. The warden had received the pardon, and together we went with it to Van Arsdale's cell. He would not touch it. He would not move from his chair.

"I have no authority to keep you, nor the sheriff to hang you," said the warden. "The sheriff has just told me to tell you so."

"You have the authority, and the duty,"

said John; "and if you don't know the law, I shall have to teach it to you. I shall apply to the court for a mandamus."

We tried to coax him, but he persisted. At last we beat a retreat, and after consultation the warden concluded to let him remain in the cell until he could apply to the court. Of course it was an absurd proceeding, but his heart was set upon it, and we were afraid of violence if we did not consent to it.

I went at once to Campbell. He was delighted at the receipt of the pardon, and as for John's behavior, he had never heard of such a thing. It was ridiculous. He went to his shelves and took down one or two volumes. As he turned from page to page, his brow became furrowed. He was evidently perplexed.

"This is preposterous law," said he. "Listen to this. It is from an opinion of Chief-Justice Marshall. 'A pardon is a deed to the validity of which delivery is essential, and delivery is not complete without acceptance. It may then be rejected by the person to whom it is tendered; and if it be rejected, we have discovered no power in a court to force it on him. It may be supposed that no being condemned to death would reject a pardon; but the rule must be the same in capital cases and misdemeanors.'"

I was astonished.

"There are some conflicting authorities," said he, "and he may not succeed. Of course I shall not appear for him. I shall go to him now."

Van Arsdale found no lawyer willing to take his case, and he took it himself. He sent out by messenger from time to time for the books which he wanted, and made a brief which the lawyers regarded as a model of learning, perspicuity, and force.

I was present at chambers a week later when the motion was heard. It was a remarkable scene. The court-room was crowded. The district attorney argued that there being no precedents in this State, the court was at liberty to act on the principles of humanity. He made one or two technical points, which had little weight, and quoted some doubtful authorities. Then Van Arsdale arose, handcuffed to a deputy-sheriff. He spoke as if he were arguing for, rather than against, his life. He made a brilliant argument, confining himself strictly to the legal questions presented. He rehearsed the history of the pardoning power in England, and proved that acceptance was necessary there; he showed that in this free country *a fortiori* the citizen should be at liberty to accept or reject a gift; he claimed that the judgment between him and the people bound both parties, and that either had a right to insist upon having it enforced. He closed with a series of citations from the reports, which seemed unanswerable.

In two days the judge rendered his decision. If the case had not been one of life and death, I have no doubt he would have granted the mandamus. But he was human; and on the ground that the question had never arisen in this State before, he set aside all the learning of centuries and established a precedent on the side of mercy.

I went once more to John's cell. He was inexorable. The court was wrong. He would not leave the jail. I told him that I would come back with a carriage at five o'clock that afternoon, and that he must be ready to go. When I left him I was confident that it would be necessary to use force.

I engaged a room for him at a boarding-house in a quiet part of the town. The landlady was a tenant of mine, and a good-hearted woman. She agreed to keep him incognito for the night, and I was to call for him at ten o'clock in the morning and take him by rail to New York. We could there determine where it would be best for him to begin life anew.

It was with some anxiety that I appeared again at the jail. I found Van Arsdale at the door of his cell. His hat was on. He had packed his bag. A wonderful change for the better had come over him.

"Well, I'm ready," he said. His voice was positively gay.

In the carriage he called attention to some familiar houses which we passed. He spoke as if nothing had happened. I went up with him to his room and had dinner sent up there for us both. I was afraid to leave him till bedtime, lest his feelings should have a relapse. He was very talkative. His mind ran back to our boyhood. We discussed adventures and games and playmates that had long since escaped my recollection. His memory was wonderfully strong that evening, and there was a tender force in his language that made those early experiences seem like strains of half-forgotten music.

I sat with him delighted until midnight, not knowing how the time sped. At last I rose and we said good-night. He followed me to the door of the room and made me turn again. He grasped my hand warmly, and bent towards me till his face was close to mine, and his eyes, wistful as they used to be when he was a boy, gazed deep into mine.

"Good-bye, dear old fellow," he said. "Good-bye."

Those eyes seemed to follow me. I saw them in the snow under the electric lights, in the sky, and on the ceiling of my bedroom at the hotel. I went to bed, but I could not sleep. I tossed about for an hour or two, and walked up and down the room and the private

drawing-room adjoining. At last I fell into a fitful slumber. When I awoke, John was sitting at the foot of my bed looking intently at me through the gloom. He leaned forward and held out his hand to me. I heard his voice:

"Good-bye, dear old fellow; good-bye."

I stretched out my hand. There was nothing there. He had vanished, all except those mysterious eyes. It was a nightmare. I looked at my watch. It was just six o'clock. I turned over and slept again until after eight. Before I was entirely dressed, there was a knock at the door; a woman wished to see me at once. I told the hall-boy to send her up to my parlor. It was John's landlady, pale, nervous, tearful. With difficulty I drew her story from her, disconnected and unintelligible though much of it was at first. At eight o'clock she had gone to his room to call him, knowing that he was to take the morning train. There was no answer to her knock. She opened the door; the key, it seems, had been lost. There from the window cornice hung the lifeless body of John Van Arsdale. He had made a rope out of two towels. A doctor, who lodged in the house, said that he must have been dead two hours.

She handed me a sheet of legal-cap which he had left on his dressing-table. It bore the ordinary indorsement of a paper in the action of the People against Van Arsdale. I unfolded it. He had written the following lines in a bold, round hand beneath the caption:

This is to certify that I am about to hang myself by the neck until I am dead, in accordance with the judgment of this court. The sheriff having refused to do his duty, I am obliged to act in his place.

JOHN VAN ARSDALE.

DATED, February 1, 18—.

I can throw but little light upon the character of Governor Hasbrouck. He made a good reputation as governor, but two or three of his public acts showed that there was no high principle running through his administration. He succeeded, whether intentionally or not, in gaining the support of independent voters without offending the lower class of politicians. He was reëlected, and died before the end of his second term. He was married after his reëlection, but his wife left him in six months. Her reasons never transpired. Those acquaintances of the governor whom I have met knew him only superficially. I am obliged to leave the true nature of the man in doubt.

There are only three theories which can explain the case of Van Arsdale, and no one of them is satisfactory. First, he may have been insane in the usual sense of the term,—an

ordinary victim of hallucination,—and the able physicians who examined him may have been entirely at fault, although, I may add, their report was confirmed by the coroner's inquest. Or secondly, he may have indulged in mere criminal hatred for his cousin, his successful rival, and thus have given play to the worst passions. In all other respects a high-minded man, exercising complete control over himself, he may in this one instance have surrendered himself to unbridled, brutal anger. *Tantane animis cœlestibus iræ?* Or in the last place,—and this hypothesis will perhaps seem to my

readers to be the least reasonable,—his intuitions may have been correct. He may have seen in Hasbrouck the very embodiment of evil; his mind, unfitted as it properly would have been for such a revelation, may have given way; the balance between his will and his emotions may have been destroyed, and he may have suffered from a kind of mania, intellectual or moral, which had no precedent, and hence was unknown to his examiners. In his conduct we may perhaps see the natural result of bringing an honest human soul face to face with the naked horrors of sin.

Ernest H. Crosby.

THE "NEWNESS."

[A FEW words are needful to explain the following paper, which was hastily written some twenty years ago, during the late Mr. Robert Carter's residence in the city of Rochester, for a literary club there, among whose members I recall (with others) the names of Dr. Anderson, President of the University of Rochester, Professor Robinson, since President of Brown University, and Judge Danforth, of the present bench of the Court of Appeals, besides the late Chief-Justice Church. In this choice circle Mr. Carter's extensive experience of uncommon phases of life, combined with a cheerful wit, which his friends delight to remember, made him one of the most agreeable associates. There never was a design on his part, nor on that of the other contributors to the winter evenings' entertainments of the club, that any of their papers should meet the public eye. The exception from the privacy in this case, after the lapse of many years, is due to the request of the editor of THE CENTURY MAGAZINE, who deems that a sketch of some of the extravagances of the New England Transcendental period is worth preserving for historical value as well as for amusement, inasmuch as Mr. Frothingham, the painstaking historian of that extraordinary episode of intellectual progress in the United States, has considered it only in its serious aspects. With these serious aspects Mr. Carter was in hearty sympathy, and of many of the band of Transcendentalists he was a cherished companion, although he was not formally mustered upon the rolls of the sect.—ALBERT G. BROWNE.]

Y the "Newness" I mean a very singular intellectual and spiritual movement which broke out like an epidemic in New England some forty years ago, and ran its course for about ten years, when it subsided and disappeared almost as suddenly as it arose. I call it the "Newness," because that was the most distinctive term applied to it, and the one by which it was most frequently designated by those engaged in it, though in fact it had no authentic or universally accepted appellation. By outsiders it was generally called Transcendentalism, and its disciples Transcendentalists, and to some extent and at certain periods those terms were used by the disciples themselves.

I do not purpose to attempt any profound philosophical analysis of this remarkable move-

ment, but only to sketch lightly its cause and origin, its picturesque aspects, and some of the queer characters and strange fantasies developed by it. It took its rise undoubtedly in Unitarianism, which was itself the first open and organized protest against what was regarded as the rigid Calvinism and oppressive church government and discipline that had so long prevailed in New England. Against what they considered a dead faith, a hollow worship, and a bigoted and narrow ecclesiasticism, the Unitarians raised the standard of liberty of conscience and freedom of inquiry. They soon began to regard creeds and theologic theories as of little consequence compared with good works, free thought, and the untrammelled exercise of all the instincts and aspirations of the soul. They unsettled the faith of multitudes and sent them wandering into a wilderness of doubts and queries through which there was no road, to which there was

no bound or termination, and which was in fact spiritually nothing but a reproduction of original chaos.

About the year 1825 a fresh and powerful impulse was given to the speculative tendency of Massachusetts by the introduction of the study of German, chiefly through the instrumentality of Bancroft and his friend and companion, Frederic Henry Hedge, both of whom had studied in German universities, from which the latter especially had returned with such a passion for Teutonic literature that for many years he was generally called Germanicus Hedge. The study of German poetry and of German philosophy became fashionable even among the young men and maidens of the highest social position, who read not only Goethe and Schiller and Jean Paul and Lessing and Herder, but grappled boldly, if not successfully, with the abstractions and abstrusities of Hegel and Kant, from whom they derived their term of Transcendental, together with much confusion of knowledge and ideas.

Ten years later, that is, about 1835, another cause gave a still stronger impulse to the tendency in Massachusetts towards intellectual and spiritual freedom, or, as some might prefer to call it, license and anarchy. This was the abolition movement, which began substantially in 1830 with the establishment of Garrison's "Liberator," and was at first religious and pious, addressing itself to the churches and the clergy, and with such success that in 1835 there had been formed throughout the country not less than 2000 antislavery societies, whose members belonged mostly to the evangelical churches. But in that year the South became alarmed and angry, and the politicians and commercial men set themselves to stem the tide of fanaticism, as they termed it. The cry of "The Union in danger" was raised, a fierce persecution was excited, the Abolitionists were mobbed in all quarters, even in Boston itself, and the 2000 antislavery societies vanished like the phantoms of a dream. The churches and the clergy, with few exceptions, bent to the storm, and the leading divines of nearly all the great sects became apologists for slavery or silent on the subject. A small body of Abolitionists, however, stood firm, and held to their principles in defiance of popular rage and outrage. Their struggle changed its character, and from a protest against black slavery it became a hand-to-hand contest for white liberty of speech and of the press. The reaction against persecution for opinion's sake not unnaturally led the Abolitionists into many excesses. Disgusted with what seemed to them the cowardice and corruption of the churches, and irritated at having the Bible cited in defense of a sin,—the vilest of all sins in their eyes, the

"sum of all villainies," as Wesley justly called it,—they were led, some of them, to renounce the Bible as a Jewish impediment to progress, while others, keeping their faith in Christianity, withdrew from the churches or were driven out as fanatical disturbers. The most radical of these "Come-outers," as they were called, presently began to assail the organizations from which they had seceded, and to denounce them as synagogues of Satan. The nature of their attacks may be briefly illustrated by the title of one of their favorite books, which was called, "The Brotherhood of Thieves, a True Picture of the American Church and Clergy." The author of this work, Stephen S. Foster, was one of the leading Abolition speakers, and for many years was accustomed to preface his discourses by laying down the proposition that it would be better for the people of a town, and less pernicious to their virtue and happiness, to establish among them a hundred rum-shops, fifty gambling-houses, and ten brothels, rather than one church. I was present at a convention in Boston at which the denunciations of the churches and the clergy had so enraged the audience that the meeting had become nearly a riot, and for more than an hour no speaker had been allowed a hearing. At length Foster made his appearance on the platform arrayed in a coat one tail of which was torn off, while around his neck was a ponderous iron collar with four large prongs protruding above his head, and in each hand he held a heavy chain and shackle. His coat had been torn in conflict with the deacons of some church in Portland, into which he had gone during meeting on Sunday, and, interrupting the preacher, had undertaken to expound the gospel of abolition, and got forcibly put out with the loss of his coat-tail and other serious damage to his garments. The collar with prongs and the chains and shackles were instruments for punishment of slaves, which had been obtained from New Orleans. In this extraordinary garb he looked somewhat like the Devil, as that personage is popularly represented, and his sudden apparition stilled the tumult enough to allow him to be heard. Shaking his chains and wriggling his horns and turning round and round to exhibit his mutilated coat, he shouted in his loudest and most taunting tones, "Behold the emblems of the American church and clergy!" This caused a renewal of the tumult, and the convention soon after broke up in disorder, though without suffering any serious outrage.

But the Church was not the only object of attack by these fanatics. The State was assailed with equal fury. The National Government at that time was in the hands of the Democrats, and the State government of Mas-

sachusetts in those of the Whigs. But Democrats and Whigs were alike obnoxious to the extremists of the "Old Organization," as they called themselves. Even the Constitution was declared by some to be "a covenant with death and an agreement with hell," and to hold office or even to vote under it was maintained to be a sin, and volumes were published in defense of this proposition. But I wish here to state, in justice to the great antislavery party of the country, that the men who indulged in these extravagances were few in number and of little political influence. But the conspicuous talents, eloquence, and energy of the two great chiefs, Garrison and Wendell Phillips, with whose following they associated themselves, and the freedom and vigor with which they assailed established ideas and institutions, contributed powerfully to the growth of the "Newness" and to the tendency to look for the speedy appearance of a glorious dispensation to reform the world.

The disciples of the "Newness," however, though generally opposed to slavery, were by no means all Abolitionists, and many of them, indeed, looked with disdain on the antislavery movement as a coarse, external, and uncouth fanaticism unworthy of the lofty intellectual state to which they daintily aspired. One of the most remarkable features of the "Newness" was its wide, its almost universal, scope, embracing as it did the whole range of human thought from the highest philosophy to the lowest details of daily life. Nothing was too great or sacred, nothing too low or petty, for its daring and impartial scrutiny.

Though the movement drew recruits from all classes of society in Massachusetts, it was, in proportion, most extensive among the best culture and most refined life of the youth of both sexes. Of such, indeed, I think the reformers and world-betterers in all ages have generally been. It was the noblest youth of Sicily and of Magna Græcia who gathered around Pythagoras at Crotona and formed the "Newness" of that day, as transient as that of Massachusetts, which in many respects it strongly resembled. The same desire for a higher and more spiritual life was often manifested among the Greeks, and displayed itself even among the secluded and conservative Jews in the establishment, a century or two before Christ, of the Essenes, who practiced a community of goods and despised riches, pleasure, glory, and all that the world covets and admires. The same tendency was evidently at work among the Jews when our Lord began to preach and to call his disciples to renounce everything and follow him. Similar feelings in later ages led to the foundation of the monastic communities in Egypt and

throughout the Catholic world, and gave rise to Quakerism in England in the seventeenth century.

I have noticed the influence which Unitarianism, Abolitionism, and the study of German literature had in producing the "Newness," and I have mentioned 1835 as about the date of its manifestation. The republication in this country of Carlyle's "Sartor Resartus" in 1836, and the appearance in the same year of Emerson's "Nature," followed rapidly by his other works in the same vein, may be said to have brought the movement to a head, and it soon culminated in the issue of the magazine called "The Dial," in July, 1840, and, shortly after, in the establishment of the Community or Association of Brook Farm, near Boston.

The object and character of "The Dial" may perhaps be best stated in its own language, which I quote from the introduction to the first number. It states that the founders of the work have obeyed

the strong current of thought and feeling which for a few years past has led many sincere persons in New England to make new demands on literature and to reprobate that rigor of our conventions of religion and education which is turning us to stone, which renounces hope, which looks only backward, which asks only such a future as the past, and holds nothing so much in horror as new views and the dreams of youth.

No one can converse much with different classes of society in New England without remarking the progress of a revolution. Those who share in it have no external organization, no badge, no creed, no name. They do not vote, or print, or even meet together. They do not know each other's faces or names. They are united only in a common love of truth and love of its work. They are of all conditions and constitutions. Of these acolytes, if some are happily born and well-bred, many are no doubt ill-dressed, ill-placed, ill-made, with as many scars of hereditary vice as other men. Without pomp, without trumpet, in lonely and obscure places, in solitude, in servitude, in compunctions and privations, trudging beside the team in the dusty road, or drudging a hireling in other men's corn-fields, schoolmasters, ministers of small parishes, lone women in dependent condition, matrons and young maidens, rich and poor, beautiful and hard-favored, without concert or proclamation of any kind, they have silently given in their adherence to a new hope, and in all companies do signify a greater trust in the nature and resources of man than the laws or the popular opinions will well allow.

This movement, the enthusiastic reformer goes on to say,

is, in every form, a protest against usage, and a search for principles. It is too confident to comprehend an objection, is assured of triumphant success, has the step of fate, and goes on existing like an oak or a river, because it must.

Alas for the vanity of human hopes! "The

Dial" has long ago passed away, the "Brook Farm Association" is scattered, and the "Newness" in all its shapes has vanished like the dreams of youth to which it so confidently appealed.

Among the brilliant coterie of contributors to "The Dial" were Margaret Fuller, Emerson, Thoreau, Bronson Alcott, Theodore Parker, James Russell Lowell, John S. Dwight, William Henry Channing and William Ellery Channing, both nephews of the famous Unitarian of the same name. Its first editor was Margaret Fuller, an able and well-read though intolerably conceited woman, who had a very marked influence in disseminating the ideas of the "Newness," not less, and perhaps even more, by her conversation than by her writings. She was born in Cambridge, Massachusetts, in 1810, and was educated almost to death by her pedantic father. At six years of age she read Latin, at eight Shakspeare, Cervantes, and Molière, and a few years later Ariosto, Helvetius, Sismondi, Sir Thomas Browne, Madame de Staël, Bacon, Epictetus, Racine, Locke, Byron, Rousseau, and many others. At eighteen, consequently, she was a prodigy of talent and accomplishment, but was paying the penalty for undue application, in near-sightedness, awkward manners, extravagant tendencies of thought, and a pedantic style of talk. She began to study German in 1832, and within a year had read Goethe, Schiller, Tieck, Körner, and Novalis. A little later she read the metaphysicians, studied ancient philosophy in Tennemann, and read Plato in the original. Emerson, who about this time became acquainted with her, thought, as she says, that "there was something a little pagan about her." He describes her as rather under the middle height, her complexion fair, with strong, fair hair, always carefully and becomingly dressed, and of ladylike self-possession, but not otherwise prepossessing, making, in fact, so disagreeable an impression on some persons that they did not like to be in the same room with her. This was partly the effect of her manners, which expressed an overweening sense of power and slight esteem for others. But still she was popular with a large and refined circle, whose houses were always open to her. Emerson says: "All the art, the thought, and the nobleness in New England seemed . . . related to her. . . . Her arrival was a holiday, and so was her abode. She staid a few days, often a week, more seldom a month; and all tasks that could be suspended were put aside to catch the favorable hour . . . to talk with this joyful guest, who brought wit, anecdotes, love stories, tragedies, oracles with her." She drew around her a charming circle of women, some of them of splendid beauty of person, grace of manner and

of character, and of talent and eloquence that rivaled her own. She instituted with them a sort of club that met weekly for conversations, in which were discussed all the topics of the "Newness." Among these ladies were Mrs. George Bancroft, Mrs. Lydia Maria Child, Mrs. Emerson, Mrs. Farrar, Mrs. Lee, Mrs. Horace Mann, Mrs. Theodore Parker, Mrs. Hawthorne, Mrs. Putnam, Mrs. Wendell Phillips, Mrs. Quincy, Mrs. George Ripley, Miss Anna Shaw, Miss Caroline Sturgis, and Miss Maria White, who afterwards became the wife of one of our most distinguished authors, James Russell Lowell, and who in beauty, grace, and genius was a fair type of this brilliant array of loveliness and culture.

The topic of the first of these conversations was the genealogy of heaven and earth, the will and the understanding; of the second, the celestial inspiration of genius, perception and transmission of divine law—and so on, all of which was illustrated by the Greek mythology. "The Dial" was continued for four years, being edited in the latter half of that period by Mr. Emerson, and died finally for want of sustenance. It made no great impression on the world, but its rare volumes are now valuable as a record of a singular episode in our spiritual history.

At Brook Farm the disciples of the "Newness" gathered to the number, I think, of about a hundred. Among them were Ripley, the founder of the institution, Charles A. Dana, W. H. Channing, J. S. Dwight, Warren Burton, Nathaniel Hawthorne, G. W. Curtis, and his brother Burrill Curtis. The place was a farm of two hundred acres of good land, eight miles from Boston, in the town of West Roxbury, and was of much natural beauty, with a rich and varied landscape. The avowed object of the association was to realize the Christian ideal of life, by making such industrial, social, and educational arrangements as would promote economy, combine leisure for study with healthful and honest toil, avert collisions of caste, equalize refinements, diffuse courtesy, and sanctify life more completely than is possible in the isolated household mode of living.

It is a remarkable feature of this establishment that it was wholly indigenous, a genuine outgrowth of the times in New England, and not at all derived from Fourierism, as many have supposed. Fourier was in fact not known to its founders until Brook Farm had been a year or two in operation. They then began to study him, and fell finally into some of his fantasies, to which in part is to be ascribed the ruin of the institution.

Of the life of Brook Farm I do not intend to say much, for I was there only one day,

though I knew nearly all the members. It was a delightful gathering of men and women of superior cultivation, who led a charming life for a few years, laboring in its fields and philandering in its pleasant woods. It was a little too much of a picnic for serious profit, and the young men and maidens were rather unduly addicted to moonlight wanderings in the pine-grove, though it is creditable to the sound moral training of New England that little or no harm came of these wanderings — at least not to the maidens. So far as the relation of the sexes is concerned, the Brook Farmers, in spite of their free manners, were as pure, I believe, as any other people.

The enterprise failed pecuniarily, after seeming for some years to have succeeded. Fourierism brought it into disrepute, and finally a great wooden phalanstery, in which the members had invested all their means, took fire, and burned to the ground just as it was completed. Upon this catastrophe the association scattered (in 1847, I think), and Brook Farm became the site of the town poor-house. Hawthorne, who lost all his savings in the enterprise, has sketched it, in some respects faithfully, in his "*Blithedale Romance*." I may remark, by the way, that while he was a member he was chiefly engaged in taking care of the pigs, that being found by experiment to be the branch of farm labor to which his genius was best adapted.

Brook Farm, however, was not the only community which was founded by the disciples of the "Newness." There was one established in 1843 on a farm called Fruitlands, in the town of Harvard, about forty miles from Boston. This was of a much more ultra and grotesque character than Brook Farm. Here were gathered the men and women who based their hopes of reforming the world, and of making all things new, on dress and on diet. They revived the Pythagorean, the Essenian, and the monkish notions of asceticism, with some variations and improvements peculiarly American. The head of the institution was Bronson Alcott, a very remarkable man, whose singularities of character, conduct, and opinion would alone afford sufficient topics for a long lecture. His friend Emerson defined him to be a philosopher devoted to the science of education, and declared that he had singular gifts for awakening contemplation and aspiration in simple and in cultivated persons. He was self-educated, but had acquired a rare mastery of English in speech, though his force and subtlety of expression seemed to fail him when he wrote. His writings, though quaint and thoughtful, are clumsy compared with his conversation, which has been pronounced by the best judges to have been unrivaled in grace and clearness.

Mr. Alcott was one of the foremost leaders of the "Newness." He swung round the circle of schemes very rapidly, and after going through a great variety of phases he maintained, at the time of the foundation of Fruitlands, that the evils of life were not so much social or political as personal, and that a personal reform only could eradicate them; that self-denial was the road to eternal life, and that property was an evil, and animal food of all kinds an abomination. No animal substance, neither flesh, fish, butter, cheese, eggs, nor milk, was allowed to be used at Fruitlands. They were all denounced as pollution, and as tending to corrupt the body and through that the soul. Tea and coffee, molasses and rice, were also proscribed,—the last two as foreign luxuries,—and only water was used as a beverage.

Mr. Alcott would not allow the land to be manured, which he regarded as a base and corrupting and unjust mode of forcing nature. He made also a distinction between vegetables which aspired or grew into the air, as wheat, apples, and other fruits, and the base products which grew downwards into the earth, such as potatoes, beets, radishes, and the like. These latter he would not allow to be used. The bread of the community he himself made of unbolted flour, and sought to render it palatable by forming the loaves into the shape of animals and other pleasant images. He was very strict, indeed rather despotic, in his rule of the community, and some of the members have told me that they were nearly starved to death there; nay, absolutely would have perished with hunger if they had not furtively gone among the surrounding farmers and begged for food.

One of the Fruitlanders took it into his head that clothes were an impediment to spiritual growth, and that the light of day was equally pernicious. He accordingly secluded himself in his room in a state of nature during the day, and only went out at night for exercise, with a single white cotton garment reaching from his neck to his knees, which he was reluctantly persuaded to wear as a concession to the prejudices of the populace. At first his appearance in this guise stalking over the fields and hillsides caused great commotion among the country people, who naturally took him for a ghost, and on one or two occasions turned out in force and gave chase till they had captured him and ascertained his quality. The winter, however, converted this disciple, or perverted him, for I saw him in January, 1844, at a convention of the "Newness" in Boston, clothed, and apparently in his right mind. I believe that the same winter also put an end to Fruitlands altogether, and that the

dispensation of bran bread did not last there more than one summer.

Next to Brook Farm, Concord was the chief resort of the disciples of the "Newness." Here lived Emerson, Thoreau, and Bronson Alcott, together with several of the lesser lights, both male and female. Of Emerson I need not speak, further than to say that while his writings furnished perhaps the main literary element of the movement, he held himself personally aloof from it, or mingled in it only as a curious and amused observer. Thoreau went into it with all his heart and soul, and was as good a type of some of its aspects as could anywhere be found. The movement had spread itself in all directions. It renounced the Church, the State, and the forms and usages of society; it aspired to newness in everything. "Behold, we make all things new," was indeed its motto. Thoreau, for example, insisted that the Church was nothing to him; that he had nothing to do with the Bible, nor with Christ and Christianity. To those who spoke of the Bible, he responded by citing the Hindu Vedas. If one talked of Christ, he became eloquent about Buddha, in whom he pretended to believe. He declared it to be a matter of indifference to him whether Abraham begat Isaac or Isaac begat Abraham. He planted himself in the middle of the nineteenth century and pronounced the past to be played out. Nay, he would not acknowledge even the present. He declared that he did not know the State or owe it any allegiance, and preferred to go to jail rather than to pay his tax. Commerce, business, money-making in all its forms, and the ordinary uses and desires of society, he scouted. He built himself a hut in the woods, where he lived rigorously for two years on what he himself raised, at an expense of fifteen dollars per annum.

The rejection of money and the adoption of certain fantasies about food, drink, and dress were common among the disciples. Edward Palmer published in 1840 a pamphlet in which he maintained that money was the root of all evil, and that the only way to reform the world was to abolish property. He lived in New Jersey subsequently, where for several years he was my neighbor, and where he still adhered to his fantasy. For instance, when he had occasion to go to New York by steamboat, he would not pay his fare, but made a bargain with the captain to work his passage by assisting in taking off or putting on freight at the various landings. His wife, however, was less scrupulous, and readily took money for work performed by her husband, who was very industrious, and preached, practiced medicine, and was an expert whitewasher and house-painter.

Three of the disciples, young men whom I personally knew, George Burleigh, Cyrus Burleigh, and Samuel Larned, who were together in Boston some time in 1842 and had an inspiration to renounce the use of money and to go forth as the disciples of Christ, were commanded to go, without gold or silver and without scrip or change of raiment, and preach the new gospel. To get out of the city in the direction of Concord, whither they naturally first bent their steps, it was necessary to pay a small toll of two cents each on the bridge across the Charles River. After an earnest but ineffectual attempt to convince the Philistine who kept the toll-gate of the soundness of the new doctrine about money, they gave him their coppers under protest, and to avoid any similar temptation to compromise their principles flung the rest of their cash into the river. I believe the sacrifice, however, was not a very large one. This was early in the forenoon. They walked on till dinner-time, when they looked about for a house at which to ask hospitality. Selecting the best house in sight, they requested dinner, frankly stating that they had no money, and after a few refusals got what they needed. They then walked on till night approached, when they sought supper and lodging. They pursued this course for six weeks, passing through a large part of Massachusetts and far up into Vermont and back again to Boston. They had many droll adventures, of which I have forgotten the particulars, but suffered no serious hardships, except that in one instance it was nearly midnight before they could get admission to any dwelling, and in another they were sent by some mischievous fellow several miles out of their way on a dark and rainy night in search of the house of a friend of the "Newness," which proved to be the miserable hut of a poor negro with a large family, who, though much astonished at their raid upon him, gave them shelter till morning and what hospitality he could.

In point of dress the disciples indulged in vagaries which were at that time a sore trial to the community, though they would not now be considered remarkable. They wore their hair long, and allowed their beards to grow at a time when everybody else shaved. They also affected peculiar garments, such as felt hats with broad brims, Byron collars, blouses, and sack-coats. Their oddities of diet were more remarkable. They were generally vegetarians and teetotalers. Some of them would not drink at all, not even water; some would not use salt. A good many of them had a notion of living exclusively on one article of food; for example, among those whom I knew, Samuel Larned, Charles List, and his wife Harriet List during one year lived exclusively

on crackers, and during another year exclusively on apples. Mrs. List¹ was a lady of great beauty of person and character, the author of a poem of considerable merit, which is found in most of our collections of poetry under her maiden name of Harriet Winslow, and begins thus :

Why thus longing, thus forever sighing.

Another set of these disciples, young men of talent, education, and family, three in number, besides adopting all the eccentricities of dress and diet which I have mentioned, took it into their heads that the language of society needed reform and that it was their duty to protest against the superstitious reverence which most people had for sacred words and names. They therefore dropped their own names and took those of the Trinity, which they used very freely. They traveled together, discoursing in this manner without much regard to time or place. On one occasion they visited Emerson, whose house in Concord is not very far from the village street. It was a warm summer evening, and as they sat at the philosopher's front door their extraordinary vocabulary attracted the attention of the passers-by to such an extent that Mr. Emerson presently was compelled to adjourn the session to the back piazza, where they might swear to their hearts' content without shocking the prejudices of the Philistines. On another occasion, during a visit to Nantucket, their language stirred the wrath of the authorities of that sedate island, who had them forthwith arrested and fined for profane swearing. As they had no money, and would not have acknowledged the authority of the State by paying their fines if they had, they were ignominiously consigned to jail, from which, however, they were soon released by the interposition of some liberal citizen who paid their fines.

The folly of these youngsters terminated very abruptly. They were one day approaching Boston from the south, and as they walked down a long and dusty hill the foremost of them suddenly stopped, and when the others came up he addressed them by their long-disused baptismal appellations, George and Christopher, saying, "This is played out." All then assented that it was played out, and turning from the road they went to the house of an aunt of one of them who lived near by and requested dinner. The good lady, in alarm, knowing their dietetic habits, informed them that she had nothing for them to eat except roast beef and leavened bread. They told her, to her surprise, that that was exactly what they wanted, and sat down and made their first square meal for

¹ Afterwards Mrs. Samuel E. Sewall.

many months. About ten years later I encountered one of these gentlemen at Willard's in Washington, and was invited by him to dinner, where he ate freely of all fish and flesh and had a bottle of wine besides. He had gone into the practice of the law and had attained considerable standing as a patent lawyer.

With one of these youths—one of those, I mean, who went on the long excursion without money—it was my fortune to become well acquainted. In the winter of 1843-44 I was living in Brookline, in Massachusetts, about four miles from Boston, lodging with Mrs. Sturgis, an elderly widow, one of whose daughters, a very brilliant girl, was a disciple of the "Newness," and was at that time an inmate of Brook Farm. One cold morning in February, when the mercury was below zero, a young man came to the house, saying that he had come to stay with us. He was a total stranger. Neither of us had ever seen or heard of him, but we recognized him without difficulty as a disciple of the "Newness." He was a handsome young fellow, about twenty years of age, with long black hair and an oval face, almost Greek in its outline. His excuse for coming was that he knew the lady's daughter at Brook Farm, where he had been staying, and he speedily won the good mother's heart by praises of the young lady. He was thinly clad, for the disciples disdained overcoats and prided themselves on their Indian-like hardihood. But the severity of the weather in that long winter morning's walk from Boston had proved almost too much for him. His ears were frozen, and he was in fact nearly benumbed when we took him in. He had scarcely got warmed, however, when looking from the windows into the yard he saw the Irish servant girl beginning to hang out the clothes, as it was washing-day. He darted out, and much to the confusion of "Biddy" insisted on helping her, which he did with a dexterity that evinced no little practice. When he came in he requested Mrs. Sturgis to give him some sewing to do, and after a little persuasion she finally got him a needle and thread, and a towel to hem. I took him to my room, where, while he plied the needle, he gave me an account of himself. He was the son of a respectable gentleman in Providence, Rhode Island. His family, I think, were Episcopalians. He told me that when about eighteen he had become possessed with the spirit of the "Newness" and had made up his mind that all social distinctions and usages were abominations against which it was his duty to protest. He began by refusing to allow the servants in his father's house to do anything for him. He blacked his own boots, made his own bed, and mended and washed his own clothes. At length, on the occasion of a large dinner party at his

father's house, instead of taking his place at the table, he insisted upon acting as waiter. This led to an explosion, and to his expulsion from home. For the last two years he had been wandering among the various communities, and during that winter had been living in Boston, in the houses of various gentlemen on whom he had intruded himself without invitation, taking care, with commendable good taste, to select the best houses in the city. In pursuance of his system, he had now come to spend a few days with Mrs. Sturgis. When dinner was served he went with me to the table, but declined to eat anything except apples, of which, fortunately, we had a good store in the house. A plate of these was set before him, which he peeled and ate very contentedly, refusing to partake of anything else, but lecturing us earnestly on the atrocity of our habits in eating beef, salt, and butter, and drinking wine and coffee. He himself did not drink at all, not even water. He staid with us a few days, during which I found him a very agreeable companion; and when he went away I accompanied him to Boston to attend an Abolition convention which was then in session in the city, at which he was desirous of speaking. When the convention adjourned for dinner he asked me to go with him to the house of Francis Jackson, one of the leading Abolitionists of Boston. As I had no acquaintance with Mr. Jackson, I declined to intrude myself upon his hospitality, and was about to set out upon my return to Brookline, which I could reach in time for dinner, when Larned insisted that if I would not go to Jackson's to dinner I must at least go and dine with him at an eating-house. We went accordingly to

a place near by, where I got a dinner of the usual kind, while my companion, in default of apples, ate an apple-pie, which he said came within the limits of his dietetic system. After dinner, it suddenly occurred to me to inquire if he had any means of paying. "Not a cent." I was nearly in the same condition, having only just money enough to pay my fare out in the omnibus to Brookline. I told him he must get out of the scrape without involving me. To this he assented, saying that he was used to such things and had great confidence in human nature. I accordingly walked directly out, leaving him to settle at the counter. He came out presently, triumphant. The restaurant keeper was indeed human, and had agreed to give him credit till that indefinite period, "the next time he came."

I then parted with him in the street, with my friendship for him a little cooled by this untoward incident, and did not see him again for about three years, when he suddenly called at my lodgings one day, fashionably dressed, and acting and talking like other people. I soon learned that he had renounced all his vagaries, was settled in the South as a Unitarian minister, and had married a lady who owned a number of slaves, whom he did not think it necessary to emancipate.

The "Newness" with him was completely "played out," and after Brook Farm exploded in 1847 and Margaret Fuller went to Europe, I think it had very little distinctive existence in New England. The aspiring youth of New England seem now to be contented with making their way in the world very much as other people make it, without seeking for any fundamental change in the established order of society.

Robert Carter.

THE PEONY.

A STURDY maid—
 Plump hands upon her hips,
 White throat flung back,
 And laughing scarlet lips—
 Full bodice laced
 With kerchief well tucked in—
 Smile for each lad,
 A kiss, perhaps, no sin!
 Plain speech or rough,
 No empty flattery—
 But wholesome heart—
 That is the Peony!

Margaret Deland.

ABRAHAM LINCOLN: A HISTORY.¹

THE SECOND INAUGURAL—FIVE FORKS—APPOMATTOX.

BY JOHN G. NICOLAY AND JOHN HAY, PRIVATE SECRETARIES TO THE PRESIDENT.

THE SECOND INAUGURAL.

E have seen what effect the Hampton Roads conference produced upon Jefferson Davis, and to what intemperate and wrathful utterance it provoked him. Its effect upon President Lincoln was almost directly the reverse. His interview with the rebel commissioners doubtless strengthened his former convictions that the rebellion was waning in enthusiasm and resources, and that the Union cause must triumph at no distant day. Secure in his renewal of four years' personal leadership, and hopefully inspirited by every sign of early victory in the war, his only thought was to shorten, by generous conciliation, the period of the dreadful conflict. His temper was not one of exultation, but of broad patriotic charity, and of keen, sensitive personal sympathy for the whole country and all its people, South as well as North. His conversation with Stephens, Hunter, and Campbell had probably revealed to him glimpses of the undercurrent of their anxiety that fraternal bloodshed and the destructive ravages of war might somehow come to an end. To every word or tone freighted with this feeling, the sincere, magnanimous, and tender heart of President Lincoln responded with bounding impulses. As a ruler and a statesman, he was clear in his judgment and inflexible in his will to reestablish union and maintain freedom for all who had gained it by the chances of war; but also as a statesman and a ruler, he was ready to lend his individual influence and his official discretion to any measure of mitigation and manifestation of good-will that, without imperiling the union of the States, or the liberty of the citizen, might promote acquiescence in impending political changes, and abatement and reconciliation of hostile sectional feelings. Filled with such thoughts and purposes, he spent the day after his return from Hampton Roads in considering and perfecting a new proposal, designed as a peace-offering to the States in rebellion. On the evening of February 5, 1865, he called his Cabinet together and read to them the following draft of a message and proclamation, which he had

written during the day, and upon which he invited their opinion and advice:

Fellow-citizens of the Senate and House of Representatives: I respectfully recommend that a joint resolution, substantially as follows, be adopted, so soon as practicable, by your honorable bodies: "Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States is hereby empowered, in his discretion, to pay four hundred millions of dollars to the States of Alabama, Arkansas, Delaware, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, Missouri, North Carolina, South Carolina, Tennessee, Texas, Virginia, and West Virginia, in the manner and on the conditions following, to wit: The payment to be made in six per cent. Government bonds, and to be distributed among said States *pro rata* on their respective slave populations as shown by the census of 1860, and no part of said sum to be paid unless all resistance to the national authority shall be abandoned and cease, on or before the first day of April next; and upon such abandonment and ceasing of resistance one-half of said sum to be paid, in manner aforesaid, and the remaining half to be paid only upon the amendment of the national Constitution recently proposed by Congress becoming valid law, on or before the first day of July next, by the action thereon of the requisite number of States."

The adoption of such resolution is sought with a view to embody it, with other propositions, in a proclamation looking to peace and reunion.

Whereas, a joint resolution has been adopted by Congress, in the words following, to wit:

Now therefore I, Abraham Lincoln, President of the United States, do proclaim, declare, and make known, that on the conditions therein stated, the power conferred on the Executive in and by said joint resolution will be fully exercised; that war will cease and armies be reduced to a basis of peace; that all political offenses will be pardoned; that all property, except slaves, liable to confiscation or forfeiture, will be released therefrom, except in cases of intervening interests of third parties; and that liberality will be recommended to Congress upon all points not lying within Executive control.²

It may be said with truth that this was going to the verge of magnanimity towards a foe already in the throes and helplessness of overwhelming defeat—a foe that had rebelled without adequate cause and maintained the contest without reasonable hope. But Mr. Lincoln remembered that the rebels, notwithstanding all their offenses and errors, were yet American citizens, members of the same

nation, brothers of the same blood. He remembered, too, that the object of the war, equally with peace and freedom, was the maintenance of one government and the perpetuation of one Union. Not only must hostilities cease, but dissension, suspicion, and estrangement be eradicated. As it had been in the past, so it must again become in the future—not merely a nation with the same Constitution and laws, but a people united in feeling, in hope, in aspiration. In his judgment, the liberality that would work reconciliation would be well employed. Whether their complaints for the past were well or ill founded, he would remove even the temptation to complain in the future. He would give them peace, reunion, political pardon, remission of confiscation wherever it was in his power, and securing unquestioned and universal freedom through the constitutional amendment, he would at the same time compensate their loss of slavery by a direct money equivalent.

It turned out that he was more humane than his constitutional advisers. The indorsement of his own handwriting on the manuscript draft of his proposed message records the result of his appeal and suggestion:

"FEBRUARY 5, 1865. To-day these papers, which explain themselves, were drawn up and submitted to the Cabinet and unanimously disapproved by them.—A. LINCOLN."¹

It would appear that there was but little discussion of the proposition. The President's evident earnestness on the one side, and the unanimous dissent of the Cabinet on the other, probably created an awkward situation which could be best relieved by silence on each hand. The diary of Secretary Welles gives only a brief mention of the important incident, but it reflects the feeling which pervaded the Cabinet chamber:

MONDAY, February 6, 1865.

There was a Cabinet meeting last evening. The President had matured a scheme which he hoped would be successful in promoting peace. It was a proposition for paying the expense of the war for two hundred days, or four hundred millions to the rebel States, to be for the extinguishment of slavery or for such purpose as the States were disposed. This, in few words, was the scheme. It did not meet with favor, but was dropped. The earnest desire of the President to conciliate and effect peace was manifest, but there may be such a thing as so overdoing as to cause a distrust or adverse feeling. In the present temper of Congress the proposed measure, if a wise one, could not be carried through successfully; I do not think the scheme could accomplish any good results. The rebels would misconstrue it if the

offer were made. If attempted and defeated it would do harm.²

The statement of Secretary Usher, written many years afterwards from memory, also records the deep feeling with which the President received the non-concurrence of his Executive Council:

The members of the Cabinet were all opposed. He seemed somewhat surprised at that and asked, "How long will the war last?" No one answered, but he soon said: "A hundred days. We are spending now in carrying on the war three millions a day, which will amount to all this money, besides all the lives." With a deep sigh he added, "But you are all opposed to me, and I will not send the message."³

The entry made by Secretary Welles in his diary on the morning after the Cabinet meeting, as to the amount and time, is undoubtedly the correct one, coinciding as it does with the President's manuscript. But the discrepancy in the figures of the two witnesses is of little moment. Both accounts show us that the proposal was not based on sentiment alone, but upon a practical arithmetical calculation. An expenditure of three or four hundred millions was inevitable; but his plan would save many precious lives, would shield homes and hearths from further sorrow and desolation, would dissolve sectional hatred, and plant fraternal goodwill. Though overborne in opinion, clearly he was not convinced. With the words, "You are all opposed to me," sadly uttered, Mr. Lincoln folded up the paper and ceased the further discussion of what was doubtless the project then nearest his heart. We may surmise, however, that, as he wrote upon it the indorsement we have quoted and laid it away, he looked forward to a not distant day when, in the new term of the Presidency to which he was already elected, the Cabinet, with new and more liberal views, would respond more charitably to his own generous impulses.

Few Cabinet secrets were better kept than this proposal of the President and its discussion. Since the subject was indefinitely postponed, it was, of course, desirable that it should not come to the knowledge of the public. Silence was rendered easier by the fact that popular attention in the North busied itself with rumors concerning the Hampton Roads conference. To satisfy this curiosity, a resolution of the House of Representatives, passed on February 8, requested the President to communicate such information respecting it as he might deem not incompatible with the public interest.⁴ With this request Mr. Lincoln complied on the 10th, by a message in which all the correspondence was printed, followed by a brief report touching the points of conference:

On the morning of the 3d [wrote Mr. Lincoln] the three gentlemen, Messrs. Stephens, Hunter, and

¹ Unpublished MS. ² Unpublished MS.

⁴ "Globe," Feb. 8, 1865, p. 665.

Campbell, came aboard of our steamer, and had an interview with the Secretary of State and myself of several hours' duration. No question of preliminaries to the meeting was then and there made or mentioned. No other person was present; no papers were exchanged or produced; and it was, in advance, agreed that the conversation was to be informal and verbal merely. On our part, the whole substance of the instructions to the Secretary of State, hereinbefore recited, was stated and insisted upon, and nothing was said inconsistent therewith; while, by the other party, it was not said that in any event or on any condition they ever would consent to reunion; and yet they equally omitted to declare that they never would so consent. They seemed to desire a postponement of that question, and the adoption of some other course first, which, as some of them seem to argue, might or might not lead to reunion; but which course, we thought, would amount to an indefinite postponement. The conference ended without result.¹

A short discussion occurred in the House on the motion to print this message, but it did not rise above the ordinary level of a party wrangle. The few Democrats who took part in it complained of the President for refusing an armistice, while the Republicans retorted with Jefferson Davis's condition about the "two countries" and the more recent declarations of his Richmond harangue, announcing his readiness to perish for independence. On the whole, both Congress and the country were gratified that the incident had called out Mr. Lincoln's renewed declaration of an unalterable resolve to maintain the Union. Patriotic hope was quickened and public confidence strengthened by noting once more his singleness of purpose and steadfastness of faith. No act of his could have formed a more fitting prelude to his second inauguration, which was now rapidly approaching, and the preliminary steps of which were at this time being consummated.

A new phase of the reconstruction question was developed in the usual congressional routine of counting the electoral votes of the late presidential election. Former chapters have set forth the President's general views on reconstruction, and shown that though the executive and legislative branches of the Government differed as to the theory and policy of restoring insurrectionary States to their normal federal functions, such difference had not reached the point of troublesome or dangerous antagonism. Over the new question also dissension and conflict were happily avoided. By instruction to his military commanders and in private letters to prominent citizens Mr. Lincoln had strongly advised and actively promoted the formation of loyal State governments in Louisiana, Tennessee, and Arkansas, and had maintained the restored government of Virginia after the division of that State and the

admission of West Virginia into the Union, and had officially given them the recognition of the Executive Department of the Government. The Legislative Department, however, had latterly withheld its recognition, and refused them representation in Congress. The query now arose whether the popular and electoral votes of some of those States for President should be allowed and counted.

The subject was taken up by the House, which on January 30 passed a joint resolution naming the insurrectionary States, declaring them to have been "in armed rebellion" on the 8th of November, 1864, and not entitled to representation in the electoral college. A searching debate on this resolution arose in the Senate, which called out the best legal talent of that body. It could not very consistently be affirmed that Louisiana, Tennessee, and Arkansas, held by Federal troops and controlled by Federal commanders in part at least, were "in armed rebellion" on election day, under whatever constitutional theory of reconstruction. The phraseology was finally amended to read that the rebel States "were in such condition on the 8th day of November, 1864, that no valid election for electors of President and Vice-President of the United States, according to the Constitution and laws thereof, was held therein on said day," and in this form the joint resolution was passed by both houses. Joint resolutions of Congress have all the force and effect of laws, and custom requires the President to approve them in the same manner as regular acts. His signature in this case might therefore be alleged to imply that he consented to or adopted a theory of reconstruction at variance with his former recommendation and action. To avoid the possibility of such misconstruction, Mr. Lincoln sent Congress a short message, in which he said:

The joint resolution, entitled "Joint resolution declaring certain States not entitled to representation in the electoral college," has been signed by the Executive, in deference to the view of Congress implied in its passage and presentation to him. In his own view, however, the two houses of Congress, convened under the twelfth article of the Constitution, have complete power to exclude from counting all electoral votes deemed by them to be illegal; and it is not competent for the Executive to defeat or obstruct that power by a veto, as would be the case if his action were at all essential in the matter. He disclaims all right of the Executive to interfere in any way in the matter of canvassing or counting electoral votes; and he also disclaims that, by signing said resolution, he has expressed any opinion on the recitals of the preamble, or any judgment of his own upon the subject of the resolution.²

¹ "House Journal," Feb. 10, 1865, p. 237.

² Lincoln, Message, Feb. 8, 1865. "House Journal," p. 213.

In anticipation of possible debate and contention on the subject of counting the electoral votes of reconstructed States, Congress had, on February 6, adopted what afterwards became famous as the Twenty-second Joint Rule, which directed in substance that all such questions should be decided, not by the joint convention of the two houses, but by each house for itself without debate, the two houses having temporarily separated for that purpose; and requiring the concurrence of both for any affirmative action, or to count a vote objected to. When the two houses met in joint convention on the eighth day of February, mention was made by the Vice-President, presiding, that "The Chair has in his possession returns from the States of Louisiana and Tennessee; but in obedience to the law of the land, the Chair holds it to be his duty not to present them to the convention."¹ No member insisted on having these returns opened, since they could not possibly change the result. Only the returns therefore from the loyal States, including West Virginia, were counted, showing two hundred and twelve electoral votes for Lincoln, and twenty-one for McClellan. The Vice-President thereupon announced "that Abraham Lincoln of Illinois, having received a majority of the whole number of electoral votes, is duly elected President of the United States for four years, commencing on the fourth day of March, 1865."²

The usual committee was appointed to wait upon Mr. Lincoln and notify him of his second election; and in response to their announcement, he read the following brief address:

With deep gratitude to my countrymen for this mark of their confidence; with a distrust of my own ability to perform the duty required, under the most favorable circumstances, and now rendered doubly difficult by existing national perils; yet with a firm reliance on the strength of our free Government and the eventual loyalty of the people to the just principles upon which it is founded, and, above all, with an unshaken faith in the Supreme Ruler of Nations, I accept this trust. Be pleased to signify this to the respective houses of Congress.³

In the informal friendly conversation which followed, the President said to the committee, in substance:

Having served four years in the depths of a great and yet unended national peril, I can view this call to a second term in nowise more flatteringly to myself than as an expression of the public judgment that I may better finish a difficult work in which I have labored from the first than could any one less severely schooled to the task.⁴

The formal inauguration of Mr. Lincoln for his second presidential term took place at the appointed time, March 4, 1865. There is little variation in the simple but impressive pageantry with which this official ceremony is celebrated. The principal novelty commented upon by the newspapers was the share which the hitherto enslaved race had, for the first time, in this public and political drama. Civic associations of negro citizens joined in the procession, and a battalion of negro soldiers formed part of the military escort. The weather was sufficiently favorable to allow the ceremonies to take place on the eastern portico, in view of a vast throng of spectators. Imaginative beholders, who were prone to draw augury and comfort from symbols, could rejoice that the great bronze statue of Freedom now crowned the dome of the Capitol, and that her guardianship was justified by the fact that the Thirteenth Amendment virtually blotted slavery from the Constitution. The central act of the occasion was President Lincoln's second inaugural address, which enriched the political literature of the Union with another masterpiece, and which deserves to be quoted in full. He said:

FELLOW-COUNTRYMEN: At this second appearing to take the oath of the presidential office, there is less occasion for an extended address than there was at the first. Then, a statement, somewhat in detail, of a course to be pursued, seemed fitting and proper. Now, at the expiration of four years, during which public declarations have been constantly called forth on every point and phase of the great contest which still absorbs the attention and engrosses the energies of the nation, little that is new could be presented. The progress of our arms, upon which all else chiefly depends, is as well known to the public as to myself; and it is, I trust, reasonably satisfactory and encouraging to all. With high hope for the future, no prediction in regard to it is ventured.

On the occasion corresponding to this four years ago, all thoughts were anxiously directed to an impending civil war. All dreaded it — all sought to avert it. While the inaugural address was being delivered from this place, devoted altogether to saving the Union without war, insurgent agents were in the city seeking to destroy it without war — seeking to dissolve the Union, and divide effects, by negotiation. Both parties deprecated war; but one of them would make war rather than let the nation survive; and the other would accept war rather than let it perish. And the war came.

One-eighth of the whole population were colored slaves, not distributed generally over the Union, but localized in the southern part of it. These slaves constituted a peculiar and powerful interest. All knew that this interest was, somehow, the cause of the war. To strengthen, perpetuate, and extend

³ Unpublished MS. The reply reported by the notification committee is incorrect, having apparently

been written out from memory, intermingling an abstract of the formal paper which the President read with the informal conversation that succeeded.

⁴ "Globe," March 1, 1865, pp. 1236 and 1263.

this interest was the object for which the insurgents would rend the Union, even by war; while the Government claimed no right to do more than to restrict the territorial enlargement of it. Neither party expected for the war the magnitude or the duration which it has already attained. Neither anticipated that the cause of the conflict might cease with, or even before, the conflict itself should cease. Each looked for an easier triumph, and a result less fundamental and astounding. Both read the same Bible, and pray to the same God; and each invokes his aid against the other. It may seem strange that any men should dare to ask a just God's assistance in wringing their bread from the sweat of other men's faces; but let us judge not, that we be not judged. The prayers of both could not be answered—that of neither has been answered fully. The Almighty has his own purposes. "Woe unto the world because of offenses! for it must needs be that offenses come; but woe to that man by whom the offense cometh." If we shall suppose that American slavery is one of those offenses which, in the providence of God, must needs come, but which, having continued through his appointed time, he now wills to remove, and that he gives to both North and South this terrible war, as the woe due to those by whom the offense came, shall we discern therein any departure from those divine attributes which the believers in a living God always ascribe to him? Fondly do we hope—ferently do we pray—that this mighty scourge of war may speedily pass away. Yet, if God wills that it continue until all the wealth piled by the bondman's two hundred and fifty years of unrequited toil shall be sunk, and until every drop of blood drawn with the lash shall be paid by another drawn with the sword, as was said three thousand years ago, so still it must be said, "The judgments of the Lord are true and righteous altogether."

With malice towards none; with charity for all; with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in; to bind up the nation's wounds; to care for him who shall have borne the battle, and for his widow, and his orphan—to do all which may achieve and cherish a just and a lasting peace among ourselves, and with all nations.¹

The address being concluded, Chief-Justice Chase administered the oath of office; and listeners who heard Abraham Lincoln for the second time repeat, "I do solemnly swear that I will faithfully execute the office of President of the United States, and will, to the best of my ability, preserve, protect, and defend the Constitution of the United States," went from the impressive scene to their several homes with thankfulness and with confidence that the destiny of the country and the liberty of the citizen

were in safe keeping. "The fiery trial" through which he had hitherto walked showed him possessed of the capacity, the courage, and the will to keep the promise of his oath.

Among the many criticisms passed by writers and thinkers upon the language of the second inaugural, none will so interest the reader as that of Mr. Lincoln himself, written about ten days after its delivery, in the following letter to a friend:

DEAR MR. WEED: Every one likes a compliment. Thank you for yours on my little notification speech and on the recent inaugural address. I expect the latter to wear as well as, perhaps better than, anything I have produced; but I believe it is not immediately popular. Men are not flattered by being shown that there has been a difference of purpose between the Almighty and them. To deny it, however, in this case, is to deny that there is a God governing the world. It is a truth which I thought needed to be told, and, as whatever of humiliation there is in it falls most directly on myself, I thought others might afford for me to tell it.²

A careful student of Mr. Lincoln's character will also find this inaugural address instinct with another meaning, which, very naturally, the President's own comment did not touch. The eternal law of compensation, which it declares and applies to the sin and fall of American slavery, in a diction rivaling the fire and the dignity of the old Hebrew prophecies,³ may, without violent inference, be interpreted to foreshadow an intention to renew at a fitting moment the brotherly good-will gift to the South which has been treated of in the first part of this chapter. Such an inference finds strong corroboration in the phrases which closed the last public address he ever made. On Tuesday evening, April 11, a considerable assemblage of citizens of Washington gathered at the Executive Mansion to celebrate the victory of Grant over Lee. The rather long and careful speech which Mr. Lincoln made on that occasion was, however, less about the past than the future. It discussed the subject of reconstruction, as illustrated in the case of Louisiana, showing also how that issue was related to the questions of emancipation, the condition of the freedmen, the welfare of the South, and the ratification of the constitutional amendment. "So new and unprecedented is the whole case," he concluded, "that no ex-

jour lorsque l'union des âmes se fera là, dans la vraie et parfaite lumière de l'Evangile. Mais quel beau jour déjà lorsque le chef deux fois élu d'un grand peuple tient un langage chrétien, trop absent, dans notre Europe, du langage officiel des grandes affaires, annonce la fin de l'esclavage, et prépare les embrassements de la justice et de la miséricorde dont l'Ecriture Sainte a parlé. Je vous remercie de m'avoir fait lire cette belle page de l'histoire des grands hommes." . . .

¹ "Globe," March 4, 1865, pp. 1424, 1425.

² Weed, "Memoirs," Vol. II., p. 449.

³ Mgr. Dupanloup, Bishop of Orléans, in a letter, 2d April, 1865, to Mr. Auguste Cochin, acknowledging the receipt of Lincoln's second inaugural, said:

"J'ai lu ce document avec la plus religieuse émotion, avec l'admiration la plus sympathique. . . . M. Lincoln exprime, avec une solennelle et touchante gravité, les sentiments qui, j'en suis sûr, envahissent les âmes d'élite, au Nord comme au Sud. Quel beau

clusive and inflexible plan can safely be prescribed as to details and collaterals. Such exclusive and inflexible plan would surely become a new entanglement. Important principles may and must be inflexible. In the present situation, as the phrase goes, it may be my duty to make some new announcement to the people of the South. I am considering, and shall not fail to act when satisfied that action will be proper."¹ Can any one doubt that this "new announcement" which was taking shape in his mind would again have embraced and combined justice to the blacks and generosity to the whites of the South, with union and liberty for the whole country? It will remain a perpetual sorrow to the nation, and especially to the South, that the lingering madness of rebellion tragically thwarted the possibility of such a consummation.

FIVE FORKS.

FROM the hour of Mr. Lincoln's reelection the Confederate cause was doomed. The cheering of the troops which greeted the news from the North was heard within the lines at Richmond and at Petersburg, and although the leaders maintained to the end their attitude of defiance, the impression rapidly gained ground among the people that the end was not far off. The stimulus of hope being gone, they began to feel the pinch of increasing want. Their currency had become almost worthless. In October a dollar in gold was worth thirty-five dollars in Confederate money; a month later it brought fifty dollars; with the opening of the new year the price rose to sixty dollars, and soon after to seventy; and despite the efforts of the Confederate treasury, which would occasionally rush into the market and beat down the price of gold ten or twenty per cent. in a day, the currency gradually depreciated until a hundred for one was offered and not taken. As a result of this vanishing value of their money a portentous rise took place in the prices of all the necessities of life. It is hard for a people to recognize that their money is good for nothing; to do this is to confess that their Government has failed: it was natural, therefore, for the unhappy citizens of Richmond to think that monstrous prices were being extorted for food, clothing, and fuel, when, in fact, they were paying no more than was reasonable. The journals and diaries of the time are filled with bitter execrations against the extortioners and forestallers; but when we translate their prices into the gold standard, we wonder how the grocers and clothiers lived.

To pay a thousand dollars for a barrel of flour was enough to strike a householder with horror; but ten dollars is not a famine price. A suit of clothes costs from one thousand to fifteen hundred dollars; but if you divide this sum by seventy-five, there is very little profit left for the tailor. High prices, however, even if paid in dry leaves, are a hardship when dry leaves are not plentiful; and there was scarcity, even of Confederate money, in the South. In Richmond, which lived upon the war, the dearth was especially evident. The clerks in the departments received say four thousand dollars a year, hardly enough for a month's provisions. Skilled mechanics fared somewhat better. They could earn, so long as they kept out of the army, something like six thousand dollars a year. Statesmanship was cheap. A congressman's pay was five thousand five hundred dollars; but most of the civil officers of the Government managed to get their supplies at cost prices from the military stores. It was illegal; but they could not have lived otherwise, and they doubtless considered their lives necessary to their country.

The depreciation of the Confederate currency was an unmistakable symptom of a lack of confidence in the course of affairs, since it did not arise from inflation. On the contrary, Mr. Trenholm, the Secretary of the Treasury, did all he could to check this dangerous tendency, going so far as to incur the reproaches of many who imagined his action enhanced prices. All dealers instinctively felt the money was worthless, and their only object was to get it out of their hands as soon as possible, at whatever prices, in exchange for objects of real value. One Confederate diarist² records with indignation that he saw a Jew buy at auction an old set of table-spoons for five hundred and seventy-five dollars, and makes this a cause of complaint against the Government, which permits men to acquire in this way the means of running away. Anybody who was able to leave the country became the object of the envy and hatred of those who remained behind. They began to treat their own financial system with contempt. When the officer in charge of the Treasury Note Bureau at Columbia, alarmed at the approach of Sherman, asked where he was to go, he could get no attention to his inquiries; one high functionary advising that he go to the devil.³

At every advance of General Grant's lines a new disturbance and alarm was manifested in Richmond, the first proof of which was always a fresh rigor in the enforcement, not only of existing conscription laws, but of the arbitrary orders of the frightened authorities. After the capture of Fort Harrison, on the north side of the James, squads of guards were sent into

¹ Raymond, "Life of Lincoln," p. 687.

² Jones, Vol. II., p. 361.

³ "Rebel War Clerk's Diary," Vol. II., p. 384.

the streets with directions to arrest every able-bodied man they met. They paid no regard to passes or to certificates of exemption or detail, but hurried the unhappy civilians off to the field, or herded them, pending their assignment to companies, within the railings of the public square. Two members of the Cabinet, Reagan and George Davis, were thus arrested on the streets by the zealous guards in spite of their protestations, though they were, of course, soon recognized and released. The pavements were swept of every class of loiterers; the clerks in the departments with their exemptions in their pockets were carried off, whether able to do duty or not. It is said by one Confederate writer¹ that the medical boards were ordered to exempt no one who seemed capable of bearing arms for ten days, and he mentions an instance where a man died, on the eleventh day of his service, of consumption. Human nature will not endure such a strain as this: a week after this sweeping of Richmond for recruits, General Gardner reported that more than half the men thus dragged to the trenches had deserted. Of those who remained, the members of influential families came, one by one, back to the town on various pretexts, increasing the bitterness of feeling among those too poor or too obscure to rescue their sons and brothers.

Desertion grew too common to punish. Almost every man in the Confederacy was, by statute or decree, liable to military service, and yet hundreds of thousands of them were not in the army. If men were to be shot for deserting, it would have been a question whether there were soldiers enough to shoot them. Mr. Davis acted prudently in remitting the death sentences laid before him, although this occasioned great dissatisfaction in the army. Near the end of the year 1864 Longstreet reported one hundred men of Pickett's division as in the guard-house for desertion, attributing the blame for it to the numerous reprimands which had been granted, no one having been executed for two months. General Lee sent this report to Richmond with his approval, which gave great offense to the Confederate President. He returned the paper, with an indorsement to the effect that the remission of sentences was not a proper subject for the criticism of a military commander.²

As disaster increased, as each day brought its catastrophe, the Confederate Government steadily lost ground in the confidence and respect of the Southern people. It is characteristic of every failing revolt that in the hour of ruin the participators turn upon one another with reproaches, often as causeless and unjust

as those they cast upon their legitimate government. Mr. Davis and his councilors now underwent this natural retribution. They were doing their best, but they no longer got any credit for it. From every part of the Confederacy came complaints for what was done, demands for what it was impossible to do. Some of the States were in a condition near to counter-revolution. Governor Brown of Georgia made no pretense of concealing his contumacy. The march of Sherman across his State seemed to have emancipated him from any obligations to the Confederacy. His letters to Richmond from that moment lost all color of allegiance. The feeling in North Carolina was little better. A slow paralysis was benumbing the limbs of the insurrection, and even at the heart its vitality was plainly declining. The Confederate Congress, which had hitherto been the mere register of the President's will, now turned upon him and gave him wormwood to drink. On the 19th of January they passed a resolution making Lee general-in-chief of the army. This Mr. Davis might have borne with patience, although it was intended as a notification to him that his meddling with military affairs must come to an end. But far worse was the necessity put upon him, as a sequel to this act,—and in conformity with a resolution of the Virginia legislature,—of reappointing General Joseph E. Johnston to the command of the army which was to resist Sherman's victorious march to the North. After this he might say that the bitterness of death was past. The Virginia delegation in Congress passed a vote of want of confidence in the Government's conduct of the war. Mr. Seddon, considering his honor impugned, and not unwilling to lay down a thankless task, resigned his post of Secretary of War. Mr. Davis at first wished him to reconsider his action, claiming that such a declaration from congressmen was beyond their functions and subversive of the President's constitutional jurisdiction; but Mr. Seddon insisted, and General John C. Breckinridge was appointed in his place in February, for the few weeks that remained before the final crash.³ Warnings of serious demoralization came daily from the army; even that firm support to the revolt seemed crumbling. Disaffection was so rife in official circles in Richmond that it was not thought politic to call public attention to it by repression. A detective reported a member of Congress as uttering treasonable language, and for his pains was told at the War Department that matters of that sort were none of his business.⁴

It is a curious and instructive thing to note how the act of emancipation had by this time

¹ Jones, Vol. II., p. 305.

² *Ibid.*, p. 343.

³ Pollard, p. 441.

⁴ "Rebel War Clerk's Diary," Vol. II., p. 390.

virtually enforced itself in Richmond. The value of slave property was gone. It is true that a slave was still occasionally sold, at a price less than one-tenth of what he would have brought before the war. But servants could be hired of their nominal owners at a barley-corn rate; six dollars in gold would pay the hire of a good cook for a year—merely enough to keep up the show of vassalage. In effect any one could hire a negro for his keeping, which was all that anybody in Richmond got for his work. Even Mr. Davis had at last become docile to the stern teachings of events. In his message of November he had recommended the employment of 40,000 slaves in the army,—not as soldiers it is true, save in the last extremity,—with emancipation to come later.

Lee assumed command of all the Confederate forces on the ninth day of February. His situation was one of unprecedented gloom. The day before, he had reported to Richmond that his troops, who had been in line of battle for two days at Hatcher's Run, exposed to the bitter winter weather, had been without meat for three days. "If some change is not made," he said, "and the commissary department organized, I apprehend dire results; . . . you must not be surprised if calamity befalls us." Mr. Davis indorsed this discouraging dispatch with words of anger and command easy to write: "This is too sad to be patiently considered; . . . criminal neglect or gross incapacity. . . . Let supplies be had by purchase or borrowing." A prodigious effort was made, and the danger of starvation for the moment averted, but no permanent improvement resulted in the situation of affairs. The armies of the Union were closing in from every point of the compass. Grant was every day pushing his formidable left wing nearer the only roads by which Lee could escape; Thomas was threatening the Confederate communications from Tennessee; Sheridan was moving for the last time up the Valley of the Shenandoah to abolish Early; while from the south the redoubtable columns of Sherman—the men who had taken Vicksburg, who had scaled the heights of Chattanooga, and having marched through Georgia had left Savannah loyal and Charleston evacuated—were moving northward with the steady pace and irresistible progress of a tragic fate. It was the approach of this portent which shook the nerves of the Confederate leaders more than the familiar proximity of Grant. Beauregard, and afterwards Johnston, were ordered to "destroy Sherman."¹ Beauregard, after his kind, showed his Government its duty in loud and valiant words. He advised Mr. Davis to send him at

once heavy reinforcements "to give the enemy battle and crush him"; "then to concentrate all forces against Grant, march to Washington and dictate a peace"—a plan of limpid simplicity, which was not adopted. Johnston superseded the brilliant Louisianian the next day, and thereafter did what he could—with the scraps and remnants of an army allowed him—to resist the irresistible.

A singular and significant attempt at negotiations was made at this time by General Lee. He was now so strong in the confidence of the people of the South, and the Government at Richmond was so rapidly becoming discredited, that he could doubtless have obtained the popular support, and compelled the assent of the Executive to any measures he thought proper for the attainment of peace. From this it was easy for him and for others to come to the wholly erroneous conclusion that General Grant held a similar relation to the Government and people of the United States. General Lee seized upon the pretext of a conversation reported to him by General Longstreet, as having been held with General Ord under an ordinary flag of truce for exchange of prisoners, to address a letter to Grant, sanctioned by Mr. Davis, saying he had been informed that General Ord had said that General Grant would not decline an interview with a view "to a satisfactory adjustment of the present unhappy difficulties by means of a military convention," providing Lee had authority to act. He therefore proposed to meet General Grant, "with the hope that upon an interchange of views it might be found practicable to submit the subjects of controversy between the belligerents to a military convention." In such event he said he was "authorized to do whatever the result of the proposed conference may render necessary or advisable." Grant at once telegraphed these overtures to Washington. Stanton received his dispatch at the Capitol, where the President was, according to his custom, passing the last night of the session for the convenience of signing bills. The Secretary handed the telegram to Mr. Lincoln, who read it in silence. He asked no advice or suggestion from any one about him, but, taking a pen, wrote with his usual slowness and precision a dispatch in Stanton's name, which he showed to Seward and then handed to Stanton to be signed, dated, and sent. The language is that of an experienced ruler, perfectly sure of himself and of his duty:

The President directs me to say that he wishes you to have no conference with General Lee unless it be for capitulation of General Lee's army, or on some minor or purely military matters. He instructs me to say that you are not to decide, discuss, or confer upon any political questions. Such questions the

¹ Breckinridge to Lee, Feb. 21.

President holds in his own hands, and will submit them to no military conferences or conventions. Meanwhile you are to press to the utmost your military advantages.

General Grant, on the receipt of this instruction, wrote, in answer to General Lee, that he had no authority to accede to his proposition—such authority being vested in the President of the United States alone; he further explained that General Ord's language must have been misunderstood. Grant reported to Washington what he had done, adding that he would in no case exceed his authority, or omit to press all advantages to the utmost of his ability. This closed the last avenue of hope to the Confederate authorities of any compromise by which the dread alternative of utter defeat or unconditional surrender might be avoided.¹

Early in March, General Lee came to Richmond and had a conference with Mr. Davis on the measures to be adopted in the crisis which he saw was imminent. The General-in-Chief had not taken his advancement seriously. He had not sympathized in the slight which it involved towards the civil government; he had positively refused to assume the dictatorial powers with which the Richmond Congress had clearly intended to invest him; he had ostentatiously thanked "the President alone" for a promotion which in reality came from the President's enemies and critics. He continued to the end, in accordance with the Constitution of the Confederate States, to treat Mr. Davis as the Commander-in-Chief of the forces. He now laid before him the terrible facts by which the army was environed: Richmond and Petersburg must be evacuated before many days; a new seat for the Confederate Government, a new base of defense for the armies, must be taken up farther south and west. There is a direct contradiction between Mr. Davis and the friends of General Lee as to the manner in which the former received this communication. Mr. Davis says² he suggested an immediate withdrawal, but that General Lee said his horses were too weak for the roads, in their present state, and that he must wait till the ground became firmer. But General Long, who gives General Lee as his authority,³ says that the President overruled the general; that Lee wanted then to withdraw his forces and take up a line behind the Staunton River, from which point he might have indefinitely protracted the war. However this may be, they were both agreed that sooner or later the Richmond lines

must be abandoned; that the next move should be to Danville; that a junction was to be formed with Johnston; Sherman was to be destroyed; a swarm of recruits would come in after this victory; and Grant, being caught away from his base, was to be defeated and Virginia delivered from the invader. Mr. Davis gravely set forth this programme as his own, in his book written sixteen years after the war.

But before he turned his back forever upon those lines he had so stoutly defended, before he gave up to the nation the capital of the State for whose sake he had deserted his flag, Lee resolved to dash once more at the toils by which he was surrounded. He placed half his army under the command of General John B. Gordon with orders to break through the Union lines at Fort Stedman, and to take possession of the high ground behind them. The reticence in which General Lee enveloped himself in his last years has left his closest friends in doubt as to his real object in this apparently desperate enterprise. General Gordon, who takes to himself the greater share of responsibility for the plan, says: "I decided that Fort Stedman could be taken by a night assault, and that it might be possible to throw into the breach thus made in Grant's lines a sufficient force to disorganize and destroy the left wing of his army before he could recover and concentrate his forces."⁴ It is certainly true that any fort can be taken, by day or night, if the assaulting party has men enough and is willing to pay the price; but to take a place which cannot be held is not what we expect from a wise and experienced general. Grant had, with singular prescience, looked for some such movement from Lee a month before. He had ordered⁵ Parke, then in command of the Ninth Corps, to be ready to meet an assault on his center and to let his commanders understand they were to lose no time in bringing all their resources to bear on the point of danger. "With proper alacrity in this respect," he adds, "I would have no objection to seeing the enemy get through." This is one of the most characteristic phrases we have met with in Grant's orders. It throws the strongest light both on his temperament and on his mastery of the business at which he had arrived. A month beforehand he foresaw Gordon's attack, prepared for it, and welcomed the momentary success which attended it. Under such generalship an army's lines are a trap into which entrance is suicide.

remains then for us no choice but to continue this contest to a final issue," etc.

⁴ Letter to Jefferson Davis, "Rise and Fall," Vol. II., p. 650.

⁵ February 22.

¹ Jefferson Davis refers to this incident in his message of March 13 to the Confederate Congress, and says: "It thus appears that neither with the Confederate authorities, nor the authorities of any State, nor through the commanding generals, will the Government of the United States treat or make any terms or agreement whatever for the cessation of hostilities. There

The assault was made with great spirit at half-past four on the morning of the 25th of March. Its initial success was due to a singular cause. The opposing lines at the point chosen were only 150 yards apart; the pickets were only 50 yards from each other; it was therefore a favorite point of departure for those Confederates who were tired of the war. Desertions had of late become very numerous and had naturally been encouraged in every way; orders had been issued allowing deserters to bring their arms with them. When Gordon's skirmishers came stealing through the darkness they were at first mistaken for an unusually large batch of deserters, and they overpowered several picket posts without a shot being fired. The storming party at once followed, took the trenches with a rush, and in a few minutes had possession of the main line on the right of Stedman. Turning on the fort, they soon drove out or made prisoners the garrison. It was the dark hour before dawn, and the defense could not distinguish friends from foes; and for a little while General Parke, who acted with his usual vigor and intelligence, was unable to make headway against the invisible enemy who swarmed on both sides of the breach in the lines. General N. B. McLaughlen, who was posted to the left of Fort Stedman, at once got to work and recaptured an outlying battery with the bayonet, and then hurrying into the fort, in ignorance of its capture, was made prisoner. As soon as it was light, Parke's troops advanced from every direction to mend the breach; Potter on the left, Wilcox on the right, and Hartranft, who had been held in reserve, attacking directly from the high ground in the rear. The last two, between them, first made short work of the Confederate detachments that were moving on the City Point road and telegraph and searching in vain for three forts in the rear of Stedman which they had been ordered to take, and which in reality did not exist. By half-past seven Parke had his task well in hand. He had repulsed the Confederate attack to the right and left of Fort Stedman, recaptured two of the detached batteries, forced the enemy with heavy loss back into the fort, and concentrated upon them a heavy artillery fire from three sides. A few minutes later Hartranft's division carried Fort Stedman by assault, and Gordon withdrew to the Confederate lines what he was able to save of his attacking force. The cross fire of artillery was now so withering that few of the Confederates could get back, and none could come to their assistance. General Parke captured 2000 prisoners, including 71 officers and 9 stands of colors; his own total loss was about 1000.

But this heavy loss was not the only damage the Confederates suffered. Humphreys and Wright, in command of the troops on the Union left, who were to be routed and dispersed according to General Lee's plan, on being informed of the racket in the center, correctly assuming that Parke could take care of himself, instantly searched the lines in their front to see if they had been essentially weakened to support Gordon's attack. They found they had not; but in the process of gaining this information they captured the enemy's intrenched picket lines in front of them, which, in spite of repeated attempts to regain them, were firmly held, and gave inestimable advantage to the Union army in the struggle of the next week. The net results therefore to General Lee of the day's work were a bitter disappointment, a squandering of four thousand of his best troops against half that number on the other side, and the loss of his intrenched picket line, which brought such dangerous neighbors as Wright and Humphreys within arm's-length of him.

For several weeks General Grant's chief anxiety had been lest Lee should abandon his lines. At first he feared a concentration of Lee and Johnston against Sherman; but when the victorious army of the West had arrived at Goldsboro' and formed connection with Schofield his anxiety on that score was at rest, and there only remained a keen eagerness to make an end of the Army of Northern Virginia. "I was afraid," he says, "every morning that I would awake from my sleep to hear that Lee had gone, and that nothing was left but a picket line."¹ Still—just as Lee, though feeling every hour of waiting was fraught with danger, was prevented from moving by the bad roads and the Richmond complications—Grant, although burning to attack, was delayed by the same cause of bad roads, and by another. He did not wish to move until Sheridan had completed the work assigned him in the Valley and joined either Sherman or the army at Petersburg. But at last, satisfied with Sheridan's progress and with Sherman's condition, he resolved to wait no longer, and on the 24th of March, at the very moment when Gordon was making his arrangements for the next day's sortie, Grant issued his orders for the great movement to the left which was to finish the war. He intended to begin on the 29th, but Lee's desperate dash of the 25th appeared to the Union commander to indicate an intention to secure a wider opening to the Danville road to facilitate an immediate move of the Confederates westward, and he felt more than ever that not a moment was to be lost. Sheridan reached City Point on the 26th, and Sherman came up from

¹ Grant, "Personal Memoirs," Vol. II., p. 424.
VOL. XXXIX.—21.

North Carolina for a brief visit the next day. He said he would be ready to move on the 10th of April, and laid before Grant a plan for a coöperative campaign, which was of course satisfactory, as was always everything that Sherman proposed, but which the swift rush of events soon rendered superfluous. The President was also there, and an interesting conversation took place between these famous brothers-in-arms and Mr. Lincoln, after which Sherman went back to Goldsboro' and Grant began pushing his army to the left with even more than his usual iron energy.

It was a great army; it was the result of all the power and wisdom of the Government, all the devotion of the people, all the intelligence and teachableness of the soldiers themselves, and all the ability and character which the experience of a mighty war had developed in the officers. Few nations have produced better corps commanders than Sheridan, Warren, Humphreys, Ord, Wright, and Parke, taking their names as they come in the vast sweep of the Union lines from Dinwiddie Court House to the James in the last days of March; north of the James was Weitzel, vigilant and capable. Between Grant and the Army of the Potomac was Meade, the incarnation of industry, zeal, and talent; and in command of all was Grant, then in his best days, the most extraordinary military temperament this country has ever seen. When unfriendly criticism has exhausted itself, the fact remains, not to be explained away by any reasoning, subtle or gross, that in this tremendous war he accomplished more with the means given him than any other two, on either side. The means given him were enormous, the support of the Government was intelligent and untiring; but others had received the same means and the same support—and he alone captured three armies. The popular instinct which hails him as our greatest general is correct; and the dilettante critics who write ingenious arguments to prove that one or another of his subordinates or his adversaries was his superior will please for a time their diminishing coteries, and then pass into silence without damaging his robust fame.

The numbers of the respective armies in this last grapple have been the occasion of endless controversy. We take the figures given by General Humphreys—not merely on account of his profound study of the subject and personal acquaintance with it, but because we consider him the most thoroughly candid and impartial man who has written the history of this army. The effective force of infantry of

the Army of the Potomac was 69,000; of field artillery, 6,000, with 243 guns. The effective force of infantry of the Army of the James was 32,000; of field artillery, 3,000, with 126 guns and 1,700 cavalry, though General Ord took with him only about one-half his infantry; Sheridan's cavalymen, present for duty, 13,000; the grand total of all arms was 124,700. Lee's infantry numbered 46,000; his field artillery, 5,000; his cavalry, 6,000; in all, 57,000.

Grant's plan, as announced in his instructions of March 24,¹ was at first to dispatch Sheridan to reach and destroy the South Side and Danville railroads, at the same time moving a heavy force to the left, primarily to insure the success of Sheridan's raid,² and then to turn Lee's position. But his purpose grew and developed every hour, and before he had been a day away from his winter headquarters he had given up the comparatively narrow scheme with which he started and had adopted the far bolder and more comprehensive plan, which he carried out to his immortal honor. It is probable that to General Sheridan belongs a part of the credit of this change of plan. He informs us that when discretion was given him, in the Valley, either to go south, past Lee's right flank, and join Sherman, or to turn east and unite with the Army of the Potomac, he chose the latter course, because he thought it best that the Eastern army, which had thus far won scanty laurels when compared with the Western, should have the glory of this final victory; and that when he arrived at City Point and found General Grant's plans once more contemplated the possibility of sending his cavalry to Sherman and bringing that commander, after disposing of Johnston, to share in the destruction of Lee, Sheridan urged the General-in-Chief to finish the work immediately with the Army of the Potomac, that had so richly merited the glory which would come of the fruition of their long years of blood and toil. Both commanders were full of the spirit of victory. On the evening of the 29th of March, Sheridan's cavalry was at Dinwiddie Court House, and the left of the moving force of infantry extended to the Quaker road—almost to Lee's right flank on the White Oak Ridge. Grant's purpose had now taken complete shape in his mind. From his tent on Gravelly Creek he wrote to Sheridan, telling him the position of all his corps, and adding in simple words, which will stir the blood of every reader for ages to come, "I now feel like ending the matter . . . before we go back." He ordered Sheridan not to cut loose and go after the railroads, but to push for the

ing Lee's forces from following Sheridan. But I will be along myself, and will take advantage of anything that turns up." [Sherman, "Memoirs," Vol. II., p. 323.]

¹ Grant, Report.

² Grant wrote to Sherman on the 22d of March: "I shall start with no distinct view further than hold-

enemy's right rear. "We will all act together as one army here, until it is seen what can be done with the enemy."

The next day Sheridan advanced to Five Forks, where he found a heavy force of the enemy. Lee, justly alarmed by Grant's movements, had drawn all his available troops out of the trenches, dispatched a sufficient force under Fitzhugh Lee to Five Forks to hold that important cross-roads, and had taken personal command of the rest on the White Oak Ridge. A heavy storm of rain began the night of the 29th, continuing more than twenty-four hours, and greatly impeded the march of the troops. Warren, on the morning of the 21st, worked his way towards the White Oak road; but before he reached it Lee came out of his lines and attacked Warren's advanced division (Ayers's) with such impetus that it was driven back on the main line at Gravelly Run. There, gallantly supported by General Miles of Humphreys's corps, who made a spirited attack on Lee's left flank, Warren held his own, and in the afternoon moved forward and drove the enemy into his works.

Lee, not satisfied with opposing Sheridan at Five Forks with cavalry, had on the 30th sent Pickett there with some 7000 infantry, which, with nearly an equal force of cavalry, was too much for the Union horse to handle. Sheridan was therefore, on the 31st, forced back to Dinwiddie Court House. "Here," says Grant, "Sheridan displayed great generalship." He fought with obstinate tenacity, disputing every inch of ground, deploying his cavalry on foot, leaving only men enough with his horses to guard them. He gave Pickett and Lee a hard day's work on the way to Dinwiddie, and at night reported his situation to Grant in his usual tone of valorous confidence. Grant, indeed, was far more disturbed than Sheridan. He rained orders and suggestions all night upon Meade, Warren, and Sheridan, the purpose of which was to effect a concentration at daylight on that portion of the enemy in front of Sheridan. Warren, giving his troops, who had been marching and fighting for three days, a few hours' needed rest, came in on Sheridan's right about dawn. But Pickett, seeing that he was out of position, did not wait to be caught between the two Union columns; he withdrew noiselessly during the night¹ and resumed his

strongly intrenched post at Five Forks. Grant, in ignorance of this timely flight of Pickett, was greatly incensed at Warren for not having done what is now seen to have been impossible to do, since Pickett was gone before the hour when Grant wished Warren to attack him. The long-smoldering dislike of Warren, which had been for months increasing in Grant's mind, now blazed out into active hostility, and he sent an aide-de-camp to Sheridan, suggesting that Warren be relieved from his command.²

Sheridan hurried up to Five Forks with his cavalry, leaving Warren to bring up the Fifth Corps. Filled, as Sheridan was all this day, with the most intense martial ardor, his judgment and control of his troops were never more powerful and comprehensive. He pressed with his cavalry the retreating Confederates until they came to Five Forks, and then assigned to Merritt the duty of demonstrating strongly on Pickett's right, while with the infantry of the Fifth Corps he was to strike the left flank, which ran along the White Oak road about three-quarters of a mile east from Five Forks and then made a return of a hundred yards to the north, perpendicular to the road. It was the old tactics of the Valley repeated, with the additional advantage in this case that, if successful, he would drive Pickett westward and cut him off from Lee. To guard against any interruption from the east, Mackenzie had been sent to take possession of the White Oak road, some three miles east of the Forks, a task which he promptly performed, and then came back to take his position on the right of the Fifth Corps.

The battle was fought almost as it was planned: the only difference between conception and execution arose from the fact that it had not been practicable to ascertain the precise position of the enemy's left flank, lest the attempt might put them on their guard. Ayers's division was on the left, Crawford on the right, Griffin behind Crawford, and in this way they moved to the attack about four o'clock. Warren, understanding that the enemy's lines reached farther down the road than was the case, sent Ayers, his smallest division, in a direction which brought it against the angle, and Crawford and Griffin were moving across the road and altogether past the left of the enemy into the woods, when the heavy firing in front

¹ The testimony of the Confederate generals in the Warren court of inquiry shows that Pickett and Fitzhugh Lee, anticipating Warren's arrival at daybreak, resolved to retire at ten o'clock on the night of the 31st of March, and that the movement began at once. "Nearly everything on wheels," Fitzhugh Lee said, "was away by midnight." At daylight the cavalry moved, covering the rear of the infantry. (Warren Court of Inquiry, p. 469.) General W. H. F. Lee's testimony is to the same effect, p. 536.

² Thorough inquiry among the friends of both generals seems to establish the fact that Grant's animosity towards Warren arose from the habit Warren had of discussing his orders, suggesting changes in plans of battle, and movements in support of his own. Grant regarded this habit as lacking in respect to himself, and although Warren was looked upon as one of the ablest and most devoted officers in the army, it was evident that sooner or later Grant's irritation would come to a point which would prove ruinous to Warren.

of Ayers warned Warren of his error, and he immediately bestirred himself to rectify it, sending his aides in every direction, and finally riding off into the woods to bring back Crawford and Griffin to the point where they were so greatly needed. All this occupied considerable time, and in the mean while the brunt of the battle fell upon Ayers's division. They were hardly strong enough for the work thus accidentally assigned them, and there might have been a serious check at that moment but for the providential presence of Sheridan himself, who, with a fury and vehemence founded on the soundest judgment, personally led the troops in their attack on the intrenchments. Those who saw him that day will tell the story to their latest breath, how, holding the colors in his hand, with a face darkened with smoke and anger, and with sharp exhortations that rang like pistol-shots, he gathered up the faltering battalions of Ayers and swept like a spring gust over Pickett's breastworks. Meanwhile Warren was doing similar work on the right. He had at last succeeded in giving his other two divisions the right direction, and came in on the reverse of the enemy's lines. At one moment, finding some hesitation in a part of Crawford's force, "Warren, riding forward," says Humphreys, "with the corps flag in his hand, led his troops across the field." His horse was shot dead in the final charge. The dusk of evening came down on one of the most complete and momentous victories of the war. Pickett was absolutely routed; every man was driven from the field except the killed and wounded, and the prisoners, who were gathered in to the number of some five thousand, with a great quantity of guns and colors. As the battle was ending, Sheridan sent an order to Warren relieving him of his command and directing him to report to General Grant for orders.

It does not come within the compass of this work to review all the circumstances which led General Grant to entertain so rooted a dislike to Warren, and General Sheridan, who had but a slight acquaintance with him,¹ to adopt his chief's opinions. In removing him from command they were perfectly justified. Honestly holding the opinion they held of him, it was their duty to prevent the evils they thought might result from his retention in so important a trust. But it is not improper here to say that a court of inquiry, which General Warren succeeded in obtaining after General Grant had for twelve years denied it to him, decided that the opinions under which Grant and Sheridan acted were erroneous, and that

Warren did his whole duty at Five Forks. Grant never changed his opinion of him. It is true he offered him another command the next day, and soon afterwards he was given an important department to administer; but the General-in-Chief was always implacable towards him. Even on his death-bed, when he forgave all his enemies, and sent forth that touching appeal for human kindness, not only to his friends, but to those who had not hitherto been friends, he kept his feeling of keen dislike for Warren—then sleeping in his honored grave—and wrote it down for future ages in his "Memoirs." A curious instance of his increasing bitterness is seen in one phrase. In his report of 1865 he says Warren was relieved "about the close of this battle"; in his "Memoirs" he says "the troops were brought up and an assault successfully made"—*after* Warren was relieved.

APPOMATTOX.

THE battle of Five Forks ought to have ended the war: Lee's right had been shattered and routed; his line, as he had long predicted, had been stretched westward until it broke; there was no longer any hope of saving Richmond, or even of materially delaying its fall. But General Lee apparently thought that even the gain of a day was of value to the Richmond Government, and what was left of the Army of Northern Virginia was still so perfect in discipline and obedience that it answered with unabated spirit and courage every demand made upon it. It is painful to record or to read the story of the hard fighting of the 2d of April; every drop of blood spent on the lines of Petersburg that day seems to have been shed in vain.

Parke and Wright had been ordered on the 30th of March to examine the enemy's works in their respective fronts with a view to determine whether it was practicable to carry them by assault; they had both reported favorably. After the great victory of Five Forks, Grant, whose anxiety for Sheridan seems excessive, thought that Lee would reënforce against him heavily,² when, in fact, Lee had already sent to his right all the troops that could be spared, and Sheridan had routed them. To relieve Sheridan, and to take advantage of any weakness in Lee's extended front, Grant now ordered an assault all along the lines. The answers came in with electric swiftness and confidence: Wright said he 'would "make the fur fly"; Ord promised to go into the Confederate lines "like a hot knife into butter." The ground,

¹ "As we had never been thrown much together, I knew but little of him." [Sheridan, "Memoirs," Vol. II., p. 168.]

² Grant to Ord: "I have just heard from Sheridan. . . . Everything the enemy has will probably be pushed against him."

however, in front of Ord was so difficult that Grant gave him no positive orders to assault, but, on the contrary, enjoined upon him great vigilance and caution. Similar instructions were given to Humphreys; Miles, of his corps, was ordered westward on the White Oak road to help Sheridan, and Wright and Parke were directed to attack at four o'clock on the morning of the 2d. Grant's principal anxiety was lest Lee should get away from Petersburg and overwhelm Sheridan on the White Oak road. Lee was thinking of nothing of the kind. The terrible blow his right had received seemed to have stunned him. He waited, with a fortitude not far from despair, for the attack which the morning was sure to bring, making what hasty preparations were in his power for the coming storm. It came with the first glimmer of dawn. Wright, who had carefully studied the ground in his front, from the safe point of vantage he had gained the day of Gordon's ill-fated sortie, had selected the open space in front of Forts Fisher and Walsh as the weak point in the Confederate harness. Not that it was really weak, except in comparison with the almost impregnable works to right and left: the enemy's front was intersected by marshy rivulets; a heavy abatis had to be cut away under musketry fire from the parapets and a rain of artillery from the batteries. It was a quarter to five before there was light enough to guide the storming columns; but at that instant they swarmed forward, rushing over the Confederate pickets with too much momentum to be delayed a minute, and, gaining the main works, made them their own after a brief but murderous conflict. In fifteen minutes Wright lost eleven hundred men. They wasted not an instant after this immense success. Some pushed on in the ardor of the assault across the Boydtown road as far as the South Side Railroad;¹ the gallant Confederate General A. P. Hill rode unawares upon a squad of these skirmishers, and, refusing to surrender, lost his life at their hands. But the main body of the troops wisely improved their victory. A portion of them worked resolutely to the right, meeting strong resistance from the Confederates under Wilcox; the larger part re-formed with the celerity that comes from discipline and experience, and moved down the reverse of the captured lines to Hatcher's Run, where, about seven o'clock, having swept everything before them and made large captures of men and guns, they met their comrades of the Twenty-fourth Corps, whom they joined, facing about and marching over ground cleared of the enemy till the left closed in on the Appomattox River.

Parke also assaulted at the earliest light, meeting with a success on the outer line equally brilliant and important, capturing four hundred yards of intrenchments with many guns, colors, and prisoners. But there was in front of him an interior line, heavily fortified, and here the enemy, under General Gordon, not only made a stand, but resumed the offensive and assaulted several times during the day, without success, the lines which Parke had seized in the morning and hastily reversed. On the left Humphreys displayed his usual intelligent energy; as soon as he heard of the success of Wright and Parke, on his right, he attacked with Hays's division the Confederate redoubt at Crow's House, capturing the works, the guns, and most of the garrison, while upon his left Mott's division drove the enemy out of their works at Burgess's Mill. Humphreys wanted to concentrate his whole corps against the scattered enemy by the Claibourne road; but General Meade countermanded the movement. Mott and Hays were ordered towards Petersburg, and Miles, who had been holding the White Oak road for Sheridan, was therefore left alone to deal with Heth's division, which had hastily intrenched itself near Sutherland's Station, and here a sharp fight took place. Miles, twice repulsed, stuck obstinately to his task, and about three o'clock whipped and dislodged the enemy, making large captures, and driving him off towards the Appomattox and Amelia Court House.

Two forts—Gregg and Whitworth—on the main line of the Confederate intrenchments west of Petersburg made a stout resistance to the National troops. The former was a very strong work, surrounded by a deep and wide wet ditch, flanked by fire to the right and left. It was an ugly thing to handle, but Foster's and Turner's divisions of Gibbon's corps assaulted with unflinching valor, meeting a desperate resistance. Every advantage, except that of numbers, was on the side of its brave defenders, and they put twice their own number *hors du combat* before they surrendered. Gibbon reports a loss of 714 killed and wounded; 55 Confederate dead were found in the work. After Gregg had fallen, Turner's men made short work of Whitworth, and the Confederates, from the Appomattox to the Weldon road, fell slowly back to their inner line of works near Petersburg, now garrisoned by Longstreet's troops, who had come in from the north side of the James.

The attack of Wright, though it must have been anticipated, came upon General Lee with the stunning effect of lightning. Before the advance of the National army had been reported to Lee or Hill, they saw squads of men in blue scattered about the Boydtown road,² and it was in riding forward to ascer-

¹ Humphreys, p. 365.

² W. H. Taylor, "Four Years with General Lee."

tain what the strange apparition meant that General Hill lost his life. General Lee, in full uniform, with his dress sword, which he seldom wore, but which he had put on that morning in honor of the momentous day he saw coming,¹—being determined, with that chivalrous spirit of his, to receive adversity splendidly,—watched from the lawn in front of his headquarters the formidable advance of the National troops before whom his weakened lines were breaking into spray, and then, mounting his iron-gray charger, slowly rode back to his inner line. There his ragged troops received him with shouts and cheers which showed there was plenty of fight left in them; and there he spent the day in making preparations for the evacuation which was now the only resort left him. He sent a dispatch to Richmond, carrying in brief and simple words the message of doom to the Confederate authorities: "I see no prospect of doing more than holding our position here till night. I am not certain I can do that." He succinctly stated the disaster that had befallen him, announced his purpose of concentrating on the Danville road, and advised that all preparations be made for leaving Richmond that night.

Some Confederate writers express surprise that General Grant did not attack and destroy Lee's army on the afternoon of the 2d of April; but this is a view, after the fact, easy to express. Wright's and Humphreys's troops on the Union left had been on foot for eighteen hours; they had fought an important battle, marched and countermarched many miles, and were now confronted by Longstreet's fresh corps, behind formidable works, led by the best of Lee's generals; while the attitude of the force under Gordon, on the south side of the town, was such as to require the close attention of Parke. Grant, anticipating an early retirement of Lee from his citadel, wisely resolved to avoid the waste and bloodshed of an immediate assault on the inner lines at Petersburg. He ordered Sheridan to get upon Lee's line of retreat, sent Humphreys to strengthen him; then, directing a general bombardment for five o'clock the next morning, and an assault at six, he gave himself and his soldiers a little of the rest they had so richly earned, and which they so seriously needed, as a restorative after the labors past and a preparation for the labors to come.

He had telegraphed during the day to President Lincoln, who was at City Point, the great day's news as it developed hour by hour. He was particularly happy at the large captures. "How many prisoners?" was always the first question as an aide-de-camp came galloping in with news of success. Prisoners he regarded as so much net gain: he was weary of slaugh-

ter; he wanted the war ended with the least bloodshed possible. It was with the greatest delight that he was able to telegraph on this Sunday afternoon, "The whole captures since the army started out gunning will amount to not less than twelve thousand men and probably fifty pieces of artillery."

General Lee, after the first shock of the breaking of his lines, soon recovered his usual *sang-froid*, and bent all his energies to saving his army and leading it out of its untenable position on the James to a point from which he could effect a junction with Johnston in North Carolina. The place selected for this purpose was Burkeville, at the crossing of the South Side and Danville roads, fifty miles from Richmond, whence a short distance would bring him to Danville, where the desired junction might be made. Even in this ruin of the Confederacy, when the organized revolt which he had sustained so long with the bayonets of his soldiers was crashing about his ears, he was able still to cradle himself in the illusion that it was only a campaign that had failed; that he might withdraw his troops, form a junction with Johnston, and continue the war indefinitely in another field. Whatever we may think of his judgment, it is impossible not to admire the coolness of a general who, in the midst of irremediable disaster such as encompassed Lee on the afternoon of the 2d of April, could write such a letter as he wrote to Jefferson Davis under date of three o'clock.² He began it by a quiet and calm discussion of the question of negro recruitment; promised to give his attention to the business of finding suitable officers for the black regiments; hoped the appeal Mr. Davis had made to the governors would have a good effect; and, altogether, wrote as if years of struggle and effort were before him and his chief. He then went on to narrate the story of the day's catastrophe and to give his plans for the future. He closed by apologizing for "writing such a hurried letter to your Excellency," on the ground that he was "in the presence of the enemy, endeavoring to resist his advance."

At nightfall all his preparations were completed. He mounted his horse, and riding out of the town dismounted at the mouth of the road leading to Amelia Court House, the first point of rendezvous, where he had directed supplies to be sent, and standing beside his horse, the bridle reins in his hand, he watched his troops file noiselessly by in the darkness. At three o'clock the town, which had been so long and so stoutly defended, was abandoned; only a thin line of skirmishers was left in front of Parke, and before daybreak he pierced the

¹ J. E. Cooke, "Life of R. E. Lee."

² Davis, "Rise and Fall," Vol. II., p. 660.

line in several places, gathering in the few pickets that were left. The town was formally surrendered to Colonel Ely at half-past four, anticipating the capitulation which some one else offered to General Wright a few minutes later. Meade reported the news to Grant and instantly received the order to march his army immediately up the Appomattox by the river road; and Grant, divining the intentions of Lee, dispatched an officer to Sheridan, directing him to push with all speed to the Danville road with Humphreys and Griffin and all the cavalry.

Thus the flight and the pursuit began almost at the same moment. The swift-footed Army of Northern Virginia was now racing for its life; and Grant, inspired with more than his native tenacity and energy, and thoroughly aroused to the tremendous task of ending the war at once, not only pressed his enemy in the rear, but hung upon his flank, and strained every nerve to get in his front. It is characteristic of him that he did not even allow himself the pleasure of entering Richmond, which, deserted by those who had so often promised to protect it, and wrapped in flames lighted by the reckless hands of Confederate officials, surrendered to Weitzel early on the morning of the 3d.

All that day Lee pushed forward towards Amelia Court House. He seemed in higher spirits than usual. As one who has long been dreading bankruptcy feels a great load taken from his mind when his assignment is made, so the Virginian chief, when he drew out from the ruin and conflagration in which the Confederate dream of independent power was passing away, and marched with his men into the vernal fields and woods of his native State, was filled with a new sense of encouragement and cheer. "I have got my army safe out of its breast-works," he said, "and in order to follow me the enemy must abandon his lines, and can derive no further benefit from his railroads or James River."¹ But he was now dealing with the man who, in Mississippi, had boldly swung loose from his base of supplies in an enemy's country, in face of an army equal to his own, and had won a victory a day without a wagon train.

There was little fighting the first day except among the cavalry. Custer attacked the Confederates at Namozine Church, and later in the day Merritt's cavalry had a sharp contest with Fitzhugh Lee at Deep Creek. On the

4th, Sheridan, who was aware of Lee's intention to concentrate at Amelia Court House, brought his cavalry with great speed to Jetersville, about eight miles southwest of the Court House, where Lee's army was resting. Sheridan intrenched, and sent tidings of his own and the enemy's position to Grant, and on the afternoon of the next day² the Second and Sixth corps came up. A terrible disappointment awaited General Lee on his arrival at Amelia Court House. He had ordered, he says, supplies to be sent there; but when his half-starved troops arrived on the 4th of April they found that no food had been sent to meet them, and nearly twenty-four hours were lost in collecting subsistence for men and horses. "This delay was fatal, and could not be retrieved."³ The whole pursuing force was south and stretching out to the west of him, when he started on the night of the 5th of April to make one more effort to reach a place of temporary safety. Burkeville, the junction of the Lynchburg and Danville roads, was in Grant's possession; the way to Danville was barred, and the supply of provisions from the south cut off. Lee was compelled to change his route to the west; and he now started for Lynchburg, which he was destined never to reach.

It had been Meade's intention to attack Lee at Amelia Court House on the morning of the 6th of April, but before he reached that place he discovered that Lee's westward march had already begun, and that the Confederates were well beyond the Union left. Meade quickly faced his army about and started in pursuit. A running fight ensued for fourteen miles; the enemy, with remarkable quickness and dexterity, halting and partially intrenching themselves from time to time, and the National forces driving them out of every position, moving so swiftly that lines of battle followed closely on the skirmish line. At several points the cavalry, on this and the preceding day, harassed the moving left flank of the Confederates and worked havoc on the trains, on one occasion causing a grievous loss to history by burning Lee's headquarters baggage with all its wealth of returns and reports. Sheridan and Meade pressed so closely at last that Ewell's corps was brought to bay at Sailor's Creek, a rivulet running northward into the Appomattox. Here an important battle, or rather series of battles, took place, with fatal results to Lee's fast vanishing army. The Fifth Corps held the extreme

² April 5.

³ Lee's report of the surrender. Other Confederate writers insist that the train which should have borne these supplies to Lee was directed to Richmond to assist the flight of the Confederate authorities. (Pollard,

"Lost Cause," p. 703.) Jefferson Davis ("Rise and Fall," Vol. II., p. 668) denounces the whole story as a malignant calumny, and gives voluminous statements from Confederate officers to confute it. But there seems no reason to doubt General Lee's statement, made to Mr. Davis in his report at the time.

right and was not engaged. Humphreys, coming to where the roads divided, took the right fork and drove Gordon down towards the mouth of the creek. A sharp battle was fought about dark, which resulted in the total defeat of the Confederates, Humphreys capturing 1700 prisoners, 13 flags, 4 guns, and a large part of the main trains; Gordon making his escape in the night to High Bridge with what was left of his command. Wright, on the left-hand road, had also a keen fight, and won a most valuable victory. With Wheaton's and Seymour's divisions he attacked Ewell's corps, in position on the banks of the creek, enveloping him with the utmost swiftness and vehemence; Sheridan, whose cavalry had intercepted the Confederates, ordered Cook and Merritt to attack on the left, which was done with such vigor—Davies's horsemen riding over the enemy's breastworks at a single rush—that, smitten in front and flank, unable either to stand or to get away, Ewell's whole force was captured on the field. The day's loss was deadly to Lee, not less than eight thousand in all; among them such famous generals as Ewell, Kershaw, Custis Lee, Corse, and others were prisoners.

In the mean time Ord, under Sheridan's orders, had moved rapidly along the Lynchburg road to Rice's Station, where he found Longstreet's corps intrenched, and night came on before he could get into position to attack. General Read, Ord's chief-of-staff, had gone still farther forward with eighty horsemen and five hundred infantry to burn High Bridge, if possible. He passed through Farmville, and was within two miles of the bridge, when he fell in with two divisions of Confederate cavalry under Rosser and Munford. One of the most gallant and pathetic battles of the war took place. General Read, Colonel Washburn, and all the cavalry officers with Read were killed, and the rest captured; the Confederate loss was also heavy. Read's generous self-sacrifice halted the Confederate army for several hours. Longstreet lost the day at Rice's Station waiting for Anderson, Ewell, and Gordon to unite with him. They were engaged in a fruitless attempt to save their trains,¹ which resulted, as we have seen, in the almost total loss of the trains, in the capture of Ewell's entire force, and in the routing and shattering of the other commands. The day's work was of incalculable value to the National arms. Sheridan's unerring eye appreciated the full importance of it; his hasty report ended with the words, "If the thing is pressed, I think that Lee will surrender." Grant sent the dispatch to President Lincoln, who instantly replied, "Let the thing be pressed."²

In fact, after nightfall of the 6th Lee's army could only flutter like a wounded bird with one

wing shattered; there was no longer any possibility of escape. Yet General Lee found it hard to relinquish the illusions of years, and his valiant heart still dreamed of evading the gathering toils and forming somewhere a junction with Johnston and indefinitely prolonging the war. As soon as night had come down on the disastrous field of Sailor's Creek, he again took up his weary march westward. Longstreet marched for Farmville, crossed to the north bank of the Appomattox, and on the 7th moved out on the road which ran through Appomattox Court House to Lynchburg. His famishing troops had found provisions at Farmville, and with this refreshment marched with such celerity that Grant and Sheridan, with all the energy they could breathe into their subordinates, could not head them off, or bring them to decisive battle that day. Nevertheless the advance of the Union army hung close upon the heels of the Confederates. The rear corps under Gordon had burned the railroad bridge, near Farmville, behind them; but General Barlow, sending his men forward at double-quick, saved the wagon bridge, and the Second Corps crossed over without delay and continued the chase, Humphreys taking the northern road, and sending Barlow by the railroad bed along the river. Barlow overtook Gordon's rear, working great destruction among his trains. Humphreys came up with the main body shortly after noon, and pressing them closely held them till evening, expecting Barlow to join him, and Wright and Crook to cross the river and attack from the south, a movement which the swollen water and the destruction of the bridge prevented. General Irwin Gregg's brigade had indeed succeeded in getting over, but was attacked by an overwhelming force of Confederate cavalry,—three divisions,—Gregg being captured, and his brigade driven back. This trivial success in the midst of unspeakable disaster delighted General Lee. He said to his son, W. H. F. Lee, "Keep your command together, General; do not let it think of surrender. I will get you out of this."³

But his inveterate optimism was not shared by his subordinates. A number of his principal officers, selecting General Pendleton as their spokesman, made known to him on the 7th their belief that further resistance was useless, and advised surrender. General Lee replied: "I trust it has not come to that. . . . We have yet too many bold men to think of laying down our arms.' . . . Besides, he feared that if he made the first overtures for capitulation Grant would regard it as a confession of weakness, and demand unconditional sur-

¹ Humphreys, p. 385.

² Badeau, Vol. III., p. 581.

³ J. E. Cooke, "Life of R. E. Lee," p. 455.

render."¹ But General Grant did not wish to drive a gallant antagonist to such extremes. On this same day, seeing how desperate was Lee's condition, and anxious to have an end of the now useless strife, he sent him this courteous and generous summons:²

The result of the last week must convince you of the hopelessness of further resistance, on the part of the Army of Northern Virginia, in this struggle. I feel that it is so, and regard it as my duty to shift from myself the responsibility of any further effusion of blood, by asking of you the surrender of that portion of the Confederate States army known as the Army of Northern Virginia.

This letter was sent at night through Humphreys's lines to Lee, who at once answered: "Though not entertaining the opinion you express of the hopelessness of further resistance on the part of the Army of Northern Virginia, I reciprocate your desire to avoid useless effusion of blood, and therefore, before considering your proposition, ask the terms you will offer on condition of its surrender." The forlorn remnant of the Confederate army stole away in the night, on the desperate chance of finding food at Appomattox and a way of escape to Lynchburg, and at daybreak the hot pursuit was resumed by the Second and Sixth corps. All this day the flight and chase continued, through a portion of Virginia never as yet wasted by the passage of hostile armies. The air was sweet and pure, scented by opening buds and the breath of spring; the early peach trees were in flower; the sylvan by-paths were slightly shaded by the pale-green foliage of leafing trees. Through these quiet solitudes the fast-diminishing army of Lee plodded on, in the apathetic obedience which is all there is left to brave men when hope is gone, and behind them came the victorious legions of Grant, inspired to the forgetfulness of pain and fatigue by the stimulus of a prodigious success. Sheridan on the extreme left, by unheard-of exertions at last accomplished the important task of placing himself squarely on Lee's line of retreat. His advance, under Custer, captured, about sunset on the evening of the 8th, Appomattox Station with four trains of provisions, then attacked the rebel force advancing from Farmville, and drove it towards the Court House, taking twenty-five guns and many prisoners. A reconnaissance revealed the startling fact that Lee's whole army was coming up the road. Though he had nothing but cavalry, Sheridan with undaunted courage resolved to hold the inestimable advantage he had gained, sending a request to Grant to hurry up the required infantry support, saying that if Gibbon and Griffin could get to him that night "the job might be finished in the morning." He added, with singular prescience, referring to

the negotiations which had been opened, "I do not think Lee means to surrender until compelled to do so."

This was strictly true. When Grant received Lee's first letter he replied on the morning of the 8th, saying: "Peace being my great desire, there is but one condition I would insist upon; namely, that the men and officers surrendered shall be disqualified from taking up arms again against the Government of the United States until properly exchanged. I will meet you, or designate officers to meet any officers you may name for the same purpose, at any point agreeable to you, for the purpose of arranging definitely the terms upon which the surrender of the Army of Northern Virginia will be received." But in the course of the day a last hope seemed to have come to Lee that he might yet reach Appomattox in safety and thence make his way to Lynchburg—a hope utterly fallacious, for Stoneman was now on the railroad near Lynchburg. He therefore, while giving orders to his subordinates to press with the utmost energy westward, answered General Grant's letter in a tone more ingenious than candid, reserving, while negotiations were going on, the chance of breaking away.

In my note of yesterday [he said] I did not intend to propose the surrender of the Army of Northern Virginia, but to ask the terms of your proposition. To be frank, I do not think the emergency has arisen to call for the surrender of this army; but as the restoration of peace should be the sole object of all, I desire to know whether your proposals would lead to that end. I cannot therefore meet you with a view to surrender the Army of Northern Virginia; but as far as your proposal may affect the Confederate States forces under my command, I should be pleased to meet you at 10 A. M., to-morrow, on the old stage road to Richmond between the picket lines of the two armies.

Grant was not to be entrapped into a futile negotiation for the restoration of peace. He doubtless had in view the President's peremptory instructions of the 3d of March, forbidding him to entertain any proposition except for the surrender of armies, or to engage in any political discussion or conference. He therefore answered General Lee on the morning of the 9th of April with perfect courtesy, but with unmistakable frankness, saying: "I have no authority to treat on the subject of peace. The meeting proposed for 10 A. M., to-day, could lead to no good. I will state, however, General, that I am equally desirous for peace with yourself, and the whole North entertains the same feeling. The terms upon which peace can be had are well understood. By the South laying down their arms they will hasten that

¹ Long, p. 417.

² April 7.

most desirable event, save thousands of human lives and millions of property not yet destroyed. Seriously hoping that all our difficulties may be settled without the loss of another life, I subscribe myself," etc. He dispatched this letter to Lee and then set off to the left, where Sheridan was barring Lee's last avenue of escape.

It appears from General Lee's report, made four days after the surrender, that he had no intention on the night of the 8th of giving up the fight. He ordered Fitz Lee, supported by Gordon, in the morning "to drive the enemy from his front, wheel to the left and cover the passage of the trains, while Longstreet . . . should close up and hold the position." He expected to find only cavalry on the ground, and thought even his remnant of infantry could break through Sheridan's horse while he himself was amusing Grant with platonic discussions in the rear. But he received, on arriving at the rendezvous he had suggested, not only Grant's stern refusal to enter into a political negotiation, but other intelligence which was to him the trump of doom. Ord and Griffin had made an almost incredible march of some thirty miles during the preceding day and night, and had come up at daylight to the post assigned them in support of Sheridan; and when Fitzhugh Lee and Gordon made their advance in the morning and the National cavalry fell slowly back, in obedience to their orders, there suddenly appeared before the amazed Confederates a formidable force of infantry filling the road, covering the adjacent hills and valley, and barring as with an adamant wall the further progress of the army of the revolt. The marching of the Confederate army was over forever. The appalling tidings were instantly carried to Lee. He at once sent orders to cease hostilities, and, suddenly brought to a sense of his real situation, sent a note to Grant, asking an interview in accordance with the offer contained "in Grant's letter of the 8th for the surrender of his army." Grant had created the emergency calling for such action. As Sheridan was about to charge on the huddled mass of astonished horse and foot in front of him a flag of truce was displayed, and the war was at an end. The Army of Northern Virginia was already captured. "I've got 'em, like that!" cried Sheridan, doubling up his fist, fearful of some ruse or evasion in the white flag. The Army of the Potomac on the north and east, Sheridan and Ord on the south and west, completely encircled the demoralized and crumbled army of Lee. There was not another day's fighting in them. That morning at three o'clock Gordon

had sent word to Lee that he "had fought his corps to a frazzle, and could do nothing more unless heavily supported by Longstreet." Lee and his army were prisoners of war before he and Grant met at Appomattox.

The meeting took place at the house of Mr. McLean, in the edge of the village. Lee met Grant at the threshold, and ushered him into a small and barely furnished parlor where were soon assembled the leading officers of the National army. General Lee was accompanied only by his secretary, Colonel Charles Marshall. A short conversation led up to a request from Lee for the terms on which the surrender of his army would be received. Grant briefly stated the terms which would be accorded. Lee acceded to them, and Grant wrote the following letter:

In accordance with the substance of my letter to you on the 8th inst. I propose to receive the surrender of the Army of Northern Virginia on the following terms, to wit: Rolls of all the officers and men to be made in duplicate; one copy to be given to an officer to be designated by me, the other to be retained by such officer or officers as you may designate. The officers to give their individual paroles not to take up arms against the Government of the United States until properly exchanged; and each company or regimental commander sign a like parole for the men of their commands. The arms, artillery, and public property to be parked and stacked, and turned over to the officers appointed by me to receive them. This will not embrace the side-arms of the officers, nor their private horses or baggage. This done, each officer and man will be allowed to return to his home, not to be disturbed by United States authorities so long as they observe their paroles and the laws in force where they may reside.

General Grant says in his "Memoirs" that up to the moment when he put pen to paper he had not thought of a word that he should write. The terms he had verbally proposed, and which Lee had accepted, were soon put in writing, and there he might have stopped. But as he wrote, a feeling of sympathy for his gallant antagonist gradually came over him, and he added the extremely liberal terms with which his letter closed. The sight of Lee's sword, an especially fine one, suggested the paragraph allowing officers to retain their side-arms; and he ended with a phrase which he had evidently not thought of and for which he had no authority, which practically pardoned and amnestied every man in Lee's army — a thing he had refused to consider the day before, and which had been expressly forbidden him in President Lincoln's order of the 3d of March.¹ Yet so great was the joy over the crowning victory, so

¹ The President in his Amnesty Proclamation of December 8, 1863, expressly excepted officers above the rank of colonel, all who left seats in Congress to aid the rebellion, and all who resigned commissions in

the army or navy of the United States and afterwards participated in the rebellion. The terms granted at Appomattox practically extended amnesty to many persons in these classes.

deep was the gratitude of the Government and the people to Grant and his heroic army, that his terms were accepted as he wrote them, and his exercise of the Executive prerogative of pardon entirely overlooked. It must be noticed here, however, as a few days later it led the greatest of Grant's generals into serious error.

Lee must have read the memorandum of terms with as much surprise as gratification. He said the permission for officers to retain their side-arms would have a happy effect. He then suggested and gained another important concession — that those of the cavalry and artillery who owned their own horses should be allowed to take them home to put in their crops. Lee wrote a brief reply accepting the terms. He then remarked that his army was in a starving condition, and asked Grant to provide them with subsistence and forage, to which he at once assented, and asked for how many men the rations would be wanted. Lee answered, "About twenty-five thousand," and orders were at once given to issue them. The number surrendered turned out to be even larger than this. The paroles signed amounted to 28,231. If we add to this the captures at Five Forks, Petersburg, and Sailor's Creek, the thousands who deserted the failing cause at every by-road leading to their homes, and filled every wood and thicket between Richmond and Lynchburg, we can see how considerable an army Lee commanded when Grant "started out gunning." Yet every Confederate writer, speaker, and singer who refers to the surrender says, and will say forever, that Lee surrendered only seven thousand muskets.

With these brief and simple formalities one of the most momentous transactions of modern times was concluded. The news soon transpired, and the Union gunners prepared to fire a national salute; but Grant would not permit it. He forbade any rejoicing over a fallen enemy, who he hoped would hereafter be an enemy no longer. The next day he rode to the Confederate lines to make a visit of farewell to General Lee. Sitting on horseback between the lines, the two heroes of the war held a friendly conversation. Lee considered the war at an end, slavery dead, the national authority restored; Johnston must now surrender — the sooner the better. Grant urged him to make a public appeal to hasten the return of peace; but Lee, true to his ideas of subordination to a government which had ceased to exist, said he could not do this without consulting the Confederate President. They parted with courteous good wishes, and Grant, without pausing to look at the city he had taken or the enormous system of works which had so long held him at bay, intent only upon reaping the peaceful results of his colossal victory, and putting an end to the waste and the burden of war, hurried away to Washington to do what he could for this practical and beneficent purpose. He had done an inestimable service to the Republic: he had won immortal honor for himself; but neither then nor at any subsequent period of his life was there any sign in his words or his bearing of the least touch of vainglory. The day after Appomattox he was as simple, modest, and unassuming a citizen as he was the day before Sumter.

TELLUS.

WHY here on this third planet from the sun
Fret we, and smite against our prison-bars?
Why not in Saturn, Mercury, or Mars
Mourn we our sins, the things undone and done?
Where was the soul's bewildering course begun?
In what sad land among the scattered stars
Wrought she the ill which now for ever scars
By bitter consequence each victory won?
I know not, dearest friend; yet this I see,
That thou for holier fellowships wast meant;
Through some strange blunder thou art here; and we,
Who on the convict-ship were hither sent
By judgment just, must not be named with thee
Whose tranquil presence shames our discontent.

William R. Huntington.

MEMORANDA ON THE CIVIL WAR.

Southern Cadets in Action.

IN his sketch of "The West Point of the Confederacy," published in *THE CENTURY MAGAZINE* for January, 1889, Mr. John S. Wise says: "At a later period of the war it [the Virginia Military Institute] had, I believe, the exceptional honor of having sent its corps of cadets, as a body, into battle." The cadets of the University of Alabama share with the Virginia Military Institute corps the honor of having received "a baptism of fire" in the closing days of the war.¹ In fact, from the thoroughness of its military organization and equipment, and from the number and quality of the officers it furnished the Southern army, the University of Alabama may fairly contest with the Virginia Institute the honor of having been the "West Point of the Confederacy."

Unlike the Virginia Military Institute, the University of Alabama was not founded as a military school; but the legislature of the State, at its session of 1859-60, probably in anticipation of the "irrepressible conflict" between the sections, took steps towards grafting a military department on the classical and scientific courses of the institution, and in September, 1860, its students for the first time went into camp on the college grounds as a military body under the name of the Alabama Corps of Cadets. Colonel Caleb Huse, now in charge of a training school for West Point at Highland Falls, N. Y., who was then a young army officer, was detailed as commandant of cadets, and under his direction the corps soon reached a high degree of excellence in drill and discipline. At the outbreak of the war Colonel Huse resigned his commission in the army and accepted an important post under the Confederate Government. Colonel J. T. Murfee, an accomplished officer and a graduate of the Virginia Military Institute, succeeded Colonel Huse as commandant, and he was aided in perfecting the organization of the military department of the institution by a complement of young officers known as "State Captains," most of whom were also Virginia Military Institute graduates.

As the war became more and more an earnest reality the University of Alabama assumed more and more the aspects of a second West Point. The president, Dr. L. C. Garland, now the venerable chancellor of the Vanderbilt University, donned the regulation gray of a Confederate colonel, and held reviews, inspections, etc., with the soldierly precision of a West Point superintendent. From time to time the young men whom the University had trained to the profession of arms were commissioned as officers in the Southern army, and of these quite a number rose rapidly in rank; one

of them, the lamented General John C. Saunders, having won the stars of a brigadier before he had reached his majority.

The university, being located at Tuscaloosa, in the interior of the State, was for a long time exempt from danger from the raiders who ravaged the northern borders of Alabama; but as the crisis drew on in the spring of 1865 the Federal troops came nearer and nearer. On the 30th of March, General E. M. McCook, then at Elyton (at present a suburb of the new city of Birmingham), fifty miles northeast of Tuscaloosa, acting under orders from General J. H. Wilson, detached Brigadier-General John T. Croxton and his brigade of fifteen hundred veteran cavalry with orders "to proceed rapidly by the most direct route to Tuscaloosa, to destroy the bridge, factories, mills, university (military school), and whatever else might be of benefit to the rebel cause."

The opportunity was now at hand for the cadet corps to taste the realities of war that it had so often mimicked in the marching and countermarching of the battalion manœuvres. The corps was about three hundred strong and was in fine trim. On the night of the 3d of April "taps" was sounded as usual. The cadets went to bed with little thought that within three miles, just across the Black Warrior River, lay Croxton's raiders, ready to make a dash across the bridge into Tuscaloosa. The Federal general, by his capture of scouts and citizens, had prevented knowledge of his approach. The surprise was complete. For the sake of form, a few of the "home guard"—old men and boys—had been kept at the bridge that night; but no one had an idea that the Federals were near. When their approach was discovered, a courier was at once dispatched to the university. The long roll was sounded, and in a few moments the cadet battalion was formed and hurried away in the darkness to the brow of the hill overlooking the bridge. There a line of battle was formed.

It was too late. Croxton's men had already crossed the bridge and were formed on the river bank. The cadets, however, were eager for the fray, and the two or three volleys that they poured down the hill for a while disconcerted the Federals and checked their advance. There was rapid firing for a short time on both sides; but, owing probably to the darkness of the night, the casualties were few. The officer in charge of the cadets, seeing the hopelessness of an attempt to dislodge a force so superior in numbers, drew off his command, having sustained a loss of only three or four wounded.

General Croxton, in his official report, makes no mention of the losses sustained by the Federals. He says: "They [the militia and cadets] made several unsuccessful attempts to dislodge us, but failed, and morning found us in peaceful possession of the premises, with sixty prisoners and three pieces of artillery." The prisoners referred to were members of the "home guard," and not cadets. The three pieces of artillery

¹ In a communication published in the "Battles and Leaders of the Civil War," Lieutenant James Oates, of the 9th Illinois Mounted Infantry, writing of Sherman's march towards Atlanta, says: "It was during the advance that day [May 9, 1864] that we came in contact with the Georgia Cadets from the Military Institute at Marietta, who had come out from the woods at Resaca and formed their line behind a rail fence. After a volley from the Cadets, which killed several of our men, our regiment charged them. . . ."—EDITOR.

belonged to the cadet battery, but they had not been taken into the action. The Federals found them under a shed, where they had been stored for protection from the weather.

The sequel to this scrap of history is briefly told. The cadets retreated in the direction of Marion, some fifty miles distant, where a few days later they were disbanded. General Croxton carried out faithfully his orders to destroy the university. Its handsome buildings, its extensive libraries, and its valuable chemical and physical apparatus, representing in all nearly a half million dollars, went up in smoke. However, like the Virginia Military Institute, the University of Alabama has been rebuilt, and is growing with equal pace with the prosperous State of which it is the educational center. It still retains the military feature as a means of discipline and physical culture among its students; but it is not probable that its cadet corps will ever again have the brush of real war that the boys of 1865 experienced on that memorable April night.

UNIVERSITY OF ALABAMA.

T. C. McCorvey.

"Who ever saw a Dead Cavalryman?"

THE article in *THE CENTURY* for May, 1888, entitled "The Chances of Being Hit in Battle," contains this statement (page 102): "Cavalrymen go into action oftener than infantrymen, and so their losses, being distributed among a larger number of engagements, do not appear remarkable as reported for any one affair. Still, in some of their fights the 'dead cavalryman' could be seen in numbers that answered only too well the famous question of General Hooker, 'Who ever saw a dead cavalryman?'"

The candor and fairness evident in the whole article forbid the thought of a purpose to cast a reflection on this arm of the service, for Colonel Fox at once proceeds to show on indisputable authority a record of 10,596 "dead cavalrymen." The credit given General Hooker of being the author of this interrogatory, as Colonel Fox states it, is open to objection in more than one respect. General Hooker did not ask a question; he did not make an offensive allusion; but he did make a remark from which have grown many phrases, the most frequent being the form now given. The circumstances calling forth the remark are well known to the writer, and are briefly narrated as follows: When Fitzhugh Lee's brigade crossed the Rappahannock in November, 1862, attacking the outposts at Hartwood Church, composed of four companies of the 3d Pennsylvania Cavalry, he inflicted a loss of eighty men, wounded and captured. Soon after this occurrence had been reported to General Hooker, then commanding the Right Grand Division of the Army of the Potomac, he rode over to General Averell's headquarters to confer with him. Of course the matter under consideration was the loss to General Averell's old regiment, whose record of service had given him rank as brigadier-general. As the interview ended, and General Hooker was leaving, he remarked, "Well, General, we have not had many dead cavalrymen lying about lately!" This remark was not intended to be in any sense offensive or derisive, although this is the use

generally made of it. It was no doubt meant in a comparative sense, as the losses in the cavalry up to that time had not attracted any special mention. Standing alone, as it does in Colonel Fox's article, it admits only of a construction which is thoroughly demolished by the force of statement and narration of facts piled on it by the author of the article, and the circumstances connected with it do not sustain the version given.

*Jno. C. Hunterston,
3d Pennsylvania Cavalry.*

Shooting into Libby Prison.

A DENIAL BY ONE OF THE GUARD.

IN an article on "Colonel Rose's Tunnel at Libby Prison," that appeared in *THE CENTURY MAGAZINE* for March, 1888, the author says, on page 780:

A captain of an Ohio regiment was shot through the head and instantly killed while reading a newspaper. He was violating no rule whatever, and when shot was from eight to ten feet inside the window through which the bullet came. This was a wholly unprovoked and wanton murder; the cowardly miscreant had fired the shot while he was off duty, and from the north sidewalk of Carey street. The guards (home guards they were) used, in fact, to gun for prisoners' heads from their posts below pretty much after the fashion of boys after squirrels.

The guard of Libby Prison at that time was the 18th Virginia Heavy Artillery, composed entirely of Virginia troops, and not home guards, and one company (E) was composed of veterans of 1861. This company, formerly known as Kemper's Battery, had been engaged at Vienna on June 17, 1861, and at the first battle of Bull Run, July, 1861.

As to the shooting of prisoners, I was doing guard duty at the prison at that time and very distinctly remember the shooting case referred to. The officer who was shot was Captain Forsythe of the 100th Ohio regiment, and the man who shot him was a private in Company C, 18th Virginia Heavy Artillery, by the name of Charles Weber, and the shooting was accidental. I was standing within three feet of Weber when his gun was discharged, and he was standing in the rear rank of the guard that was just going on duty. Weber was to blame, as he had loaded his gun without orders, and he placed the cap on the nipple and was in the act of letting the hammer down when his thumb slipped and the gun was discharged. He did not have the gun to his shoulder aiming at any one, but it was resting against his right hip in the position of "ready." He had been wounded in the right hand and did not have good use of it, and the morning of the shooting was quite cold, and I suppose these were the causes of his letting the hammer of his gun slip. He was arrested and held until the matter was investigated. The affair cast quite a gloom over our entire command, and Weber was generally blamed for his carelessness.

Since the war I have seen several men who were in the prison at that time, and when I mentioned the shooting of Captain Forsythe they told me that they were satisfied the shooting was purely accidental.

*James M. Germond,
Co. E, 18th Virginia Heavy Artillery.*

TOPICS OF THE TIME.

Prohibition by Law or by Constitution ?

IT can hardly be denied that the cause of prohibition, as that word has hitherto been understood in morals and politics, has been set back materially during the past year. The expectations of its supporters in the Presidential election of 1888 were high, and their disappointment at the meagerness of the results must have been correspondingly intense. That this should be followed by an apparently contemptuous coolness among the politicians, who had so long been used to regard prohibition with profound outward deference, was perhaps disagreeable, but only to be expected ; but there was hardly anything to mitigate the tremendous adverse majorities in the popular vote of Pennsylvania and Rhode Island last summer. Such a year in the experience of a war administration or of a mercantile house would lead to a general overhauling of affairs, in order, if possible, to find the root of misfortune.

Opinions as to the moving cause will vary even upon the facts as found. The prevailing belief will undoubtedly be that, after a fair and prolonged comparison between prohibition and high and restricted license, there is a more general and decided inclination to abandon prohibition in favor of its competitor. The belief of the Prohibitionists will be that their calamities are the work of the politicians ; and there is probably no doubt that many of those who have been saying to prohibition deferentially and for years, "Is it well with thee, my brother ?" have seized this opportunity to drive the dagger deep beneath the fifth rib. There is truth enough in the belief of both Prohibitionists and restrictionists : the unpardonably foolish belief, which can only bring its own punishment, is that the results are due to an increased popular indifference to the evils of drunkenness and of the system under which intoxicants have been sold freely in the past. The people "do care" ; but perhaps they have come to see by instinct objections to the recently developed prohibition policy which Prohibitionists would do well to consider frankly.

We have in this country a written Constitution for the United States and similar written constitutions for each of the individual States. We are much in the habit of speaking of these instruments as "organic laws" and of thinking of them as if they were much the same in kind as ordinary laws, differing only in the intensity of their action and the difficulty of repeal. Such a conception entails many errors. The written constitution differs from a law in almost every point of nature and function. A law aims at both coercion and freedom ; it helps to furnish tests for the decision of disputes ; it makes or secures privileges. A constitution is all this, and more ; it makes or unmakes laws and legislation ; it is the voice of the underlying sovereignty, whatever it may be, imposing restrictions upon voters, upon non-voters, upon governmental agents, upon every manifestation of the political being called the State. But a constitution has even higher characteristics. It is the ultimate expression, not of some one's desires or hopes, not of what some warmly interested people think ought to be done for the people, but of the inmost political life, nature, and development of the people. It

cannot but be a mistake to use so peculiar an instrument as a constitution for purposes peculiarly appropriate to a law. There is no more real kindred between constitution and law than between the subtle, mysterious vital force and the flesh and bones which it builds up.

True as it is that a law must also express some substantial fact of a people's nature and progress, or else it will fail, this is very far from putting a constitution on a par with a law. There must be some field for experimentation and possible mistake ; but this must be in a law, not in a constitution. In a country like Great Britain, which has no written constitution, the real offense of him who advises or commits an "unconstitutional" act is that he is throwing his own minute personality athwart the whole life and development of his people, and is attempting to impose his will as a limitation upon the national career. Where is the difference in the act of him who disobeys a written constitution, unless it be that his offense may usually be stated in more definite terms ? Where, in reality, is the difference in the act of him who should assume to force upon a people such a constitution as he thinks they ought to have, but which they would never have made for themselves ? Either they will invade or override it, or else he has permanently marred or crippled their whole political development. "An unconstitutional constitution," instead of being a contradiction in terms, may be a definite and true expression for an unnatural constitution.

Has there been the highest wisdom, then, in the new policy of the past few years, of "imbedding prohibition in the constitutions" of the States interested ? There are, no doubt, cases in which such a policy is valid, when it indicates just the line and point of a State's own development. But there are cases which are not of this kind, but merely colorable imitations of it : it is possible, as every one knows, to coerce the real will of voters and reach the same result by a skillful use of temporary circumstances, by a strategic balancing of party against party, or by a spasmodic and exciting use of moral forces. Such a process could make at the best only an "unconstitutional constitution" ; it would be the worst thing possible for popular government ; and yet the temptations to seize upon such a success, and hope for good results, are peculiarly great for earnest men. Was it wise to multiply and intensify such temptations by the adoption of an indiscriminate policy of constitutional amendment ?

"Everybody knows more than anybody" ; and it may very well be that the disasters of the past year are due to an instinctive popular perception of the dangers of the new policy. It seems clear that, where popular condemnation is fairly to be inferred, it has thus far been provoked mainly along the lines of this policy. But it should not be forgotten that there is an entirely distinct field, that of law, applying either to a whole State, or to part of it by local option. None of the facts available seem to indicate that this is any the less debatable ground than it has always been. At any rate, those who believe that prohibition in this sense is dead would do well not to be too hasty in administering upon its estate.

American Game Laws.

IN so extensive and various a country as this it would be impossible to fix a date even so general as the English Twelfth of August, and the "opening of the season" has varied hopelessly for different regions and different types of game. There has been, nevertheless, an apparent disposition to make the event center somewhere about September, and it seems to be increasing in strength with the growing tendency to make the opening of a season compulsory, rather than conventional or traditional.

For years, probably rather for centuries, the general American feeling with regard to the edible portion of the wilder animals was one of indifference; the supply was abundant, and it was not the business of any one in particular to impose any restraints on the desire to use the supply either for pleasure or for profit. The unhappy results of this indifference are familiar. Every one was at liberty to kill at discretion; men shot, and snared, and seined as they saw fit. The contest was increasingly unequal. The swiftest and most acute of the game animals found it continually more difficult to gain places of security against the improved weapons and transportation of their pursuers; and even the fittest for survival had an increasingly precarious tenure of existence. Fools or selfish men, if they were able to buy a ticket on a far Western railway, were thereby enabled to appropriate to themselves that to which they really had no title, except in common with the millions who were not in position to assert their claims. "Sport" became a veneering for senseless and heartless massacre, which had almost done its work before any general notice was taken of it. It is a national disgrace that one of our few characteristic animals, the bison, has practically ceased to exist. But only those far-sighted men who have invoked the shield of law against the further course of this destruction can tell us how narrowly the caribou, the prairie-chicken, and the different varieties of game fish have escaped the fate of the bison.

As such results have opened the eyes of the people, the reign of unlicensed selfishness has come to an end, and we are entering upon the era of systematic protection for game. State after State is coming to recognize the fact that the game animals eat little that could be required for man, while they may become, under protection, an important part of the national larder; and the States are becoming as willing to grant such protection as they would to the fields or factories against similar acts of folly or ill-will. Parts of the year are marked off by statute, and during these periods the game animals are not to be injured, but are to enjoy a season for race recuperation. It is none the easier for them to find holes or corners of security against modern invention; but the law comes in to give them a time limit, within which the most active or most selfish of their pursuers must let them alone. The whole change of view has been a complete one. A little more than a century ago it seemed to Franklin the most natural thing possible to declare that, rather than submit to Parliamentary exaction, he would retire with his family "into the boundless woods of America, which are sure to afford freedom and subsistence to any one who can bait a hook or pull a trigger." Already there are not many places, at least between the Atlantic

and the Mississippi, where the patriot who should seek an indiscriminate subsistence in that way would be safe from arrest and punishment as a poacher.

The American "poacher," however, will always be a very different offender from his English prototype. All that the American law will require will be a due respect for the rights of the people. Game is not to be preserved for particular persons, but for all; and during the proper time limit all men may become "poachers" so far as the American game laws will concern themselves with him. All this may seem to many quite incompatible with the fact that, even within proper time limits, no one may pursue game upon the land of another without express or tacit permission, and they may conclude that there is not to be any essential difference between English and American game preservation after all. Such a belief confuses two different things, land ownership and game protection. If we are to have land ownership, the owner must be owner altogether, and his ownership must cover the live stock on the estate, be it wild or tame. But this is just as it always has been. It is true that there is an increasing unwillingness to grant permission for the intrusion of others in pursuit of game; but the permission has always been legally necessary, as a part of land ownership, and should not be attributed to the new system of game protection. The change is merely a corollary of the country's development; the permission to hunt or fish, which was once valueless and was given with corresponding liberality, is now valuable and must be paid for.

It would not be fair, however, to leave even an implication that the change, legal as it may be, is withal an injury to the people. When one tract of wild land after another is taken out of the market and reserved as a hunting or fishing park, when the people of successive neighborhoods find that the lakes, brooks, and forests over which they and their fathers have fished and shot from time immemorial are now closed to them, it is easy to suggest to them that they have been injured in some way. One must take the development as a whole, not in parts. The case is not one in which powerful barons have entered by force and ousted the people from their natural privileges. It is merely that the lake, the trout-brook, or the shooting-ground has acquired a new value from a general development which, in another part of it, has enriched our tables with fish and game from the most distant parts of our own country and with food products from all over the world. The parts must go together. He who wishes to turn back the years, and fish and shoot as freely as his grandfather did, cannot surely expect to enjoy the Northwestern salmon, the Southern berries, the Florida oranges, the California figs, the Western beef, the tinned or glass goods from all over the world, for which his grandfather possibly would have been glad to barter all his meager privileges of the chase. Such details of development are enough to show that, while there is always a scale of popular loss, it is altogether outweighed by the scale which represents the popular gain.

Progress in the Copyright Reform.

WE commend to our readers the perusal of Mr. Hayes's Open Letter in the present number of *THE CENTURY*, recalling the confidence of the literary men

of 1837 in the speedy passage of a bill to prevent the theft of literary property, and suggesting whether a similar confidence felt by the literary men to-day may not be misplaced. But the reader must be careful not to miss the significance of the record. The very consideration which seems to imply the hopelessness of the cause is indeed the fortress of its strength. Fifty years of steadfast adherence to the demand of their predecessors is a star of the first magnitude in the crown of American men of letters. Their hands, surely, are clean: the robbery of their fellow-writers of other countries is not of their procuring; the incidental robbery of themselves is not by their consent. They have never been remiss in protest against both, but with singular unanimity have borne their testimony for the national honor even against its official custodians, and still the protest goes on. Were this sense of outrage dulled by years, were the voice of the protestant less clear or constant, there would indeed be reason to despair of the result. As it is,

Time but the impression stronger makes,
As streams their channels deeper wear.

Besides the solidarity and the wide-spreading influence of American authors, there are other reasons for thinking that we are not far from a settlement of the question. Within five years, through the agitation of official organizations, the movement for a just law has acquired a momentum which has carried a copyright bill through one house of Congress and past a committee of the other. That it did not wholly succeed was due, not to the will of the House of Representatives, but to an extraordinary abuse of the rules of the House, an event not to be foreseen, nor, if foreseen, prevented. On the eve of the renewal of the struggle, it is well to rehearse briefly the story of the past year—the most eventful and successful in the course of the agitation.

On more than one occasion when copyright legislation was sought at the hands of Congress, senators replied to the entreaties of the supporters of different bills: "This is a subject remote from our experience. Go home and agree among yourselves upon a copyright law and we will support it." After repeated attempts to make progress along separate lines, this is exactly what the reformers, by weeks of negotiation in committees, succeeded in doing. The result was of course a compromise measure, not wholly acceptable to most but cordially supported by all, the greatest sacrifices being made by the authors, most of whom would prefer a pure and simple copyright, free from conditions. This bill Mr. Jonathan Chace had the honor to introduce in the Senate, Mr. W. C. P. Breckinridge in the House of Representatives. To the support of the measure the joint committees of the American [Authors'] Copyright League and the American Publishers' Copyright League gave unremitting and exhausting efforts, assisted by official representatives of the printers' unions. The bill was successfully urged before committees of each house, and the personal solicitation of members was patient and thorough. Realizing that the chief point was to secure the attention of legislators, a series of readings by prominent American authors was given at Washington in April last, being the third series organized by the Authors' League in aid of the cause. On the 9th of May, after a considerable debate,

Mr. Chace succeeded in obtaining in the Senate a vote on the bill, which was as follows: yeas 34, nays 10.

Much has been said, and justly, about the supineness of our lawmakers on this subject, but it must be remembered that no copyright bill has ever been rejected by them—in fact, if we mistake not, this was *the first direct vote upon the merits of an international copyright bill ever taken in the American Congress*. The names of the senators voting in favor of the bill deserve to be recorded. They were:

Allison,	Edmunds,	Morgan,
Bate,	Evarts,	Paddock,
Blair,	Farwell,	Pasco,
Blodgett,	Faulkner,	Payne,
Bowen,	Frye,	Quay,
Brown,	Hampton,	Sawyer,
Butler,	Hawley,	Spooner,
Chace,	Hiscock,	Stockbridge,
Chandler,	Hoar,	Turpie,
Cullom,	Ingalls,	Wilson of Iowa,
Davis,	Mitchell,	Wilson of Md.
Dolph,		

Senators recorded as paired who would have voted for the bill were:

Blackburn,	Hale,	Platt,
Colquitt,	Manderson,	Plumb,
Dawes,	Morrill,	Sabin.
Gray,		

Senator Vest made an able speech in favor of the principle of copyright pure and simple, but felt obliged to vote against the bill on account of the "manufacturing clauses."

Twelve absent senators were not paired, including, however, several who were known to favor the bill. But omitting these 12 the record shows 44 votes for and 20 votes against the bill.

The preponderance of the affirmative vote greatly inspired the friends of the measure and their efforts were redoubled among the Representatives. Many measures—chiefly the Mills tariff bill—combined to postpone the consideration of the bill, and it was not till the 6th of February that an opportunity offered to call it up. It was agreed that on this day a vote should be taken on the motion to suspend the rules and fix a day for its final consideration. It was feared by the opponents of the bill (whom a careful canvass of the House showed to be largely in the minority) that an effort would be made to suspend the rules and pass the bill without debate. This programme, however, was never entertained by the friends of the bill; and assurance to that effect being given, a number of its opponents agreed to vote for its consideration. It was now thought beyond question that the motion would prevail by the required two-thirds, and that with the advantage of the open debate the bill could be passed a few days later by a majority vote. But a new kind of opposition now presented itself—the opposition of the filibuster. This weapon, heretofore employed only to protest against the political oppression of majorities, was now used to postpone the redress of a form of oppression the most indefensible. Against the will of the House, which was at the mercy of one member, Mr. Lewis E. Payson of Illinois, the bill could not be reached, and thus died without a vote. It has been urged in defense of the action of Judge Payson, that his opposition was directed against other measures, which it was feared might be considered on that day. It is to be hoped that this is the fact. If so, there will be abundant opportunity to demonstrate

it at the coming session. For, that the contest will be continued on the part of those who advocate a just and honorable national policy is a matter of course. The traditions of the Senate may be depended upon for the passage of the bill by that body; and so intelligent have Representatives become, that, in our opinion, nothing but filibustering can defeat the bill in the next Congress, as certainly nothing else could have defeated it in the last. It is only a question of time when the judgment of legislators will be convinced to the point of making odious any attempt to defeat the will of Congress by that unfair and un-American device.

What a series of paradoxes does the copyright question reveal! Intensely "American" country papers countenancing the defeat of the will of the majority of the

House for the privilege of spreading without compensation English sentiments and opinions! A government based on the equality of all men before the law invoked to defend the robbery of foreigners! Members of Congress, sworn to defend the Constitution, virtually nullifying the clause providing for the encouragement of literature and the fine arts! And, chief of all, the works of foreign authors considered so valuable to the country, not that they must be paid for, but—that they must be stolen!

The history of the American agitation for international copyright is, in the words of Æneas to Dido, "a long and intricate tale of wrong," and the next Congress owes it to itself and the country to bring the disgraceful record to an honorable conclusion.

OPEN LETTERS.

International Copyright: a Literary Montezuma.

FAR away in the barren and sunlit land of New Mexico, and on that ancient and wonderful road the Santa Fe trail, stands the old Pecos church. Every morning, just as the king of day sends forth the rays which announce his coming, the poor, patient priest leaves his half-ruined quarters and, with a pathetic faith, undaunted even by protracted and crushing disappointment, looks to the east, as have his predecessors for ages, for the coming of Montezuma, the Great Deliverer, the beneficent father of his people. Just so in these times of what Mr. Lowell calls "reckless and swaggering prosperity" do certain sanguine and optimistic souls watch for the dole of a small measure of justice to the literary brotherhood. Does any one suppose that this earnest desire, this eager anticipation, are recent things? On the contrary, I read on the stained and faded editorial page, now before me, of the "Knickerbocker Magazine" for February, 1837,—more than *fifty-two* years ago,—as follows:

INTERNATIONAL COPYRIGHT.—The advocates of this measure, we are glad to see, have begun to bestir themselves, not only with the political laity, but with the delegated priesthood of Congress. This is well. We look now to behold the steady advancement and profitable discussion of the matter. There are stores of argument in reserve that can be produced with wonderful effect in disquisitions on the question.

Fifty-two years of disappointment! In that half-century every material interest in this country has been mightily fostered and developed; a great war has been fought; the threatened disruption of the Union has been averted; slavery is dead—and international copyright, the literary Montezuma, still cometh not. The poor watchers were hopeful in 1837; they are hopeful in 1889; how will it be in 1937?

A. A. Hayes.

Free Kindergartens in New York.

ONE of the peculiarities of the philanthropy of the present time is the emphasis it gives to the value of preventive work. Never before has so much attention been given to childhood or so much importance been attached to the formative period of life.

VOL. XXXIX.—23.

Statistics show that the country is producing more criminals in proportion to the population, and younger ones, than it produced twenty-five years ago, and the cause of this alarming state of things is found to be in the neglect of childhood. It is seen that the tendencies of infancy, whether for good or for evil, crystallize into the character of maturity, and the philanthropist, weary of fruitless efforts at reforming, is seeking for means of forming wisely and well.

The home is the proper place for beginning, but in many cases there are practical difficulties in the way, and thoughtful people are turning with hope to the mission kindergarten, which, whether regarded from the standpoint of the educator, the social reformer, or the Christian teacher, contains possibilities of prevention and upbuilding not to be found in any other available agency.

It is adapted to children of three years of age, thus meeting the demand that in some way the years below school age shall be utilized for the highest educational purposes. The training of the kindergarten includes the whole child. For his hands there is delightful occupation, through which he learns to love work and to respect himself as a producer of that which is useful and beautiful; there is well-directed activity for the busy brain; and, above all, the higher faculties of love, joy, sympathy, and reverence are brought into constant and healthy exercise.

During the last decade interest in the mission kindergarten has been growing, until there is now in the country scarcely a city that has not one or more such institutions. More than ten years ago Mrs. Quincy Shaw began the work in Boston by establishing in the worst quarters of the city about twenty kindergartens, into which the children of the lowest classes were gathered. Well-trained teachers were employed, and the whole enterprise was under the wise and efficient superintendence of two kindergartners. It is the testimony of the police that the moral aspect of whole neighborhoods has been improved by these institutions. That the system is believed to have a high educational value is proved by the fact that after so thorough a trial it was last year adopted as a part of the public-school system of that city.

In Philadelphia, a few years since, a similar movement was started as a result of the thorough work of the Society for the Organization of Charity. It was found that, in the homes and haunts of the pauper and criminal classes, children were growing up in appalling conditions of ignorance, idleness, and vice. As it was felt that the only radical remedy for existing evils and the only hope for the future lay in vigorous preventive work, kindergartens were established in every ward of the city, and the satisfaction they gave led to their adoption as a sub-primary department of the public schools.

In San Francisco, mission kindergartens, established as an offset to the hoodlumism which threatened the safety of society, are now the most popular of all the philanthropies. In Chicago, St. Paul, Cincinnati, and Brooklyn there are efficient associations of this kind, and in St. Louis the kindergarten has for several years been a part of the school system.

New York has many of these missions; but with a tenement-house population of 1,100,000, of whom more than 142,000 are under five years of age, and with a constant influx of the lowest class of foreigners, it is felt that this is a time of emergency to meet which extraordinary efforts are necessary, and a movement has been started looking to the establishment of kindergartens throughout the city.

Angeline Brooks.

"The Use of Oil to Still the Waves."

READERS of the article under the above title in this magazine for March, and of the Open Letter on the same subject in the August number, will be interested in the following extract from the log of the steamship *Chattahoochee*, from Savannah to New York, April 7, 1889:

At 5 A. M. gale (from northeast) burst upon us with velocity of eighty miles per hour—the sea and wind something terrible; at six a sea came over the bows, end on, doing considerable damage, knocking in pilot-house windows and flooding same; ten to twelve began to board us on port-quarter, knocking in saloon and flooding same; at eleven I had oil bags put in port and starboard water-closets forward, and port one aft. When they were in working order I reluctantly stopped the engines, and, to my heartfelt desire, the ship fell off to southeast by south and took a position of her own, and was as comfortable as could be reasonably expected, shipping little or no water to speak of, so that the crew could work with the utmost safety in repairing damages.

This all done in the middle of one of the worst gales I ever encountered in thirty-three years' experience at sea. Every ship should have oil for an emergency. It is all it is recommended to be. The action of oil upon the water is upon the crest of the wave: the oil forming a slick upon the surface breaks the crest, in which is all the danger. It has no effect upon the great undulating motion of the ocean during a gale.

The quantity used in this case was about forty-five gallons in eleven hours; it took about five gallons to start each bag, and about eight quarts per hour to feed the three bags.

From 5 A. M. to noon ship drifted about three miles per hour to the southeast; from noon to 11 P. M. three per hour to south.

Ship's position at noon, by d. reckoning, latitude 36° 38', longitude 74° 41'.

At 8 P. M. gale began to moderate.

At 11 P. M. started ahead.

Oil used, five gallons raw linseed oil, ten gallons lard, thirty gallons cotton-seed. Used separately—no mixture.

tember 3, 1889, with a cargo of 5300 barrels of paraffine oil for Copenhagen, which encountered a hurricane in latitude 70°, longitude 38°. The account of her rescue by the Clyde steamer *Yemassee* off the Delaware Breakwater, given in the "New York Times" of September 14, contains this statement, attributed to Captain McKee of the latter vessel:

The *Yemassee* sped to the assistance of the *Alsylvia*, and then lay to within about one hundred feet of her. Every time the bark made a plunge several barrels of oil were shot out of her hatchways. Oil was oozing all over the vessel, and had covered the surface of the water for quite a distance around. This waste of oil had proved the salvation of the bark's captain and crew. The water if not quiet around was free from breakers, and the boats rode the waves with ease. Had it not been for the oil, ship and boats would have been smashed long before help arrived. As it was, the bulwarks were breaking up.—EDITOR.]

A Speech of Lincoln's.

THE closing paragraphs of the biography of Abraham Lincoln in the August number of THE CENTURY MAGAZINE recall a memorable scene at the White House, which is now given to the public and makes a suitable appendix to the record of "Lincoln and the Churches." It occurred after an anniversary of the United States Christian Commission, which was held at the Capitol in the hall of the House of Representatives, some time in the winter of 1863, in the presence of a great assembly, in which the President was a silent and deeply interested auditor. With characteristic modesty he declined a seat upon the platform, and the only public demonstration that he made during the evening was by a request, penciled on a slip of paper and handed to the presiding officer, that Mr. Philip Phillips, who was one of the sweet singers of the war-time, would sing the hymn entitled "Your Mission," which was a favorite of the President. This request was announced and the piece was sung with wonderful effect.

After the anniversary, arrangements were made for a private reception of the delegates by Mr. Lincoln at the White House the next morning, with the distinct understanding that nothing that took place should be made public. This put all persons at their ease and the promise of privacy was well kept. It was a time of great anxiety and of long suspense; one of those critical periods when decisive battles were expected, and when news from the front was scanty, and slow in coming.

At the appointed hour the delegates were ushered into the President's office. Soon afterwards Mr. Lincoln came in slowly and looking careworn, sad, and anxious. In brief remarks by men representing the various work of the Christian Commission, he was told that we had no requests to make, no favors to ask, no offices to seek; that we were there only to assure him of our profoundest respect, sympathy, and loyalty to the Government and to himself as its head, and of our intention to carry on the philanthropic and spiritual ministrations of the Commission in the army and navy, with the continued sanction and help of himself and of the military and naval authorities. It was also said that "behind all the political and patriotic forces of the Union there was a vast Christian constituency in the homes and churches of loyal States which would never fail him with their prayers and consecration to

[A similar instance is recorded in the case of the Norwegian bark *Alsylvia*, from Perth Amboy, Sep-

the cause for which the Government was contending against armed rebellion in the field of war, and against disloyal opposition in the North."

To these sentiments and assurances Mr. Lincoln listened with closest attention, and he replied, as my vivid recollection serves me, chiefly in these very words:

"I thank you, gentlemen, for this interview. Such visits strengthen me. No man who knows what we know here of the state of things can fail to see that a greater than a human hand is controlling the issues of this war. If our great enemy over there," pointing his finger across the Potomac, "could have had his way, he would have had victory long ago. But the Almighty has not thought as he thought. If I could have had my way, I would have had victory long ago. But it is evident that the Almighty has not thought as I thought. I know not how, nor when, nor by whom it shall be accomplished, but I have a firm, unshaken faith that in the end success will crown our arms, and that the Union of these States will be restored and maintained."

Then, alluding with kindly appreciation to the remarks of one of the speakers respecting the loyalty of the Christian constituency in the churches of the land, he said:

"Whatever differences of opinion may exist concerning the management of the war, it is manifest that the Government must be sustained by the people of the loyal States. For example," said he, with a humorous smile and a twinkle of the eyes that lighted up his grave face for the moment, "if a man wishes to be elected President of the United States, he must sustain the Government in prosecuting this war to a successful end, because if it should not be victorious there will be no Union for him to preside over!"

Adding a little in this strain and closing with renewed expressions of his gratification in the interview, and of his warm approval of the beneficent work of the Commission, the President greeted each delegate with a hearty handshake and a pleasant parting word.

NEWARK, N. J.

William J. R. Taylor.

"Governor Seymour during the Draft Riots."

I WAS one of the "multitude," described by Mr. Wheeler in your July number, who listened to Governor Seymour's address on July 14, 1863.

During most of the time of the draft riots the neighborhood of the "Tribune" office was occupied by a turbulent crowd, and an attack on the building was only prevented by the preparations believed to have been made to defend it. If not a crowd of actual rioters, it was distinctly composed of sympathizers, and very many of them were of just the class who were elsewhere active participants in the riot. It was such a crowd, and not "a multitude of persons naturally attracted to the City Hall by the news that the governor of the State, whose arrival was anxiously expected, had actually come." The whole tenor of his speech was distinctly, and in his usual adroit manner, meant for just such a class, and not for interested but peaceable citizens, and this the extracts given in the Lincoln history show. I was standing with a friend looking on from the outside of the crowd while it was in the square in front of the

"Tribune" building when a sudden movement was begun towards the City Hall. I followed, or rather anticipated, the movement as I saw it begin, and when I found it was to be addressed by some one I moved up to within hearing distance, and listened to the speech.

That it was an apology for the rioters, who were told that they were unjustly dealt with by the Government, and that if they would abstain from violence the draft would be stopped through the measures that he had taken, was the meaning given to it by the multitude, and no other meaning was thought of then, and for some time afterwards, by any one. The governor had only recently made his great Fourth of July speech in the city when he had arraigned the Administration in the most violent manner, exactly in unison with his speech to the incipient rioters.

NEW YORK CITY.

Miln P. Dayton.

The Methodist Episcopal Church South.

IN the August CENTURY the authors of the Lincoln history say, "The Methodist Church in the South had separated from their brethren in the North fifteen years before the war on the question of slavery, and a portion of their clergy and laity when the war broke out naturally engaged in it with their accustomed zeal; but they were by no means unanimous, even within the seceding States, and the organization was virtually wrecked by the war."

The close of the war found the Methodist Episcopal Church South, with over 400,000 members, impoverished and more or less discouraged; but it was not "wrecked" in any sense that was not true of other churches in the South, and of the whole people. Nor did any part of the Southern people rally more quickly from this fearful blow. The 400,000 with whom this church started in 1866 became 1,101,465 in 1887, and its "organization" was never in more excellent working order than it is to-day. It is one of the great churches of our nation, not more than three or four others outranking it in any element of strength.

At the breaking out of the war the individual members of this church were for or against secession according to their individual ways of looking at things. But the church as such made no deliverance upon the subject, considering it to be its mission to preach the gospel to secessionist and unionist alike, and not to promote any special ideas of government.

DALLAS, TEXAS.

John K. Allen.

Erratum.

IN the July number of THE CENTURY, in the article "Gentile da Fabriano," an error occurs in the sentence beginning on the 27th line of the second column of page 450, "He was the contemporary," etc. The clause, "not far from the same time as Gentile," should come in after the first "and died" instead of after the second, which would make the sentence read thus: "He was the contemporary of the brothers Van Eyck, the elder of whom, Hubert, was born about 1366, and died not far from the same time as Gentile, in 1426, while John was twenty or thirty years younger, and died probably in 1446." So far as the historical facts go, the article contains the material for the correction of the error.

BRIC-À-BRAC.

The King's Daughter.

("THE KING'S DAUGHTERS" IS THE NAME OF A NUMEROUS
BENEVOLENT ORGANIZATION OF AMERICAN WOMEN.)

WHIN you was out a lady called,
A lady foine and fair,
Wid swate blue eyes, and putty mouth,
And lovely banged up hair.

And whin she asked ef you was in,
Says I, "No, mum, she 's not;
But ef you 'll lave yer card wid me,
I 'll see it 's not forgot."

"Oh, niver moind," says she. "I came
A little news to bring
About some poor we 're doing for—
I 'm dau'ther av the King."

Thin, "houly saints!" I lost me wits,
And curtsied down so low,
That whin the princess left the door,
I niver saw her go.

But gettin' quick me sinses back,
I hurried down the strate,
And bowin' low, says I to her,
"Pray won't yer hoighness wait?"

She looked at me and smiled most swate,
Wid all her white teeth showin':
"No, not to-day; I 'll come again.
'T is toime I must be goin'."

Now, though I am a dimmycrat,
All kings and queenses hatin',
And bein' an American,
All white folks aqual ratin',

I 'd loike to know the princess' name,
And who might be her father,
And what she 's doin' over here
So far across the wather.

And ef her Royal Hoighness wants
A maid to wait upon her,
I 'll do it on these blissed knaes,
Sure 's me name 's O'Connor.

Mary L. Henderson.

To E. C. S.

(ON FINDING BARNUM IN FULL BLAZE BEFORE HIS DOOR.)

My Edmund, lately listening to the tone
Of thy clear harp, the while I picked mine own,
Much have I marveled by that mighty sign
Thy conquering numbers so prevailed o'er mine.
But when I see, in fond familiar calls,
This blazon new of zoöphoric walls
Before the generous, ready-opening door
To numbers known—its own being 44—
All in that vision is revealed to me.
How much thou owest to thy *vis-à-vis*!
Unmindful that the Greatest Show on Earth
As sponsor stood at thine each stanza's birth;
That these gay posters plenteously spread
Were but the curtains of thy Muse's bed,

Praise I gave only to the tuneful Nine,
And took no heed of other Pens than thine.

But, much it is that thus in soft retreat,
The cushioned ambush of a window-seat,
Reflected halos wreathed about thy head
Of chromoed gymnasts, green, and blue, and red;
Thy *rus in urbe* no contracted field,
But all of Afric's burning heart revealed;
Far from the madding crowd, compelled to pay,
Thou calm mayst sit and free the Show survey:
See the lithe leopard axioms confound,
Changing his spots at every agile bound;
The zebra, bearing with a martyr's zeal
The stripes that only those about him feel;
The tall giraffe a shapely neck display,
Where long, long woe might well be wept away;
While for communion if the giant cries,
Lo! the Fat Woman gives back size for sighs!

Here under thine own vine and fig tree's shade,
And the sweet influence of the Bearded Maid;
Nature anigh—not rocks, nor streams, nor dells,
But herds, heard often, and wild woody smells
(But a bare pole's length from the canvas where
The sleek seal scuds before the Polar bear);
Here thou mayst sit and thy light zither play,
The ostrich rival with thine easier lay;
Soft sonnets warble to the timid deer,
Troll bolder ballads to the buck-a-near.
Tiring of concourse that thy pace confines,
Of quadrupeds—and quadrupedal lines,
With longer stride let Pegasus then lope—
Pentameter—loved and approved of Pope;
That all who visit the Great Show may see
Thou 'rt not outfooted by thy *vis-à-vis*;
And own, though Barnum permeates the street,
Thy airs, O Singer! all are strangely sweet.

Indeed, when I reflect on all thou hast,
And with thine own my lowlier lot contrast,—
No circus near, no beasts about my door,
Save the one wolf that sits there evermore,—
I ask why Fate does thus deny to me
The beasts and blessings she bestows on thee.

In mood more generous it is joy to know
Within thou hast that—something—passing show;
Without, the rarest raree-show e'er shown—
For thy rare Muse the one Museum known.
If still with greed I view thy *vis-à-vis*
One further thought bids all such baseness flee:
When Night comes on and the dark shades descend
On man and beast—and queer things without end;
When wild cats try their subtler quaverings
And tame ones tune their yet unfashioned strings;
When social simians to the chimpanzee
Speak in a tongue none understands but he,
And Jumbo answers from his misty shroud
Back to the joyous apes that call to him aloud;
Then when from broken slumbers thou dost crawl
To hurl a bootjack at the—*blank*, blank wall,
With sharp, swift speech that cleaves the midnight air
Curt as a curse but heartfelt as a prayer—
Speech all thine own, though neighbors think they
hear
English as spoke by thy old "Buccaneer";
Then, O my Edmund! then I envy thee
Thy verse, thy *vis*—but not thy *vis-à-vis*!

Charles Henry Webb.

FIELD-MARSHAL THE DUKE OF WELLINGTON.

No. 2.

SELECTIONS FROM WELLINGTON'S LETTERS.

APSLEY HOUSE, PICCADILLY, W., December 2, 1888.

DEAR MRS. DAVIES-EVANS:

I am very glad to give you permission to publish the letters of my grandfather which you have already submitted to me for perusal.

Yours very truly,

WELLINGTON.

MRS. SPENCE—THE "LOUISE" OF THE LETTERS.
(FROM A PICTURE IN POSSESSION OF THE DEAN OF
GLOUCESTER.)

THE great Duke of Wellington's character from a military and a political point of view has been fully discussed by several writers: namely, W. H. Maxwell, Prebendary of Balla, in his "Life of Wellington," 1839; Charles Duke Yonge in his "Life of Wellington," 1860; Gurwood's "Despatches of the Duke of Wellington"; the Rev. G. R. Gleig, Chaplain-General to the Forces and Prebendary of St. Paul's, in his "Life of Wellington," translated from the French of M. Brialmont, Captain of the Staff of the Belgian army.

The first two authors do not touch on his private and social life; and Mr. Gleig does so only in two chapters, a considerable portion of one being devoted to the duke's opinion of the military defenses of Great Britain. It has been thought that the accompanying letters would interest the public, as showing the gentler side of those qualities which habitually occur as characteristic of the "Iron Duke"—

He that gained a hundred fights,
Nor ever lost an English gun.

Mr. Gleig indeed explains that the sobriquet was given to him in jest, and "not, as has been said over and over again, that the duke never entertained a single generous feeling towards the masses." He continues:

Great misapprehension exists both at home and abroad concerning its origin. The fact is, that it arose out of the building of an iron steamboat which plied between Liverpool and Dublin, and which its owners called *The Duke of Wellington*. The term *Iron Duke* was first applied to the vessel, and by and by, rather in jest than in earnest, it was applied to the duke himself. It had no reference whatever, certainly at the outset, to any peculiarities of his Grace's disposition.

The letters in question were written to a young friend of his, Mrs. Jones of Pantglas, afterwards Lady Levinge. At her death they came into the possession of her daughter,¹ Mrs. Davies-Evans, the "Lilla" referred to in them.

¹ Mary Eleanor, wife of Herbert Davies-Evans, Esq., of Highmead, Lord Lieutenant of Cardiganshire.

Copyright, 1889, by THE CENTURY CO. All rights reserved.

He was very kind and much attached to Mrs. Jones, who at the time was nearly sixty years his junior, and who went much into society. Among other things she was gifted as a conversationalist and letter-writer, and in the latter capacity contributed the news of the day to him in an easy manner when his increasing deafness rendered general society irksome. That this was so will be seen by his letter of October 15, in which, after descending on the delight of English country houses, he says :

I have been in the habit of visiting much, and enjoyed the society until I have become so deaf as to be unfit for social life ; and I now go only to attend Her Majesty's Invitation, or to meet Her Majesty

MRS. DAVIES-EVANS—THE "LILLA" OF THE LETTERS.
(FROM A MINIATURE.)

as recently at Lord Ellesmere's, as I find it irksome to pass eighteen hours out of twenty-four in Society, and not hear one word that is said. I never go anywhere now excepting to Lord Salisbury's for a night.

How much he appreciated Mrs. Jones's letters is evident from the various allusions throughout the correspondence, and less than a month before his death he writes, "My delight in receiving and perusing your letters augments daily."

The letters from himself are written from London, Walmer Castle, and Strathfieldsaye, with the exception of a few from Worsley and Windsor. They have been selected with a view of either giving his account of current affairs, or demonstrating some special trait of character. Under the first heading are those

describing the Queen's visit to Manchester and Lord Ellesmere's, etc. At the latter place, although many of the festivities had to be carried out in the midst of drenching rain and in the open air, he describes the sight as "beautiful!" and he gives the palm to the entertainment of Her Majesty at Worsley as outshining any he had ever witnessed. "I have been at the Reception of the Queen at many of the great Noblemen's Houses, and I have received Her Majesty myself. But I have never witnessed arrangements more perfect or handsomer than those made here."

It is curious now to read of the Queen traveling by canal boat to the "Canal Station," and to hear of "a party of 300 to 400 well-dressed people, ladies and gentlemen," running beside the duke's carriage through Manchester and escorting him to the railway station.

His account of his first visit to the Crystal Palace, the "Glass Palace" as he calls it, is amusing as showing the great discomfort which is possible to accrue from extreme popularity.

Never did I see such a Mob [he says], or get such a rubbing, scrubbing and mashing. There were 100,000 people in the Building. . . . They rushed upon me from all directions—Men, Women, and Children, all collecting into a crowd and endeavouring to touch me! I had rode there and sent my horses from the Eastern Entrance to the Southern one opposite Princes Gate into the Park, and many followed them and met me in the Transept. I expected at every moment to be crushed, and I was saved by the Police alive!

We gather from the correspondence that he distrusted the kinsman of his old enemy, for the comments he makes on Louis Napoleon and his *coup d'état* are by no means favorable. Political allusions are very slight and thinly scattered through it.

With regard to the second heading, personal traits and peculiarities, the illustrations are much more numerous. One of the first that we notice refers to his love of nature.

"I continued to admire the beauty of the Sky and the Sea, as I hope you did! . . . I never was out on a more beautiful afternoon," he writes to Mrs. Jones after returning from a ride on the Downs with her, and showing her the beauties of the neighborhood. And connected, perhaps, with this is the fact that he never became quite reconciled to railways. From Windsor Castle he says: "I arrived here by the road to the great amusement of the Queen. But I was in excellent time—indeed before the other Knights of the Chapter." And from Strathfieldsaye: "I have come down by the Road, and made a good journey. . . . I had the sun in my eyes during the whole of it, but preferred it by far to going by the Railroad, tho' I should have travelled with the sun behind me."

WELLINGTON. (AFTER THE PORTRAIT, SUPPOSED TO BE BY BENJAMIN HAYDON, OWNED BY RICHARD P. HERRICK.)

And in his very last letter from Walmer Castle :

I have been twice to Folkestone, going and returning the short distance between Dover and Folkestone by Railroad ! which takes a great deal of time, as one must wait at the stations for the hours at which the Trains pass on the great Lines !

The grave and earnest tone running through the correspondence is particularly noticeable in an age in which badinage and a wish on the part of so many to be amused is con-

spicuous. Though always cheerful, there is scarcely a word of pleasantry in it, except in the following instances :

I heard this morning that the Duchess of Gloucester lives upon the visits which the Duke of Wellington pays her. I hope her Royal Highness will thrive upon them ! . . . I went to visit my young friends in Biggin Street. But they and the Governess must have gone as all others in Dover did to see *the Show* in the streets [meaning himself holding a Pilot court] at the very same time at which *the Show* went to see them ! . . . I hope you was

amused at Goodwood, and did not lose *your money*. . . . If you come at six and we dine at seven, there will be ample time "*pour la toilette!*"

— a sentiment most of the smart ladies of to-day would hesitate before indorsing!

Then we are struck by his activity of mind and body, his undulled sympathies with all the questions of the day, and the utter absence of that stony indifference which so often accompanies and chills old age. The four letters relating to the painful tragedy of the burnt ship

begin with Royalty: he is delighted with his godson, Prince Arthur, whom he thus describes:

I have seen my Godson, who is in a very prosperous state. He trots about in hand perfectly. He saluted me in my fashion! Put his hand up to his head! He is a fine and clever child.

Mr. Gleig tells us of "his affection and care for his own"; and it is perhaps worth while appending what he says:

STRATHFIELDSAYE, SEAT OF THE DUKE OF WELLINGTON.¹

Amazon, in the Bay of Biscay, are touching from the concern and grief he displays, although all the passengers were unknown to him. "It kept me awake for two nights!" he says. And what energy and practical care are evident in the way in which he searches for measures to prevent the recurrence of such a catastrophe! In the last year of his life he still goes out hunting. In February he writes from Strathfieldsaye of waiting for the meet of the hounds, "which may detain me for some hours, as I conclude the people will not be satisfied if I should not take a gallop with them," and it is pleasant to find him joining in the sports and pastimes of his neighbors to the very end.

But certainly the dominant feature in the correspondence is the way in which it illustrates his well-known love for children.² To

The Duke's fondness for children was great, and he was, as might be expected, strongly attached to his own grandchildren—the children of his son, Lord Charles Wellesley. One of them was taken ill when on a visit to Walmer, and the Duke's anxiety about the little sufferer knew no limit.

But the feeling was not new with him, as it sometimes is with men who for the first time come under its influence when well stricken with years. Though never demonstrative under any circumstances, and though the pressure of constant business cut him off from indulging much in pastimes with his sons, he was extremely fond of them, and took the deepest and truest interest in their early training and education. The Rev. W. Wagner, Vicar of Brighton, became tutor to the Marquis of Wellesley, and to Lord Charles Wellesley in 1817, and he thus describes his first interview with their illustrious father:

In 1817, when the Duke sent for me to go to him at Mont St. Martin, the headquarters of the army

¹ From a photograph kindly supplied by his Grace the Duke of Wellington.

² For one about whose patriarchal knee Late the little children clung.

Tennyson, Ode on Wellington.

LADY LEVINGE—MRS. JONES OF PANTGLAS. (FROM A PICTURE IN POSSESSION OF MRS. DAVIES-EVANS.)

of occupation, at the very first interview he told me his intention was that "the boys should serve the king." He desired that they might be brought up as Christian gentlemen, in all singleness and simplicity, every consideration being postponed to that duty.¹ The interest that he took in their education may, in a manner, be exemplified by a single fact. During the period of seven years that I was with them he never failed to answer, by *the very first post*, any inquiry or letter connected with the well-being of his sons. No matter what were the Duke's occupations, whether en route for the inspection of the fortresses in the Low Countries, whether at the Congress of Vienna, or on a special mission to St. Petersburg, he invariably answered my letters touching his sons by the first post.

¹ One that sought but Duty's iron crown.
Tennyson.

The group of letters about the children in Biggin street gives us a real insight into the simple and faithful nature of the man who wrote them.² Very quaint and touching is the picture of the hero of "a hundred fights," as he tells us how much he enjoys and prizes the affection children have for him:

When they become familiar with me I believe that they consider me one of themselves, and make of me a sort of plaything! They climb upon me and make toys of my Hair and my fingers! They grow up into friends. I have known most of the fine Ladies about London as children!

Mrs. Jones of Pantglas had left her children in

² And, as the greatest only are,
In his simplicity sublime. Tennyson.

STATUE OF WELLINGTON AT ALDERSHOT.

Dover during October, 1851, while she was paying visits. When he finds that they are there he goes to see them, and describes his visit thus:

I went to see your children in Biggin St. They were in health, appearance, spirits, and every other respect, as you could wish that they should be — excepting the eldest, I don't think that they knew me again! [The youngest was two.] I thought there were four! I saw only three.

The Governess, who can only speak in French, appears well satisfied with everything, and likes Dover. I desired her to let me know if any of them should be sick! and gave her my address, and desired her to write to me in case anything should occur to any of them. She knew me, and said she had accompanied you on a visit to Walmer Castle. You may rely upon it, that if any interference on my part should be necessary, I will do by them exactly as I would if they were my grandchildren.

This last sentence would have been with many friends a mere *façon de parler*, no sooner uttered than forgotten; and indeed at the time it seemed a very remote contingency that it should ever be anything more than a friendly sentiment. How exact he was to his word, and how faithfully he kept his promise, to the utmost letter, when he was put to the test, and the children sickened with measles, no testimony will prove so eloquently as his own words. The way in which he entered into all minutiae, interviewing the landlady and the governess, sending for the "Apothecary" to meet him, visiting the children personally in their sick-room, and reporting their state in daily bulletins, illustrates Ruskin's

saying that "The thoroughly great men are those who have done everything thoroughly, and who have never despised anything, however small, of God's making."

That he had an innate sympathy with children, the present writer can vouch from experience. Her earliest recollection is of the cannon at Walmer with the duke explaining their uses, and then showing her the piles of shot belonging to them. She remembers distinctly the patriarchal fashion in which he used to lay his hands on her head according to the formula in the letter from Scotland, "Give her three gentle pats with your hand, and a kiss upon the forehead for me." The awe and the grief she experienced when told that she should see him no more are quite vivid to this day, and there is no one else of his age who stands out so distinctly in those misty memories of former years. There must have been something very childlike in the nature of this great man to attract the young in the way in which he did. He must have been eminently able to put himself in their places to realize that "the glory and the dream" were still with them; and to remember how it had once been with himself. Perhaps it is in forgetting this that so many middle-aged people are out of sympathy with the young, and, failing to understand their keen enjoyment of the moment, look on them as a race apart. His latest letters show us how his intellect and his interest in everything continued vigorous and bright to the last, and when he sank to rest it was like the sun in unclouded splendor after a long summer's day. It was

just as he would have wished, for the last Christmas he spent on earth he wrote:

I am much obliged to you for your good wishes. I hope that I may keep my health and strength! I should be an awkward sort of old man if weak and doubled up!

He was in perfect health till the morning of the day he died, September 14—just

I will endeavor to find an opportunity of conversing with you on this subject, really feeling desirous of doing what you wish whenever it may be in my power. I have some experience in the matter of sitting for my Portrait as well as others. It is impossible for an Artist to complete his work if held to the performance of his promise to require only short sittings! An hour is the least that he will in

THE PAINTING BY F. WINTERHALTER, ENGRAVED BY SAMUEL COUSINS, A. R. A.

a week after the date of the last letter in this series.

Truth-teller was our England's Alfred named;
Truth-lover was our English Duke;
Whatever record leap to light
He never shall be shamed.

Tennyson, Wellington Ode.

COPIES OF THE LETTERS.

LONDON, August 5th, 1851.

MY DEAR MRS. JONES: I have received your note of yesterday's date and I am much flattered by your desire to possess a Portrait of me, and that it should be executed by an artist whom you think deserving of Patronage and Protection.

VOL. XXXIX.—25.

reality require—and for every hour of sitting, the sitter must reckon upon three hours interruption of occupation. This loss must be of the earliest hours of the day, and those in which the command of light is the most perfect. This is a serious affair to a man, every moment of whose time during the 24 hours is allotted! However I have not decided not to comply with your desire. But I will converse with you about it and merely point out to you that what you wish is not a matter of course! I have in this season sat to Winterhalter at Buckingham Palace for a Picture for the Queen! Every sitting for an hour, and there were some by loss of time took three hours often!

Ever yours most faithfully,

WELLINGTON.

WALMER CASTLE FROM THE BEACH LOOKING TOWARDS DOVER.

LONDON, — 6th, 1851.

MY DEAR MRS. JONES: I have been to Mr. Weigall's and have fixed to give him a regular sitting on Tuesday at 12. I find that I must be dressed accordingly. I will take care that all is as it ought to be.¹

Ever yours most sincerely,
WELLINGTON.

WALMER CASTLE, Sept. 7th, 1851.

MY DEAR MRS. JONES: I have not yet settled the roads to be taken to Waldershore. It seems to me that you ought to set out from Dover at so early an hour as to be certain of returning before your dinner hour (2 o'clock) or you would keep your children waiting! Or to set out after your

dinner, say Half past two or three? You must reckon upon two hours to go and return and possibly one for the visit—and at this season we ought all to look to be at Home at least to avoid to ride in a gallop over the Downs after five o'clock.

Let me know if I am right in the view which I have taken of the necessity for your being at home at the dinner hour, two o'clock, as I must be guided accordingly in the proposition to be made for you to ride to Waldershore or elsewhere.

Ever yours most faithfully,
WELLINGTON.

ENTRANCE TO WALMER CASTLE

¹ His ordinary dress in summer was a blue frock-coat, white waistcoat and white trousers, and white cravat fastened by a silver buckle behind. In winter the

waistcoat was blue, sometimes red, and blue trousers. He never wore a great-coat, but in severe weather a short cape made of blue cloth lined with white.

WALMER CASTLE, Sept. 11th.

I have returned very prosperously, as I hope that you have, my dear Mrs. Jones — but I am afraid not quite so soon as I have. I ought to have taken leave of you on the other side of Osney Woods; our distance then would have been about the same. But I wanted to show you the Nine Acres! I continued to admire the beauty of the Sky and the Sea, as I hope you did!

I think it probable that Lady Douro will come away from Balmoral before the 24th.

Ever yours most faithfully,

WELLINGTON.

MY DEAR MRS. JONES:

I thank you for writing to me and particularly for recollecting my sea girt Castle, my walks upon the Platform, of the Waves and Ramparts, my beautiful garden and its sheltered walks, while you are flying on your Railroad!

WALMER CASTLE FROM THE MOAT, SHOWING WINDOW OF ROOM IN WHICH THE DUKE OF WELLINGTON DIED.

I never was out on a more beautiful afternoon, God bless you. I will propose a meeting for a ride on some of these fine afternoons.

Believe me ever yrs most
faithfully,

WELLINGTON.

WALMER CASTLE, Sept. 13th.

MY DEAR MRS. JONES:

Lady Charles and her children have arrived this evening, having made a very prosperous journey, so that my Platform is quite gay this evening. I have heard no news.

We have had no fair day, scarcely a fair moment since you left! The wind has changed to the S. West, and the rain has been constant. I have not been to Dover since you went; and I don't know whether your children are there — but I understand that up to last night the Shore at Dover had not been injured by the effects of the Gales which had prevailed; and that our Works are all in good and successful progress. I had the Lords of Deal Castle at dinner again here yesterday, and Lady Pembroke, Lady Clanwilliam's mother, in addition.

I will take this to London and send it from

APSLEY HOUSE, PICCADILLY, FROM HYDE PARK.

thence. You will receive it just as soon as you would if put in the Post here to-night.

I go to-morrow morning at eight o'clock, and into Lancashire on Wednesday. With best compts. to Mr. Jones,

Believe me
Ever yrs. most faithfully,
WELLINGTON.

LONDON, Oct. 6th.

I have arrived, my dear Mrs. Jones, having left the Castle at eight this morning, and finding myself in my own House in Piccadilly at ten. I have been already to your house in Dover St. to enquire about your children, and have learnt that you had left them, as I thought probable. I am so provoked with myself that I did not go over to see them. It is true that it was bad weather, and that I could not have rode over. But I might have gone in a close carriage, which I certainly should have done, if I had known that you had left them. It is true, and you will have perceived from my letters to you that I thought they were gone—but I concluded that you would have mentioned them, if they really were. I cannot tell you how much I enjoy and prize the affection which children have for me. When they become familiar with me I believe that they consider me one of themselves, and make of me a sort of plaything! They climb upon me and make toys of my Hair and my fingers! They grow up into friends. I have known most of the fine Ladies about London as children! I have received your letter of Sunday and am delighted that you find your old mansion so gay. I am

about to follow your example and to pay a visit to the Glass Palace. I will write to you before I leave London on Wednesday and also from Worsley, and whenever I hear anything that can interest you. I have not heard of any of the marriages that you mention, but have seen nobody. Remember me to Mr. Jones.

Believe me ever
Yours most faithfully,
WELLINGTON.

LONDON, Oct. 7th.

MY DEAR MRS. JONES:

I went to the Glass Palace according to the example set me by you, and as I told you I would in my note sent yesterday; but never did I see such a mob, or get such a rubbing, scrubbing and mashing. There were 100,000 people in the Building. The Police advised me not to enter, and if they had not exerted themselves to take care of me, I should never have got out! They rushed upon me from all directions—Men, Women, and Children, all collecting into a crowd and endeavouring to touch me! I had rode there and sent my horses from the Eastern Entrance to the Southern one opposite Princes Gate into the Park, and many followed them and met me in the Transept. I expected at every moment to be crushed, and I was saved by the Police alive! I have heard no news excepting that it is reported that the illness and death of the King of Hanover would impede the festivities in Lancashire. This is apprehended at Liverpool. I don't hear of the King of Hanover's illness here, and I think the report so little likely to be true, that I pur-

pose to go off in the morning. I shall be happy to be able to write you from Lancashire.

Ever yours most faithfully,

WELLINGTON.

WORSLEY, Oct. 8th.

MY DEAR MRS. JONES:

I made a good journey here yesterday, but did not arrive till towards six o'clock. Her Majesty will come here from Liverpool at the same time this day. I found here the Duke and Duchess of Norfolk, Lord and Lady Westminster, Lord and Lady Wilton, and a son of Lady Westminster's, Lord and Lady Brackley, and the family of the Host. I purpose to return to London on Saturday. Lord and Lady Stanley will come this day. We all go into Manchester to-morrow. I shall return to London on Saturday and then back to Walmer Castle. I hope that you continue to be amused. Yesterday was a very fine day. It rains heavily now, but I hope will clear up for the arrival of the Queen.

With compts to Mr. Jones,

Believe me

Ever yours most faithfully,

WELLINGTON.

WORSLEY HALL, Oct. 10th.

I have just received your letter of the 9th, my dear Mrs. Jones. I had a fine day on Wednesday for my journey. But yesterday was a very bad one for all the operations in this county. It rained from morning till night. I have been at the Reception of the Queen at many of the great Noblemen's Houses, and I have received Her Majesty myself. But I have never witnessed arrangements more perfect or handsomer than those made here. But all the outdoor preparations were rendered unneces-

sary by the badness of the weather. The whole of the guests here went by Canal to meet Her Majesty at the Railway Station at which Her Majesty quitted the Railroad from Liverpool, some miles distant from the House. We then received her; and she embarked with us in a Canal Passage Boat, fitted up of large dimensions. We brought her to the Canal Station about half a mile from the House, from whence carriages brought the whole party to the House. The banks of the Canal were occupied by curious visitors. There would have been crowds of well-dressed persons both from Liverpool and Manchester if the day had been favorable; but as it was, the sight was beautiful, but much more agreeable to have looked at under cover, than to the lookers-on drenched with rain! This day has been beautiful. We have just returned from Manchester, where Her Majesty took a seat in the Town Hall, and received some addresses.

We proceeded in procession of carriages thro' the streets of Manchester for more than three hours. The streets were thronged with people, almost as full as I found the Crystal Palace! However, we got there without accident of any kind, and I never saw people more delighted. Lord and Lady Derby have come besides the Queen and the Household since I informed you of those here. I believe Sir John Hanbury has just been appointed Colonel of a Regiment. I rather think that the knowledge that he was to be appointed was what induced me to enquire from you whether he was related to Lord Bateman. I never saw

APSLEY HOUSE AND STATUE.

WORSLEY HALL, MANCHESTER—SEAT OF THE EARL OF ELLESMERE.

or heard of the Lady or even of the Lt. General himself till I thought of him for the Regiment.

I received your design for a bracelet,¹ which I admired much,—and particularly the universality of your genius. God bless you.

Ever yours most faithfully,

WELLINGTON.

I shall go down to London to-morrow and shall write you a letter which you will receive on Monday at Shobden Court.

LONDON, Oct. 12th.

MY DEAR MRS. JONES:

I wrote to you on Friday an account of our proceedings up to the last moment when the Post went out. There was a fine Assembly at the Hall in the evening, and yesterday morning all separated, each on his departure to his Home. The Queen went to Windsor, and I am in London.

Nothing could be more satisfactory than H. M.'s reception at Lord Ellesmere's. I have not been present at one that was more so. My journey to London was dilatory, yet there was but one apparent cause of delay, that, to allow

¹ The design referred to was that of a bracelet with a miniature of himself, that he purposed giving to Lady Douro.

the Queen's train to pass the general one, which was an hour after we had quitted Manchester. I did not reach home till nine at night, having quitted at ten—not far from twelve hours! I purpose to go to Walmer Castle to-morrow, and will write to you from thence to Scotland. I conclude that you must come up from Herefordshire to Manchester and Liverpool in order to get into Scotland.

I was very well received on my passage through Manchester—a party of 300 to 400 well-dressed people, ladies and gentlemen, ran with my carriage through the town to the Railroad Station! God bless you, my dear Mrs. Jones.

Believe me,

Ever yours most faithfully,

WELLINGTON.

WALMER CASTLE, Oct. 14th.

MY DEAR MRS. JONES:

I came down here from London yesterday by the Railroad, and I have taken my usual gallop over to Dover this morning.

I missed much my amiable companion in former rides over the same ground in this season, but she is flying in another direction!

I went to see your children in Biggin St. They were in health, appearance, spirits, and

every other respect, as you could wish that they should be — excepting the eldest, I don't think that they knew me again! I thought there were four! I saw only three.

The Governess, who can only speak in French, appears well satisfied with everything, and likes Dover. I desired her to let me know if any of them should be sick! and gave her my address, and desired her to write to me in case anything should occur to any of them. She knew me, and said she had accompanied you on a visit to Walmer Castle. You may rely upon it, that if any interference on my part should be necessary, I will do by them exactly as I would if they were my grandchildren.

I shall stay here till the 14th of November, so that you need have no anxiety about them for that period of time. Lady Charles has gone into Nottinghamshire to see her father, who is not well, and has left here the children. I am here quite alone with them. I expect Prince Frederick of Orange, and some other foreigners, and probably Lady Douro. But I shall certainly break up on the 14th of Nov.: I will look in upon my young friends in Biggin St. whenever I go into Dover. With best compts to Mr. Jones,

Believe me, my dear Mrs. Jones,
Ever yours most faithfully,
WELLINGTON.

WALMER CASTLE, Oct. 15th.

MY DEAR MRS. JONES:

I have just received your letter of the 13th, from which I learn that you were to arrive at your destination in Scotland this morning, after travelling all last night. You will have had fine weather, I hope, for your rapid journey.

You will be pleased with the letter I wrote to you yesterday about your children, after I returned home.

I see that after quitting Scotland you are to make a long visiting tour before you will return to London. You are quite right. The country-house society is the most agreeable in England!

It is perfectly understood and well arranged in all parts of the country. I have been in the habit of visiting much, and enjoyed the society until I have become so deaf as to be unfit for social life; and I now go only to attend Her Majesty's Invitation, or to meet Her Majesty as recently at Lord Ellesmere's, as I find it irksome to pass eighteen hours out of twenty-four in Society, and not hear one word that is said. I never go anywhere now excepting to Lord Salisbury's for a night. I will let you know when I shall see your children again.

Believe me ever,
Yours most faithfully,
WELLINGTON.

I have no account of Lady Charles. There is nobody here excepting the children and myself.

Field-Marshal Count Nugent and his son are coming to-morrow, and I expect Prince Frederick of Orange.

WALMER CASTLE, Oct'r 16th.

MY DEAR MRS. JONES:

I could not have heard of your arrival in Scotland, nor have I of your children, which is all right — I shall not hear unless there shall be sickness or something amiss! The Queen has taken my guests from me, having invited them all to Windsor. They do not come till Saturday.

I have got some little medals to give your children, the same as I have given to my grandchildren and to all my little Play-fellow Children! I shall deliver them to them on the first day that I shall go to Dover. Our weather continues moderate. With best compts to Mr. Jones. Believe me ever,

Yours most faithfully,
WELLINGTON.

WALMER CASTLE, Oct. 17th.

MY DEAR MRS. JONES:

This day being at last as fine as in your time, the detention of my guests by the Queen enabled me to avail myself of it to gallop over to Dover, and see whether the bad weather of Wednesday had injured my works, or had occasioned any encroachments of the sea upon the shore, and to visit my young friends in Biggin St.

I am just returned, and found the latter as well looking, as well, comfortable, and happy as you could wish them! The sun was shining upon their rooms, which were very airy and comfortable. I presented medals to each of them, with which they appeared pleased. The youngest girl and boy appeared to know me better.

I got Madame Simon to give me her name in case I should have occasion to write to her. She told me that you had arrived on Tuesday night. But I understood not before Wednesday morning.

It is very much to be lamented that much of the information respecting the Exhibition had not been communicated in the Catalogues instead of being published in the Report of Prizes. I never could learn while the Exhibition continued as open to find anything! We have all the information now that all is over! I expect my guests to-morrow. Lady Charles is still absent — nobody with me but the children. God bless you. Believe me,

Ever yours most faithfully,
WELLINGTON.

WALMER CASTLE, Oct'r 23rd.

I have been to my Pilot Court at Dover, my dear Mrs. Jones, and have returned in time to write to you by this post.

I went to visit my young friends in Biggin Street. But they and the Governess must have gone as all others in Dover did to see *the Show* in the streets at the very same time at which *the Show* went to see them! Unfortunately we did not meet, and I saw only their attendant who knew me, and informed me that they were all as well and as comfortable as possible. As usual I was accompanied through Dover by a Mob, and could not wait for their return, and I have been obliged to come away without seeing them. But I shall return on the first quiet day I can have, will see them, and let you know how they are. I have received an intimation that it is probable that I shall be summoned to Windsor on the 4th, which will oblige me to go to London on Monday, the 3rd, but I shall return here on the 5th, and stay the usual time. I understand this day that I shall finish at Dover on the 13th and go to London on that afternoon. With best compts to Mr. Jones,

Believe me,

Yrs Most faithfully,
WELLINGTON.

WALMER CASTLE, Oct. 25th.

I have taken advantage of a fine day, my dear Mrs. Jones, to gallop over the Downs to Dover to visit my young friends in Biggin Street. I found them as well, as comfortable, and as happy as you could wish. They had just dined when I went in. They were out walking when I went to see them on Monday.

I have received a sort of Notice that I may be summoned to Windsor Castle on Tuesday next to a Chapter of the Order of the Bath, as well as on Saturday, the 1st of Nov'r, to a Chapter of the Order of the Garter.

My sister-in-law, Lady Mornington, who has long been very unwell and confined to her bed, died on Wednesday last; and I have but indifferent accounts of Mr. Pierrepont, Lady Charles's father. She is with him at Thoresby. Charles is there likewise. The children are still with me.

With best compts to Mr. Jones,

Believe me ever,

Yours Most faithfully,
WELLINGTON.

ALFRED JONES — THE BOY REFERRED TO IN THE LETTERS.
(FROM A PICTURE IN POSSESSION OF GERWYN JONES OF PANTGLAS.)

WINDSOR CASTLE, Nov. 4th.

You are quite right, my dear Mrs. Jones, to complain when you think that you are not properly attended to! I write to you whenever I have anything to tell you that will be agreeable to you. I know that any tidings of your children, or any accounts of their various doings even though I should not have seen them will be agreeable to you — and I invariably write on each occasion. I write to you whenever I hear from you, and you are very kind in writing to me, and I am delighted with your letters. But you forgot that there is no Post on Saturdays, and that on Wednesday and Friday in last week I passed my time either at the Funeral Ceremony or on the Railroad. I have since written and directed to Edenwood as I did not understand you intended it should be directed to Edinburgh. I am fully sensible of, and feel your kindness as it deserves I should.

I arrived here this morning by the road to the great amusement of the Queen. But I was in excellent time — indeed before the other Knights of the Chapter. The Earl Fitzwilliam is the Knight elected. He and others stay here this night. I stay till Thursday.

Mr. Pierrepont is still in an uncomfortable

state, but he is in less pain, and possesses his mind and faculties and takes nourishment. But he is very ill.

You are right in crossing the Border. The weather is becoming exceedingly cold. God Bless you. With best compts to Mr. Jones,

Believe me ever,

Yours Most faithfully,

WELLINGTON.

WINDSOR CASTLE, NOV. 5th.

The world of the Chapter went away this morning, my dear Mrs. Jones! I have been desired not to go till to-morrow. I believe probably that I may have an opportunity of seeing my Godson this day!

I have heard no news excepting that the King of Hanover is very unwell. . . . They say that the Duke of Cambridge thought him looking very unwell, grown quite emaciated! That is a bad symptom for a man so old as His Majesty is! He cannot be much less than 76.

I saw last night the fine rubies presented to the Queen by the East India Company. They are quite transparent, and beautiful as well in size as in other respects.

You will have seen from the perusal of my letter of the night before from London, that detailed instructions about your address was exactly what I wanted.

I will avail myself of your instructions, and you may rely upon hearing from me whenever I have anything to tell you that is interesting to you besides the expression of my constant interest about my amiable companion on the British Downs!

Believe me Ever,

Yours Most faithfully,

WELLINGTON.

P. S.—I have seen my Godson—who is in a very prosperous state. He trots about in hand perfectly. He saluted me in my fashion! Put his hand up to his head!

He is a fine and clever child.

WALMER CASTLE, NOV. 9th.

MY DEAR MRS. JONES:

My letter of yesterday directed to Marchmont, if you received it, contained expressions of my concern that I could not go to Dover to pay my usual visit to Biggin Street. The enclosed, which will amuse you, will show you that my young friends there recollected me and began to feel uncomfortable at my long absence! I shall go there to-morrow certainly. I will go over in a carriage if it should not be fine enough for me to ride there.

I am glad that my amiable companion and friend was satisfied that I had not neglected

her. She must be satisfied of my sincere regard and respect for her, and may be certain that I shall never be guilty of any slight or neglect of Her! I hope that I have correctly understood your directions and that you will receive this on your arrival at Swaffham, and that you will inform me of it, and your doings there. I shall write to you all about my young friends when I shall return from Dover to-morrow. God bless you. With best compts to Mr. Jones,

Believe me,

Ever yours most faithfully,

WELLINGTON.

(Copy of the letter inclosed from Biggin Street.)

SAMEDI, 8 NOV.

MONSIEUR LE DUC:

Je profite de la permission que vous m'avez fait l'honneur de me donner, pour vous dire que n'ayant pas eu l'avantage de vous voir cette semaine, les enfants et moi nous sommes inquiétés de votre santé. Tous les jours ils me demandent pourquoi vous n'êtes pas venu, et sont très occupés de vous Monsieur, car ils vous aiment beaucoup. À part un peu de rhume ils se portent bien.

Pardonnez moi, Monsieur, la liberté que je prends de vous écrire, en faveur de ma bonne intention, car lors qu'on vous connaît je crois qu'il est impossible de vous oublier.

J'ai l'honneur d'être,

Monsieur Le Duc,

Votre dévouée servante,

LAURE SIMON,

Gouvernante des enfants de
M'dme Jones.

WALMER CASTLE, NOV. 10th.

In conformity with what I stated in my letter yesterday, my dear Mrs. Jones, I have been to Dover notwithstanding the rain. Previous to my departure I received the enclosed letter, but none from yourself. This was written by the Mistress of the Lodging House! On my arrival at the door, I was informed that your eldest daughter¹ as well as your son² was sick, and both in their beds. I went into their apartment, and there found them in their beds. It was said they were better this evening and had been in the right stages. Poor children! They looked lively and were much pleased to see me. There was no heat about their skin, and they were but little flushed in the face. I enquired who attended them? A respectable Apothecary by name Coleman. The Mistress of the House talked highly of him—I desired

¹ Lilla L., Mrs. Davies-Evans.

² Alfred (since dead).

to see him. She sent her husband to fetch him! The youngest girl¹ is as well as possible, and in good spirits, and looked quite well. But I am afraid that it is not possible to expect that she should not catch the disorder. I recommended to M'dme Simon to keep her separate from the others as much as possible. I did not see Mr. Coleman; the Master of the House returned before I went away. Mr. Coleman had gone out, nobody knew where. I was under the necessity of coming away without seeing him. He had fixed to see the children again this evening. M'dme Simon talks of the disorder lasting only a few days, but that they must be kept in the house for a week. It appears to be a decided case of measles, and any physician will tell you what the course of the disorder is, and how long it will probably affect the patient. I will go over to Dover as often as I can between this and Thursday, when I shall go to London, and you may depend upon hearing from me on Thursday exactly how they are.

I will be in Dover on that day, and will come to London direct from thence. I will certainly see them on Thursday, and their Doctor Coleman, and you shall hear at your house in London on that evening the most correct accounts of them. The youngest girl was looking this morning as well as ever. It appears that the Boy was taken ill on Saturday Evening, but it was discovered he had measles on Sunday—yesterday the eldest girl had caught the disorder.

My children go away from hence on Wednesday and I go on Thursday. I am to attend the Harbour Committee at Dover $\frac{1}{4}$ before twelve, and to go to London by the 2 o'clock train. I shall call and see your children at about eleven. God bless you.

Believe me,

Ever yrs most faithfully,

WELLINGTON.

I have lent my Castle to Lord Ellesmere from Thursday next, on which day he will take possession of it.

WALMER CASTLE, Nov. 11th.

MY DEAR MRS. JONES:

I have been so much occupied that I have not been able to go to Dover. But I send you a note which I received this morning from Mr. Coleman, who, I told you, attends your children. I wish that I could have seen him yesterday as I probably should have been able to relieve your mind from uneasiness, as mine has been, & as yours undoubtedly will be by the perusal of this report. I will write the man a civil answer, and will appoint a time to meet

¹ Louise, now Mrs. Spence, wife of the Dean of Gloucester.

him in Biggin Street. You may rely upon it no harm will result from my having shewn an interest about them. I will bring you up on Thursday the last authenticated report of their state on that morning. You shall have it in Dover St. on Thursday evening, or as soon as possible afterwards if I shall know where you are. God bless you. Give my compts to Mr. Jones, and

Believe me ever,

Yours most faithfully,

WELLINGTON.

I thank you for letter from Marchmont of the 8th. I have not yet heard of your visit to Swaffham.

DOVER, Nov. 13th.

MY DEAR MRS. JONES:

I have seen your children and Mr. Coleman this morning, and I am happy to be able to inform you that those which had been attacked by the disorder are now perfectly well and have not the appearance of having been sick. They look quite well and are in good spirits. The medical gentleman says that they have no disease, but he is desirous that they should not go out, in order to avoid catching cold, and they were still in their room.

They were very glad to see me. The youngest girl is quite well, looking as well as you could desire, and in very good spirits. I don't think that she will now catch the disease, being so strong and healthy. Mr. Coleman thinks that she will, but he makes very light of it, and thinks it better that she should. I requested M'dme Simon to continue to keep her separate from the others, at least as long as it is necessary to prevent them from going into the open air. I sincerely congratulate you upon the state of things. You rely upon it, that it is accurately what I have seen, and it has been confirmed by Mr. Coleman, who appears a kind and sensible man. He says that the disorder has been a very mild one, but has gone through all its stages, and that they are now free from it. I write this previous to my departure from Dover, meaning to send it by the first post office I find in London, and will besides write to you to your House in Dover Street. I enclose the report which I received this morning from Mr. Coleman before I quitted Walmer Castle, that you may see the whole progress of the case.

Ever yours with sincere affection,

WELLINGTON.

LONDON, Decr. 2nd.

MY DEAR MRS. JONES:

I have been to pay a visit to my Dowagers. The Duchess of Gloucester was tolerably well, but not sufficiently so to go out. She talked a good deal of the Weimar marriage and other

events. She told me of an extraordinary event, which she said she had been assured had reached London by Telegraph — that Louis Napoleon had dissolved the Chambers by Proclamation, and had thrown *Himself upon the Country*. However, oddly, I have not heard of the event in any other quarter! Indeed I have not been in the way of hearing of it.

I have heard this morning of a marriage that will cause some sensation — that of Louis Napoleon with Miss Erskine, daughter of Lady Augusta Erskine, the natural daughter of King William. I have heard of this in one quarter only.

Ever yours most faithfully,
WELLINGTON.

LONDON, Decr. 3rd.

MY DEAR MRS. JONES:

I have had here this morning many hundreds of hard rings to enquire my opinion of insurrection at Paris, of which however I have heard no more than is in the Morning papers. I think that there must be a fight! The friends of those who have been arrested will endeavour to have them set at liberty. This alone will cause a collision in the streets. I have heard no more of the marriage I told you of yesterday. I had so much to do that I could not go to Lady Powlett's last night. I hope that you made a satisfactory journey.

Ever yrs most faithfully,
WELLINGTON.

LONDON, Decr. 4th.

I thank you for your note, my dear Mrs. Jones. I rejoice that you like your Residence! I hope that Mr. Jones will have good sport shooting. Short days add to the zest of such parties!

I have heard nothing that is not in the Newspapers. Paris was still quiet last night! It is reported that Monsieur Mole asserts that he is not one of those sent to Varennes! He is at least as comfortable in his own House in Paris! He can confine himself in that if he likes.

My children are going on well in the Cough¹ Part of the Disease! Lady Charles uninfected last night!

Ever yours most faithfully,
WELLINGTON.

LONDON, Decr. 12th.

The honors and rewards of the Officers in the Service of the East India Company and my relation with them are an intricate question for the explanation of which time must be required, and it is not easy for me to discuss one of such claims with a London fine Lady, without such previous explanation!

It has been very dark all day — I have had
¹ They had whooping-cough.

candles since seven o'clock this morning! I write from the Home Guards, and I doubt very much being able to find my way home in my Plaid.

God bless you.

Ever yrs most faithfully,
WELLINGTON.

LONDON, Decr. 20th.

I wrote to you on Thursday, my dear Mrs. Jones, after seeing Mr. Jones and the children, and directed my letter to Brighton. I heard this morning that the Duchess of Gloucester lives upon the visits which the Duke of Wellington pays her! I hope Her Royal Highness will thrive upon them! I have been to pay her one this day! but I have not heard any news. I understand that people begin to complain of our sending troops to the Cape. They say we ought to wait and see the result of what is going on in Paris.

God Bless you.

Ever yours most faithfully,
WELLINGTON.

LONDON, Dec. 23rd.

I have just now called at your House and seen your children, who are as well as you can wish them to be. I never saw them looking in better health. They were very happy to see me! Give my best love to Lilla, and tell her I was much pleased by her recollection of me. I think and understand that it is seriously thought that Louis Napoleon's Election is certain.

Ever yours most faithfully,
WELLINGTON.

LONDON, Dec. 24th.

MY DEAR MRS. JONES:

I believe that we may consider the Election of Louis Napoleon quite safe.

In the mean time there is a screw loose in the Machine called the British Cabinet, of which I think there is a very rational account in the "Times" this morning. I have heard nothing of it from Windsor or from any other authority! I am going to Strathfieldsaye with Lady Douro. With best love to Lilla,

Ever yours most faithfully,
WELLINGTON.

STRATHFIELDSAYE, Decr. 27th.

MY DEAR MRS. JONES:

I am much obliged to you for your good wishes! I hope that I may keep my health and my strength! I should be an awkward sort of old man if weak and doubled up!

I have heard of no cause for the late resignation from any authority excepting the "Times" newspaper! Indeed I should not credit it if

I did not know that the successor was appointed. With best love to your little girl,
Ever yours most faithfully,

WELLINGTON.

My daughters are both here and the children quite well.

STRATHFIELDSAYE, Janry. 4th, 1852.

MY DEAR MRS. JONES:

You may rely upon it that I have not forgotten you, nor am I tired excepting by having so much to do! I assure you that at times the reflection at night of all that I have gone through in the day astonishes me, notwithstanding my daily habits and long practice! The weather here also continues to be delightful. I have never known it so mild at this season of the year! This day is more like a day of July than of January! I have not been out with the hounds. The distances to go have been very long, and I have had too much to do and attend to! I have not fixed any time for going! But I am ready to go at a moment's notice! I hear of Balls all over the World. We shall end by making one great city of the counties surrounding London. I have not heard of Officers of the Guards excepting at your Ball in Surrey! There has been another great Ball at Hatfield. But I have not heard of Officers of the Guard at it!

I have had no news! The nine days' wonder has gone by! Lord Palmerston's resignation! People begin to ask what he will do next.

I hope that Lilla is quite well and enjoying herself! If she does not, I shall reproach myself! As I believe that something that I said to you one day has been in part the cause of your taking her with you and separating her from the other children,

Believe me,

Most sincerely ever yours,

WELLINGTON.

STRATHFIELDSAYE, Janry. 10th.

MY DEAR MRS. JONES:

Your favourite Rifle Regiment went from Plymouth on its Voyage to the Cape on Wednesday night! We had an alert here yesterday morning! Lord Fitzroy Somerset arrived whilst I was at breakfast with letters from Government on the state of war at the Cape, which gave me a good deal of employment. I sent him back with the answers! I don't know of any occasion on which I have been so much annoyed as by the misfortune of the *Amazon* Packet in the Bay of Biscay! It kept me awake for two nights! I am anxious by a knowledge and study of the details to discover some mode of avoiding, or at least of mitigating the evils of such misfortunes in future. I witnessed last spring in Lambeth the effect of a discovery by

an Individual of a mode of extinguishing fires which was certainly very extraordinary.

The principle of action was to smother the flame by overwhelming it with steam; which certainly was successful when water failed. I see that a discovery has also been made of machinery by the use of which the Commander of a steam vessel might be enabled any time to convey to any part of his vessel as he might think proper any portion of the steam with a view to smother any fire. This is very important and I hope that such machinery will be introduced into all vessels navigating with steam in the future. Give my best love to Lilla & Believe me,

Ever yours most faithfully,

WELLINGTON.

STRATHFIELDSAYE, Janry. 13th.

General Cathcart having come down here on Sunday to converse with me, it was not necessary for me to go to London on Monday, which I had intended — I should have gone to see your children, and to reconnoitre the work of the fallen Balcony if I had gone up.

The loss of the *Amazon* has been a terrible affair. It has greatly disturbed me, notwithstanding that I knew nothing of any of the persons embarked in her! I had read of Mr. Warburton whom you mention! but now grieve his loss more than before!

I am much gratified by the recollection of Lilla and yourself. Be so kind as to give her three gentle pats with your hand, and a kiss upon the forehead for me.

Believe me ever,

Yours most faithfully,

WELLINGTON.

STRATHFIELDSAYE, Janry. 14th.

I have received your letter of yesterday from London, my dear Mrs. Jones. We have had rain likewise, and this is but a damp day. I confess that I have no hope that any other boat can have been saved from the *Amazon*! The whole case of it is terrible, and the investigation most interesting! How did it occur? How did it ignite? Fire originating in the Hold of the Vessel or by accident? or in the Engine Room? and thence by heated red-hot flues to the deck? This last cause may occur in any of those Ships of which the Master may be desirous of making a short ———¹ or of partly accelerating the rate of going! What are the best and most certain modes of extinguishing the fire in a ship? I have seen the experiment of that machine to which you refer. It is doubted by some whether it could be successful in a ship. Then the Life Boats, in what manner and where are they to be carried to

¹ Manuscript illegible.

be out of the way of fire, and yet easy to get at when required?

How prevail upon the terrified passengers to place themselves in the Life Boats in tranquillity and order? I have been more at sea than most men in the Naval Profession, and it is very strange have met with severe accidents. I was shipwrecked . . . but it is very strange that I have always thought that the greatest danger of all in a ship at sea was that of fire! The aspect of it is terrible! Nobody will go aloft when it is mentioned! I cannot tell you how anxious I have been about the *Amazon*, and still continue anxious! although I know of nobody on board of her! Give my best love to Lilla and the two others, and

Believe me ever,

Yours most affly,

WELLINGTON.

STRATHFIELDSAYE, Janry. 18th.

MY DEAR MRS. JONES:

I write to you to London, concluding you are still there! I am summoned to go to Windsor Castle on Tuesday, where I shall go, and return here on Thursday.

I see that reports have been received that another boat saved from the *Amazon* had arrived at Plymouth! I observe that there never existed anything to equal the representations of the confusion and human misery on board that unfortunate Ship.

Give my best love to your children.

Believe me ever,

Yours most faithfully,

WELLINGTON.

WINDSOR CASTLE, Janry. 21st.

MY DEAR MRS. JONES:

I arrived here yesterday as usual by the Post Roads! The weather has been fine and moderate, but I have not been either hunting or shooting this day!

We have here Lord John Russell and the first Lord of the Admiralty! But, as usual, I have not heard more than is in the newspapers! Of course there must be anxiety regarding the turn up in France! I return home to-morrow, and believe that my son and daughters return to town on the following days, and I propose—indeed I must go to town soon afterwards. Give my best love to your children.

Believe me Ever,

Yours most faithfully,

WELLINGTON.

I have just seen my Godson in good condition. He trots about quite well.

STRATHFIELDSAYE, Janry. 25th.

MY DEAR MRS. JONES:

I am not at my ease about Louis Napoleon.

He is going too fast. I see that his Ministers have resigned on account of his last act—the Plunder of the Property of the Orleans Family! This is a great mistake! The whole World will be against him on account of it. But it must not be believed that there is much feeling for the Orleanist Family! The feeling is on account of the atrocity of the act!

With best love to my friends, your children, God Bless you.

Believe me ever,

Yours most faithfully,

WELLINGTON.

STRATHFIELDSAYE, Febry. 27th.

MY DEAR MRS. JONES:

I came down here yesterday after the Levee—without my companion Lady Douro, who was too unwell. But Lady Charles has arrived from South Hants. The Judges have not yet arrived. I understand we are to have the Hounds here, which may detain me for some hours, as I conclude the people will not be satisfied if I should not take a gallop with them.

Believe me ever,

Yours most faithfully,

WELLINGTON.

STRATHFIELDSAYE, April 13th.

I have come down by the Road, my dear Mrs. Jones, and made a good journey! I had the sun in my eyes during the whole of it, but preferred it by far to going by the Railroad! tho' I should have travelled with the sun behind me! I was delighted to see my friends so flourishing and well! I hope your accounts from Carmarthenshire are satisfactory. With best compts to Mr. Jones,

Believe me Ever,

Yours Most faithfully,

WELLINGTON.

I don't think that I shall be allowed to remain long out of London this time!

LONDON, July 27th.

MY DEAR MRS. JONES:

I thank you for your note received from Edenwood. I am delighted to learn that my young friends are well pleased and recollect me! I have not forgotten them and shall be delighted to see them again!

So many fancy themselves interested in misrepresentation of the strength of the Party with which they are acting, and misrepresentation of the truth! I don't think on the whole the Elections have been so favorable to Lord Derby's Government as was expected by the World! But I can't say what will be the exact result. I must go to Winchester again on the 13th of August! In the mean time I shall not

be surprised if I should be under the necessity of going to Walmer Castle one of these fine mornings! but only for a moment as I must finally settle the Militia in Hants and the Tower Hamlets before I establish myself there!

Ever, my dear Mrs. Jones,

Yours Most faithfully,
WELLINGTON.

LONDON, August 17th.

MY DEAR MRS. JONES:

I have reason to think that the statements in General Cathcart's despatches are not entirely correct. I cannot answer for the statements in the Cape Newspapers!

This is quite certain. The whole coloured population is disaffected & in a state of Insurrection! The European population is to the last degree incensed!

There is Civil and Servile war in the Colony! But in England we are never satisfied with anything excepting entire success. In circumstances such as exist at the Cape, Time is required to prove any result which our impatient working is willing to grant!

The Queen returned to Osborne last night, I believe. She passed Calais at three o'clock in the afternoon and steering to the West.

I have still here the Russian Grand Duchess. I believe the American affair¹ has been settled. God bless you.

Ever yours most faithfully,
WELLINGTON.

LONDON, August 19th.

MY DEAR MRS. JONES:

My delight at receiving and perusing your letters augments daily! I am still hard at work about raising the Militia, but I believe that I shall be under the necessity of going to Town next week.

The Queen has returned and postponed the Parliament till October, but it does not appear that is the time fixed for the Assembly. It will probably be in November.

Give my love to Lilla — my friend.

Believe me ever,
Yours most faithfully,
WELLINGTON.

WALMER CASTLE, August 26th.

MY DEAR MRS. JONES:

I have received your letter of Tuesday! I write to you very constantly, and I am glad you feel sensible of my attention and all you wish. God Bless you.

Give my love to my friends.
Believe me ever,
Yours most faithfully,
WELLINGTON.

My visitors will be here on Friday.

WALMER CASTLE, August 31st.

MY DEAR MRS. JONES:

I have been so much occupied by the Reception here of the Grand Duchess Catherine of Mecklenburg Strelitz that I have not written to you since I came here. She came here on Friday with a suite that filled the House. There was nobody here but myself. Lady Charles and her children do not come until Friday next. I had all the Notables here whom you know to meet her at dinner! She breakfasted and had lunch here on Saturday, and I went down to Dover with her after luncheon in order that she might embark and go that evening to Ostend. She was delighted with her Reception and Residence here, and wished much to prolong the latter. But her husband the Grand Duke is an Officer of the Artillery in the Service of the Emperor of Russia, and was under the necessity of attending a Review in the South of Russia in the month of October, and she was obliged to go.

I am happy to hear that you and my young friends are so well. I see that you visit Yorkshire for the Doncaster Races, but go back to St. Andrews. I am delighted with your account of yourself and your friends — say to them from me Everything that is kind. I understand that Parliament will certainly meet for the disposal of business between the 10th and 15th of November. I have already made arrangements which have for their object to enable me to quit this part of the world a week sooner than usual! I generally go about the 14th or 15th of November,² but I shall go at least a week earlier this year. God Bless you.

Believe me ever,
Yours most faithfully,
WELLINGTON.

WALMER CASTLE, Sept. 7th, 1852.³

I have been a good deal occupied since I wrote to you last, my dear Mrs. Jones. I have been twice to Folkestone, going and returning the short distance between Dover and Folkestone by Railroad! which takes a great deal of time, as one must wait at the stations for the hours at which the Trains pass on the great Lines! I went to see Mr. Croker who is here for change of air. He has had a most extraordinary attack. He has lost one half of his pulse, that is to say his Pulsation was 70 odd strokes in a minute! It now strikes only 30 odd less of the number of times! He walks and talks and looks and feels just as ever! But he has no appetite! The doctors have ordered him to avoid any sudden exertion, or movement, or excitement.

¹ The disputed fisheries in the Bay of Fundy.

² He was buried on the 17th.

³ He died September 14.

The weather continues to be beautiful.

Parliament will certainly meet on the 11th. I understand that the Government feels very confident of success. With kind love to my friends,

Believe me ever,

Yours most faithfully,

WELLINGTON.

I should think that Mrs. Scarlett must wish very much that my opinion should prevail—viz: that an Englishman has no claim to be treated by the Tribunal, in any country otherwise than as a native of the Same.¹

ON that very day week the duke was seized with his mortal illness. As the bright autumnal day passed away he went with it, and so calmly and quietly, that it was only when a mirror was held to his lips that life was seen to be extinct.

He had said in one of his latest letters that this year he would go up to London a little earlier than his usual date of the 14th or 15th of November—little thinking how he would make the journey.

On the 10th of that month, by the light of torches and with the pealing of minute-guns, his earthly remains, which had lain at Walmer Castle for eight weeks under the faithful guardianship of his old regiment, the Rifle Brigade, were removed to Chelsea Barracks. There

¹ This remark has reference to the "Mather" case at Florence.

all London thronged to see him as he lay in state. The great hall, lighted only by waxen tapers in silver sconces and draped in black, brought into strong relief the crimson coffin in which reposed the "good gray head" with its expression of perfect peace. At its foot lay all the decorations which he had so nobly won. Life-guardsmen with their arms covered guarded the apartment. It was a sight never to be forgotten. The Queen was led weeping bitterly to her carriage, having broken down when she got to the center of the hall, and sorrow and solemnity were stamped on every face.

Of the impressive funeral through the heart of London, lined with the troops he had led through so many perils to so many victories, we need not speak. All who could assembled to do him honor on that last journey to St. Paul's, where he rests beside the "Mighty Seaman" of Lord Tennyson's ode.

Foremost captain of his time,
Rich in saving common-sense,
And, as the greatest only are,
In his simplicity sublime.
O good gray head which all men knew,
O voice from which their omens all men drew,
O iron nerve to true occasion true,
O fall'n at length that tower of strength
Which stood four-square to all the winds that blew!
Such was he whom we deplore.
The long self-sacrifice of life is o'er.
The great World-victor's victor will be seen no more.

Mary E. Davies-Evans.

PERDITA.

(ON SEEING MISS ANDERSON IN THE RÔLE.)

SHE dances,
And I seem to be
In primrose vales of Sicily,
Beside the streams once looked upon
By Thyrsis and by Corydon:
The sunlight laughs as she advances,
Shyly the zephyrs kiss her hair,
And she seems to me as the wood-fawn, free,
And as the wild rose, fair.

Dance, Perdita! and shepherds, blow!
Your reeds restrain no longer!
Till weald and welkin gleeful ring,
Blow, shepherds, blow! and, lasses, sing
Yet sweeter strains and stronger!
Let far Helorus softer flow
'Twixt rushy banks, that he may hear;
Let Pan, great Pan himself, draw near!

Stately

She moves, half smiling
With girlish look beguiling—

A dawn-like grace in all her face;
Stately she moves, sedately,
Through the crowd circling round her;
But—swift as light—
See! she takes flight!
Empty, alas! is her place.

Follow her, follow her, let her not go!
Mirth ended so—
Why, 't is but woe!
Follow her, follow her! Perdita!—lo,
Love hath with wreaths enwound her!

She dances,
And I seem to see
The nymph divine, Terpsichore,
As when her beauty dazzling shone
On eerie heights of Helicon.
With bursts of song her voice entrances
The dreamy, blossom-scented air,
And she seems to me as the wood-fawn, free,
And as the wild rose, fair.

Florence Earle Coates.

THE AUTOBIOGRAPHY OF JOSEPH JEFFERSON.¹

BARN-STORMING IN MISSISSIPPI.

IT is to be hoped for the credit of humanity that the old philosopher was in error when he said that we feel a sad gratification even in the distress of our dearest friends. But, be that as it may, it is quite certain that those of our fellow-creatures whose lives have been burdened with sorrow command our respect and excite our interest more than the high and mighty. Belisarius, stricken blind, wandering, a beggar in tattered rags, and asking alms of the people he once led to victory, presents a figure that calls for our deepest sympathy; while we cannot shed tears over a dethroned monarch with a corner lot. By these reflections I am strengthened in the hope that I may not be tiring my reader with the continuous recital of our misfortunes, and that he will not grow as weary of them as we did. If he will but patiently wade a little farther through this "slough of despond," I promise in the latter part of my narrative to give some account of my less interesting success.

Our disastrous seasons were not exceptions. The country had been in a chronic state of theatrical bankruptcy since the panic of 1837, and continued in it for many years. Actors often had to turn their hands to something else for a livelihood besides the profession. My father painted signs for a whole summer in Vicksburg, and our leading man manufactured genuine Havana cigars in the same studio. I often acted as "drummer," and, when business was slow, would sally forth among the wharf boats to solicit orders.

It is likely that some of the events I have recorded may not have followed in the order in which I have placed them, but I do not feel that this is of much importance. Accurate statistics, with dates, long rows of figures, and unimportant casts of plays, are somewhat tedious. Tony Lumpkin says, with undoubted truth, that "the inside of a letter contains the cream of the correspondence." I must therefore crave your Honor's pardon for acting on this hint by endeavoring to trace the interesting portion of this history,—if it has any interest,—casting unimportant details into oblivion.

Mary's death reduced our quartet to a trio,

and I next found myself in the town of Grand Gulf, in the State of Mississippi, with my mother and sister. We were there awaiting the arrival of my half-brother, Charles Burke, who was somewhere in the interior of the State, with a small company of actors, struggling along from town to town. Our letters to him had crossed or miscarried; so we were obliged to remain there for several weeks until we could hunt him up. There was no telegraph in those days, and postal communication was uncertain.

The money had run out, and we were in a straitened condition, when, to our joy, my brother arrived. He burst like a ray of sunshine into the house, and we crowded about the dear fellow, smothering him with tears and kisses. It seems that his company was at Port Gibson, only eight miles away, where they had arrived the night before, and he had started at daylight, walking to Grand Gulf to meet us. After breakfast he went out for the purpose of hiring a wagon and team to take us on. This was soon done, and we started on our journey. We had got but four miles from the town when I observed my brother and the driver in close conversation. I saw that something was wrong. Presently the driver pulled up and the wagon stopped. My brother turned round and said: "Mother, I have made a bargain with this man to take us to Port Gibson for ten dollars. I have no money, and expected to pay him out of to-night's receipts after the play. He says this arrangement will not do for him; he seems unwilling to trust me, so he must be paid now or he will turn back." I looked at my mother and hinted that perhaps, if she searched hard, something might be found in the stocking. Her eyes filled with tears, and I saw by her face that the bank was broken. There was nothing left us but to get out of the wagon and remain by the roadside until my brother should go back and make another trial. The rain came down, and we took shelter under a large tree, awaiting his return. My mother had once been one of the most attractive stars in America, the leading prima donna of the country, and now, from no fault of her own, was reduced to the humiliation of being put out of a wagon with her two children, in a lonely road in the far-off State of Mississippi, because she could not pay a wagoner the sum of ten dollars.

This was so far the darkest hour we had

¹ Copyright, 1889, by JOSEPH JEFFERSON. All rights reserved.

passed. About noon the sun shone bright, and shortly afterwards my brother appeared in sight, mounted on top of an ox-cart driven by an old negro. We were only four miles from Port Gibson, but it required as many hours to make the journey, so about sundown our party alighted at the hotel.

We now entered upon a course of the most primitive acting, going from town to town and giving entertainments in the dining-rooms of the hotels. As there were no papers published in these small villages, there were no printing-offices, consequently no bills; so flaming announcements of our arrival in a bold handwriting were displayed in the three important points of the town, viz.: the hotel, the post-office, and the barber-shop. It fell to my duty, being an adept with the brush, to write, or rather paint, these advertisements. The plays were acted in costume, but without scenery or curtain. The nightly receipts were small—just about enough to get us from place to place.

Our objective point was the town of Liberty, Mississippi; but there was some difficulty in getting there, as the distance was greater than we could accomplish in a day. A farmer who had been to the theater the night before for the first time in his life was so struck by the performance that he proposed to have his teams brought in and take us to his farm-house, about twenty-five miles distant. According to his suggestion we were to rest for a day, give an entertainment in his barn, and so go on to Liberty.

"But," said my brother, "you tell me there is no other house there but your own. What shall we do for an audience?"

"Well," said the farmer, "all my family will come, to begin with, and there is a dozen or more on 'em; then there's eight or ten farm-houses close by, and if one of your men will drive there with my son and blow the horn they will all come, for there ain't one on 'em ever seen a play before. I'll insure you a full barn."

So the matter was settled, and we actually played in a barn, the house that we staid in being the only one in sight. It seemed in vain to look for an audience in such a lonely place, but the farmer was right. Soon after the sun had gone down the full harvest moon rose, and by its dim light we could faintly see family groups of people, two and sometimes three on a horse, coming from all directions over the hill—now a wagon with a great load. Some of them walked, but all were quiet and serious, and apparently wondering what they were going to see.

Those who have traveled through the Southern States will perhaps remember the kind of barn we acted in: there were two log houses joined together with an opening between them which was floored and covered in. The seats were arranged outside in the open air—benches,

chairs, and logs. The double barn on each side was used for dressing-rooms and for making entrances and exits, while the opening was devoted to the stage. The open air was well filled, containing an audience of about sixty persons. Our enthusiastic admirer, the farmer, collected the admission fee, a dollar being charged and freely given. The plays were "The Lady of Lyons" and "The Spectre Bridegroom." The farmer had supplied us liberally with candles, so that the early part of the entertainment was brilliantly illuminated, but the evening breeze had fanned the lights so fiercely that by the time the farce began the footlights were gone. The little "flaming ministers" had all sputtered out, so "The Spectre Bridegroom" was acted in the moonlight.

It was curious to watch the effect of a strong emotional play like "The Lady of Lyons" upon an audience that had never seen a drama before: they not only were much interested, but they became excited over the trials of the hero and heroine; they talked freely among themselves, and, at times, to the actors. One old lady insisted that the lovers should be "allowed their own way," and a stalwart young farmer warned the villain not to interfere again "if he knew what was best for him."

We continued traveling through the State of Mississippi, sometimes in wagons or on a stray stern-wheel steamer that was hailed from the bank of some little village where we had acted. As the spring opened the rainy season set in, and the roads became almost impassable. Fortunately at this time my mother received an offer for us to join the new theater in Galveston, to which place we proceeded, my brother and his wife going North to act under Mr. Burton's management at the Arch street Theater, Philadelphia.

PUDDING STANLEY.

AT the termination of our Galveston season the company embarked on board a small stern-wheel steamer that wound its way through a narrow, crooked stream and landed us at the city of Houston. I say the company, but it was only a remnant of it, as most of its members, being weary of the hot weather and despairing of any more regular-salary days, had returned to the North. We acted for several weeks in Houston, but with a feeble kind of patronage that just enabled us to keep our heads above water; still, the ever-hopeful disposition of the itinerant actor buoyed us up, and we struggled on in the anticipation of a reaction.

We had by this time resolved ourselves into what was called a "sharing scheme," dividing the profits, when there were any, *pro rata*

with our salaries. First the board was paid for, then the rent, then the printing, then the orchestra—the latter always ready to strike at a bar's notice; the rest we shared. These uncertain dividends were looked forward to with much interest, for home was far away and difficult to reach.

As the season approached its close and the disbanding of our company was under discussion, a new sensation occurred in the arrival of an old actor and ex-theatrical manager by the name of Stanley. This remnant of an earlier era had been upon the retired list for many years, and now suddenly burst upon us with enticing schemes to better our condition. I had never seen him before, but several of our company knew and recognized him as a veteran barn-stormer of the olden time. He had been living in San Antonio for many years, and having heard that a company of players were at Houston the slumbering old war-horse within him was awakened, and disdaining the dangers of a long journey through the chaparral,—for the country was at this time full of hostile Indians,—he had ridden three hundred miles in the wild enthusiasm of an old manager-actor, thirsting for the revival of three-sheet posters and a high stool opposite that fascinating spot, the pigeon-hole of the box-office. Naturally, in the first flush of his arrival, laden as he was with flattering promises of double salaries and clear third benefits, we were in a delightful flutter of anticipation. His accounts of San Antonio and the surrounding country were dazzling. There had been no dramatic entertainment ever given there, the gold mines of Mexico were close at hand, and, in short, it seemed quite clear that our fortunes would be made if we concluded to embrace his offer. He further informed us that he was well known all through Texas, and that his popularity was second only to that of the late Davy Crockett; that, under the very "shadow of the Alamo," as he poetically expressed it, he kept a bar-room in conjunction with a fandango, a keno table, and a faro bank—by which means it seems he had endeavored to refine the depraved tastes of the citizens. Mr. Stanley's figure was portly, so that his friends, in order to distinguish him from the other and less important Stanleys in town, bestowed upon him the title of "Pudding Stanley," or "Pud," as he was more briefly and affectionately called.

As I have said, we were at first overwhelmed with his amazing description of our future Eldorado, but upon holding council to consider the situation dispassionately our ardor cooled. First came the dreaded journey of three hundred miles through a wilderness of chaparral inhabited only by jack-rabbits and hostile Indians.

Our leading actor remarked that he did not mind jack-rabbits, but considered the Indians an impediment. He was a courageous man, too, upon the stage. I had seen him play the *Chief Osceola*, and scalp one "super" after another with great nerve; but now he seemed to think with *King Lear* that "Nature's above art in that respect," and while he reveled in being the hero of an artistic assassination, realistic effects of this kind were not to be thought of.

Another reason for our not relishing the proposal was contained in the recollection of a really serious matter in connection with actors and Indians that had occurred in Florida during the Seminole war. It seems that a manager by the name of William C. Forbes had taken a theatrical company into the very jaws of the disturbance. The troupe acted at the different forts and garrisons along the line of battle, and on one occasion, while going from one military station to another, without an escort, it was attacked and roughly handled by the savages. Forbes and most of his people escaped, but two unfortunate actors were captured and butchered. The theatrical wardrobe belonging to the company fell into the hands of the Indians, who, dressing themselves up as Romans, Highlanders, and Shakspearean heroes, galloped about in front of the very fort, though well out of gunshot, where Forbes and the more fortunate members of his company had fled for safety. Several of the Indians were afterwards taken, and as they were robbed and decked in the habiliments of *Othello*, *Hamlet*, and a host of other Shakspearean characters,—for Forbes was eminently legitimate,—their identity as the murderers was established, and they were hanged in front of the garrison.

The recollection of this incident acted as anything but a stimulus to our wavering courage, and we took the liberty of mentioning to the ex-ranger that it was within the bounds of possibility that the warlike Comanches of Texas might have no more respect for the legitimate drama than the Seminoles of Florida, in which case history would inconveniently repeat itself.

The tempter ridiculed our fears, looking upon us, I think, with a ranger's contempt. He said there were a few Indians here and there certainly, but they were cowardly, and generally kept themselves concealed in the chaparral. On being cross-questioned as to why they concealed themselves in the chaparral, he replied, "Well, possibly ambush; but they are great cowards." He said the safest plan would be for the entire party to keep together; going all in one wagon, we would then exhibit "the full strength of the company," and well armed with such theatrical weapons as we might

possess, there would be no danger. Theatrical weapons — just think of it! The armory of a theater in those days consisted of two pairs of short broadswords, a half-dozen stuffed sticks, and a rusty flint-lock horse-pistol that always snapped once and generally twice before virtue felt itself secure. A cold shiver ran down my back as I imagined myself facing a Comanche with an article whose uncertainty had on more than one occasion compelled the heavy villain to commit suicide with a table-spoon.

It is needless to say that I had inwardly resolved not to go, and I think the entire company were of my mind. Of course we laid it all on the leading man, who had at least been bold enough openly to express his fear; but we decided not to go!

Stanley was of course disappointed, as he had looked forward, he said, not only to the renewal of managerial responsibility and importance, but to donning again the sock and buskin and acting with us. Upon this hint we suggested that if he really desired to act again, and would appear one night in Houston for our benefit, we should be proud to support him. If *Richard III.* could tempt him — we knew this to be his weak point — it was at his service. Of course at first he pretended to demur, saying that he had no wardrobe, and that it was so long since he had acted that he “really feared.” But he could not conceal an undercurrent of secret delight at the thought of again striding the stage. He consented. He was so well known in Texas that we felt quite sure, in securing his services for a joint benefit to the company, our treasury would swell from its present slender dimensions and give us the means of returning to Galveston with flying colors.

Stanley's professional and private histories were both interesting, as they covered a period when artistic, commercial, and military matters were curiously mingled. He had acted in the then far West under the management of Alexander Drake both in Louisville and in Cincinnati; he had then drifted off into Texas, joining the rangers against Santa Anna; then back again to the Mississippi, where he encountered the celebrated Chapman company, who had ingeniously fitted up a steamboat and converted it into a floating theater. This huge dramatic barge used to ply from one town to another on the Ohio, Mississippi, and Missouri rivers, giving theatrical entertainments at the various points where there were no theaters. The roving spirit again taking possession of him, he left the Chapmans and returned to Texas.

The night was arranged for the benefit, and such was the popularity of the volunteer that tickets amounting to the capacity of the thea-

ter, and even beyond it, were sold without delay. As I before said, *Richard III.* was his pet part; and while he considered himself unequaled in the character, he confided to me that he did not mind privately confessing that in the later scenes he drew his inspiration from the example of Edwin Forrest. Stanley now employed his mornings in walking as majestically as his ungainly figure would permit up and down the stage, gesticulating violently and roaring out the soliloquies of *Richard*; and his afternoons in accumulating raw cotton, in order that the hump and the bandy-legs of the crook-backed tyrant might be properly deformed and traditionally disfigured.

Our volunteer reminded me of an actor I once knew who used to wear upon the stage a red wig so like his own hair that whether he had it on or off there was no perceptible difference in his appearance. So with Stanley: his bandy-legs and round shoulders, even when unadorned, quite harmonized with the accepted idea of Gloucester's deformity; but, looking upon himself as an Apollo, our hero had piled such a mountain of cotton on his natural hump that it made “Ossa like a wart.”

On the auspicious night the house was packed to the doors. A few ladies came; but their escorts, seeing that the audience were disposed to be turbulent, took them away, so that the friends and admirers of the star were unchecked in their noisy cat-calls and demonstrations. Law, order, and decorum were set at defiance. The friends of the old ranger had come for a frolic and evidently intended to have it. The placard of “No smoking” was totally disregarded. Pipes and cigars were vigorously puffed, and the house was so filled with smoke that one would have supposed that the battle of Bosworth Field had taken place before the opposing forces met. The weather was sultry, and the general heat, combined with the stifling atmosphere of a crowded house, ran the little box of a theater up to the temperature of an oven in full force.

At the rise of the curtain the expectant audience was on tiptoe to greet their comrade. At the wing stood the sweltering *Richard*, absorbed in his character and embedded in cotton, and as he strode upon the stage the theater rang with applause and shouts of welcome. After bowing low his acknowledgments he began the famous soliloquy. The performance proceeded quietly for a time, the silence being broken now and then by expressions of approval in complimentary but rather familiar terms. During the love scene with *Lady Anne*, her ladyship was warned by some one in the audience, who claimed to have an intimate knowledge of *Richard's* private domestic affairs, that the tyrant had already two Mexican wives in San

Antonio. Nothing daunted at this public accusation of polygamy, "Pud" pressed his suit with ardor.

The retired actor had not forgotten some of the old-fashioned tricks of the art, and would take the stage with tremendous strides from the center to the extreme right or left after making a point, thereby signifying to the audience that if they desired to applaud then was their time. "Off with his head! so much for Buckingham!" and away he would go. In one of these flights, being over-stimulated by excitement and applause, he nearly tumbled into the private box. Straightening himself up, his ostrich plumes became entangled with a spermaceti chandelier and set him in a blaze of glory. He glared with indignation at the convulsed audience, being himself entirely innocent of the illumination until the unmistakable odor of burnt feathers warned him that his diadem was in danger. In the death scene, just as *Richard* expired, a voice, signifying that the game was over, shouted "Keno!" This allusion to "Pud's" commercial pursuits brought him to life, and as the curtain was descending he sat up and warned the interlocutor that he would "keno" him in the morning.

IN MEXICO.

THE declaration of war with Mexico caused a great stir in Galveston; speculations were rife in all quarters as to the probable result from a commercial point of view. Of course no doubt existed as to the ultimate success of our side; but the question as to how much was to be made out of it seemed to absorb the public mind. Our manager was a thrifty soul, and foresaw the prospect of good financial results by following up the army with his dramatic forces. My mother was considerably alarmed lest I should be conscripted, and I was not a little uneasy on those grounds myself.

In May, 1846, we embarked on board a condemned Mississippi steamer for Point Isabel. This leaky old boat, crowded with soldiers, gamblers, and a few actors, feebly wended its uncertain way along the coast and arrived at its destination in about four days. Luckily, the sea was as calm as a mill-pond; for if one of those dreadful cyclones so frequent in the Gulf had overtaken us, many good soldiers, indifferent gamblers, and bad actors would have found their way to the bottom of the sea, and these important reinforcements to General Taylor never would have put in an appearance. Point Isabel, on our arrival, was all bustle and activity. It was a flat, sandy, and uninteresting place, covered with tents and boiling over with military preparations. The battle of Palo Alto was fought on the 8th of May: these were

the first guns fired, and we could distinctly hear the booming sounds of opposing cannon; it ended at sunset with victory for the American army. The next morning I saw the ambulance bringing in the wounded form of Major Samuel Ringgold, who died soon after. This celebrated hero introduced into this country the flying artillery, to the efficiency of which the success of the day was attributed. The Mexicans had retreated only a few miles, and, being reinforced, gave battle the next day, and the memorable engagement of Resaca de la Palma was won by the gallant charge of Captain May at the head of his dragoons. Then came the bombardment of Fort Brown, and on the 18th of May the city of Matamoras was occupied by the United States army; with our gallant band of comedians bringing up the rear, elated at our military success.

The manager took advantage of the distressed position of the town, and, by permission of the American commandant, occupied the old Spanish theater. Victory had crowned our arms; so the soldiers, settlers, gamblers, rag-tag and bob-tail crowd that always follow on in the train of an army, like "greedy crows" that hover over the heads of the defeated party, "impatient for their lean inheritance," were ready for amusement. Here we acted to the most motley group that ever filled a theater. But in the middle of September the trumpet blast sounded in our ears again; the soldiers were ordered to march on to Monterey. The town was deserted and the theater closed. Our manager, seeing that all further hopes of their return had vanished, disbanded his company, and with all the cash he could collect, including our back salaries, "wandered away, no man knew whither." Here I was left with my mother and sister, thrown on our own resources, which were very small, in a strange country, and among a people not at all on good terms with us. The only member of the company left besides ourselves was Edward Badger. He was my brother comedian and friend; his father was the well-known Alderman Badger of Philadelphia. Our situation was somewhat desperate; so we held a council of war to determine on our future movements. The soldiers had gone, but the gamblers remained; and the brilliant idea occurred to us, that as we could no longer minister to their intellectual entertainment we might make something by furnishing them with internal comforts. So we boldly resolved to open a coffee and cake stand in their interest. We arranged to place the stand in a bar-room in the central part of Matamoras, the locality offering the best position for our commercial enterprise. The establishment was dignified by the high-sounding title of "The

Grand Spanish Saloon," and consisted of a long room, with a low ceiling, having a counter, or bar, running the full length on one side, and a row of gaming-tables on the other, where roulette, keno, chuck-a-luck, and faro were industriously pursued with the usual integrity which generally attaches itself to these pastimes. The walls were beautifully whitewashed and the floor was well sprinkled with sand. In front of the bar and at regular intervals were kegs cut into halves and filled with sawdust, these being the cuspidores of the pioneers. From the ceiling were suspended chandeliers made of barrel-hoops, tastefully covered with pink, blue, and white paper, cut in different patterns, in which candles were placed to illuminate the cheerful and tragic scenes that alternately occurred in this fascinating but dangerous place.

Badger, after convincing the proprietor that the introduction of a stand for cake and hot coffee at one end of the room would not only add to the refinement of his establishment, but increase its custom by providing the patrons with refreshment during their hours of relaxation from business, came to terms with him. We were to furnish everything and give him ten per cent. of our gross receipts for rent, it being verbally understood that if either Badger or myself came to an untimely death at the hands of any of his attachés the person so offending should be discharged from his service at once.

Nothing could be more satisfactory than this arrangement, so I at once set about the decoration of our café, while Badger went off in search of an old Mexican woman, said to be an expert in the manufacture of coffee and pies. The construction of our stand was simple and effective; a large dry-goods box on which two boards were placed so as to reach the bar-counter made a permanent and secure foundation for the reception of our viands. The boards were tastefully draped and masked with Turkey-red reaching to the floor. Large sheets of white paper were spread over the top, and on the right, next the counter, stood a large and elaborate tin coffee-urn, and beneath it an alcohol lamp emitting a beautiful blue flame. This monument was surrounded by a dozen old cups and saucers, in which, placed at right angles, gleamed a corresponding number of shining spoons, giving a pure German silver flavor to everything they touched. A fat sugar-bowl and an attenuated milk-pitcher completed the coffee service. Four flat pies, two pyramids of sandwiches, a box of cheap cigars tilted up on a brick, and a large plate of homemade Mexican cakes completed the assortment. Among the dainty articles which adorned our counter were some large, round, burnt-sienna-looking cakes called mandillos. I think they must have been indigenous to the soil of Mex-

ico, for I rejoice to know that I never saw one anywhere else. They were sparingly sprinkled with dry currants, and glazed on top with some sticky stuff that never dried during the whole summer: if an unlucky fly lit on one of these delicacies his doom was sealed. I have no idea what they tasted like, for I never had the courage to try one; nor did I ever know a customer who ventured on one for the second time. One gentleman—an epicure from Texas—said that he would not mind giving one a trial if he could be sure which were the currants and which were the flies. This kind of pleasantries we could afford to smile at, but when a ranger remarked on one occasion that any man who would sell such things ought to be shot, we decided—for the sake of our customers—that we would remove this objectionable feature from our bill of fare; so the cakes were forthwith banished to the top shelf, well out of sight, and utilized as fly-traps for the rest of the season.

When our arrangements were first completed Badger and I stood with folded arms at the far end of the long room, contemplating the effect with pride and satisfaction. It was now about time for the doors to open. We were quite nervous and excited; for, in the innocence of our natures, we expected a great rush from the public. Our spirits were somewhat dampened, therefore, to find that no one seemed to know or care anything about us or the new venture in which nearly all of our available cash was invested.

As the day wore on, stragglers dropped in one by one; blear-eyed gamblers, freshly shaved, with shaky hands and gloomy looks, called for their morning cocktail at the bar. Now and then we caught a stray customer: our coffee, clear and strong, was a great success; and the pies did pretty well, too, but the "Colorado Claros" were a dead failure. Our point now was to watch the public; if an article was not in demand we discarded it at once, and offered another in its place. By these tactics, before the week was over, the cash returns were more than satisfactory. My partner and myself conformed to the regular business hours of the establishment: at about three o'clock A. M. the order to close was given and "Vamoose!" was shouted by the stentorian lungs of the proprietor. The roulette ceased to revolve, the dice were discarded, the faro cloth was rolled up, and our alcohol lamp was extinguished. Those members of the sporting fraternity who could stand on their feet reeled home (?), and those who could not were dragged along the sanded floor and deposited on the sidewalk; the candles were blown out and the doors of "The Grand Spanish Saloon" were closed to the world. Badger and I would trudge to our

room arm in arm, carrying our money in a shot-bag between us, and each armed with a Colt's patent "pepper-caster."

The dwelling-houses in Matamoras were generally one story high, built of brick, plastered, and painted yellow; one door and an iron-barred window in front on the street, and the same at the back, leading to a courtyard which was used in common by the occupants of the house for washing, ironing, cooking, and eating. We occupied one of these establishments.

In the morning little tables, with white cloths, were brought out and set for breakfast in the open air. The different families would sit at them and drink their hot coffee, eat their fruit and bread, smoke their cigarettes, and talk away as gaily as if no war were going on. The courtyards were entered by a large gate, and hired out to passing caravans of muleteers or rancheros, who occupied the middle of the space. Here they also took their meals and sold their fruit, vegetables, chickens, and dry goods of cheap and gaudy-colored stuffs, Mexican blankets, *sombreros*, and baskets. The courtyard at night was a lovely sight. The little houses surrounding it were all lighted up within, the doors wide open so that we could see the families, men, women, and children, knitting, smoking, dancing, singing, and playing cards—always for money (everybody gambled in Mexico); and groups of muleteers in the center were seated around their camp-fire, which would blaze and shed its light over the scene. I had a great fondness for this locality, for here I met my first love. Her mother was a full-blooded Mexican, but her father must have been pure Castilian, for the girl was not only beautiful, but her features were aristocratic. She had the prettiest little feet and hands that could be imagined. Her merry black eyes fairly danced and sparkled with brilliancy, and when laughing she would throw her head back in ecstasy, showing two rows of pearly teeth. Metta—that was her name—was as wild and graceful as a deer. I was quite in love with her at first sight, and when she began to teach me to play the guitar and smoke cigarettes I was entirely captured. She had that rich, olive complexion that one sees in a pale Key West cigar, and, like that article, was about half Spanish. Her great delight was to make a full half-dozen of her Mexican sweethearts jealous by flirting with me; but as she spoke not a word of English, and I was entirely ignorant of Spanish, we could only make eyes and smile at each other. Perhaps this was all for the best, because had it been otherwise, I am afraid that, though I was only eighteen, my mother would have been astonished with a Mexican daughter-in-law before we left the country.

Our business affairs were flourishing at the saloon, and but for a strong propensity that my speculative partner had for trying his luck at the side tables now and then, we should have made a small fortune. Of course there was a heavy risk of life and property in such a place, as the frequenters of the "Grand Spanish" were more numerous than select, and, to paraphrase an old saying, "when the rum was in, the knife was out." Several times the firm had dodged under the counter to escape contact with a stray bullet, and on one occasion the offending coffee-urn had been fatally shot.

I now divided my time between attention to commerce and learning the Spanish language from Metta, but I am afraid it was a case of pleasure before business. She was the most innocent, simple child of nature that I ever saw, and yet, with all her modesty, a perfect miniature coquette. She would jump for joy and clap her little hands together if she only could contrive to make any of her lovers jealous. The scowling brows of one of her native admirers, together with the liberal display of a small arsenal of unconcealed weapons encircling his waist, always gave me a disagreeable turn, and at these times I would insist on Metta's not lavishing so much public attention on me. I never saw the fellow's dark eyes glaring at me but there came up a vision of that old engraving of the Spanish lady on a moonlight night smiling from her window on her favorite lover, and a melodramatic looking rival in the background peering around the corner and grasping a stiletto as big as a hand-saw, ready to stab the accepted lover in the back.

A noted character on the border line in those days, one Buck Wallace, was a frequenter of this place—a lump of good nature and kindness when unmolested, but if the demon in him was aroused he became a desperate and dangerous man. He was a Philadelphian by birth; and as that was my native city, Wallace and I struck up a great friendship, though he was full thirty years my senior. He was an interesting fellow, with a strange mixture of tenderness and ferocity. His life had been an adventurous and romantic one; as a boy, he had served under Captain James Bowie, after whom the famous Bowie-knife is named, and was with Davy Crockett at the fall of the Alamo. After the assassination of Crockett and Bowie by the Mexicans, Wallace returned to Philadelphia, and, as extremes meet, strangely enough married a beautiful young Quakeress. He now resolved to settle down and lead a steady life, but the City of Brotherly Love was a trifle too peaceful for his belligerent nature; so, taking his young wife on his arm, he again sought the border, squatting on a ranch in the

heart of a wild and lonely spot on the banks of the Nueces. This river marked the fighting line between Mexico and Texas, so it was congenial soil for "Bully Buck," as he was familiarly called, though I am afraid the friendly spirit of his gentle wife was often shocked by his deeds of daring. He used to talk to me of this sweet lady and their only child with tears in his eyes, for he was a loving savage. They had been cruelly murdered by the Comanche Indians during the absence of Wallace from his home. This crazed him for several months, and when he came to himself a morbid craving for revenge took possession of him. It is said that if Buck met a Comanche alone, it was all up with the redskin. His knowledge of the country made him of much importance at this time to the United States Government, by whom he was employed as spy, scout, ranger, and detective; his bold nature won for him the admiration of his friends and the fear of his enemies. He had in his way educated himself, and was very fond of quoting poetry of the morbid and romantic order. Byron's "Corsair," Poe's "Raven," and Scott's Highland tales were special favorites with him; but he had a thorough contempt for Cooper's novels, and put no faith in the existence of "Boston Indians."

One evening—the last on earth for him, poor fellow!—just as the candles were lighted and the games in the "Grand Saloon" were in full play, Wallace, without hat or coat and with his hair disheveled, rushed wildly into the room. He shouted to the crowd: "Give me a knife or a pistol, for God's sake, quick, or I'm gone!" Everybody started to his feet; the man was so well known that the sound of his voice and his desperate appearance seemed to terrify the crowd. In the midst of the confusion three dark-looking Mexicans rushed into the room and began a furious attack upon Wallace. He was unarmed, and, seizing a chair, he fought desperately for his life. He felled the first man to the ground, but before he could turn he was stabbed to the heart by one of his other assailants and fell heavily to the floor; the assassins, brandishing their knives, cleared a way through the crowd and escaped. This was the darkest tragedy I had yet seen, and that night, as I turned the matter over in my mind, I felt that however congenial this atmosphere might be for a Texan ranger, it was no place for a legitimate comedian. So I proposed to Badger that we should at once hunt up some Mexican having a commercial turn of mind and sell out. This was easily done; the business was a thriving one, and the death of poor Wallace seemed to have made the place more popular. So we sold the good-will, divided our capital, and dissolved.

I had to break the dreadful tidings to Metta

that I must go away. I do not think she cared half so much for me as I did for her; but when she realized the fact that I was about to "vamoose" she got up quite a little scene. Through our interpreter I told her I should soon make my fortune and return to her to claim her as my bride, and bear her off with the whole family—there were sixteen of them—to my own country. It was pretty hard to make her understand that there was any other country but the one she was living in: she had often wondered where I and all the other cruel people had come from to make war on her family, and always fancied that the little town where she was born was the all and end of everything. In fact, Metta in Matamoras was like the minnow in the brook; she "knew not of the sea to which the brook was flowing."

The parting between Metta and myself was very affecting; her mother and all her little barefooted brothers were weeping away in the Mexican tongue as I departed. In a month after that I had quite forgotten Metta, and the chances are that within a year she had allied herself to that animated arsenal the dark-eyed rival.

MR. AND MRS. JAMES W. WALLACK, JR.

WE had a permit to leave Matamoras in one of the Government boats that was taking back wounded soldiers to Brazos Santiago. Many of the poor fellows were on board, and, having left various members of their bodies on the battlefields of Mexico, they were anxious to get what was left of them home as soon as possible. I was an eye-witness to much of the suffering; the water, the climate, the blazing sun, and the drenching rain thinned their ranks with more effect than Mexican valor could have done. One by one they dropped off, and by the time we reached Brazos Santiago there were but few left alive. Here we left the Government steamer and took passage on a brig bound for New Orleans.

I am not aware as to how attractive their places of business may be to the members of other professions, but when I was a youth the first place an actor sought out when he arrived in town was the theater. Actors seemed to be in love with their vocation and fluttered about the footlights, whether they had anything to do or not. I scarcely think that the attachment is so strong to-day, and there are many reasons, too, why it should not be so. At the time of which I write actors mixed but little with the public and seldom went into society. Salaries were small, so they could not afford expensive amusements, and I cannot call to mind that there was a dramatic club in America. Now they have their yachts, their horses, their clubs,

and their country homes. Then their only place of rendezvous was the theater.

It is not to be wondered at, then, that on our arrival in New Orleans the brig we came in had scarcely touched the wharf when I leaped ashore and bought a morning paper to see what theater was open. At the St. Charles — still under the management of Ludlow and Smith — there was announced the "Tragedy of King Richard III." from the original text, the stars being Mr. and Mrs. James W. Wallack, Jr., who appeared as the *Duke of Gloster* and *Queen Elizabeth*, the evening's entertainment concluding with the farce of "A Kiss in the Dark," with the then rising young comedian John E. Owens as *Mr. Pittibone*. Of course I went at once to the theater. As I had acted there the season before, I knew all of the attachés and most of the company, and I naturally expected to be something of a lion, having just returned from the seat of war. In this, however, I was somewhat disappointed; for as I had arrived in a sailing vessel, they knew more of the conflict than I did. That night I saw the performance. James W. Wallack, Jr.,¹ was in those days at his best. Young, vigorous, and handsome, he was the most romantic-looking actor I ever saw; there was a dash and spirit in his carriage, too, that was charming. I say he was at his best in those days, because in after years the acting of Macready, whom as an artist he idolized, had an unfortunate influence upon him, as he ultimately became imbued with the mannerisms of the English tragedian, which were so marked that they marred the natural grace of the imitator. All who remember Mrs. James W. Wallack, Jr., will attest the force of her tragic acting. In the quality of queenly dignity I think she even surpassed Charlotte Cushman, though she lacked perhaps the spirit and fire of the latter. War usually increases the nightly receipts of the theater, but the struggle with Mexico seemed to have a contrary effect. So I remember that, though the bill would have been considered an attractive one under the usual condition of public affairs, the audience was small. The American Theater, then under the management of James Place, was not open, but the company was still in town, and there were as many actors as citizens in front.

The play was finely acted but indifferently mounted, the armies of York and Lancaster being wretchedly equipped and quite limited as to quality and quantity. The faint and un-military efforts that they made to march with time and precision gave them anything but a warlike aspect. In keeping step there was a glaring difference of opinion, the pursuing army treading more upon their own heels than

upon those of the enemy, and in the final collision there was a friendly tapping of tin spears on pasteboard helmets that told too plainly of a bloodless battle.

But the really furious fight between *Richard* and *Richmond* made amends for the docility of the rank and file. Wallack was a superb swordsman, and I do not remember to have seen a stage combat fought with finer effect.

JOHN E. OWENS.

I HAD for the last year at least been buffet-ing about in barns and tents, so that anything like a legitimate production was a great treat. But my chief interest on this occasion was centered in the farce, and my thoughts were dwelling on the approaching efforts of the rising young comedian — and why not? Was I not a rising young comedian myself? I certainly had reached that height in my own estimation, at least, and I felt a burning desire that a time should come when some newspaper would proclaim it for me as the New Orleans "Pica-yune" had that day announced it for Owens.

At last he came, and certainly he conquered. As he entered briskly upon the stage, humming a sprightly song, I thought him the handsomest low comedian I had ever seen. He had a neat, dapper little figure, and a face full of lively expression. His audience was with him from first to last, his effective style and great flow of animal spirits capturing them and myself too — though I must confess that I had a hard struggle even inwardly to acknowledge it.

As I look back and call to mind the slight touch of envy that I felt that night, I am afraid that I had hoped to see something not quite so good, and was a little annoyed to find him such a capital actor; in short, I experienced those unpleasant twinges of jealousy that will creep over us during the moments when we are not at our best — though these feelings may occasionally produce a good result. In me, I know, it stirred up the first great ambition that I remember ever to have felt, and from that night of pleasure and excitement I resolved to equal Owens some day, if I could.

CROSSING THE ALLEGHANIES.

It was now decided that my mother and sister should remain in New Orleans with some old friends while I went to join my half-brother in Philadelphia. He had been urging us for some time to come to the North, writing that arrangements were made for me to act the second comedy to himself and W. E. Burton, then manager of the Arch street Theater. My mother was banker, and so had charge of the money. I took enough to see

¹ So called to distinguish him from his uncle, who was the father of Lester Wallack.

MRS. JAMES W. WALLACK, JR.
(FROM A PHOTOGRAPH BY FREDERICKS.)¹

me to Philadelphia, supposing that no accident would happen; but before our steamer arrived at Wheeling the river was blocked with ice, and we were delayed over a week before we could reach the line of stages that crossed the Alleghany Mountains.

Some of the old folks of to-day, who live only in the past and stolidly witness the improvements of the present, passing no remarks upon them except when there is an opportunity to condemn, are always preaching about the delights of the olden time and extolling the comforts of the stage-coach. I will describe, by way of contrast with travel of the present day, how the Alleghany Mountains were crossed in 1846.

It was midwinter when we arrived at Wheeling. Our steamboat was tied to the wharf about three o'clock in the morning, and as the stage-coach was to start at five no one thought of going to bed, so we wended our way along the frozen streets to secure through tickets to Philadelphia. The morning was pitch-dark and bitter cold—that damp, penetrating weather piercing wraps and overcoats until it reached the very marrow in one's bones.

We got to the little "den," by courtesy called the "office," where we found a half-dozen more passengers equally damp, cold, and ill-natured with ourselves. There was a handful of coal burning in a very small grate, about which were grouped the round-shouldered, unsympathetic people who were to be our fellow-travelers. They glanced up at us as we entered, and, closing up all the open space near the fire, said as plainly as they

could without speaking: "You don't get in here, we can tell you. You have no right to travel in our coach, anyhow."

At one side there was a small table on which stood a large coffee-pot, some white cups and saucers, a plate of cold sausages,—frozen stiff,—and an unattractive loaf of bread; behind this banquet was a tall darky, leaning against the wall, and fast asleep. Here he remained undisturbed, not only because his refreshments were not tempting, but because we were given to understand that we could get a good breakfast twenty miles from Wheeling. At the appointed time the heavy old coach came up and we all climbed in. As our places were not designated on the ticket, we stowed ourselves in pell-mell, and I presume no one got the seat he wanted.

A short way from town there was a long hill up which the horses toiled, so this gave the inmates of the coach time to settle themselves down for a quiet nap. One snore after another announced the accomplishment of this feat, and in a few minutes at least six out of the nine passengers were oblivious of their miserable condition. I never before had so fine an opportunity to study the philosophy of snoring. A large, fat man opposite me had a short, angry snore; at one time he snored so loudly that he woke himself up, and he had the impudence to glare about at the company as though he hoped that they would not make that noise again. The old lady who was crushing me up in the corner snored deeply and

¹ Unless otherwise stated, the pictures in this article are from the collection of Thomas J. McKee.

contentedly. Some one off in a dark corner, whom I could not see, had a genial way of joining in, as though he snored merely to oblige the passengers; but the grand, original musician of the party sat opposite me. I never heard anything approaching him, either for quality or for compass. It was a back-action snore that began in a bold *agitato* movement, suddenly brought up with a jerk, and terminated in a low whistle. As the coach steadily moved up

JOHN E. OWENS.
(FROM A PHOTOGRAPH BY BACHRACH.)

the hill the band was in full play. The summit gained, there was a sharp crack of the whip, the horses started, and as everybody was jerked violently backward, the snoring gave place to oaths and pshawes and jolting about. As soon, however, as we got used to this sensation, the chorus began again; and as I was quite overcome and tired, I joined in until the coach came to a full stop at the stable where the horses were to be changed. The sun now rose, and came in at all sorts of places, waking and blinding everybody. What a discontented and unhappy lot we were! and how we all hated one another!

Breakfast at last! Ah, hot coffee, ham and eggs, and buckwheat cakes! The meal was not half over before we were a band of brothers. We could not do enough for one another, and all was harmony and peace. Of course under these conditions we became more familiar, and one vied with another in making the time pass agreeably.

Two gentlemen pitted themselves against each other in telling funny stories. Their talents and qualities in this respect differed very widely; one invariably began his anecdotes by telling the joke first and then relating the story, whereas the other told his tale in a capital way until he came to the point, and that he never could remember. The fat man sang a sentimental song about "My Mother, Oh, my Mother." His voice was not bad if he had only kept in one key, but his natural independence set all such trifles at defiance, and in his most extravagant wanderings he would look about with an expression of countenance which clearly admonished us not to give him any advice in the matter.

Of course I was expected to contribute my share of amusement, particularly as it leaked out that I was a young actor; in fact, I should have been offended if they had not pressed me. I sang a comic song about "The Good Old Days of Adam and Eve," the passengers liberally joining in the chorus. I followed this up with some bad imitations of Forrest and Booth. These seemed to give great satisfaction, the old lady exclaiming that the imitations were wonderful; but as it afterwards turned out that she had never seen the originals, her criticism must be received with some caution. The day rolled slowly away, and as the darkness came on a mountain storm of snow and driving wind enveloped us. As we ascended the mountain the cold became intense.

It was rather late in the night when we arrived at the supper station, as in consequence of the slippery state of the roads we were fully three hours behind time; but the cheerful look of the dining-room with its huge blazing fire of logs repaid us for all the suffering we had endured. We found that a large pile of bricks was being heated for us in front of the fireplace: these comforting articles were intended for our feet in the coach, and nothing, not even the supper, could have been more welcome.

The horses changed and the passengers aboard, we were again ready for our journey—more perilous now than ever, for, as we reached the summit of the mountain, the storm increased in its fury. At times we thought the stage would blow over; the icy roads caused the horses to slip, and several times the leaders went down. It was a night to be remembered. A little after daylight we rolled into the town of Cumberland, the terminus of the stage line and the beginning of the railroad. Shivering and benumbed with cold, we alighted and sought the hotel for warmth and shelter. The driver of the coach was frozen stiff and had to be assisted down from the box. Another hour on the road would have been fatal to him.

Twenty-four hours of suffering and peril took

JOHN E. OWENS AS "SOLON SHINGLE."¹

us from Wheeling to Cumberland—a journey now made in six, with a comfortable bed to lie on and a warm sleeping-car for shelter.

MY FRIEND THE SCENE PAINTER.

A REUNION with my brother was always delightful. We took the greatest pleasure in each other's society, and he seemed never tired of making any sacrifices for my advancement, and, while we were both acting at the Arch, would often persuade Mr. Burton to cast me for parts far beyond my reach.

At the end of the season Burke joined the Bowery Theater in New York, and I was installed in his place at the Arch. I was destined to meet in this theater one of my oldest and dearest friends, Tom Glessing. (Dear Tom, as I write your name how my thoughts run back to the olden time—not that we were happier then in each other's friendship, for it is a great comfort to reflect that throughout the many years we knew each other our affection never weakened.)

Tom was the scenic artist of the Arch street Theater, and noted for great rapidity in the

execution of his work. The same generous nature that prompted him to lavish all he had upon his friends rendered him equally prodigal in the use of paint; he wasted more than he used, and bespattered everything and everybody, himself included. Such was the generosity of his double-pound brush, that it scattered benevolence in all directions, and woe betide his dearest friend if ever he came within the circumference of its bounty. His was the loudest and the heartiest laugh I ever heard. Nor had he any control over it, and often during the quiet scene of some play that was in preparation his boisterous roar of merriment would burst forth from the paint room and, echoing through the theater, upset the serious business of the play. At such times the stage-manager would have to assert his authority, and demand of Glessing that he should stop that "dreadful roar" in order that the rehearsal might go on. If he had a fault it was that he was a trifle mischievous, and his enjoyment of a practical joke, played on any of

¹ From an article by Brander Matthews, entitled "The American on the Stage," in this magazine for July, 1879.

his companions, was delightful to behold: when he tried to tell of it he would laugh so immoderately that one could never understand half he said. Fortunately, none of his pranks resulted seriously, except sometimes to himself; and when recounting some of the mishaps that had befallen him, in consequence of indulging too freely in his sport, he seemed to enjoy his own discomfiture quite as much as that of the other party. Practical jokers, like physicians, seldom take their own prescriptions with pleasure; but Tom was an exception, and would even delight in being the victim of the game.

I recall the first time we met in the paint room: he was hard at work, splashing in a turbulent ocean with angry billows breaking upon the rocks. The storm was very severe, and the artist must have had a narrow escape, for he was so bespattered with spray that he seemed to have been battling with the breakers.

We were friends from the first moment. Sincere attachments usually begin at the beginning. He had but one sorrow—it was a domestic one—and he bore it nobly, never uttering a word against those who had caused his unhappiness. Years afterwards he married again, and so happily that it repaid him for the trouble he had passed through in his youth. Gaiety became contagious in his presence, and cheerfulness followed in his wake. He dreaded to look upon the serious side of life, for his nature was so sympathetic that he suffered the pangs of others, and at the mere recital of human grief his eyes would fill with tears. He was fond of acting, and could n't act a bit, poor fellow; but it was delicious to hear him recount his failures.

Mr. Burton had married Tom's sister, and he and Glessing traveled together through the South on one of the comedian's starring trips. In Natchez, Mississippi, the manager offered to give Tom a benefit if he could prevail upon Mr. Burton to play for him. This was arranged, and for two days he practiced the speech he intended to deliver in front of the curtain, as a tribute of gratitude to a generous public. He had written it out, and had sat up all the previous night to commit it to memory. It began, "Being totally unprepared for the honor you have done me." After rehearsal he walked out to the edge of the town, so that he could practice it in the open air, where he could elevate his voice without disturbing the citizens. On his way towards the woods he met a drunken Indian, who was staggering from side to side in the road, and flourishing an empty whisky-bottle at the white man in general and Glessing in particular. When any one is anxious to avoid a drunken man, by some strange fascination the intoxicated person invariably makes directly for him; you

may look the other way, or pretend to be unconscious of his existence, but it's of no use: he will introduce himself. The Indian was no exception; for though poor Tom, who was frightened to death, whistled a lively tune and looked up at the tops of the trees, the gentle savage would not be avoided.

"Hey! you white man, look me too. Me good Indian, good Indian. Yes, ah?" said the red man.

To which Tom assented at once, most emphatically: "Certainly, you are a splendid Injun; you're as good—I may say you are the best Injun I ever saw."

"You think me drunk, eh?"

"Drunk!" said Tom. "No. Let me hear any one dare to say you're drunk, and I'll kill him. Give me that bottle and I'll kill him with that."

"No; me *am* drunk," said the savage, glaring fiercely at Tom.

"You may be a little drunk, but not much—just enough, eh?" said Tom, desirous of agreeing to anything under the circumstances. The Indian became sullen and moody, as if brooding on the wrongs that the white man had inflicted on his ancestors, when it suddenly occurred to Tom that the United States Government, when the Indians got troublesome, always softened their anger by the bestowal of costly presents; so, offering a dollar to the chief, Tom bade him return to his wigwam and take some whisky home to his squaw and papoose. The offering was accepted, and had the desired effect. After two or three affectionate embraces they parted, and Tom got away in the opposite direction.

Finding himself once more alone, and in a secluded spot, he began to go through his speech. He tried various methods, first the cheerful; and, stepping forward with bright, jaunty manner, he raised his voice in a high key: "Ladies and gentlemen, being totally unprepared for this honor." On second thought, it appeared to him that his manner was a little too free and undignified, so he now assumed the grave and thoughtful. Placing one hand in his breast, and pulling his hair over his eyes, to give him a poetic and dreamy air, he paced slowly forward, and in a solemn, deep voice began again: "Ladies and gentlemen, being totally unprepared." Just at this point he raised his eyes and observed the astonished heads of two farmers peering over the rails of a worm fence. He immediately gathered up his hat and manuscripts and started for the town at a brisk pace; but remembering that the "good Injun" might be in ambush awaiting his return, he was forced to skirt the town for miles before he reached his hotel.

He would go on by the hour and tell such

WILLIAM E. BURTON AS "DOCTOR OLLAPOD." (FROM THE PAINTING BY INMAN, AFTER AN ENGRAVING BY SARTAIN.)

stories, and was always the most pleased when he was the hero of them and placed in some absurd position.

About this time I was haunted by a professional borrower. Just eighteen, and in the receipt of what was considered in those days a fair salary, I was a shining mark for his skill, though I was such easy game that I think he held me in slight contempt. But, for all this, he was crafty enough to impress me with the simplicity of his nature, and what a toy and plaything he had been for fortune's sport! He was a dreadfully bad actor on the stage, but a star of the first magnitude in private life; so much so that for many weeks he tortured and defrauded me with the ease and confidence of a master.

Conventional beggars are as conventional as any other professionals. That time-honored custom of assuming a nervous and uncertain manner, as if this was the first time they were placed in such a position, is a favorite attitude with them; while in reality they are cool and collected. My tormentor was an expert, and his costume quite a study for an amateur in the business. Although his ample

shoes were full of gaping wounds, they shone with a high polish that any man might feel proud of; and if his tall hat was a trifle weak, it had a gloomy, ruined-tower look that won him respect from strangers; and his clothes were of a shabby black, just "sicklied o'er with the pale cast" of time. Sometimes he would meet me with a sad, sweet smile, clasping my hand warmly, and regarding me as if I was the one ray of light that illumined his gloomy path. I believe he once said these very words; at all events he looked them, and at times I really thought I was. The first thing a sly old rascal like this does is to study the weak points of his victims; and he knew mine better than I did. He had a large supply of tears that he could turn on at will, and after getting under a full headway of grief he would revolve slowly round and dry his eyes with his back to me. I used to imagine that he did this so that I might not observe him weep; but since then I have thought differently of it.

He knew perfectly well when salary day came, and would waylay me at the stage door. On these occasions he would assume a surprised and startled look, as if we had met

quite by accident; and then he would exclaim, in a half-retrospective tone, "Dear me! dear me! it must be nearly a week since we last met." It was just a week, to the minute, and he knew it, the villain! At such times Tom Glessing would fairly revel in my discomfort. If he saw that my tormentor had buttonholed me on the corner, he would delight in passing close to us with an "Ah, how are you? At it again, eh?" And on he would go, fairly holding his sides with laughter, while my "corkscrew," as Glessing used to call him, was drawing the dollar notes out of my pocket, one by one. The most provoking thing about the fellow was the air of patronage he assumed when negotiating a loan: in our early transactions he used to make me feel that he was doing me an immense favor by levying these little drafts on my slender income. He would

ing look that quite terrified me, and as lately he had hinted that the time was drawing near when he thought of trying his luck in the Delaware, I really feared he might commit suicide.

I can hardly describe what I suffered from the persecutions of this man, and it was nothing but a sense of shame at being the dupe of such a low fellow that determined me to break my bondage and turn from him. When he saw that I made a bold stand against him he became abusive; finding that this did not have the desired effect he lapsed into the dismal, whining and mourning over his crushed feelings, and lamenting his personal degradation. But I had discovered his cloven foot, and it was too late for him to attempt further imposture.

Such men are to be found in all grades of life, and they are usually adroit and cunning fellows, attacking their victims right and left, and using just the sort of weapons that are the most difficult to parry. They lie in ambush for the innocent traveler, and suddenly pounce upon him with a well-told tale, so got by rote, and so often rehearsed, that they act the part of injured innocence to the life. If the victim be timid he is lost, for they recognize his nervousness at once, and browbeat him out of his benevolence.

This vile weed—the borrower—grows and luxuriates in all the capitals of States and countries. The ever-changing soil of fresh visitation seems well adapted to nourish it. Sometimes women indulge in this practice, but not often; you are at least safer with them than with the men, particularly if they are old. A feeble old mendicant generally uses her collection for some purpose that gives her comfort at least. Coal, tea, and warm worsted stockings are necessary, and they must and should have them; but the man has many avenues through which he can filter your bounty—the gaming-table, the bar-room, and worse.

WILLIAM E. BURTON.

If Mr. Burton was not at this time a fixed star, he was certainly a managerial planet of the first magnitude, and in this position was naturally surrounded by a number of small satellites that basked in the moonshine of his affection. These lesser lights seemed to gyrate in eccentric orbits, generally going out of their way to carry tales to their superior.

Nothing is more distressing to the members of a stock company than to have spies set upon them who eavesdrop and report every little trifle to the manager. It is natural that the occupants of the dressing-room, and even of the greenroom, when the manager is not present, should now and then indulge in the

WILLIAM E. BURTON AS "CAPTAIN CUTTLE."
(FROM A DAGUERRETYPE BY MEADE BROTHERS, AFTER A
LITHOGRAPH BY SARONY & MAJOR.)

begin by saying that if it were not for the regard he had formerly felt for my father he would not demean himself by sinking so low. I put up with this for some time, not out of any charity, for I had gradually lost all respect or pity for him, but from a kind of fear. He had an overawing and at the same time despair-

harmless amusement of criticizing and even censuring the policy of the theater; it serves to pass away the time between long waits, and, like *Doctor Ollapod's* small dose of magnesia, does "neither harm nor good."

The tale-bearing element in Mr. Burton's theater was fully organized under the generalship of one of the most ingenious informers that I have ever met with. If I do not speak affectionately of this gentleman, it is because I was at that time smarting under the effects of one of his secret-service reports to the Star-chamber, to which apartment I had been summoned on a charge of "contemplated desertion." It seems that I had been incautiously bragging among my comrades in the dressing-room of a large offer I had received to leave the Arch and join Mr. Killmist at his theater in Washington, stating that I was shortly going to send in my resignation to Mr. Burton. I had also been abusing the management, both criticizing and condemning its short-sighted policy; and though there was no stated reward offered for the exposure of such offenses, the informer was anxious to get me out of the theater, looking for his compensation in being cast for some of the good parts that were already in my possession.

I was ushered into the manager's office by the call-boy, and stood there like a prisoner ready to be sentenced to the rack for daring to express my opinion of the "powers that be." Mr. Burton sat in state at the farther end of a long table, supported on each side by his stage-manager and the prompter; this august tribunal frowned on me with a most discharging countenance as I stood before it. The scene as I look back at it seems comical enough, but just at that time it was a serious matter for me, as my prospective engagement was not positively settled, and under the most favorable circumstances could not be entered upon short of two months, and a dismissal just at that time would have been financially inconvenient. The accusation of a "contemplated desertion" being made, I demanded the name of the informer. This being withheld, I declined to make any answer to the charge. Those who remember Mr. Burton's face will recall its wonderfully comical expression, even when he was serious; but when he assumed a look of injured innocence the effect was irresistible. I did not dare laugh then, but I do enjoy it now when I think of it. The examination proceeded, and on the first question being again put I acknowledged the fact point-blank, stating also that being engaged for no stated length of time I intended to give the customary notice and to resign.

CHARLES BURKE.
(FROM A PAINTING IN POSSESSION OF THE AUTHOR.)

The manager demanded to know on what grounds I presumed to take such a step without first consulting him. I told him that I had been offered double the salary I was then receiving. Upon his asking who made me worth "double the salary," I replied that I was quite willing to admit that he did, and proposed that he should give it to me. At this rather impertinent remark he waxed wroth, and said I was not worth it, and never would be worth it, but that I had been insubordinate and disloyal to him, and that he should take legal steps to prevent my appearing at any other theater if I left him.

There is no doubt that Mr. Burton thought that his denunciation and threats of an action would crush me, but he knew little of human nature, for I now went up at least one hundred per cent. in my own estimation. The very thought of being threatened with a lawsuit made me feel at least an inch taller. I, who up to the present time had thought myself of small consequence, threatened with an action for breach of contract! It was delightful; and I have no doubt that I drew myself up with much dignity as I informed him that he could pursue whatever course he pleased in the matter—swaggering out of the room with the defiant air of a "heavy villain."

Of course quite a little knot of actors were waiting at the back door to hear the result of the trial and learn the verdict of the judge. When I informed them with a lofty pride that I presumed the affair would end in a lawsuit, they were amazed. If they had never envied me before, they certainly did now. It was not

MR. C. BURKE, AMERICAN COMEDIAN.

in Comedy, Drama, Farce & Burlesque.

(FROM A LITHOGRAPH BY J. L. MAGEE.)

a hanging matter, and the most serious result could not go beyond "damages for the plaintiff"; and what actor of my position in those days could ever have afforded to pay damages? We might have dreaded a long vacation in the summer, or quaked at the rebuke of a dramatic critic, but the law! So far as damages were concerned, we defied it! The case, however, never came to trial; for about a week after this the Washington theater was destroyed by fire, and I was only too glad to remain where I was without double the salary.

As an actor of the old broad farce-comedy Mr. Burton certainly had no equal in his day, and his dramatic pictures of the characters of Dickens would have amazed the author if he had been so fortunate as to see them. *Captain Cuttle* and *Micawber* were his greatest achievements; his face was a huge map on which was

written every emotion that he felt; there was no mistaking the meaning of each expression. His entrance as *Van Dunder*, in the drama of "The Dutch Governor; or, 'T would Puzzle a Conjuror," was a comic picture so full of genius that it stamped itself indelibly on the mind, an effect never to be forgotten. The great stupid face was a blank. The heavy cheeks hung down stolidly on each side of a half-opened mouth; the large, expressionless eyes seemed to look hopelessly for some gleam of intelligence. There he stood the incarnation of pompous ignorance, with an open letter in his hand. The audience swayed with laughter; for, though he had not said a word, they knew that he had just received an important state document and could not read it.

As a manager he achieved much success, but met with some disastrous failures, not seem-

ing to understand the difference between competition and opposition. The first deals with our own affairs, and, if pursued with honesty and industry, invariably leads to good results. The latter meddles with the business of other people, and generally brings about the downfall of the opposer. Burton was always temperate, and very industrious; he had literary talent, too, as his contributions to "The Gentleman's Magazine" (which he edited) will attest. Edgar A. Poe was also a contributor to this periodical, but he and Burton were always "at daggers drawn"; they had a paper war for many months in Philadelphia, and splashed their angry ink at each other much to the amusement of the public. Poe lost his temper, and Burton, seeing his advantage, fired off his humorous artillery, so that the comedian got the better of the poet. If people could only realize how little the public care for the private quarrels of individuals—except to laugh at them—they would hesitate before entering upon a newspaper controversy.

I have often thought that Mr. Burton must have had Irish blood in him, for he was continually spreading the tail of his coat for a fight—I mean an intellectual fight, as physically he was not pugnacious. Quarrelsome persons who do not indulge in pugilistic encounters are fond of lawsuits; it is only another way of having it out, and Burton must have spent a fortune in fees. His humor on the witness-stand was quite equal to that of Sam Weller. On one occasion, while the actor was going through bankruptcy, an eminent lawyer in Philadelphia thought he detected a desire on Burton's part to conceal some facts relative to a large sum of money that he had made during the production of the "Naiad Queen." Rising with great dignity, and glaring fiercely at Burton, he demanded, "What became of that money, sir?" The comedian looked him straight in the face; then rising in imitation of an attorney, he replied, "The lawyers got it."

AN EFFORT IN GREEK TRAGEDY.

DURING the first season that I acted at the Arch great preparations were made for the production of a Greek tragedy, the "Antigone" of Sophocles. In a theater, as we have seen, there are apt to be two or three discordant spirits that criticize and condemn the course of the management, and I presume that most public institutions are honored by small private bands of conspirators; so that on being confronted by this ancient drama in the greenroom we naturally shrugged our shoulders and wondered what Mr. Burton meant by it. This same sublime tragedy of "Antigone" had been freely translated and acted in Dublin at the Theater

Royal some forty years before. The audience was quite bewildered by this performance, and at the close of the play called for the author; whether to applaud or to chastise him does not appear. The manager came forward to apologize for the absence of Sophocles, but promised faithfully to produce him if ever he allowed one of his plays to be acted under his management again. Notwithstanding that this Greek tragedy had always failed to attract public attention, our manager determined to revive this previously unfortunate drama. It has been said that Mr. Burton was classically educated; naturally he felt justly proud of his scholastic attainments, and having a desire to display them he selected the Greek tragedy as just the thing for its accomplishment. Apart from his undoubted claim to erudition, he had that wonderful stage tact and executive ability that thoroughly qualified him for the management of a theater; so that whether he had drunk deep at the "Pierian spring" or not, he certainly had quenched his thirst at the public fountains, and refreshed himself at all those little intellectual brooks that flow along the roadside of an actor's life. This kind of knowledge may be superficial, but it is most useful to an actor-manager.

But to return to "Antigone." During its rehearsals a marked change came over our manager. In arranging the lighter and more colloquial plays he was accustomed to be cheerful, and rather inclined to intersperse his directions with anecdote; but now he assumed a dignity strangely at variance with his usual manner, and we, the company, who had been in the habit of associating his comical figure with *Paul Pry* and *Jem Baggs*, could scarcely be expected at this short notice to receive this change of demeanor with the same solemnity with which it was given. Of course we did not dare exhibit our irreverent feelings, for there is no doubt that had Mr. Burton detected the slightest attempt to guy either him or his new venture an immediate discharge of the offending party would surely have followed. Tom Glessing, myself, and several minor members of the company had got hold of some Greek quotations and would slyly salute one another in the classic tongue when we met at the theater in the morning, always, however, when the manager's back was turned; for if in his presence we had dared talk Greek we should certainly have walked Spanish.

I was cast for one of the unhappy Chorus,—I think there were four of us,—and when the curtain rose a more wretched looking quartet was never seen. I think the costume we wore was unfortunate, and added neither to our comfort nor to our personal appearance. We were crowned with four evergreen laurel wreaths, which bloomed unsteadily upon our heads, and

were done up to the chin in white Grecian togas. Mr. and Mrs. James W. Wallace, Jr., were in the cast, and for their fine declamation and classic tableaux were much applauded; but when we as the Chorus attempted to explain what it all meant the effect upon the audience was dreadful.

The failure of this sublime tragedy caused Mr. Burton to be seriously out of pocket, as well as out of temper. He blamed first the public, then the unfortunate Chorus, and, finally, himself.

In domestic matters I had good opportunity of forming my judgment of Mr. Burton, as we were for some time quite intimate, and I often visited him at his house. The affection he lavished upon his children was almost feminine in its warmth and gentleness. He had three lovely little tyrants, who managed him quite as well as he managed his theater. They were extremely fond of their father, and he delighted to walk with his lovely daughters and show them off. I have often met the group strolling hand in hand in Franklin Square on a fine Sunday morning in the spring, the pretty little girls, tastefully dressed, tossing their heads and shaking their curls in childish vanity with their portly parent looking proudly down upon them.

The Arch, during the time I was under Mr. Burton's management, had met with many of those vicissitudes that were so prevalent in theatrical ventures when the production of the "Glance at New York" struck the popular taste of that curious and uncertain element known as the "public." The "public" means in reality nobody; it is an elastic term; we are indeed prone to call every one the public but ourselves. We wonder that the public can support this or that trashy entertainment, forgetting that we have been to see it once, and perhaps twice. "Life in London," upon which the "Glance at New York" was founded, ran for two seasons in London, when both lords and ladies went in crowds to witness the vulgarities of low life; the knocking down of watchmen, the upsetting of an old woman's apple stall, and the dancing of *Dusty Bob* and *African Sal* occupied the attention and delighted the audience of seventy years ago.

Years before, Monk Lewis's melodrama of "Castle Spectre," a ghostly and ghastly piece of business, drew crowds of people, to the exclusion of the works of Shakspeare, Sheridan, and Goldsmith. Nondescript actors, of the ranting and fantastic school, were in demand, while the Kembles and a host of great comedians were playing to empty benches. Likewise, we find Colley Cibber complaining that in his day the legitimate drama had fallen so low in the estimation of the public that he and his company of fine comedians were put aside and made sub-

servient to the Italian singers and French ballet dancers that then flooded England.

We must not always condemn the public of the present day for these curious characteristics which seem to have come to them by a legitimate inheritance. Besides, there may be a necessity for this seeming inconstancy, and it is quite possible that the mind requires now and then a change of diet as the stomach does; the palate being satiated with rich and delicate viands often craves a little coarser food, if only to assist digestion.

But to return to Mr. Burton and his new venture. The great success of the "Glance at New York" caused him to look in that direction himself. A full treasury had excited his ambition, so he proceeded to New York and purchased Palmo's Opera House for the purpose of opening it as a comedy theater. He was an early riser, very industrious, and extremely temperate. These qualities, combined with energy and an inordinate ambition to lead, made him a formidable adversary for Mr. Mitchell, who was then in the very height of prosperity at the Olympic. This latter gentleman, like Mr. Burton, was a comedian and a manager of rare ability; he had surrounded himself with an excellent company of actors and actresses, who were so quaint and so well chosen that the dramatic treats given at the "Little Olympic" became the rage and talk of the town. Mr. Burton saw this, and his desire for a dramatic battle urged him to oppose Mitchell, and this he did with much force and judgment, bringing to bear the heaviest theatrical artillery that New York had ever seen. When I say that these great guns consisted of William Rufus Blake, Henry Placide, W. E. Burton, John Brougham, Lester Wallace, Oliver Raymond, Lysander Thompson, and Charles Burke, I think that those who remember these extraordinary actors will fully agree with the statement. I do not think that Lysander Thompson and Charles Burke were with this company at this time, but they joined it afterwards. In the midst of this conflict between the managers Mr. Mitchell was stricken with paralysis; this rendered the contest still more unequal, and the "Little Olympic" surrendered.

To give some idea of the excellence with which Mr. Burton's plays were cast, I may mention that I saw Shakspeare's comedy of "Twelfth Night" produced at his theater with Blake as *Malvolio*, Placide as the *Fool*, Burton as *Sir Toby Belch*, Lester Wallace as *Sir Andrew Aguecheek*, and Miss Weston as *Viola*. I do not believe that this play has been acted with greater skill since Shakspeare wrote it, although there is no denying that, with regard to scenic effects, costumes, ingenious stage-man-

agement, and elaborate ornamentation, the Shakspearean productions of our own time far exceed those of the earlier revivals.

Burton's ambition to succeed in the various tasks he had set himself was strongly fortified by his quick apprehension and great versatility. He was at the same time managing the Arch street Theater in Philadelphia, the Chambers street Theater in New York, acting nightly, and studying new characters as fast as they came out. In addition to these professional duties, he was building a country residence at Glen Cove, writing stories for the magazines, and taking prizes at the horticultural shows for hot-house grapes and flowers. If his success and happiness were marred, it can only be attributed to his too great ambition; this trait led him to oppose everything that came within range, and at times he would even go out of his way to search for a new antagonist. In a fit of excitement, brought on by some domestic shock, he was suddenly stricken down, and never rose again. During his last hours he was lovingly attended by his daughters, who had grown up to womanhood, and I am told by one who was present that the parting with them touched the hearts of all who saw it.

CHARLES BURKE.

It was a rare treat to see Burton and Burke in the same play: they acted into each other's hands with the most perfect skill; there was no striving to outdo each other. If the scene required that for a time one should be prominent, the other would become the background of the picture, and so strengthen the general effect; by this method they produced a perfectly harmonious work. For instance, Burke would remain in repose, attentively listening while Burton was delivering some humorous speech. This would naturally act as a spell upon the audience, who became by this treatment absorbed in what Burton was saying, and having got the full force of the effect they would burst forth in laughter or applause; then, by one accord, they became silent, intently listening to Burke's reply, which Burton was now strengthening by the same repose and attention. I have never seen this element in acting carried so far, or accomplished with such admirable results, not even upon the French

stage, and I am convinced that the importance of it in reaching the best dramatic effects cannot be too highly estimated.

It was this characteristic feature of the acting of these two great artists that always set the audience wondering which was the better. The truth is there was no "better" about the matter. They were not horses running a race, but artists painting a picture; it was not in their minds which should win, but how they could, by their joint efforts, produce a perfect work. I profited very much by these early lessons.

Dying at the age of thirty-two, it is wonderful that Charles Burke left such an enduring reputation as an actor. I do not mean that his fame lives with the general public, but his professional brethren accorded to him the rarest histrionic genius. I have sometimes heard comparisons made between Burton and Burke, but they were so widely different in their natures and their artistic methods that no reasonable parallel could be drawn. Burton colored highly, and laid on the effects with a liberal brush, while Burke was subtle, incisive, and refined. Burton's features were strong and heavy, and his figure was portly and ungainly. Burke was lithe and graceful. His face was plain, but wonderfully expressive. The versatility of this rare actor was remarkable, his pathos being quite as striking a feature as his comedy. He had an eye and face that told their meaning before he spoke, a voice that seemed to come from the heart itself, penetrating, but melodious. He sang with great taste, and was a perfect musician. His dramatic effects sprung more from intuition than from study; and, as was said of Barton Booth, "the blind might have seen him in his voice, and the deaf have heard him in his visage."

Although only a half-brother, he seemed like a father to me, and there was a deep and strange affection between us. As I look back I can recall many social and professional sacrifices that he made for me, and my love for him was so great that if we were absent from each other for any length of time my heart would beat with delight at his approach. It is scarcely fair to intrude upon the reader one's domestic affections, but I am irresistibly impelled to write these words. And so they must stand.

(To be continued.)

Joseph Jefferson.

NIGHT IN THE SICK-ROOM.

I
In torments lying on my bed,
I wait the hour that heals;
The night lamp, flickering overhead,
Each well-known shape reveals.

Beethoven's death-mask paler grows,
And grimmer, through the night;
Thou too, O man of many woes!
Hast wearied for the light.

Near by the Hermes, smiling now
And ever, knows not pain;
No sin stains that angelic brow,
Where thought and beauty reign.

O radiant shape of sunlit Greece!
Whisper the sacred charm
That turns despair and doubt to peace,
Unrest to deathless calm.

Alas! the marble lips refuse
The mystic words to speak;
Yet still their beauty bids me choose
The saving truth to seek.

My waking sense grows faint and sore,
But to my inward eye
Forms long since dead appear once more,
Beneath an alien sky.

I stand within the prison-wall
Where, amid tears and sighs,
Socrates drinks the hemlock's gall,
And Greece's glory dies.

I see the deep and turbid pool,
By the Ionian Sea,
Where maddened Sappho plunged to cool
Her burning agony.

I see the tool Praxiteles
Wields from his fingers glide,
As he sinks, spent with weariness,
His matchless work beside.

A vast throng pass unfaltering,—
Bards, prophets, heroes, saints,—
Each face bears marks of suffering,
But no voice utters plaints.

And while I gaze a form draws near,
A voice the silence breaks;
Fixing me with his look austere,
Music's great master speaks:

"Cursing thy lot, thou dream'dst these men
Quaffed life in joy and pride.
'T was never so; as now, so then
All sorrowed, suffered, died.

"Yet ever dauntlessly these toiled,
Though weighed by sins and flaws,
Obeying still, however foiled,
The soul's unwritten laws.

"To the great heart of Nature these
Inclined a reverent ear,
Till through life's blurred dissonances
A theme divine rang clear.

"If staining still thy faith's bright gold
Commingles doubt's alloy,
Stand by my bed, where deaf, poor, old,
I heard the Hymn of Joy.

"And when my mighty harmony
Rolls on thine ear again,
Know that there sounds in majesty
What once I wrought in pain."

Deep stillness falls; then happy birds
Stir 'neath my window eaves,
A rustling wind sweeps by, and herds
Like sheep the fallen leaves.

The white dawn glimmers on my eyes
The morning's pledge to give,
Night's shadows flee as darkness dies
To let the new day live.

Margaret Crosby.

THE NEW CROTON AQUEDUCT.

ORDINARILY, a dwelling-house, measuring say 33 by 35 feet, and standing where the rainfall is not less than 45 inches in a year, will collect on an average about 90 gallons of water per day; that is, supposing that all the water that falls in the area of the building is saved, that none is allowed to evaporate, and that the cistern is big enough to hold the excess of water that falls in the wet winter months. Practically, such a roof will not give on an average ninety gallons a day, and in a dry year will yield very much less. Such a dwelling-house may be supposed to contain a family of five people, and at even ninety gallons a day this would be only eighteen gallons apiece. A tenement house five stories high and of the usual New York area has about the same roof surface. In such a tenement five families, or twenty-five people, would find homes, and if the theoretical ninety gallons were divided among them, they would have only a trifle over three and a half gallons each.

When in the rapid growth of New York City the population reached three hundred thousand it became necessary to obtain more water than could be supplied by the wells or roof tops. A small supply had been obtained near by, but it was not enough, and it became very evident that the needed water must be brought from some distant water-shed far beyond any injury from the smoke, dust, and refuse of a great city. There were some who looked to the Housatonic Valley in Connecticut. Others thought the pure, deep lakes among the mountains of New Jersey would be nearer and more abundant. Next to these was the valley of the Croton River, about thirty miles north of the city. The Croton was within the State of New York, and its many branches, winding among wooded hills and meadow-dotted valleys, covered over 360 square miles of thinly settled country. It was for these reasons the most available water-shed in easy reach, and was selected as the big roof from which to fill the municipal water-barrel.

The original Croton aqueduct was begun in 1837 and finished in 1842. It is a brick

conduit built on or near the surface, and extends from the dam at Croton Lake (which is artificial) along the Hudson River to High Bridge, crossing the deep valley of the Harlem on that beautiful structure—a true aqueduct that suggests the grand aqueducts of Rome. The capacity of the aqueduct is from ninety-five to ninety-eight million gallons of water every twenty-four hours. For the New York of the 'forties this was an abundant supply, and a curious result seems to have followed the use of such a vast quantity of water by such a comparatively small population. Three hundred gallons in a day for each person—no one could use so much water. Why take thought of its use? The people of New York never did, and they became, so far as water was concerned, a wasteful people, and they have never been cured of the habit. Prayers, entreaties, threats, fears of a water famine, have made no impression.

Within the life of one generation the average daily supply of ninety-seven million gallons has come to be insufficient. The people on the lower floors continued to go on in the same cheerful wastefulness, with no thought of their neighbors or of the morrow, until all upstairs New York was reduced to very short commons. Then thousands of small pumping engines were put into the tenements and many roofs carried a water-tank. With the ever-growing population the share of water for each individual has rapidly decreased. The public fountains have been shut off and the use of private hose has been restricted. In 1884 the Bronx River aqueduct was built, and for a while it served to help the upper part of the city. Today, even with this extra supply, there are only 115,000,000 gallons daily to be divided among 1,500,000 people. Even this apparently liberal supply implies plenty of rain. If the season be dry and the rainfall scant there will be serious trouble at once.

When in the early 'eighties it was proposed to bring more water into the city it seemed best to go once more to the Croton.

Speaking roughly, the Croton River and its branches cover about 360 square miles of hilly country in Dutchess, Putnam, and Westchester counties, New York, and also a narrow strip of the western edge of Connecticut. The main river flows in a southwesterly direction

into the Hudson, the lower part following a narrow and winding valley among high hills, the upper portion spreading out into three main channels called the East, West, and Middle branches. It is naturally a country of brooks and ponds, and is musical in spring with the sound of many waters. If the entire surface on which the falling rain seeks an outlet above the present Croton Dam is measured, hills, fields, and lakes, we have 338.82 square miles of available water-shed. Of course all the territory below the Croton Dam is virtually useless as a water-shed. The rain indeed falls, but it flows away and is lost in the salty waters of the Hudson. There are therefore two water-sheds, one the present water-shed above the dam, and the larger district (including the former) below the dam, and which might be used were a second dam built lower down the river. This larger water-shed would give a surface of over 360 square miles. As this lower dam is not yet built, it may be best first to consider the smaller water-sheds now available above the present dam.

The Croton Valley is distinctively a dairy country. The underlying rock is a micaceous gneiss of remarkably uniform character. This rock is greatly broken up on the surface and appears in steep, irregular hills scattered about in great confusion. Glacial action in the past is plainly marked, and the surface is covered with a thin, gravelly soil, or is bare and stony. Woods formerly completely covered the entire country; but the early settlers cleared off the forests, and to-day there is a second growth of woods covering the steeper and rougher hills. The cleared lands are almost exclusively pasturage and hay-fields, and only a portion of the soil is available for crops. In the southern and eastern parts of the water-shed the few towns are scattered along the main stream of the Croton, for the sake of the water power. Towards the north and west the population is more scattered, and the hills rise to wild and deeply wooded mountains. In point of fact the water-shed is a part of the Highlands of the Hudson, the center being directly opposite West Point, and the mountains are, as it were, foothills of the great Appalachian backbone of the Atlantic seaboard. These stony hills and sloping pastures, these woods and fields, make the great roof on which the rains and snows deposit their pure waters that New York be not athirst. So far as nature is concerned, it is as good and sweet a place to collect water as may be found in the world. If there be any injury to the water, it must come from known and preventable artificial sources. The gneiss rock is practically watertight, and all the water that falls is saved, less the amount that is lost by evaporation. The soil that covers

the surface is a filter to restrain any natural impurities that may contaminate the rain or snow. The grass, trees, and vegetation serve as a sponge to hold the water after every rain and let it escape slowly and evenly into the streams. The only possible contamination that can come to the water collected on such a surface must come from the habitations of men and animals. Twenty-five years ago the population of the Croton Valley was very small, and the actual contamination of the water was so small that it was hardly worthy of notice. The ordinary waste of a farm, manure, etc., spread upon grass or plowed land, can do no harm, because the pure, sweet soil and the air are disinfectants and purifiers.

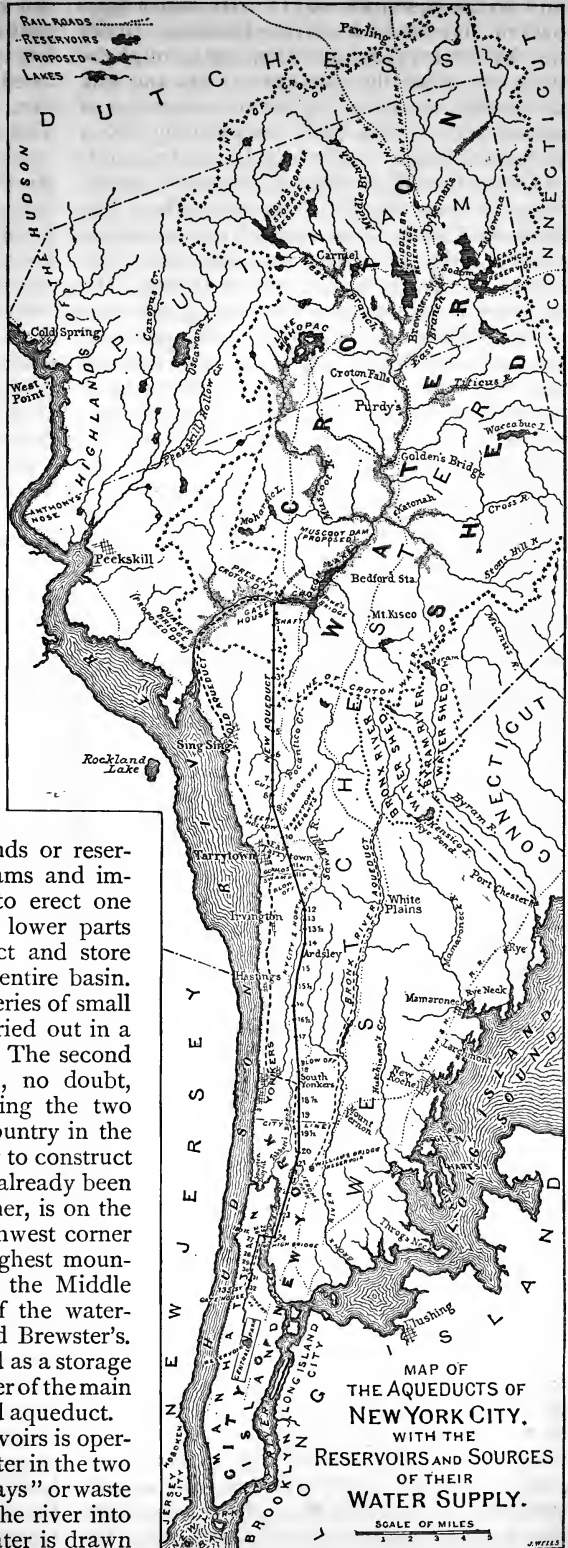

Within the last few years a third railroad has been built across the Croton water-shed, the towns have rapidly increased in size, a large number of summer hotels and boarding-houses have been built, and manufactories have multiplied. From all these may come contaminations. The population of this valley are plain folks, quite as selfish, quite as indifferent to sanitary laws, and quite as firm in their belief in their right to do as seems to them fit, as the rest of us. The Croton gives them water power, its bed is a good place to deposit refuse. Why, they doubtless say, why not use it for water power and a sewer? From the piazza of a farmhouse it is difficult to sympathize with a tenement house. A number of committees and commissions have from time to time inspected the Croton water-shed with the view of ascertaining the possible and probable injury to the water that may arise from the neglect or carelessness of the people living there. The last investigation was made by the State Board of Health in 1887, and from their report and from other sources it is evident that the danger from contamination is rapidly increasing. In the opinion of experts the danger is not yet serious. The point is that it grows, and grows rapidly. So evident is this danger that laws have been passed to police the entire district. It therefore depends wholly upon the officers appointed to conserve the water-shed whether we drink in the future pure water or impure water. Had the citizens of New York any real faith in the persons whose duty it is to care for the cleanliness of our big drinking-cup they might rest in peace. Unfortunately so long as they permit certain "private clubs" to decide who shall hold public office that faith must be at least a trifle unstable.

The annual rainfall in the Croton River, as recorded at Boyd's Corner from 1870 to 1886, ranged from 38.52 inches in 1880 to 55.20 inches in 1882. These were the driest and the most rainy years, and were exceptional, the average being 45.97 inches. This, in a water-

shed of about 360 square miles, is ample for a much larger city than New York for a generation to come. There is, of course, a large percentage of loss by evaporation from the surface of the reservoirs and from the ground, yet there should be gathered here sufficient water, provided it is all properly managed, for several generations to come, and enough to form the larger source of supply for a century or longer. There is water enough and to spare. The question is how to economize it, a problem some of the ablest hydraulic engineers in the world have done much to solve.

The rainfall is never evenly distributed through a year, or even through a series of years, and while the average rainfall may be sufficient, the actual supply will be so irregular as to be wasteful and even dangerous. The engineers who have at different times been in charge of the public works of New York have recognized for a long time that the entire rainfall must be conserved. The restraining influence of the woods and ponds must be extended by artificial means. The abundant rains of winter must be saved for use in the dry season of midsummer. Two plans have been proposed. One is to construct, at intervals along the upper waters of the Croton, a large number of artificial ponds or reservoirs, by erecting dams across the streams and impounding the water. Another plan is to erect one large and several smaller dams on the lower parts of the main streams, and thus to collect and store virtually all the water falling into the entire basin. The first of the plans, that of having a series of small storage reservoirs, has already been carried out in a limited way, and is now being extended. The second plan is still under advisement, and will, no doubt, ultimately be carried out, thus combining the two plans. The peculiar character of the country in the Croton basin makes it comparatively easy to construct artificial storage reservoirs, and two have already been built. The first of these, at Boyd's Corner, is on the upper waters of West Branch in the northwest corner of the basin, among the wildest and highest mountains of the district. The second is on the Middle Branch of the Croton near the center of the watershed, between the villages of Carmel and Brewster's. Croton Lake is too shallow to be regarded as a storage reservoir, for its chief duty is to lift the water of the main stream to a level with the mouth of the old aqueduct.

The plan on which this system of reservoirs is operated is very simple. In wet weather the water in the two reservoirs flows away through the "spillways" or waste weirs beside the dams, and runs down the river into Croton Lake. Here a portion of the water is drawn

off into the aqueduct, and the remainder flows over the dam and is lost in the Hudson. In dry weather the surplus water escaping through the spillways beside the dams grows less and less, and finally stops, leaving the reservoirs full of stored water. The river immediately below each dam ceases to flow, and would dwindle to a mere thread of water did not new supplies come in from the hills on each side. The drain on Croton Lake through the aqueduct soon absorbs the entire flow, and the water ceases to run to waste over the dam. The engineer in charge then asks the gate-keeper at Boyd's Corner to open the gates and permit the stored water to run down the river into the lake. In the same way he draws upon the Middle Branch reservoir, and in this manner the supply is kept up through the dry weeks of summer. Besides these two artificial reservoirs, there are a number of natural and partly improved ponds, Lake Mahopac being the largest. These ponds can also be drawn upon for extra supplies in case of necessity.

Boyd's Corner reservoir contains 2,727,000,000 gallons of water, and Middle Branch 4,004,000,000 gallons, and this represents our reserve capital put away, so to speak, in bank against a dry day. So long as the old aqueduct drew less than one hundred million gallons a day these two reservoirs were sufficient insurance against a drought. When more water was required and a new and very much larger aqueduct was proposed the entire question assumed another aspect. As early as 1858 it was recognized that the storage capacity of the basin must be largely increased, and surveys were made for some new and very large reservoirs. While all of these reservoirs were not built, and more recent surveys have shown that some of the sites selected were not available, it may be observed that the necessity for such storage lakes has become imperative, and three reservoirs are now in process of construction. A passing study of this work may serve to show how a great storage reservoir is made and used.

Taking the town road from the village of Brewster's on the New York and Harlem Railroad, we drive down a long hill into the valley of the East Branch until the works of the Borden Milk Condensing Company are reached. Here the road follows the little river under a bridge of the New York and New England Railroad and again climbs over the hills till the little village of Sodom is reached. There the stream turns to the south through a narrow rocky gorge and then winds off to the east between high, wooded hills. At this point is being erected a magnificent masonry dam closing the portal between the hills and designed to create an irregular lake where now are farms, meadows, and deep woods. The

new reservoir will eventually consist of two distinct bodies of water formed by four dams. The first of these dams is of solid rubble masonry faced with dressed granite. To the east of this dam, on the crest of the hill and at right angles with the stone dam, will be a long, low dam of earth and having a heart or core of masonry. North of the dam, on the other side of the rocky hill, are two more earth dams, designed to impound the waters of a little pool called Lake Kishowana and a small brook that flows out of it. Under the hills is to be a tunnel connecting the two reservoirs. The building of the three earth dams is comparatively simple. The work on the stone dam is quite complicated. The first steps were to bore into the hills on each side of the stream and in the bed of the river with diamond drills to ascertain the character of the bed-rock. The borings having shown that the rock is comparatively uniform in character, the river was diverted by means of a temporary crib-work dam, and then a deep trench was blasted out of the bed of the river and out of the steep sides of the hills to form a safe support for the dam. In this trench the foundations of the dam are laid. In the center, near the bottom, large iron pipes with gates are built into the foundations, the pipes being eventually the escape or outlet for the water, and while the dam is being built they serve as a waste weir or outlet for the river. The dam is 500 feet long, 53 feet wide at the base, 12 feet wide at the top, and 78 feet high. The earth dam is 700 feet long, and there will be a roadway on the top of each dam with a turning-place at the end. When finished it will be a magnificent drive, with the broad lake on one side, the deep, rocky valley on the other, with its white fountains below and the wide spillway at the end of the dam, where the surplus water will pour in an enormous waterfall down the rocky face of the cliff. The present hill, where stands the white church, will be like an isthmus between the two reservoirs, the tunnel to connect the two being directly under the crest of the hill. The accompanying pictures give one an excellent idea of the character of the country above the dam, and show the work in operation just as the walls of the great stone dam began to rise above the massive foundations sunk in the hills. The first two illustrations show the deep trench cut in the hills as a foundation for the dam, and the cable hoist used in handling stone. The third picture gives an idea of the character of the country to be eventually submerged.

It is a curious commentary on the demands of modern civilization to observe the effect of building this dam. The million people in the city need a reserve of drinking water, and twenty-one families must move out of their

EXCAVATION FOR SODOM DAM.

shed is not yet by any means exhausted, and as fast as needed more of these storage reservoirs will be provided at different places. One will probably be placed near Purdy's, on the little Titicus River. An excellent site for the dam has already been found where the stream passes through a narrow, rocky gorge. A dam will here flow a very large tract of fine farming country to the east and give another sweet, clean drinking-cup for the city. Still others are under consideration near Carmel, and above Croton Lake on Muscoot River.

In addition to this plan of storing the surplus water in a number of reservoirs at the upper part of the Croton basin is the proposal to erect, far down on the main stream of the Croton, one very large dam, which with the others will impound virtually all the rainfall of the Croton basin and save thousands of millions of gallons that are now lost. This proposed dam is to be placed within one or two miles of Quaker Bridge. If built it is to be the largest dam in the world, and will impound more than thirty thousand million gallons of water. The lake will be on an average 3000 feet wide and 72,000 feet long, with an average depth of over 30 feet. The dam will add

quiet rural homes and see their hearths sink deep under water. The entire area to be taken for the reservoir is 1471 acres. Twenty-one dwellings, three saw and grist mills, a sash and blind factory, and a carriage factory must be torn down and removed. A mile and a quarter of railroad track must be relaid, and six miles of country roads must be abandoned. A road twenty-three miles long will extend around the two lakes, and a border or "safety margin" three hundred feet wide will be cleared all around the edge to prevent any contamination of the water. This safety border will include a carriage road, and all the rest will be laid down to grass. As the dam rises, the water will spread wider and wider over fields, farms, and roads. Every tree will be cut down and carried away. Every building will be carted off, and the cellars burned out and filled with clean soil to prevent any possibility of injury to the water. Fortunately there is no cemetery within the limits of the land taken for the reservoir. Had there been one it would have been completely removed before the water should cover the ground. Fifty-eight persons and corporations, holding one hundred and eleven parcels of land, will be dispossessed in order to clear the land for the two lakes and the dams, roads, and safety borders.

This East Branch reservoir will give the city two good-sized additional storage reservoirs, and while they will add considerably to the present supply, they will not meet the wants of the city in a year of drought. The Croton water-

115 square miles to the now available watershed, and save about all the water now lost on this great surface. Very much has been written both for and against this great dam, but the consensus of opinion appears to be in favor of its erection. That it can be built is beyond discussion. It can also be built with entire safety, both in a sanitary sense as a storage place for water, and in a mechanical sense as a structure absolutely safe against overthrow by floods. The key to the safety of any dam is found in the spillway. Given a good

be, for a generation at least, any danger of a water famine, even should two dry years like 1880 follow each other.

When it was first proposed to build a new aqueduct to bring down more water from the Croton water-shed it was suggested that the new and larger dam should be built at once and that the aqueduct should start at the great dam. It was also suggested that the aqueduct should start just above the old dam at Croton Lake. The points in favor of this last plan were these: The water could be let into the aque-

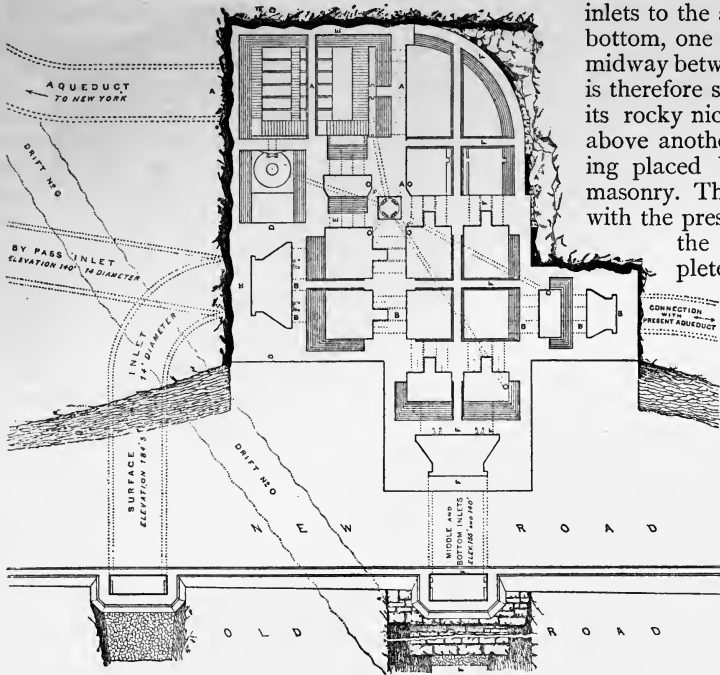

A FUTURE LAKE AND ISLANDS AT BREWSTER'S.

design, good materials, and good work, a dam may be as secure as any structure that can be built. Its life therefore depends on the provision for relieving extra pressure. The water behind the dam rises as the rainfall increases. Before it can reach the top and flow over it finds an outlet in the spillway and runs harmlessly away. It is believed that American engineers are in the front rank of their profession, and modern science places in their hands the exact data of rainfall, water pressure, and strength of materials. It becomes, therefore, only common sense dealing with large figures; and this dam, great as it may seem on paper, is within the ability of our engineers, and its construction and maintenance are within "the limits of safety." The smaller reservoirs will not be useless when the large dam is built, and all these proposed small dams should be built as well as the greater work. It will take five years to build the big dam. Each of the smaller dams can be built in two or three years, and New York cannot go on another year without more water. True wisdom suggests both plans, the smaller reservoirs on the head waters, the larger lake below. Both systems can be used together and be controlled from one point, and then there will not

duct as soon as completed and without waiting for the new dam. If it were afterwards decided to build the great dam and submerge the present dam, the water could be just as well taken there as at the dam itself. If the dam were built a part of the old aqueduct would be submerged, and it could be used as a supply pipe for conveying the water back from the new dam to the new aqueduct. The old aqueduct could also be connected with the new reservoir at or near the new dam, tapping the river several miles below the present inlet. This plan, therefore, seemed the best, and the new aqueduct was laid out along a line beginning at a point just below Croton Dam.

The Croton Valley at the foot of Croton Lake is very narrow and the stream is walled in by steep, rocky hills. This very fact led to the erection of the present dam at this place. The old aqueduct is on the south bank and follows the line of the country road close under the steep cliffs that line the shore. The new aqueduct would require a gate-house, and, as there was no room on the bank without interfering with the old aqueduct, it was decided to blast out an excavation directly in the side of the hill. This excavation, like an enormous scar on the side of the hill, made the first important

GENERAL PLAN OF THE NEW GATE-HOUSE.

step in the great work of moving the rainfall of the Croton basin into New York. The aqueduct itself begins just opposite the iron bridge, seventy feet below the ground and below the bed of Croton River.

The most simple way to connect an aqueduct with its reservoir, or source of supply, is to place the end of the aqueduct below the level of the water and to put a gate in the conduit to control the inflow of water. This was the plan followed in the old aqueduct. The latest science leads to grave doubts whether this is the best way. Water stored in a reservoir is in different temperatures and in different conditions at different depths. It may be warm near the surface and cool below. It may contain minute forms of life near the surface and be barren below. The engineer should therefore be able to draw the water from different points according to the season and according to the temperature and condition of the water. It is evidently better to let the cold bottom water flow into the city in summer than the tepid surface water. A gate-house is necessary in any event, and in planning the gate-house for the new aqueduct provision was made for the future control over the selection of the water to be sent to New York.

Very soon the great dam must be built. When it is built the water will rise forty feet above the present dam, and the lake opposite the new gate-house will be deep enough to give three

inlets to the aqueduct — one near the bottom, one near the surface, and one midway between. The new gate-house is therefore set high up on the bank in its rocky niche with three inlets one above another, the building itself being placed behind a massive wall of masonry. The middle inlet is on a level with the present road on the bank, and the bottom inlet, when completed, will pass directly under the old aqueduct, and will be many feet under the present surface of the lake. All this is, of course, provisional and for the future. For immediate use there is a fourth, temporary, inlet, called the "by-pass inlet," that takes the water from the lake a few hundred feet above the dam. This inlet is the only one that can be used at present, and we must take the water, as we do now, from a point near the surface

of the old Croton Lake. Another point with respect to the future had also to be considered. The old aqueduct passes in front of the new gate-house, and by connecting it with the gate-house the water for the old aqueduct could be controlled from the new gate-house and the old gate-house could be given up.

The new gate-house must be regarded as a masterly piece of engineering, both in design and in construction. It is a nearly square structure, built of granite and brick and divided into a number of compartments or vaults. The aqueduct being below the level of the river, it will be impossible to permit the water to rush directly into it under pressure. The aqueduct is here a "flowing conduit." That is, the water does not fill it, but occupies only about four-fifths of the tunnel and flows easily along like an underground river. The water enters the gate-house through the by-pass under pressure, and to relieve this pressure and permit the water to escape into the aqueduct with only its natural pressure or weight it is passed through a series of reducing chambers until its force is spent and it is ready to start easily and slowly on its long, dark journey to the sea. This grand gate-house gives us the key to the whole great engineering work before us.

Walking over the iron floor of the immense room within we may before long peer down into the deep black caves where the great waters are to flow. Here the engineer may guide a whole

river under the hills, selecting, mixing, and controlling from day to day the water sweeping with ceaseless roar through the caverns below. Looking down into one of the great vaults of the gate-house the portal of the aqueduct can be seen. It is like the entrance of a cave under the hills. It seems hardly possible that this black archway, so deep under ground, is the direct road to New York, and that the water will easily flow away into the blackness on its long journey to the Central Park reservoir.

When it was proposed to build a second aqueduct two plans were suggested. One was to parallel the present aqueduct with a second one placed on or near the surface. Two serious objections were found to this route. If the aqueduct were placed so near the Hudson it would interfere with the old aqueduct and could be easily shelled and destroyed by hostile ships that might force their way into the Hudson, or even be destroyed by guns placed on the New Jersey shore, and the city would be without water and at the mercy of the enemy. Some such route must be taken if a surface aqueduct be built; and even were it safe from attack from the river the very fact of the aqueduct being on the surface would always be a menace, as it could be easily destroyed by a mob. Common sense and military prudence plainly pointed to a tunnel placed deep under ground out of reach and easily guarded at the few points where it might come to the surface. Besides this, land owners are content to accept a very small fee for right of way if the tunnel is a hundred feet under their houses and the inconvenience of surface operations is avoided.

These considerations led to the construction of the new aqueduct in the form of a continuous tunnel extending from Croton Dam to High Bridge. The path of the aqueduct is a perfectly straight line from the gate-house to a point just

FRONT ELEVATION OF BLOW-OFF.

west of Tarrytown Heights and north of Sleepy Hollow. It then turns slightly to the east, passes under the hills, and enters the valley of the Saw-mill River. It then passes, with an occasional slight turn to right or left, directly to the great siphon where the water is to pass under the Harlem River. Reaching Manhattan Island near 180th street, it follows Tenth Avenue to the new gate-house at 135th street, where the aqueduct will end and the pipe lines begin. The pipe lines will then convey the water to Central Park reservoir and to other points for distribution through the upper part of the island. For the entire distance from Croton Lake to 135th street the aqueduct is built of solid brickwork and masonry, reinforced in places with wood and iron, and all, except at three points

covering a few thousand feet, is sunk to an average depth of 170 feet and underground. The aqueduct itself is divided into two portions, each part being of different size and shape. The larger part, extending from the lake to a point near the city line, is a horseshoe section and is a flowing conduit; that is, the tunnel is filled to about four-fifths of its capacity. The other portion, extending from the city line to 135th street, is smaller and of

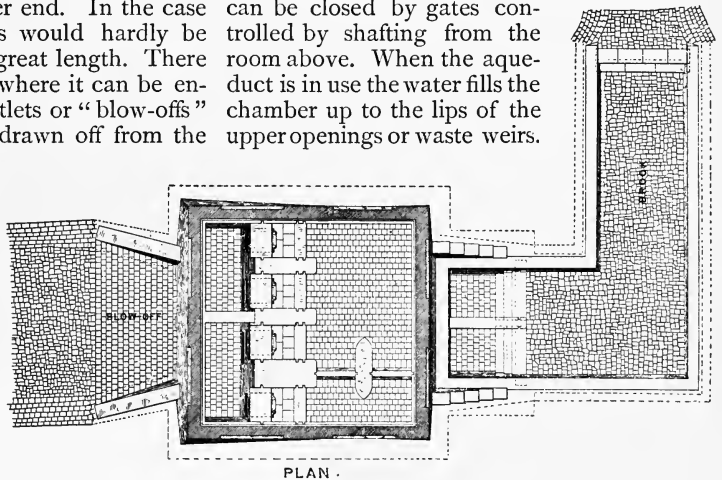

BUILDING THE FOUNDATION OF A GATE-HOUSE AT SOUTH YONKERS.

a circular section, and here the water fills the entire tunnel and is under pressure.

In planning an aqueduct two things have to be considered. There must be arrangements made for the steady filling or supply of the aqueduct and for the safe conveyance of the water without contamination and without loss. There must also be provision for shutting off the supply and emptying the aqueduct in order to clean or repair it. We have seen how the new aqueduct is to be supplied from Croton Lake, and its ability to carry the water without harm or loss can be studied as we travel along its route. The fact that the aqueduct is deep underground and full of water is difficult of access if at any time it becomes necessary to clean or repair it. If it be of a uniformly descending grade it is possible to empty it by shutting off the supply of water. The water will gradually run out, and the tunnel can then be entered from either end. In the case of the new aqueduct this would hardly be practicable, because of its great length. There must be numerous places where it can be entered, and a number of outlets or "blow-offs" where the water can be drawn off from the whole or a part of the tunnel. There must also be waste weirs for the escape of surplus water, and for maintaining the flowing water at a uniform height in the aqueduct. The actual problem in the case of the new aqueduct was even more difficult, because it was necessary to make at two points sunken loops or inverted siphons. The first of these was made to avoid a swamp, by diving under it, and the second and deeper siphon is under the Harlem River. In emptying the aqueduct the water would lodge in these low places and provision must be made for lifting it out. At other points advantage was taken of the contour of the country, and outlets or "blow-offs" were placed in low valleys, where the water

could be allowed to flow away into neighboring streams.

A study of the gate-house and blow-off at South Yonkers will give a general idea of the plan on which these outlets are arranged. Here the aqueduct appears at the south side of a hill and is then built for a short distance in an open cut. As the land falls the aqueduct comes to the surface and is built on the ground and covered with an embankment. At this point a small brook is diverted from its old bed and passes, through stone culverts, directly under a massive granite gate-house. The gate-house consists of a large chamber on the line of the aqueduct and of the superstructure or building (one room) overhead where the gates are controlled. This chamber is built of massive blocks of granite and is divided into two parts by a cross wall or partition parallel with the aqueduct. In this partition are eight openings, four being placed at the bottom on a level with the floor of the chamber, and four placed about ten feet above the first. All of these openings lead directly into the culvert below. The four lower openings can be closed by gates controlled by shafting from the room above. When the aqueduct is in use the water fills the chamber up to the lips of the upper openings or waste weirs.

BLOW-OFF AND WASTE WEIR AT SOUTH YONKERS.

BLOW-OFF AT SOUTH YONKERS, LOOKING NORTH.

These waste weirs are provided with channels or grooves cut in the stone-work, and by sliding planks into these grooves and thus forming a wooden dam, the height of the water in the aqueduct can be maintained at any point desired.

If at any time it is required to empty the aqueduct or to shut the water off below this point, the gates can be opened and the entire contents will sweep out into the culvert and then into the brook. As soon as the gates are closed the water will again flow on through the chamber towards the city. In the same way the water may be turned aside at Ardsley or at Pocantico, or be shut off at the lake and allowed to escape at any of these points until the aqueduct is empty.

The plan and section and elevation on the preceding pages show the position of the bed of the brook and the positions of the gates, and also of the two portals of the aqueduct. Near one portal is seen a column dividing the chamber into two parts. This is to be used to support a wooden dam across the aqueduct in case it becomes necessary to shut off the water at this point.

The picture showing the gate-house while being constructed will also assist to a correct understanding of the work. The construction had reached a point where the "invert" or floor of the aqueduct on each side of the gate-house

had been laid, also the floor of the chamber, the gates, and the lower part of the central column. A portion of the aqueduct is seen to the north just as it emerges from the hill.

The accompanying pictures from photographs in the gate-house reveal the massive character of the stone-work, and also give an impression of the comparative size and shape of the aqueduct at this point. One of these pictures gives a view from the chamber looking north into the aqueduct. Another is from a photograph taken within the aqueduct and looking south across the chamber into the south portal of the aqueduct, and showing the

massive walls of the gate-house and the dividing column in the center of the chamber. The picture on the opposite page shows the partition with the gate openings below and the waste weir above. At the left the arch shown in the other picture appears at the lower part of the gate, daylight showing under the crown of the arch. The elevation of the gate-house, on page 212, shows its position on the embankment, and also the openings of the culvert where the brook passes under the aqueduct.

When it had been decided that a new aqueduct should be built in the form of an underground tunnel, careful and elaborate surveys were made of the country to the south of

LOOKING SOUTH ACROSS GATE-HOUSE AT SOUTH YONKERS.

Croton Lake to determine the best route. The hills and valleys were searched for the best positions from which to reach the line of the proposed tunnel by means of shafts sunk in the ground. Diamond drills were employed to test the character of the rock in order to find out if it would be sufficiently strong to sustain the roof of the tunnel while the excavations were being made. The cores brought up by the drills showed the bed-rock to be of a generally uniform quality of gneiss with a few belts of limestones, over the entire thirty miles between the lake and a point near 135th street on the west side of the city. Careful studies of all the data collected in the field showed that a tunnel could probably be excavated directly through the rock at an average depth of 170 feet below the surface. The surveys showed that after passing under the high hills to the south of the lake the valley of the little Saw-mill River offered a route to the Harlem that would not require very deep shafts to reach the line of the tunnel. This route would also give two or three points where the tunnel would come to the surface and give opportunities for the building of gate-houses, blow-offs, and waste weirs. From these studies the final plans were made and the drawings and specifications drawn up for the entire work.

The plans showed that the line of the tunnel could be reached by thirty-two shafts and four open cuts. To gain time, the number of shafts was afterwards increased to thirty-five. For convenience the work was divided into five divisions and these again divided into fifteen sections. The first four sections extended from the lake southward to a point near East Tarrytown and included the open cuts at Pocantico, a distance of about thirteen miles. These sections included the deepest shafts and made the longest portion of the tunnel entirely underground. Sections 5 to 9 inclusive carried the tunnel to the city line and under lower hills, the tunnel twice coming to the surface. Sections 10 and 11 included all the route to the Harlem River, and here the tunnel dropped down deeper under the ground, because if continued on that grade it would have approached too near the surface. Section 12 included the great siphon under Harlem River, and Sections 13 and 14 carried the work to the gate-house at 135th street, where the aqueduct ends and

the pipe lines begin. The grade established for the aqueduct was about nine inches' fall in the mile for the flowing portion extending from the lake to a point about a mile south of the city line. The drainage for this portion, in case of repairs, escapes at Pocantico, Ardsley, and South Yonkers. Where the aqueduct changes from a horseshoe section to a circle the tunnel dips deeper into the earth, as already mentioned, and the drainage is into the inverted siphon at the Harlem River, where the water can be pumped out through a blow-off and discharged into the Harlem. South of the river the tunnel gradually rises and the drainage flows north and escapes into the Harlem.

It was estimated that the most economical distance at which a heading could be driven

BLOW-OFF AND WASTE WEIR.

from the bottom of a shaft would be about half a mile, and the next step was to define the positions of the shafts. The selection of the sites was guided in part by this distance of one mile (half a mile each way), in part by the valleys, and in part by convenience in disposing of the "spoil," or waste rock. The bottom of a valley would give the shortest shaft, but leave no room for dump-heaps, and thus all the shafts, while in valleys, were really on the sides of the hills above the bottom or lowest part of the depression to give room for the gigantic heaps of broken stone (spoil) that would gather about the mouths of the shafts. These considerations finally resulted in the selection of thirty-five shafts to be excavated directly into the earth. For convenience the shafts were numbered from 0 to 32, and it is curious to observe the variety of places in which they were started. "Number 0" is a straight drift into the hills from the edge of Croton River below the dam, and the

HEAD-HOUSE OF SHAFT ON TENTH AVENUE.

dump-heaps form a gigantic embankment along the south side of the river. Shafts from Nos. 1 to 17 are either in woods or on farms, some of them being deep in the hills far from any town or village. Shafts 24 and 25 are directly on the banks of the Harlem. Shafts 27 to 30 are placed in the middle of Tenth Avenue, between the tracks of the cable road, and some of them in a thickly built-up neighborhood. The accompanying illustration gives a good idea of the way some of the shafts are placed in the center of Tenth Avenue. The deepest shaft at the great siphon at Harlem River is 419 feet, the deepest among the hills near the lake is 370 feet, and the shortest shaft is only 32 feet.

The actual work of sinking the shafts began about the middle of January, 1884, twenty-four shafts being very soon under way. The first shaft to be excavated to the depth of the top of the tunnel was shaft No. 11A, thirty-one feet deep. Other short shafts were soon after completed and the work of excavating the tunnel was begun. The deepest shaft in the hills, No. 3 (370 feet), was completed in thirty-four weeks from the start, there being five weeks when for various reasons little or no progress was made. The short shafts along Tenth Avenue were not begun until February, 1886, and were completed in from ten to twenty-two weeks. The maximum progress in any one week was forty-two feet in the drift No. 6, and the maximum progress in the vertical shafts was twenty-one feet.

The actual work of driving the tunnel began in shaft No. 11A, in March, 1885, the progress

for the first week being forty feet to the north and twenty-four feet to the south. By the 1st of April work was under way in four more shafts, and by May 9 work was in progress in ten shafts. By the 1st of July nineteen shafts had reached the level of the tunnel, and in thirteen of these the tunnel was advanced in one or both directions. The first piece of excavation to be completed was near Shaft 14. It was only fifty-five feet long, and extended to the open cut at Ardsley. The next piece of excavation to be finished extended from Shaft 9 north to Pocantico cut, a distance of 1727 feet. In September, 1886, four more of the drifts either met under ground or had reached an open cut, and in October three more con-

nections had been made, and the tunnel had begun to assume something of its grand proportions. Up to January 1, 1887, a period of ninety-six weeks from the start, the maximum progress in the heading from the shafts or portals (open cuts) had been 84 feet in one week, and the highest average weekly progress in any one heading had been 45 feet. The highest average weekly rate of approach between the headings (south from the shaft, north from the next) was 70 feet, and in many places it ranged from 50 to 60 feet. This was for the time when work was actually going on.

Up to January 1, 1887, the tunnel and open cuts had been excavated for a total distance of twenty-two miles, leaving at that time only eight miles, which were completed in the spring of 1889. The excavation was soon large enough to admit the masons, and work in the tunnel lining began. Parts of the tunnel did not need any interior support, but it was thought best to reinforce it with a brick lining called the "tunnel lining," this brick-work being in turn firmly braced at the sides and roof against the walls of the excavation. The work of making the tunnel lining began in Shaft 9, September 28, 1885. During 1886 the work was under way in one or both directions from a number of shafts, and on the 1st of January, 1887, the side walls of the finished tunnel had advanced 32,382 linear feet, and the "invert," or floor, had been laid for 7722 feet, while the arch, or roof, had been completed for 16,713 feet. The entire brick-work of the tunnel is now completed, and makes a continuous tunnel 29.63 miles long. The total

number of bricks exceed 163,000,000, or sufficient to construct thirty-three buildings like the "Tribune" building in New York City.

In this enormous labor at one time ten thousand men were employed, with hundreds of mules and horses and a great number of steam engines, and their labors underground were lighted by scores of electric lights. The mere handling of this vast amount of material involved important questions of transportation. The line of the aqueduct is several miles back from the line of the Hudson, and touches tide-water only at the Harlem River near High Bridge. The only railroad convenient to the line is the New York and Northern, a short, single-track route reaching from the elevated railroad on Eighth Avenue at 155th street to the Croton River basin. Fortunately it has docks on the Harlem, and could load cars with brick and cement from barges and canal boats sent up from the East River. Whenever convenient, materials were sent by this route. For the portions within the city materials were sent by team from points on the Hudson. The enormous mass of broken rock (spoil) taken out in making the excavations involved the purchase of land on which it could be dumped. The material itself is practically valueless, except for filling on town roads or railroads. It has been tried for road surfacing, but is wholly useless, as it soon grinds up to fine powder.

However carefully the plans for such a great engineering work as this are drawn, there must be an element of uncertainty in the actual work. It is impossible to foresee what difficulties may be met deep under the hills. For instance, in sinking Shaft 24, on the east bank of the Harlem, water was encountered in great quantities, so that the work had to be performed under the greatest difficulties. Costly pumping engines were erected and put in operation. After-

wards, when for certain reasons a second shaft had to be sunk still lower, a new position was selected for this shaft not twenty feet away, and this second shaft was as dry as a bone. The diamond drill might have gone a few inches to one side and not have told the exact truth about the rock.

The first serious difficulty was met at a place called Gould's Swamp, in Section 5. The soil proved to be a wet muck overlaying sand with boulders—in fact, a swamp. The only way to avoid this soft spot was to go round it or to pass, deep in the bed-rock, under it. This was finally done, and two shafts were sunk, Nos. 11A and 11B, on the hill-sides on each side of the swamp, and these were connected by a short tunnel, thus forming a bend or inverted siphon.

Another serious difficulty was met at shaft No. 30, near 149th street. Soft, crumbling rock was found that threatened to cause dangerous leakage of water, and it became necessary to line the interior of the tunnel with plates of cast iron. These plates were bolted together to

REINFORCING THE TUNNEL.

form a circular pipe the size of the aqueduct at this point (13 feet 3 inches), and outside of this iron pipe the brick-work was laid as in the other portions of the aqueduct. The illustration on the preceding page shows this work of reënforcing the aqueduct. This iron-lined portion of the aqueduct extends for about 230 feet in the south heading and is about 400 feet south of the shaft.

The most serious difficulty met in the entire work was encountered in crossing the Harlem. Two shafts on each bank of the river, Nos. 24 and 25, had been sunk to what seemed to be a proper depth, and headings had been driven east and west across the river where a fissure was met near the west bank of the river, and it was decided to sink the shaft deeper. Shaft No. 25 was continued to a depth of 419 feet; headings were then started, and in due time they met and were lined with brick. The work was not alone one of the greatest difficulty, but it may also be regarded as of the first importance from an engineering point of view. Shaft 25 is one of the largest in this country; it is

THE SITE OF THE GREAT SIPHON.

double, one portion being used for the water and the other for the bucket that is used in lifting the water out of the siphon in case of inspection and repairs. The arrangements for emptying the aqueduct at this point are specially interesting, because not only is the part under the river very deep, but only at this place could a blow-off be arranged for draining that part of the aqueduct south of this point. Here are being built a gate-house, pumping station, and blow-off, and they will form perhaps the most interesting spot, from an engineering point of view, in the entire work. The aqueduct is here under pressure, and the water rising in the shaft after its passage deep under the river must again rise on its passage to the gate-house at 135th street. The top of the shaft must therefore be closed at a point under the surface where it joins the aqueduct that extends along Tenth Avenue, and it must also have gates to permit the escape of all the water in the aqueduct to the south, a distance of two miles. Shaft 26, a

few hundred feet from Shaft 25, is arranged with an overflow and blow-off, and it virtually acts as a safety-valve for all that portion of the aqueduct to the south. The overflow here regulates the height of the water in the gate-house at 135th street, two miles south. A short pipe line connects Shaft 26 with the blow-off at the foot of the bluff at

IN SHAFT 25.

Shaft 25. Shaft 24 has also a blow-off for the water to the north as far as South Yonkers.

There are, therefore, three grand hydraulic works concentrated within a few hundred feet and in the midst of what promises to be a populous part of the city. Moreover, these works, though partly unseen, are placed between two other great works that testify to the skill of American engineers. To the south is High Bridge, justly famous as a lofty and beautiful stone structure, and to the north is the Washington Bridge. This new bridge is formed of two immense steel arches, the largest single arched spans in the world. The picture on the opposite page gives an idea of the character of the Harlem Valley at this point. The picture gives a view across the river, and shows the head-house and other works at Shaft 24. At the left is seen a portion of the new bridge, and below, on the river banks, are the two landing stages where the brick, cement, and other materials used in the aqueduct were landed. It also gives a view of the inclined railway for bringing brick and stone up from the river to Shaft 25.

In addition to the larger and unexpected difficulties met in building the aqueduct more trouble was looked for in the way of soft, broken, and weak spots in the rock. These were overcome by means of timbering, as in a mine. However, the amount of timbering required was not excessive, only about 39,000 feet of the aqueduct tunnel being supported by timbers outside the brick lining. This timber-work was put in before the bricks were laid, and in some cases was left in position when the lining was put in. Completely inclosed from the air, it will last for a long time; and even if it decays no harm can follow, as the tunnel lining is backed up by masonry and is amply strong enough to carry the weight of the rock.

The difficulties at all points along the aqueduct have now been overcome and the great engineering work is virtually complete. The

THE CIRCULAR SECTION FOR WATER UNDER PRESSURE.

upper part from the lake to a point near the city line is of a horseshoe section, the interior dimensions being 13.60 feet wide at the top of the side walls and 13.55 feet high in the center. The accompanying section shows the shape of the tunnel lining. The lining consists of three and sometimes four cornices of brick laid in cement. The actual excavation, as shown in the diagrams, is larger than the tunnel lining, and the space between the lining and the sides of the excavation is represented as filled with masonry or with additional brick-work. This exterior work was essential in order to brace the arched lining against the weight of the rock overhead. Without this masonry at the sides and top of the lining the pressure of the rock might crush or distort the brick-work and destroy or seriously obstruct the aqueduct.

The tunnel south of the city line descends deeper underground and is circular in section and smaller in diameter, and will connect with an additional storage reservoir to be built at Jerome Park. The section above gives a good idea of this part of the excavation and of the round tunnel lining. It also shows the masonry backing used to reinforce and protect the lining and assist in carrying the weight of the rock above. The diameter of the circular part of the aqueduct is twelve feet three inches, except under the Harlem River, where it is reduced to ten feet six inches.

Not long ago the writer walked for a mile or more through both the arched and circular portions. Entering by an unfinished portal, left open on account of repairs, the first impression was rather depressing. The ladder was wet with clay, and the sunlight fell upon the curved walls and a wide and rapid brook flowing between

THE HORSESHOE SECTION FOR FLOWING WATER.

CAVE OVER CROWN OF ARCH. (FROM A PHOTOGRAPH.)

them. A rubber hat, rubber coat, and long rubber boots were awkward but comfortable. There was a cool wind blowing from the two black-arched caves, and it was but a moment's change from bright sunshine to intense darkness, relieved only by the lantern in the hand. The floor had a gentle slope towards the center and for about a foot on each side was comparatively dry. The sense of walking half in a brook and half on its slippery bank was peculiar at first, but in a little while the trick of walking on the edge of the water close to the side wall had been learned.

The spot of sunlight behind us faded away to only a yellow star that at last went out. The intense darkness was blacker by contrast with the black walls that here and there in the light of the lamps sparkled with drops of moisture. Occasionally a white mark gleamed with strange distinctness on the walls, showing where the engineers or inspectors had measured the work or left traces for future measurements or inspections. The silence, the cool air gently moving through the tunnel, the narrow circle of light about the lantern, appealed strongly to the imagination. Every splashing footfall echoed strangely, and there seemed at times to be a deep murmur in the air. We paused and listened, but heard nothing save the faint ripple of the water. Then might come

a distant sound, or rather reverberation, like the ghost of a thunder peal. Standing in the water in the center of the tunnel and looking either way there was only deep blackness, and it was difficult to decide from which direction came the faint rolling sound. A word spoken seemed to start tremendous echoes, and a note sung loudly floated away and came back again in a long-drawn-out sigh. Several words spoken quickly were repeated distinctly out of the black void beyond the little circle of light. Again we heard the far-away booming, and the engineer said that men were at work perhaps a mile away. We might meet them yet.

The lines of bricks stretch on and on in uniform, unbroken precision. The sloping floor never changes its exact angle, the walls are ever exactly in line, and high above the head is the arched roof. It is the perfection of mechanical work stretching ever onward through darkness. We pass a gate-house and cross its magnificent stone floor, and listen to the roar of the escaping water, and watch the curious effects of light shining upward through the gates and bringing out the massive blocks of granite into startling relief. Again the great arch welcomes to darkness.

Ahead there appears a faint, white cloud, or nebulous spot of light. In a moment we

are close to it, and find it some workman's tools covered with white canvas. It is only a hundred feet distant, and yet seems immensely removed. All sense of distance is lost in such deep darkness. Looking up, a circular opening is seen where daylight streams faintly down a shaft, lighting an iron ladder. This is one of the finished shafts, and the light shining on the white canvas spread over the tools at the bottom gave that peculiar nebulous appearance in the gloom. Nearly all the shafts are completely closed, and only a few are left like this—permanently open. The ladder ends in a little house that serves as a protection from the weather and from improper visitors to the tunnel.

As we walk on there are sounds in the air, echoes from yet unseen workmen. Soon through the murky air are seen star-like spots of light. There is a flash from an electric light and we meet piles of brick, stone, and cement. There are voices and a sound of tools and we come to a wooden staging, or "false work," and climb a short ladder and stand close to the roof among a group of workmen. There is a square hole cut in the arched ceiling, and with much scrambling we crawl through and sit down directly on the top of the tunnel lining. The space between the lining and the rock is

not high enough to enable one to stand upright, yet high enough for a comfortable seat on the top of the work. The cave-like place extends for some distance in both directions. The candles light up the wet, ragged rocks overhead, some heavy timbers in the distance, and the clean red bricks of the arch.

This space over the tunnel lining is only one of a great number that have been found at different points along the aqueduct. They appear sometimes at the top, sometimes at the sides, sometimes extend completely over the tunnel lining from side to side. In the specifications for the work all these spaces are marked as filled up solid with rubble masonry. The masonry is necessary to the strength of the aqueduct, and it was to be supplied in all cases for the whole length of the tunnel. It was not so supplied in this and in many other places. Moreover, the specifications call for three, and in some cases five, courses of solid brick laid in cement. The upper course in this cave is not laid in cement at all. The bricks on the top of the arch are as clean as on the day they were made. No cement was used, and the bricks were merely laid loosely in place and left there. The hole cut in the arch was made by the engineers to test the work, which was found wanting.

CAVE AT SIDE OF ARCH. (FROM A PHOTOGRAPH.)

That this statement may not seem exaggerated, two pictures are presented on the preceding pages from photographs taken in two of these caves. In the first the hole cut in the arch is shown with one course of brick properly laid, two courses badly laid, and two courses simply left out. More bad work can also be seen in the other picture. The rock above is the roof of the excavation, and all the empty space represented in the picture was paid for by the citizens of New York at the rate of about five dollars a cubic yard. In some of these caves cross-walls were built to deceive the engineer and lead him to think all the space had been built in solid. In one of the pictures such a cross-wall is shown with a hole knocked in it to show that another cave existed beyond. It is now known that these defects occur in the larger part of the aqueduct, and that over one million dollars were at one time paid out for work that was never performed, and that was certified to have been performed by those appointed to watch the work.

Happily the faults of which these pictures are such unimpeachable witnesses have been repaired, at the expense of the contractors, but they resulted in a complete change in the administration of the work, and the whole business is now but a bad memory. We can only hopefully look forward to the day when "practical politics" shall no longer rule our great public works. The time is fast coming when the selfish greed of political "halls" and the per-

sonal necessities of aspirants for public office can no longer thrive on the robbery of the people. Some day the American people will insist that neither governors nor mayors shall appoint public servants at the behest of political managers.

The aqueduct itself ends at the gate-house at 135th street and Tenth Avenue. The water rises through a shaft into the great vaults of the gate-house and then flows through eight lines of huge iron pipes into the city. Four of the lines of pipes lead directly to the reservoirs at Central Park, and four of them branch off at different points to supply the upper and central parts of the city. The laying of these pipes was of itself a great piece of work. The gate-house is a few hundred feet east of Tenth Avenue, and the pipe lines all start from the bottom of the gate-house deep underground. The surface slopes rapidly to the south, and advantage was taken of some partly unoccupied land to lay out a new street extending in a southeast direction from the gate-house to 125th street. This new street, now called Convent Avenue, made a bed for the eight lines of pipes. A trench was cut out the entire width of the street, and in it the pipes were laid. At one or two places the pipes came to the surface, and here the street was raised to cover them. The illustrations on other pages give an idea of the size of these great pipe lines and of the manner in which they were laid. At 124th street gates were put in the pipe lines, and

WORKING ON THE PIPE LINE.

PIPE LINE ON CONVENT AVENUE, FROM GATE-HOUSE.

blow-offs were arranged in connection with the sewers. At 125th street the pipe lines begin to branch off, one line turning east along that street. The other lines go on towards the south along the east side of Morningside Park. Other lines diverge at different points, and the four lines for Central Park pass down Eighth Avenue until they enter and cross the park to the old reservoir.

Compared with other tunnels, the new aqueduct is easily at the head of all works of a like character in the world. The cities of Chicago and Cleveland are each supplied with water through tunnels extending out into a lake. The first Chicago tunnel is 5 feet in diameter and 10,567 feet long. The second tunnel is 7 feet in diameter and 31,490 feet long. The Cleveland tunnel is only 5 feet in diameter and 6661 feet long. All of these tunnels were laid in comparatively soft materials. The Baltimore water supply includes a rock tunnel, twelve feet in diameter and seven miles long, and is lined with brick-work for about two miles. The old Roman aqueducts were several of them longer than the Croton Aqueduct, but they were all very small, and were merely masonry conduits a few feet in diameter. The Liverpool water supply is conveyed by an aqueduct about twice as long as the Croton Aqueduct, but it is mainly a surface aqueduct, there being only a little tunnel-work. A portion of the aqueduct is merely a pipe line. The supply is from a reservoir formed like that at Croton or at Sodom, by building a dam across a narrow gorge in a valley among the mountains in Wales. The dam is larger than

that at Sodom, being 136 feet high, while that at Sodom is only 78 feet. Compared with the proposed dam it will be small, as the new dam is to be over two hundred feet high, and will be the highest dam in the world. The aqueduct tunnel, when compared with railroad tunnels, is a little smaller in diameter than the three most famous tunnels, but is very much longer. The Hoosac Tunnel is only 24,000 feet long, the Mont Cenis is 8 miles long, and the St. Gothard $9\frac{1}{2}$ miles long, while the new Croton Aqueduct, as we have seen, is nearly 30 miles long.

In conclusion it may be observed that with the new aqueduct completed New York City can draw 318,000,000 gallons of water from Croton Lake. Combined with the old aqueducts it can have on tap, as it were, 415,000,000 gallons every 24 hours. In rainy years like 1888 and 1889 it will be able to use this great supply of water freely.

At the present time we have the Boyd's Corner reservoir, holding 2,700,000,000 gallons, and the Middle Branch reservoir, holding 4,004,000,000 gallons. These, with the 2,000,000,000 in Croton Lake, give a reserve of 8,704,000,000 gallons. The new reservoir at Sodom, now nearly finished, will add 9,000,000,000, and the reservoirs on the Titicus and Muscote rivers and at Carmel, to be finished within three years, will give 22,000,000,000 gallons; so we are sure next year of 17,704,000,000 gallons, and of 39,704,000,000 two years later. Thus we have to-day a reserve of 17,700,000,000, or enough to last a few months only in a year of drought; but when the large

dam is built we shall have 30,000,000,000 gallons more, or a grand total of 69,704,000,000, a reserve sufficient for a series of dry years.

Then, and then only, will the New York of the near future be absolutely safe from a water famine.

Charles Barnard.

THREE CHRISTMAS CHIMES.

I.

HEARKEN! how the Christmas chime
Sings on earth its song sublime!
"See those twain with weary feet
Wander through the village street—
Doors are closed against the stranger.
See the Child, the meek and lowly,
Christ, the mighty, the all-holy,
Sleeping cradled in a manger."

Sing your joy, O Christmas chime!
Let us keep the Christmas-time.
Be the loaf of plenty doled,
Be the poor man's heart consoled.
Thus we keep the Christmas-time.

II.

Hearken! still the Christmas chime
Sings on earth its song sublime!
"Wondering shepherds see the night
Flooded with celestial light—
Wondering hear the angel message;
Come, and let us kneel before him,
Let us find him and adore him.
Peace on earth this Child doth presage."

Sing your joy, O Christmas chime!
Let us keep the Christmas-time.
Let all strife and hatred cease,
Kindness live, good-will and peace.
Thus we keep the Christmas-time.

III.

Hearken! still the Christmas chime
Sings on earth its song sublime!
"Eagerly the Magi sped
By the wondrous star-beam led,
Gold and myrrh and incense offer.
He brings most, yes, he the highest
Draweth unto God the Highest,
Who a heart of love doth proffer."

Sing your joy, O Christmas chime!
Let us keep the Christmas-time;
Love shall be the law to bind
In one band all humankind.
Thus we keep the Christmas-time.

Constantina E. Brooks.

CAPTAIN JOE.

WANTED—A submarine engineer, experienced in handling heavy stone under water. Apply, etc.

IN answer to this advertisement, a man, looking like a sailor and wearing a rough jacket, opened my office door.

"I'm Captain Joe Bell, out of a job. Seein' your advertisement, I called up.

Where is the work, and what is it?"

I explained briefly. A lighthouse was to be built in the "Race," off Fisher's Island; the foundation was of rough stone protected by granite blocks weighing ten tons each. These blocks were to be laid, by a diver, as an enrockment, their edges touching. The current in the Race ran six miles an hour. This increased the difficulties of the work.

While my visitor bent over the plans, tracing each detail with a blunted finger that looked like a worn-out thole-pin, I had time to look him over. He was about fifty years of age, powerfully built, short, and as broad as he was long. The very fit of his clothes indicated his enormous strength. His pea-jacket had long since been pulled out of shape in the effort to accommodate itself to the spread of his shoulders. His trousers were corrugated, and half way up his ankles, in the lifelong struggle to protect equally seat and knee — each wrinkle outlining a knotted muscle, twisted up and down a pair of legs short and sturdy as rudder-posts. His brown hair protruded from under a close-fitting cloth cap, and curled over a neck seamed and bronzed, showing bumps where almost every other man had hollows: these short curls were streaked with gray. His face was round, ruddy, and wind-tanned, the chin hidden in a stubby beard, which clung to his lower lip; the mouth was firm, the teeth were like a row of corn, the jaws strong and determined. Everything about him indicated reserve force, endurance, capacity, and push.

Two things struck me instantly: his voice, which was deep and musical, and his eye, which looked through you—a clear, laughing, kindling, tender eye, that changed every instant, boring like a gimlet as he pored over the plans, or lighting up with a flash in the suggestion of ways and means to execute them.

As he leaned over the table, I noticed that his wrist was bandaged, the cotton wrappings showing beneath his coat-sleeve, discovering a partly healed scar.

VOL. XXXIX.—32.

"Burnt?" I asked.

"No, scraped. It don't bother now, but it was pretty bad a month back."

"How?"

"Oh, a-wreckin'. I've been four years with the Off-shore Wreckin' Company. Left yesterday."

"What for?"

He looked me straight in the eye, and said, slowly emphasizing each word:

"Me and the president did n't gee. He had n't no fault to find with me; but I did n't like his ways, and I quit."

So transparent was his honesty, self-reliance, and grit, that such precautionary measures as references or inquiries never once entered my mind. Before he closed my door behind him the terms were agreed upon. The following week he took charge of the force and the work began.

As the summer wore on the masses of granite were lowered into position, Captain Joe placing each block himself, the steam-lighter holding to her anchors in the rip of the Race.

When the autumn came a cottage was rented on the shore of the nearest harbor, and the captain's family of six moved in. Later I noticed some new faces in the home circle, a pale, sad woman and a delicate-looking child, both dressed in black. They would sometimes remain a week and then disappear only to return again. She was introduced by the captain as "Jennie, widow of my old mate Jim."

"What happened to him, Captain Joe?" I asked one evening when she left the room to take the child to bed, leaving us alone in the modest sitting-room, from the windows of which I caught a glimpse in the twilight of the tall masts of the schooners, coal laden, and the jibs of the smacks at anchor near the village wharves.

"Drowned, sir; two year ago." And he looked the other way.

"Washed overboard?" I asked, noticing his husky voice.

"No. Smothered in his divin'-dress, with a dumb fool at the other end of his life-line. We wuz to work on the *Scotland*, sunk in six fathoms of water off Sandy Hook. The president sent for me to come to the city, and I left Jim alone. That week we wuz workin' in her lower hold, Jim and me, I tendin' and Jim divin', and then I goin' below and he lookin' out after my air hose and line. Me bein' away that day, they put a duffer at the pump. Jim got

his hose tangled up in a fluke of the anchor, they misunderstood his signals, and hauled taut when they should have eased away. He made a dash at the hose with his knife, but whether it wuz the brass wire wove in it, or because he wuz beat for breath, we don't know. Anyways he warn't strong enough to cut her through, and when they got him up he wuz done for. That wuz mighty rough on me, bein' with Jim mor'n ten years, in and out o' water. So I look out for Jennie and the young one. No, it ain't nothin' strange nor new. While I've got a roof over me she's welcome. He'd done the same for me, and I've got the best of it, for there's only two of his'n, and there's six o' mine."

Gradually an accumulation of old rope, blocks, chains, diving-gear, and odds and ends of wrecker's outfit were heaped up on the small dock below the cottage, where a "shanty," vacated by some fishermen, served as a storehouse.

As the work on the lighthouse progressed the force and plant increased. A steam-tug was added, stone-sloops were chartered, and the gradual filling up of the interior of the foundation began. The owner of one of these sloops was a tall, sunken-cheeked old man named Marrows, who lived near the village on a small stone-incrusted farm. Outside of its scanty crop this sloop and her earnings were his sole resource.

Late one afternoon she returned to the harbor with her shrouds loose, her mast started, and her forefoot chewed into splinters. Her captain, a retired, bony fisherman, named Barrett, had miscalculated the tide, which cut like a mill-tail in the Race, and she had swirled, bow on, atop of the stone pile. When she struck, Captain Joe was in his dress, his helmet off. In a moment he had loosed his heavy iron shoes, caught up a crow-bar, and was bounding over the rugged rocks surrounding the foundation, giving quick, sharp orders to his men, who sprang into a yawl and began paying out a heavy line, Captain Joe following with the shore end of it, and taking breath meanwhile to swear at Barrett for his stupidity.

"Haul that line taut, you! Make fast to your starboard-cleats aft. Quick, you—fool! do you want her masts out of her? Now drop that kedge into the yawl."

While the men in the yawl pulled, as for dear life, astern of the endangered sloop, and slung the kedge anchor far enough out to get holding ground, others were leaping over her rail and running aft to the windlass, winding up the line, which tightened with a strain on the kedge.

All this time Captain Joe was under her bowsprit, his back braced against her chains,

his legs rigid as hydraulic jacks. Every time the sloop surged he straightened out, concentrating his enormous strength and assisting the movement, so that when she struck again she came a few inches short, the wave having spent its force. There he stood for half an hour shaking his head free from the great sheets of white foam breaking clear over him, shouting his orders until the stern line began to draw, and the sloop was windlassed clear of the stone pile and saved.

Marrows was on the little harbor dock, peering through the twilight when his sloop dropped anchor. Captain Joe held the tiller. He began as soon as Marrows's gaunt figure outlined against the evening sky caught his eye:

"I tell you, old man, Captain Barrett ain't fittin' to fool round that rock. He'll get hurt. I tell you he ain't fittin'."

"I believe you, and I've told him so. Is she sprung, Captain Joe?"

"A leetle mite forrard, and her mast a touch to starboard, but nothin' to hurt."

"Will she be any good any more?" Then, as he came nearer, "Why, you're soaking wet; the boys say you was clear under her." Then, lowering his voice, "You know, Captain Joe, she is a good deal to me."

The captain laid his great rough hand tenderly on the old man's shoulder.

"I know it, I know it; that's why I wuz under her chains." Then, raising his voice, "But Barrett ain't fittin'; mind I tell you he ain't fittin'."

The next day being stormy, with a gale outside and no work possible, Captain Joe tightened up the shrouds of the disabled sloop himself, reset the mast, lecturing Barrett all the while, and then sent word to Marrows that she was "tight as a keg, better 'n ever, and everythin' aboard, 'ceptin' the bony fisherman who was out of a job."

The winter closed in with the foundation but partly completed. Before the first December gale broke on the rock the derricks were stripped of their rigging and left to battle with the winter's storms, the tools were stowed in the shanty, and all work was suspended until the spring. During the long winter that followed Captain Joe took to the sea, having transferred his diving-gear to the sloop; and before April three coal-laden schooners were anchored, or stranded, as befitted their condition, on the shoals in front of his dock in the village harbor. It made no difference to him how severe was the gale, or how badly strained the helpless vessel, he was under her bottom almost as soon as a line could reach her, and a patch of canvas, or half a cargo of empty oil-barrels, buoyed her up until the tug could tighten a line over her bow, and so on to an anchorage

inside the lighthouse. It seemed in truth that winter as if each luckless craft, in its journey up the Sound, did its level best to keep its rail above water long enough to sink peacefully and restfully upon some bar or shoal within reach of Captain Joe's diving-tackle. There it died contented, feeling sure of a speedy resurrection.

If a wrecked schooner, coal laden, was an unusual sight along the harbor shore, a wrecker, distributing her cargo free to his neighbors, was a proceeding unknown to the oldest inhabitant. And yet this always occurred when a fresh wreck grounded on the flats.

"That 's all right," he would say; "better take a couple of boat-loads more. Seems to me as if we wuz goin' to have a late spring. No, I don't know the price, 'cause I ain't settled with the underwriters; but then she came up mighty easy for me, and a few tons of coal don't make no difference, nohow."

When the settling day came, and his share as salvage was determined upon, there was of course a heavy shortage. He always laughed heartily.

"Better put that down to me," he would say. "Some of the folks along here boated off a little. Guess they wuz careless, and did n't know how much they took."

Little indiscretions like this soon endeared him to his neighbors. Before long every one up and down the shore knew him, and everybody sent a cheery word flying after him whenever they caught sight of his active, restless figure moving along the vessel's deck, or busy about his dock and wrecking-gear. Even the gruff doctor would crane his head around the edge of his curtained wagon to call out "Good-morning," although he might be clear out of hailing distance.

So passed the winter. With the first breath of spring over the marsh the shanty for the men on the rock was rebuilt and the work resumed.

During all these months the captain never once referred to his early life or associations, or gave me the slightest clue to his antecedents. Now and then he would speak of Jim, his dead mate, as being a "cur'us square man," and occasionally he would refer to the president of the Off-shore Wrecking Company, his former employer, as "that skin." Such information as I did gather about his earlier days was fragmentary and disconnected, and generally came from his men, who idolized him, and who had absolute belief in his judgment and the blindest confidence in his ceaseless care for their personal safety. This care was necessary: the swiftness of the current and sudden changes of wind, bringing in a heavy southeast roll, submerged the rock at wave intervals, while the

slippery, slimy surface and the frequent falling of the heavy derricks made the work extremely dangerous. He deserved their confidence, for through his constant watchfulness but one man was hurt on the work during the six years of its construction, and this occurred during the captain's absence.

One morning when tacking across the Race in a small boat in a stiff breeze, with only the captain and myself for crew, I tried to make him talk of himself and his earlier life, and so said, suddenly:

"O Captain Joe! I met a friend of yours yesterday who wished me to ask you how you stopped the leak in the Hoboken ferry-boat, and why you left the employ of the Off-shore Wrecking Company."

He raised his eyes quickly, a smile lighting his weather-beaten face.

"Who was it—the president?" He always spoke of his former employer in that way.

"Yes—but of one of the big insurance companies; not your Wrecking Company."

"No, reck'n not. He ought to keep pretty still about it."

"Tell me about it."

"Oh, there ain't nothin' to tell. She got foul of a tug, and listed some, and I sorter plugged her up till they hauled her into the slip. Been so long ago I 'most forgot about it."

But not another word could be coaxed out of him, except that he remembered that the water was "blamed cold," and his arm was "pretty well tore up for a month."

In the shanty which was built on the completed part of the work, and which sheltered the working force for the three years of this section of the construction, were gathered that night a crew of a dozen men, many of whom had served with Captain Joe when Jim was alive. While the captain was asleep in the little wooden bunk, boarded off for his especial use, the ceaseless thrash of the sea sounding in our ears, I managed after much questioning and piecing out of personal reminiscences to gather these details.

One morning in January, two years before, when the ice in the Hudson River ran unusually heavy, a Hoboken ferry-boat slowly crunched her way through the floating floes, until the thickness of the pack choked her paddles in mid-river. The weather had been bitterly cold for weeks, and the keen northwest wind had blown the great fields of floating ice into a hard pack along the New York shore. It was the early morning trip and the decks were crowded with laboring men, the drive-ways choked with teams; the women and children standing inside the cabins, a solid mass up to the swinging doors. While she was gathering strength for a further effort, an ocean

tug sheered to avoid her, veered a point, and crashed into her sides, cutting her below the water-line in a great V-shaped gash. The next instant a shriek went up from a hundred throats. Women, with blanched faces, caught terror-stricken children in their arms, while men, crazed with fear, scaled the rails and upper decks to escape the plunging of the overthrown horses. A moment more and the disabled boat careened from the shock and fell over on her beam helpless. Into the V-shaped gash the water poured a torrent. It seemed but a question of minutes before she would lunge headlong below the ice.

Within two hundred yards of both boats, and free of the heaviest ice, steamed the wrecking tug *Reliance* of the Off-shore Wrecking Company, making her way cautiously up the New Jersey shore to coal at Weehawken. On her deck forward, sighting the heavy cakes, and calling out cautionary orders to the mate in the pilot-house, stood Captain Joe. When the ocean tug reversed her engines after the collision and backed clear of the shattered wheel-house of the ferry-boat, he sprang forward, stooped down, ran his eye along the water-line, noted in a flash every shattered plank, climbed into the pilot-house of his own boat, spun her wheel hard down, and before the astonished pilot could catch his breath ran the nose of the *Reliance* along the rail of the ferry-boat and dropped upon the latter's deck like a cat.

If he had fallen from a passing cloud the effect could not have been more startling. Men crowded about him and caught at his hands. Women sank on their knees, and hugged their children, and a sudden peace and stillness possessed every soul on board. Tearing a life-preserver from the man nearest him and throwing it overboard, he backed the coward ahead of him through the swaying mob, ordering the people to stand clear, and forcing the whole mass to the starboard side. The increased weight gradually righted the stricken boat, until she regained a nearly even keel.

With a threat to throw overboard any man who stirred, he dropped into the engine-room, met the engineer half way up the ladder, compelled him to return, dragged the mattresses from the crew's bunks, stripped off blankets, racks of clothes, overalls, cotton waste, and rags of carpet, cramming them into the great rent left by the tug's cutwater, until the space of each broken plank was replaced, except one. Through and over this space the water still combed, deluging the floors and swashing down between the gratings into the hold below.

"Another mattress, quick! All gone? A blanket, then—carpet—anythin'—five min-

utes more and she'll right herself. Quick, for God's sake!"

It was useless. Everything, even to the oil-rags, had been used.

"Your coat, then. Think of the babies, man; do you hear them?"

Coats and vests were off in an instant; the engineer on his knees, bracing the shattered planking, Captain Joe forcing the garments into the splintered openings.

It was useless. Little by little the water gained, bursting out first below, then on one side, only to be recalked, and only to rush in again.

Captain Joe stood a moment as if undecided, ran his eye searchingly over the engine-room, saw that for his needs it was empty, then deliberately tore down the top wall of calking he had so carefully built up, and, before the engineer could protest, had forced his own body into the gap with his arm outside level with the drifting ice.

An hour later the disabled ferry-boat, with every soul on board, was towed into the Hoboken slip.

When they lifted the captain from the wreck he was unconscious and barely alive. The water had frozen his blood, and the floating ice had torn the flesh from his protruding arm, from shoulder to wrist! An hour later, when the color began to creep back to his cheeks, he opened his eyes, and said to the doctor who was winding the bandages:

"Wuz any of them babies hurt?"

A month passed before he regained his strength, and another week before the arm had healed so that he could get his coat on. Then he went back to his work aboard the *Reliance*.

In the mean time the Off-shore Wrecking Company had presented a bill to the ferry company for salvage, claiming that the safety of the ferry-boat was due to one of the employees of the Wrecking Company. Payment had been refused, resulting in legal proceedings, which had already begun. The morning following this action Captain Joe was called into the president's office.

"Captain," said that official, "we're going to have some trouble getting our pay for that ferry job. Here's an affidavit for you to swear to."

The captain took the paper to the window and read it through without a comment, then laid it back on the president's desk, picked up his hat, and moved to the door.

"Did you sign it?"

"No; and I ain't a-goin' to."

"Why?"

"'Cause I ain't so durned mean as you be. Look at this arm. Do you think I'd got into that hell-hole if it had n't 'a' been for them

women cryin', and the babies a-hollerin' ? And you want 'em to pay for it. If your head wuz n't white, I 'd mash it."

Then he walked straight to the cashier, demanded his week's pay, waited until the money was counted out, slammed the office door behind him, and walked out cursing like a pirate. The next day he answered my advertisement.

THE following year, when the masonry was rapidly nearing the top or coping course, and the five years of labor were bringing forth their fruit,—the foundation and the pier being then almost ready for the keeper's house and lantern, from which since has flashed a welcome light to many a storm-driven coaster,—one lovely spring morning I was sitting overlooking the sea, the rock with its cluster of derricks being just visible far out on the water-line.

Beside me sat a man famous in the literature of our country—one who had embalmed in song and story the heroic deeds of common men, which are now, and will be, household words as long as the language is read. To him I outlined the story, adding :

"It is but half a mile to the captain's cottage, and, being Sunday morning, we shall find him at home; let him tell it in his own way."

We took the broad road skirting the shore, overlooking the harbor with its white yachts glinting against the blue. High up, reveling in the warm sunlight, the gray gulls poised and curved, while across the yellow marshes the tall tower of the harbor light was penciled against the morning sky: Over old fences, patched with driftwood and broken oars and festooned with fishermen's nets, stretched the boughs of apple trees loaded with blossoms, and in scattered sheltered spots the buttercups and dandelions brightened the green grass. A turn in the road, a swinging gate, a flagged path leading to the porch of a low cottage, and a big burly fellow held out both hands. It was Captain Joe. He was in his Sunday best, with white shirt-sleeves, his face clean shaven to the very edge of the tuft on his chin.

With a child on each knee, the younger a new-comer since the building of the light-

house, we talked of the "work," his neighbors, the "wrack" the winter before,—the one on Fisher's Island, when the captain was drowned,—the late spring, the cussed sou'east wind that kep' a-blowin' till you thought it were n't never goin' to wollup round to the west'ard again; in short, of everything—but himself.

Beating the bush with allusions to sinking vessels, collisions at sea, suits for salvage, and the like only flushed up such reminiscences as fall to the lot of seafaring men the world over—but nothing more. In despair I put the question straight at him.

"Tell him, Captain Joe, of that morning in the ice off Hoboken, when you boarded the ferry-boat."

He would, but he had 'most forgotten, been so long ago. So many of these things a-comin' up when a man's bangin' round, it's hard to keep track on 'em. Remembered there wuz a mess of people aboard, mostly women and babies, and they wuz all a-hollerin' to wunst. He wuz workin' on the *Reliance* at the time—captain of her. Come to think of it, he found her log last week in his old sea-chest, when he wuz lookin' for some rubber cloth to patch his divin'-suit. If his wife would get the book out, he guessed it wuz all there. He wuz always partic'ler about keepin' log aboard ship.

When the old well-thumbed book was found he perched his glasses on his nose, and began turning the leaves with that same old tholepin of a finger, stopping at every page to remoisten it, and adding a running commentary of his own over the long-forgotten records.

"*January 23.*—Yes! that's when we worked on the *Hurricane*. She was sunk off Sandy Hook, loaded with sugar; nasty mess that. It was somewhere about that time, for I remember the water wuz pretty cold, and the ice a-runnin'. Ah! here it is. Knowed I had n't forgot it. You can read it yourself; my eyes ain't so good as they wuz"—pointing to the entry on the ink-stained page.

It read as follows:

"*January 30.*—Left Jersey City 7 A. M. Ice running heavy. Captain Joe stopped leak in ferry-boat."

F. Hopkinson Smith.

TWO FLOWERS OF LOVE.

GAY love half conquered by fleeting pain
Is a rose that droops in the April rain,
But passion unvanquished by deeper woe
Is a flower that lives in the alpine snow.

William H. Hayne.

THE LIBRARY.

GIVE me the room whose every nook
Is dedicated to a book,
Two windows will suffice for air
And grant the light admission there;
One looking to the south, and one
To speed the red, departing sun.
The eastern wall from frieze to plinth
Shall be the Poet's labyrinth,
Where one may find the lords of rhyme
From Homer's down to Dobson's time ;
And at the northern side a space
Shall show an open chimney-place,
Set round with ancient tiles that tell
Some legend old and weave a spell
About the firedog-guarded seat,
Where one may dream and taste the heat :
Above, the mantel should not lack
For curios and bric-à-brac,—
Not much, but just enough to light
The room up when the fire is bright.
The volumes on this wall should be
All prose and all philosophy,
From Plato down to those who are
The dim reflections of that star ;
And these tomes all should serve to show
How much we write — how little know ;
For since the problem first was set
No one has ever solved it yet.
Upon the shelves toward the west
The scientific books shall rest ;
Beside them, History ; above,—
Religion,—hope, and faith, and love :
Lastly, the southern wall should hold
The story-tellers, new and old ;
Haroun al Raschid, who was truth
And happiness to all my youth,
Shall have the honored place of all
That dwell upon this sunny wall,
And with him there shall stand a throng
Of those who help mankind along
More by their fascinating lies
Than all the learning of the wise.

Such be the library ; and take
This motto of a Latin make
To grace the door through which I pass :
Hic habitat Felicitas !

Frank Dempster Sherman.

NATURE AND PEOPLE IN JAPAN.

WITH PICTURES BY THEODORE WORES.¹

JAPAN has become the mikado's empire again, and feudalism in the realm has passed away. After more than six hundred years' lease of power to lieutenants at Kamakura or at Yedo, the throne and the people are again united. A vast change in the habiliments and in the mental attitude of the Japanese is noted by outsiders: the hermits have chosen the world's society.

For years to come it will be a question of interest as to how far the recent revolutions mean a return to ancient forms and customs. How much have the Japanese gained by introducing, for the third time, a foreign civilization? How much have they lost by casting away what was native? Rarely in history have we seen an instance of a nation acting so thoroughly in accordance with the economy of a serpent in sloughing off its old skin; or, perhaps we might say, of a silk-worm emerging from cocoon-like isolation into the brilliancy of the moth.

Alien observers are too ready to declare that this modern renaissance of one of the smallest of Asiatic nations is entirely the result of contact with Western civilization. They see in all the constant flux and change only the imitation, even to servile copying, of things European. On the other hand, the patriotic native insists that the first idea and ruling motive of the revolution of 1868 was original with the Japanese, was from within, not from without, and that the main force was generated before the "black ships" of Perry cast anchor in Yedo bay. The presence of foreigners without doubt hastened a crisis that was already imminent, but even had Japan's isolation remained inviolate, a mighty political upheaval would have taken place. Almost to a certainty the duarchy would have gone down, with the reduction of the tycoon to his level as one of many vassals of the emperor. It is also possible that the wreck of the feudal system would have followed. In this general opinion the profoundest students and the best foreign scholars are in substantial agreement.

But it is certain that all those changes which are real reforms, and which most affect the common weal, are fixed beyond the possibility of speedy alteration, and are true returns to

the law and customs of ancient times. The present whims and fancies, the rage for the study of English, the adoption of European food, costume, and architecture, may have their day, and then cool or die, but the renovated national institutions are not likely to be abolished during the days of those who see the twentieth century.

The real explanation of the changes most recent and most visible is that the Japanese have cast off feudalism and have returned to ancient ideas reënforced by whatever foreign elements seem best fitted to aid them in national progress. As a matter of fact, we see to-day what was peculiar to Japan from the seventh to the twelfth century. The soil, no longer cut up into fiefs held by an oppressive nobility and gentry, is now held by peasant proprietors. Twenty years ago the "daimio" and the non-taxpaying "samurai" farmed the land in bulk, and the tillers of the soil were *adscripti glebae*; in 1886 the average farm was less than an acre in area, and the taxpayer owned the land he tilled. The old sumptuary laws, which forbade the lower classes, seventeen-eighteenths of the populace, to ride on horseback, or to dress, build, or spend money at will, and which denied them redress, are abolished. Before the revolution few indeed were the rights of the common people that the leisure class of sword-wearers were bound to respect. Now the mechanic may sue gentry or nobles, and the lowest in the land sends his children to the public school. The small property holder has the privilege of voting in the local elections, and all classes have equal rights before the law. In other words, the "heimin," or commoner, stands where he stood a thousand years ago, having regained all the old rights of which feudalism robbed him, together with modern advantages. The country is again divided into "ken," or prefectures, ruled by governors sent out from the capital, and the mikado, as in ancient days, is the fountain of honors and the source of all power.

The one thing which the ministers of the court are determined to keep inviolate is the sanctity of the person of the mikado. The foundation of social order is the throne, and this must not be disturbed. Certainly the greatest force in the national history, and the main-

¹ See also "An American Artist in Japan," written and illustrated by Theodore Wores, in this magazine for September, 1889.

spring of every reform, has been the affection of the people for their sovereign. The popular reverence and confidence are not to be lightly shaken, even though the imperial prerogative is to be modified and a national parliament is to be summoned by Mutsuhito himself to meet in Tokio in 1890. Full well do these earnest patriots, educated abroad, know that critical scholarship applied to the ancient and hitherto unchallenged documents, the spread of Christianity and science, and the entrance of Western ideas generally, will quickly enough dissipate in the common mind the inherited notion of the mikado's divine descent. They purpose to hatch the egg of democracy with healthy warmth, but not to hasten it to ruin in a furnace.

In foreign policy also Japan has changed mightily, but this change likewise is not without precedent. In the sixteenth century her keels plowed the seas from Calcutta to the Philippines, and from Siberia, Corea, and Annam to Mexico, and in earlier periods her sea-rovers were the Northmen of Chinese Asia. The present influx of foreign ideas is the third or fourth great wave of civilization from the West and the second from Christendom. The Japanese have always shown themselves a curious and knowledge-seeking race, and the sealing of their ports, the burning of their sea-going ships, the expulsion of foreigners, and the eradication of Christianity were in no sense national acts or the expression of popular desires. It was the high-handed policy of a despot who seized the time of national exhaustion to rivet upon the country the clamps of an elaborate feudal system, hoping by such means to maintain for centuries the calm of despotism. For over two hundred years, in her thornrose castle, Japan slept the dream of peace, of art, of literature, of refinement, of etiquette, of sensuous enjoyment. Her reaction is but the assertion of national instincts.

Even in her rapid change in those things in which men change slowly, religion and ethics, there seems less cause for surprise when we consult history. During the Middle Ages missionaries converted the Japanese people from Shintō to Buddhism, which, however, never secured the same hold upon the intellect of the samurai that it gained over that of the people, the former holding stoutly to Confucianism, with its code of ethics so well suited to feudal conditions of society. Furthermore, long before the coming of Perry and the still living Christian missionaries, Buddhism was losing its grip upon the masses. The impulses to reform, the orders of popular homilists, and the schools of ethical literature which sprung up during the first half of this century were not from Buddhism. The famous preachers of the "Shingaku," or new learning, whose sermons,

translated by Mr. Mitford and others, have so amused and delighted English readers, were practical moralists who owed little to the peculiar teachings of Shakamuni. Their successes were evidences of a crisis in the history of a cult which had neared its decay. On the other hand, the fall of feudalism robbed the Chinese ethical system of half its value. When the new politics substituted patriotism for the old personal ties of loyalty, most of the reasons for the existence of the Confucian ethics in Japan lost their significance, and therefore their right of existence. Furthermore, after the success of the revolution Buddhism was disestablished. Once rich in land, edifices, investments in brain and money, it is now weak in purse and mind, but weaker yet in popular regard because of the relaxation of morals and ascetic practices among the clergy. While Confucianism is emptied of its old meaning, and Buddhism subsists by openly borrowing certain tenets of Christianity, the earnest native, commoner or gentleman, is in need and in search of a religion. Nearly as impressive to the mind as the existence of a quarter of a million of nominal Christians in Japan is the corollary fact that heretofore the males have been in the great majority in the churches. Only recently have the women become communicant members in equal proportion. The leading laymen and nearly all the native preachers are samurai and former retainers of the daimios.

The student of political and social Nippon is not, therefore, so ready as is the artist to wail over the imagined losses of the Japanese, nor to suppose that they are "going to pieces," or are likely to lose their own genius in a servile imitation of foreigners. But, with the artist, he rejoices that besides the one unchanging conservative, the human heart, nature still abides in her glory, new every morning and fresh every evening. The same causes which have in the past so mixed the elements in the native disposition will continue, under every change of fashion or politics, to mold the people of these volcanic islands which are daily rocked in the cradle of the earthquake. The same light-hearted carelessness for to-morrow, fondness for sensuous pleasure, pursuit of the arts of enjoyment, keen and brilliant intellectualism, love of art and refinement, intense conviction of duty, and tendency to count life as nothing when its sacrifice for an idea is called for, will remain permanent characteristics. Fiery, patient, faithful, winsome, the Japanese show on their moral and intellectual side some of the noblest qualities that glorify human nature. Their own lofty ideal of Yamato Damashii (the spirit of unconquerable Japan) has been a thousand times illustrated in unquailing courage, in generous sacrifice, in unselfish devotion, and in lavish

A JAPANESE JULIET.

expenditure of life simply for a conviction. Such traits stamp the Japanese as men who deserve to be treated by Christians as men, and not as barbarians, as in the eye of the treaties they are held to be.

The aspects of nature and types of humanity in the archipelago, though long tempting to dalliance with the camera, are more justly reflected in colors on canvas. Indeed, one who has studied hundreds of photographs, whether plain or tinted, may get an entirely different impression when the picture is in pastel or oil and pigments. Comparatively few artists have as yet visited Japan with leisure, but among such are Wirgman, La Farge, Mompes,

the samurai's belt, absence of these is noticeable. Mr. Wores's collection also emphasizes humble life, for the glory of color and the splendor of costume which some of us remember are now bright dreams of what has vanished. The spectacular fascinations of feudalism which once made Yedo daily like the stage of a vast theater have passed away forever, and the generation born since 1868 cannot recall them. The artist complains that even when he would paint his picture of the maidens in silk and crape going out on their annual "hanami," or flower-view, in the cherry groves of Mukojima, he could with difficulty find the old costumes. One week the man of easel and palette saw

MEMORIAL TEMPLE OF THE SHŌGUN IYÉMITSŪ.

and Wores. The last, a young American artist educated in Munich, spent two years chiefly between Tokio and Nikko, or in the region, anciently named by the first explorer, and still poetically called, Adzuma (my wife). Unlike many who sketched in Japan and finished at home, Mr. Wores patiently completed his canvases on the spot. The result is a collection unique in faithfulness to truth. All foreign elements and alien suggestions are absent from his work. Besides exact presentation of aboriginal nature, he has given in dress, costume, and architecture only what was of Old Japan before the revolution of 1868. The only exception is, perhaps, the "jinrikisha," or man-power carriage, invented in 1870.

To those who remember the universal gun-hammer top-knot, and the brace of swords at

the high-bred daughters of Tokio, on their way to school, filling the street with pictures of fresh faces and a subdued glory of purple and crimson costume in harmony with all Japan. The next week, presto! they made locomotion in the whole foreign toggery of bonnets, skirts, stockings, and shoes. Happily in the paintings we have the old-time grace and beauty.

Flirtation in the land of the Rising Sun is not by handkerchiefs, and, though eyes may speak a language without words, it is not by winking. The verses on the cherry trees often serve as postal facilities not under parental or imperial patronage, and pledges of personal property given on the sly are redeemed at appointed time and rendezvous. The picture of "A Japanese Juliet" shows how a first meeting

A TEA-HOUSE IN CHERRY TIME.

may ripen into love and betrothal. On a platform or upper veranda of the Hall of Silvery Waves, or Fragrant Pavilion of Vistas, stands Miss Swaying Bamboo, who has not yet come to the writing of her name with the figure 21. Mr. Foot of the Mountain's second son beholds the vision of girlish loveliness. He loves his pipe-case, but the vision more. He would behold again. *Now* he cannot, that is certain. She is under parental or guardian eye, and a chat with a man stranger or a callow youth is out of order. However, under her modest mien and bashful eye there lurks encouragement. Her sleeve waves, and the swaying of a sleeve is a sign of willingness. It is enough. Romeo, in lieu of a rose, tosses her his smoker's chatelaine, with ivory *netsūke*. If she flings it back, or drops it, his hopes are blighted. If it finds safe hiding in her girdle, then there will be a meeting, and perhaps love and marriage. What boots it that books and society unite in saying that marriages must be and are arranged by parents? Love laughs at locksmiths, and often the parents, in innocent ignorance of the fact that the children ever met, confirm the suggestions made and the contract secured by the "go-between."

Mr. Wores's pictures show the samurai, the former wearer of a brace of swords, only on his peaceful and gentle side; for like Brown-ing's man he boasts two soul sides—one to face the world with, one to show a woman that he loves her. The samurai is the incarnation of the spirit of Japan. He is proud of

his name and history, which is that of servant and service. The revolution which destroyed feudalism and made a new Japan came about because the samurai yearned to be and not to seem, to do what he professed and to practice what he preached. The term means servants of the mikado, and the class included all from the proud "shōgun" of Yedo, called by foreigners the "Temporal Emperor,"—an expression which made the "mikado reverencers" gnash their teeth,—to the humblest retainer, whose salary and perquisites netted scarcely fifteen dollars a year. Theoretically the poorest gentleman was a samurai, and the shōgun nothing more; and so feudalism and tyconery were webs and veils of lies. The "soul of the samurai," the sword of 1868, cut away the fraud of centuries and revealed the truth. The gentry, now called "shizoku," is the middle, or rather the high middle class, and numbers in all about two million souls. Their origin is to be found in the period between the fifth and twelfth centuries, when hardy men rising from the ranks of the peasantry formed the military class, which in field and council served the mikado by bringing all the tribes of the archipelago beneath his sway. Under feudalism the samurai was landlord and paid neither tax nor toll. His symbol of rank was his pair of swords. One of these, the long two-handed saber, he drew against his lord's enemies; the other and shorter found its sheath in his own bowels when as a beaten or wounded soldier he earned honorable suicide on the battlefield.

PAGODA AT NIKKO.

The samurai wore a splendid costume, and was the embodiment of culture, often of austere morals, and often of cruelty. In a word, the virtues and the vices of feudalism were incarnate in him. Out of this same class came statesmen, scholars, soldiers, thinkers, prophets, models of refined life, who contrasted startlingly with the rakes, ruffians, swaggering swashbucklers, and assassins who were ever ready to cut from behind. Those who abused their position were sensual, dissipated, lazy, cruel, and worthy only of being improved off the earth; those who lived under the ideals of *noblesse oblige* adorn the annals of Japan, and are the fathers of those young men who in Europe and America have given us "a covert missionary retort" by their gentleness, winsome politeness, and fine mental traits.

In days remembered by the writer a samurai would no more appear in public without his swords than a gentleman among us would promenade Fifth Avenue in his shirt-sleeves. Then, his pomatumed top-knot, voluminous silk trousers, and crest-embroidered coat were his glory; now, he attends to the serious business of life in workaday trousers and leather boots. At home, however, or in cherry time, he may don his old easy garb, and keeps his hair clipped.

Feudalism, which the samurai created, and, under a conviction, destroyed, we associate most with the dynasty of the Tokugawas, which Iy yas  (E-ya -yas-u) founded in Yedo in 1604, after having made the village of Bay-door Japan's most splendid city. The finest architecture in the empire is illustrated in the family tombs, pagodas, temples, and mausoleums at Kuno, Nikko, and Tokio. The contrast between the austere simplicity of a mikado's tomb and a Tokugawa's resting-place is amazing. One is a simple, inexpensive, outdoor affair colored only by lichens and weather; the other is an immense aggregation of all the splendor, coloring, and consummate craft that art and trained nature can lavish. Both Taik  and Iy yas , who were the great unifiers of the empire, made use of Buddhism as a help to their peaceful policy. As nurse and patron of art, this faith appeals both to the classes and to the masses. Taik  was able to turn the thoughts of his captains and warriors from camp and sword to the mild joys of tea and poetry parties, where ceramics were admired, and pictures, carvings, and bronzes were critically appreciated. Iy yas  first encouraged his vassals to build and adorn shrines and temples and to patronize the popular religion, and then allowed himself to be canonized under the name of the Orient-illuminating Manifestation of Buddha. The ashes of himself and Iy mits  his grandson, the third of the line, rest amid the famed glories of Nikko, while the other twelve sleep in the heart of the great city, six at Shiba and six at Uy no. With vast patience and skill Mr. Wores has transferred to his canvas the amazing detail which, with characteristic extravagance, the Tokugawas lavished on edifices which were approaches to the simple bronze barrel of ashes. The "bonzes," or priests, of the J d  sect are still the custodians of the shrines, in the outer pebbled courts of which stand hundreds of stone memorial lanterns, the reverent tribute of feudatory vassals. The late Edward Greay has shown that these florid specimens of modern art are but conventionalized forms of the common five-tiered tombstone, which in its courses and arrangement typifies the five elements—earth, air, water, fire, and ether, from which man comes and to which he returns.

Learning in Japan was first the prerogative of the priest, then of the courtier, then of the lady, then of the samurai. In the age of the soldier, as in medieval Europe, the bonze was the sole scribe and interpreter. After peace settled down, education became common. In these last days, since the name of Yedo has become Tokio, there are old priests, and, indeed, young neophytes; but the youth of the land are not in the monasteries, and the bonze is rather a lonely figure amid the souging cryp-

tomeras or the lotus-ponds. He sighs over the past as he feeds the pigeons with rice or clips the pink lotus-buds to adorn the altar. Christianity, the once outlawed alien faith, with the prestige of Western civilization is coming in like a tidal wave, and the saints are now in Cæsar's household. Nevertheless, Buddhist altars are still blazing with gold and fragrant with the flower so rich in the symbolism of Buddha's cult. By the side of the decayed and moss-grown monastery gate we see the ever-swaying

and benefactors, still abide; and the landscape still preserves with slight change the features Buddhism began to introduce into it a thousand years ago. Nature soon covers the work of man in wood or stone with a carpet of moss and her own heraldry of lichens; and despite the frequent use of steps and stone platforms the damp climate would soon bury the sacred places in greenery. "Tomb-cleaning day" is an annual feast of fun, frolic, and work, when the women with brushes, brooms, and scrub-

GATHERING LOTUS-FLOWERS FOR THE ALTAR.

and endlessly graceful bamboo, and out from the cloistered stillness we catch vistas of streets in sun and shade. Too old to change, and surrounded by irreverent children spoiled by Western conceits and more familiar with physical science than with ancient traditions, the lot of the old shaven-pate is sad.

Christianity gains in the cities first. The country people are still mainly heathen, and the superstitions of debased Buddhism and primitive fetishism are dyed into their deepest mental fiber, though the public schools are doing much to bleach them out of the rising generation. What was revolting and parasitic in the old systems, the incredibly obscene processions, the phallic shrines, the old festival parades so generally accompanied with extortion and sensuality, are now mostly things of the past. The ancient wayside shrines, local temples, and red pagodas, memorials to heroes

and benefactors, still abide; and the landscape still preserves with slight change the features Buddhism began to introduce into it a thousand years ago.

Whatever Japan may be to the adults, it is certain that to the children it is the "country between heaven and earth." Alcock first called it the paradise of babies. The coppery little shaven-heads seem at once dolls and live children. Petted, fondled, and indulged as they are, obedience is yet the first law, and etiquette is constantly taught them. Probably no other country in Asia is so full of toys, toy-shops, and people who make a living by amusing the youngsters.

The "eta" was the pariah of Japan, and considered outside of humanity. How he originated is uncertain, though tradition says that these "not-humans" were descendants of Corean prisoners. They numbered probably a half-million souls, and a colony of them was

A STREET SHOWMAN OF TOKIO.

usually found at the poorest end of most towns. To give fire, food, or drink to these people was a rare act, and when done the vessel was sacrificed; for to touch or handle anything once in an eta's possession was a defilement to be avoided with horror. No process of law could pursue a samurai who even wantonly took the life of an eta, while to save the

life of one in danger of drowning was not usually attempted. The eta men earned their subsistence as cobblers, buriers of dead animals, prison attendants, etc.; the women, by begging or by playing on the three-stringed banjo. Sometimes they trained monkeys and thus gleaned a few iron or copper coins from children. Mr. Wores has drawn the picture of a

man and his wife and a monkey amusing a family group in some temple inclosure. Upon no part of the nation have the recent revolutions had such mighty influence as upon the eta; for by a decree of the mikado this hated and despised class has been restored to citizenship. Though it will be generations before the social stigma is entirely removed and their former history forgotten, yet their future is full of hope. Before the tribunals of Japan a man born an eta may now sue a former daimio; he may gain money and spend it as he wishes; with property, he may vote. It is even possible for the creature in whom neither religion nor politics acknowledged a soul to become the adviser of Mutsuhito, who, as "King of Heaven," governed Nihon, the land ruled by the theocratic dynasty of the mikados.

As the wise men of the country look less to the clouds for the source of power and more to the consent of the governed, striving to enlighten those whom they tax, so will the throne be more truly based upon the people's will. The old fictions, dogmas, and mystery-plays which awed the people into obedience will not be too rudely destroyed, if the men in power carry out their own profession that education is the basis of all progress. Those who charge the Japanese with headlong haste, irreverent iconoclasm, and a feverish love of novelty that does not care for consequences are unjust. They do not know either the thoroughness of reform or the intensity of earnestness characteristic of the leaders of new Japan. Certainly those who most honestly strive to get at the inner facts find little to regret in the loss of feudalism, while they find very much to admire in imperial Japan.

In her foreign policy Japan has thus far failed to obtain justice at the hands of the treaty powers, though she is straining every effort to deserve it. Though sixteen years have elapsed since the promised revision of the conventions, the mikado's ministers have not halted for a moment in the work of reform. Patiently and with the utmost care they are perfecting codes of law and preparing to afford such guarantees

as will satisfy foreign governments of their ability to protect aliens and to secure the right administration of impartial justice to all.

Japanese politics are now largely shaped upon two questions: how far the national parliament proclaimed February 11, 1889, to meet in December, 1890, will follow the German Diet or approach the British model, and on what basis revision of the treaties shall proceed. One party of ultra-patriotic men claims that Japan as a sovereign state should demand of the powers recognition and equality without offering specific guarantees. If necessary, they would denounce the treaties and stand on the defensive, even to war. The other and more enlightened party desires that the fullest guarantees should be offered, and the wisest reforms should be thoroughly carried out, so as to win recognition of sovereignty by being worthy of it. They argue that the Government will not dare to treat foreigners better than they treat natives; therefore, if the best codes and courts are provided on western models, the Japanese will profit by them even more than the subjects of foreign rulers.

To the philanthropist, therefore, the long-delayed revision of the treaties, which has already been the source of woes innumerable to an ambitious and worthy nation, is seen to be a double wrong. Their re-negotiation in the interests of righteousness will be a blessing to all concerned. Considering that the first treaties of amity, and also of commerce, were made by the United States, whose diplomatists, Perry and Harris, first introduced the obnoxious clauses which have proved manacles to a weaker nation, ought not our Government to initiate the needed policy of justice—if indeed it has not already done so? Were the Father of his Country with us at this date, seeing our long and apparently hearty adhesion to the European policy of oppression by treaty, he might muse on the uselessness of giving advice. In our treatment of our Pacific neighbor we have long been mixed up in one of the most disgraceful as well as most entangling European alliances.

William Elliot Griffis.

OLIVE.

DOVE-BORNE symbol, olive bough;
Dove-hued sign from God to men,
As if still the dove and thou
Kept companionship as then.

Dove-hued, holy branch of peace,
Antique, all-enduring tree;
Deluge and the floods surcease—
Deluge and Gethsemane.

Joaquin Miller.

PAINTED BY FORTUNY.

ENGRAVED BY T. JOHNSON.

UNE DAME ESPAGNOLE.

(FORMER OWNER, J. H. STEBBINS; PRESENT OWNER, A. C. CLARK. PHOTOGRAPHED BY KURTZ, THROUGH THE COURTESY OF THE AMERICAN ART ASSOCIATION.)

PORTRAIT D'UNE DAME ESPAGNOLE.

THE hand that drew thee lies in Roman soil,
Whilst on the canvas thou hast deathless grown,
Endued by him who deemed it meaner toil
To give the world a portrait save thine own.

Yet had he found thy peer, and Rome forborne
Such envy of his conquest over Time,
Beauty had waked, and Art another morn
Had gained, and ceased to sorrow for her prime.

What spirit was it—where the masters are—
Brooding the gloom and glory that were Spain,
Through centuries waited in its orb afar
Until our age Fortuny's brush should gain?

What stroke but his who pictured in their state
Queen, beggar, noble, Philip's princely brood,
Could thus the boast of Seville recreate,
Even when one like thee before him stood?

Like thee, own child of Spain, whose beauteous pride,
Desire, disdain, all sins thy mien express,
Should need no absolution—hadst thou died
Unhouselled, in their imaged loveliness.

All this had Fate decreed,—the antique skill,
The halt, the poise, the long auspicious day,—
Yielding this once, thy triumph to fulfill,
Velasquez' scepter to Fortuny's sway.

Shine from thy cloud of night, fair star, nor fear
Oblivion, though men thy dust inurn,
For who may bid thy counterpart appear
Until the hand that drew thee shall return!

Edmund C. Stedman.

FRIEND OLIVIA.

BY AMELIA E. BARR,

Author of "Jan Vedder's Wife," "The Border Shepherdess," "A Daughter of Fife,"
"The Bow of Orange Ribbon," etc.

III.

"THE WAY TO REST."

"Christian saw the picture of a very grave person, and this was the fashion of it. It had eyes lifted up to heaven, the best of books in its hand, the law of Truth was written upon its lips, the world was behind its back, it stood as if it pleaded with men, and a crown of gold did hang over its head."

"Gathered from many sects the Quaker brought
His old beliefs; adjusting to the thought
That moved his soul the creed his fathers taught;
One faith alone, so broad that all mankind
Within themselves its secret witness find:
The soul's communion with the Eternal Mind;
The Spirit's Law—the Inward Rule and Guide."

BEYOND Milnthorpe village Nathaniel came in sight of the woods which encircled Sandys Hall. He had been dimly conscious through all his spiritual turmoil of the glory of the setting sun

and the clouds floating and burning in the west with the hue of a carmine-colored flame. But when he passed through the park gates the splendor had faded away, and the cumulus masses lay dead and ghostly in the cold gray air. The silent, colorless land-scene added its pathos to his troubled mood, and some strange sympathy with it made him draw rein and give his weary horse permission to walk soberly through the wooded avenues. They were already misty with the vapors from the mountains and the sea, and to his excited mind were full of images as mysterious and incoherent as the background of dreams.

When he came within sight of the house he forgot himself in the sad fate of its old possessors. For the last of the family had fallen in the battle of Marston Moor fighting for the king, and the estate had subsequently been sold by the Puritan Parliament to Roger Prideaux, a wealthy goldsmith of Paul's Walk, London. Roger was a Westmoreland man, and the hope of his heart, as he saw his wealth increasing, had ever been to buy a home in some sweet valley of his native county. The fact that there was no heir to Sandys, and that he would not therefore be dwelling in the rooms of any

unfortunate living man, decided him in the purchase of Sandys Hall.

He had shown a singular respect and even tenderness towards its original holders. The portrait of the last Sandys still hung in its place over the hearthstone of the great dining-hall. The furniture had been renovated and not removed; the ornaments and pictures, though many of them objectionable to Puritan taste, were still in their places. Sometimes he had thought of casting the latter away; but the pictured faces had always pleaded for themselves, and in the ornaments his daughter Olivia found pleasure. And if Olivia saw no harm in the Indian gold and silver work, the sandalwood and ivory carvings, surely there could be none. For Olivia had a virgin conscience, pure as the snow and clear as the light.

Nathaniel remembered very well the young Lord Sandys. The night before he left the home which was to see him no more forever Nathaniel met him upon the road which he had just traversed. Where in all the universe of God was the young man now? It was with this solemn thought in his heart that Nathaniel reached the door of the house. Roger Prideaux met him there. He was a spare man of medium height, with the shrewd face of a successful tradesman. But his eyes were the eyes of a mystic—wistful, speculative, so full of light that the dropped eyelids were almost transparent.

"Nathaniel, thee is welcome. I have been thinking prayerfully of thee all this afternoon."

"I confess that I needed it. I have been too blind to go right and too presumptuous to stand still. But I observe that you have many lights and the appearance of company."

"We have Friends here this night whom thou hast wished to know."

Then he led Nathaniel to a room on the ground-floor which he had often occupied, and a servant brought him his saddle-bag. And he was not sorry to reflect that this bag contained a handsome change of clothing, for he noticed in crossing the hall that many people were passing up the great staircase of polished oak—beautiful women in shining satins, with their hands lightly resting on the arms of their husbands or lovers. And he thought of the excellently beautiful Olivia, and felt that the utmost nicety of apparel was but the most obvious of duties if a man ventured into her presence.

When he left his room Roger Prideaux was waiting to offer him the sunset meal. "We have eaten already," he said; "but thou must have something to strengthen the flesh, for it cannot feed at that table where the spirit waits and is satisfied."

"To say truth, I am in a hungry humor, Roger, and at this present the pullet and white wine are extremely tempting."

"Thou hast been to London, I know?"

"I have."

"And thou hast seen Oliver Cromwell?"

"Yes; I saw him."

"Then thou sawest a man who has had many secret conflicts and baptisms, but who when the time of trial came has not been able to stand to the unfoldings of duty."

"I think surely that he has done great things for England."

"If thou wouldst remember how many of God's people are buried alive in holes and dungeons: hearts broken, homes desolate, men and women, of whom the world is not worthy, suffering daily scourgings and oppressions. And he whom we have made Protector cares for none of these things."

"Cromwell is beset on every hand. Give him time; he will right all these wrongs."

"But thou knowest in such grave matters the instant time is the fittest time."

"I have seen this, Roger, that the Quakers are a sort of men very impatient and unreasonable. They will have their own way, even though it run against law and custom and all men's liking for it. They preach peace, but their lives provoke to a constant breach of the peace. And they stand so stiff in their own judgment that no man can convince them otherwise."

"I am right glad of it. And, if it please God, prisons shall be schools for prophets and nurseries of strong men in Christ Jesus."

"Three thousand Quakers are now in prison, Roger. If they are indeed bearers of a true message, how can they deliver it? Even the Word must fail, if it have not way."

"The Word will run to and fro till it fill the earth. Three thousand prisoners can do nothing, but God and three thousand prisoners can do all things."

"I doubt it not. But it seemeth to me that the way of moderation is better than the way of martyrdom. While I was in London a Quaker entered the Protector's presence in Whitehall. He uncovered not his head, he used not the commonest civility, and he rated Oliver as Elijah rated the wicked Ahab. My lord Stanley told me that the Protector was patient with him, and when it came to Scripture routed him with his own weapon. And when he saw that the Protector could give him verse for verse he argued no longer, but

he took from his pouch a linen cap and tore it in two with a stern passion, saying, 'Thus shall the Lord rend the kingdom from thee and from thy family.' Men like not to be prophesied against; and they judge Cromwell wide of the mark who think he can be terrified into any course of action."

"Nathaniel, when thou hast the true wisdom thou wilt speak more wisely."

Then the conversation turned to more personal matters and soon flagged a little, for Nathaniel saw that Roger Prideaux's heart was not with him. As they left the room they passed a long panel-mirror and the young man glanced at his figure in it. His black doublet and white-laced band, his breeches with a black ribbon at the knees, his silk stockings and low shoes fastened with silver latches, set off in a noble fashion his fine form and spiritual face. And there was an expression about the lips which strengthened it pleasantly. For Nathaniel judged rightly that he was to be brought under the influence of Quaker doctrines, and he was fully making up his mind to keep his own convictions intact.

They crossed the main hall and ascended the stairs to a large and lofty parlor on the next floor. It was well filled, and the company were mostly of Nathaniel's own social class, known to him as men know one another who live within certain boundaries and who meet on market-days and on Sabbath-days with the same motives. There was Squire Godlee, and Squire Salkeld, and the young heir D'Acre with his two-months' bride, and the Rev. John Duttred, the Independent minister, and old Captain Zoltone, Edmond Heron, Gilbert Lamplon, and Walter Grandale, all middle-aged soldiers with the scars of battle upon them.

Nathaniel saw all these as he entered, but only as background to two other personalities. One was Olivia Prideaux. She sat apart from the rest within the embrasure of a projecting window. Her hands lay listlessly in her lap; she was doing nothing; she was not even listening. But there was a wonderful light on her calm face, the faint bright smile of one who thinks much of heaven and of all sweet, innocent things. For Olivia Prideaux had those vehement longings after God which spring up in young hearts. She delighted to go apart, to close all avenues of sense, to retire into those unseen depths of the spirit wherein lies the image of God; because she had found, even in childhood, that part of our finite nature which borders on the infinite, that gate through which God enters in to dwell with man.

She did not perceive the approach of her father and Nathaniel. After a moment's hesi-

tation Roger Prideaux passed her without a word, and Nathaniel felt constrained to the same course. Then he looked at the group towards which he was advancing, but mainly at the man who sat in a large chair on one side of the blazing fire. The majestic figure, the noble sweetness of the face, the luxuriant hair,—not cut short, Puritan fashion, but falling upon the shoulders with a slight natural curl in it,—the impressive manner in which he was speaking, and the rapt attention of those who listened to his words, made an instant impression upon Nathaniel.

Duttred leaned against the high chimney-piece with a disputatious aspect. D'Acre rested his hand upon the back of his bride's chair, and his face reflected the light on the speakers. The rest of the men were in different attitudes, but they were all standing. The women had drawn their seats in a circle round the hearth. Men and women alike were in Puritan dress. Some, however, had discarded the lace wrist-falls and neckbands, and wore their silk or velvet or broadcloth without trimming of any kind, save the spotless lawn kerchiefs covering the bosoms of the women and the throats of the men.

"George," said Roger Prideaux, when they reached the side of the speaker, "this is my neighbor, Nathaniel Kelder."

Then George Fox rose and took Nathaniel's hand, and gazed at him with those piercing eyes which more than one judge found themselves unable to bear. "I have heard of thee, Nathaniel," he said; "now I see thee, and of the rest God will take care." As he spoke he looked at Nathaniel and he loved him, and there came into both men's faces that mysterious something which is the recognition and salutation of souls. This incident scarcely interrupted the conversation. Slowly relinquishing Nathaniel's hand, Fox sat down and turned his solemnly radiant face upon Duttred.

"Thee must not say that this doctrine of the indwelling Christ is a new one. Oh, no! To it give all the Scriptures witness. This is that divine change described by Paul, when he exclaims, 'I live; yet not I, but Christ liveth in me.' This is that divine union which Christ willeth, 'I in them, and Thou in me, that they may be made perfect in one.' This is that glorious fellowship promised: 'If a man love Me, . . . my Father will love him, and we will come unto him, and make our abode with him.' Christ in us the beauty of holiness, the hope of glory. This is the keynote of the Gospel."

The wonderful magnetism of Fox's voice, charged with faith, thrilling with love, broke into the stillness of Olivia's soul. She moved like a spirit, and laying one hand on the back of Fox's chair said with an invincible conviction:

"We know that this testimony is true. You have heard, Friends, how the bird halcyon has ordained for it a week of wondrous calm when the year is at its wildest and roughest. Then upon the waves she builds her nest. Christ within us! In this hope the soul builds for herself a marvelous covert, which not only floats upon the waves of time, but charms them into stillness; so that in the very heart of storms our souls enjoy the halcyon days."

She spoke in a rapture of peace. Her voice was low and even, and had the softness and remoteness of dreams. Her face was illumined from the light within. Nathaniel's heart trembled with joy that was as pure as it was indefinable. At that moment he thought nothing of the girl's personal loveliness: it was her pure soul that charmed his soul, and he longed to hold communion with it.

After a moment's pause Duttred said querulously, "This is going too far. It gives to our vile bodies too much honor."

"John Duttred," Fox answered, "who gave thee permission to speak spitefully of the body? It is easy to call the body 'vile' and then use it vilely. But we *have* this treasure in earthen vessels, and our bodies *are* the temples of the Holy Ghost. And he that hath this hope purifieth himself, and feareth to defile the sacred place. We must go into the depths of our nature, John, for our repugnance to give the body its due. Is it not sensuality? Men who would not wrong their souls by stealing, or by listening to a Pelagian tenet, eat and drink and riot like pagans. But Christ redeemed the body with his own body."

"Can the Spirit of God dwell with the spirit of man?"

Duttred spoke with a scornful incredulity; for though religious and faithful to his convictions, he was full of personal jealousy, and therefore unsympathetic. "This is a strange doctrine, Mr. Fox."

"It would be a stranger one, John Duttred, if the Creator, in whom 'we live, and move, and have our being,' should not have direct access to the spirit of his own creatures."

"There are no faculties of our mortal nature adapted for such intercourse. The Church has no service or provision for it."

"Such secret favors dispense with, rather than demand, mortal aid or service. O John! thee hast not known the prayer of union, when the soul enters into the sweet, solemn solitudes of the Divinity, and sees and hears and feels unutterable things. In these preludiums of heaven, these neighborhoods of eternity, a mortal man may have such glimpses of God that whether he be in the body or out of the body he cannot tell."

"I enter into no controversy touching things

too high for me. No creed has taken knowledge of such a condition, no church provided for it. Even the Fifth Monarchy Men, who pretend to understand Daniel and the Revelation as well as the Ten Commandments and the Lord's Prayer, fly not so high as this. The Church around us is our best hope and protection."

"The Church around us! Very well, John; but also Christ within us!"

"If this doctrine be true, it is too much truth. Men who hold it are self-hurtors if they speak of it. And, truly, I blame not the civil power for its controversy with them. When men say that Christ is in them, it is all one with saying that they themselves are Christ."

"Oh, no! We are nothing; Christ is all. And what kind of controversy is martyrdom? Doing men to death is not arguing with them. Moreover, I deny the civil power the right to touch a man's conscience. Conscience is placed out of sight; it is neither visible nor tangible. It is inaccessible to stripes. It cannot be bound in prison. While wicked magistrates are making the body suffer, conscience enjoys the Divinity. How then, John, can conscience be accountable to the civil government? Men who try to control it are usurpers of God's own right."

"Well, I know not what Quakers would have; and I wish they knew themselves. As for me, the old religion is good enough."

"The old religion! John, that is what Quakers want—the religion of Christ, and of the apostles, and of the primitive church."

"The church of Christ, which is the kingdom of Christ—"

"Is within us. Its real enemies are within. They are spiritual, and must be fought with spiritual weapons."

"In a word, then, how does a man attain to this condition of union with the Unseen?"

"By faith; for faith is the victory over what ever separates from God. Thou knowest what men have done through faith—how they have 'subdued kingdoms, wrought righteousness, obtained promises, stopped the mouths of lions, quenched the violence of fire, escaped the edge of the sword, out of weakness were made strong, waxed valiant in fight, turned to flight the armies of the aliens.' If faith can do these things, and more also, can it not open the door of the soul when he knocks, and say, 'Come in and dwell with me'? Can it not give him the whole heart, and enter into covenant with him? I can tell, for I have felt him nearer to me than breathing. He has beset me behind and before, and laid his hand upon me."

Fox rose as he spoke, and an indescribable majesty and authority clothed him as with a garment. His face shone, his clear, sweet voice

penetrated into the secret places of every heart. The atmosphere of the room trembled to spiritual influence, and a feeling of infinite tenderness brooded over the small assembly. Duttred stood silent, tears were in his downcast eyes, and when George Fox stepped forward and offered his hand he took it with a troubled, questioning look.

"We are made poor by what we miss, as well as by what we lose, John. Go into thy room and enter into that spiritual communion which is beyond all visibles. Open the door of thy heart and ask Christ to come in and dwell with thee. Verily, he will keep his promise." And as Fox stood surety for his Maker he lifted up his face and it grew like an angel's, and an old man on the outskirt of the little assembly cried out:

"It is true! It is true!"

But Duttred said coldly: "My desire is to stand still at present, so that the voice of the stranger be not taken for the voice of the shepherd. Yet I will not flatly contradict or condemn the words spoken, lest I come within the apostle's reproof for speaking evil of things I understand not." Then looking steadily at Fox, he said, "Pray for me,—peradventure I am wrong,—that I may be led right."

"John, why ask any man to pray for thee? Abide in thyself and take hold on thy own possession."

Then Duttred explained at some length his views of the Atonement, and the necessity for a formulated creed and a regularly trained ministry. But after Fox's burning utterances his words were cold, for he spoke of Christ in a distant way, as of one holding the central place in a theological system, but far off from daily love and life.

"Oh, no!" answered Fox. "There is no such thing, John, as a system of divinity in the Bible. Nothing there but a living record of personal relations between the Creator and the souls he has made. No dogma in all the Book. Only human life touched by the Spirit of God. And as for trained ministers, when God says to a man, 'Preach the Gospel,' he needs no other preparation or authority. Schools cannot make ministers, and God dwells not in temples made with hands. 'I was no prophet, neither was I a prophet's son; but I was . . . a gatherer of sycamore fruit'; but the Lord raiseth the poor out of the dust."

Then the conversation turned upon Cromwell and his government, and Fox vindicated Cromwell in many things, and set lucidly before the assembly the difficult part the Protector had to play between all the sects that were then claiming recognition for themselves and persecution for all others.

"In the high noon of these dog-days of our

religious discords," he said, "things are done and spoken which will hardly bear reviewing when the cool of the evening shall come. Between Thomas Edwards writing furiously against liberty of conscience and toleration, and the Presbyterian clergy complaining 'that men of civil employment usurp the right of preaching, to the great scandal of the kirks,' and the Church of England men, and the Fifth Monarchy Men with Rogers at their head, and the Independents, and other sects too numerous to mention, what is the Protector to do? And I think well of him for the plain words he gave the Presbyterians concerning preaching."

"Doubtless they deserved them, whatever they were," said Duttred; "but I know them not."

"Truly he answered their complaint with some searching questions: 'Are you troubled that Christ is preached? Is preaching so exclusively your function? I thought the Covenant and the professors of it could have been willing that any should speak good of the name of Christ. If not, I say plainly that it is no covenant of God's approving, nor are these kirks so much the spouse of Christ. I hope,' he further said, 'that He that ascended up on high may give his gifts to whom he pleases; and if those gifts be the seal of mission, be not envious though Eldad and Medad prophesy.' Are not these words like himself — strong, stiff, and unbendable?"

"Yes; and John Milton likewise says that 'presbyter' is only 'priest' writ large." And Duttred spoke with a bitterness that made Fox look steadily at him.

"A good man is known by the company he keeps," said Roger Prideaux; "and what say you to Cromwell's? His two secretaries are John Milton and Andrew Marvell. The seraphic John Howe is his chaplain. He has put Dr. Owen over the University of Oxford. And thou knowest, George, that he listened gladly to thee, and brought thee into his house, and desired to talk with thee again. And thou wilt allow that Friends have been a little demanding with him?"

"Not too much so, Roger. When Friends are everywhere robbed and beaten to the death they have just cause to go to the Protector for protection. However, whether he speak for us or whether he forbear to speak, we are saved by divine alliance from any danger of defeat."

The company then began to leave, for most of them had some miles to ride over lonely and ill-kept roads. Nathaniel was glad of the peace and quiet of his own room, for the day had been full of emotion and not devoid of physical fatigue. Yet he was not inclined to

sleep. He threw some logs on the fire and sat down before their blaze. For the first time he looked curiously at his chair, a large one of carved oak covered with Spanish leather. The gilding was worn, the leather had lost its brightness and curious stampings. It showed use, and he began to speculate about the men and women who had sat in it. His eyes roved from the chair to the great bed with its somber tapestry curtains. What fingers had worked the gigantic shadowy figures that lurked among their folds? Here and there a sword or a buckler in lighter silks gleamed out with a stubborn distinctness which was almost uncanny. The inanimate furniture revealed in the midnight a sort of personality. He could not but imagine the men and women who had known the room before him, and who had gone away forever. The empty chairs, the dim, vast couch, the little tapestry stool on the hearth, each and all had a lonely, mournful look, as pathetic and distinctive as that which hangs around a grave. He felt that the house preserved, like a book, the memory of those who had lived in it.

Into this melancholy atmosphere there came suddenly the memory of Anastasia, the mocking, brilliant face, the scornful voice, the laughter which he could now feel was but a thin veil for her anxiety. He lived over those moments of temptation, and his face burned, and he felt an intolerable shame in his own weakness and cowardice. He recalled the flight of his fearful soul up those terraced steps, and the heaviness of the body which so reluctantly followed it. Then he began to speculate on the assurance that "there is a spirit in man," and to compare it with the opinion of the Platonists, "that in all minds there is concealed a spark of the same wisdom that exists in the Supreme Being"—the inward light of Quakerism; the light "which lighteth every man that cometh into the world"; the divine light higher than knowledge, higher than grace, higher than love, which is only satisfied with that unity where no man dwelleth.

Hitherto he had lived on the outside of himself—in his intellect and reason and senses. Now he let everything go; reasoning, willing, hoping, fearing, and lost himself in a simple sense of this immediate God, so seldom sought, yet always so passionately longing to be sought and to bless—lost himself until the experience became more real to him than house, or home, or sun, or stars. He knew not how long he sat thus, but he rose trembling and awed with the revelation of this new capability of his nature. It brought him as yet no exaltation, only a solemn, dreadful reverence, mingled with an excessive physical chill and weariness. He lay down and slept heavily, and did

not awake in the morning until the sun was high in the heavens. The house was very still. He dressed and went into the dining-room, and found that the morning meal was long over, and that Roger Prideaux had gone with George Fox to Ulverstone.

A servant brought him bread and meat and wine, and he ate and drank with an eager appetite. The food refreshed him physically, and made him able to grasp the spiritual blessing that had come to him, and to feel its power and strength.

Then the bright sunshine, and the singing birds, and all the pleasant sounds and scents of nature spoke to him, and he went into the garden to enjoy them the better. Also he longed to see Olivia before leaving Sandys, and he hoped to find her there. But the sweet alleys of pleached beeches were all empty of human life. The box, and the privet hedges, and all the green palaces of the cherry trees were full of twittering birds, but in none of the pleasant garden-ways could he find the fair woman he wished to see.

Presently, however, he heard the sound of voices beyond the hedge, and he looked into the meadows and saw her there. She had two of her maids with her and they were gathering flowers. In a few moments he was by her side. Her apron was full of cowslips, and she opened it and let him press his face to the dewy, scented little blossoms.

"I am going to make them into wine, Nathaniel. Hast thou ever tasted cowslip wine? It is like the dew of spring. I think it hath the sunshine in it, and the scent of daisies and buttercups. My father thinketh it to be a good cordial. He went out early this morning, he and Friend George Fox. George felt drawn towards Ulverstone, and my father was clear to go with him."

They talked of many things as they went through the long grass, but Nathaniel was like a man in a happy dream. All his life after he could recall the feeling of the turf under his feet and the fresh wind blowing across his face. He stopped to listen to her innocent talk of a robin's nest which she had seen, and the great bed of violets under the oak tree, which she had not pulled, because they looked so happy in its shadow. He could find nothing to compare her to. He could pay her no compliments. She was exquisitely lovely and graceful and gracious, but he felt it to be impossible to tell her so.

When they came to the house they went into the large room where Nathaniel had eaten. She took off her hood and sat down with the flowers in her lap, and their delicate field-sweet perfume drifted between them. Then she hid her hands in their golden freshness, and her

face caught a kind of glory from their color. Nathaniel thought her the loveliest flower of humanity that he had ever seen. Usually it was an easy delight to talk with her, but this morning she appeared inclined to stillness, and he even imagined that there was an expression of fear or anxiety in her eyes when she lifted them suddenly.

Once, as she did so, they rested on the likeness over the chimney-piece. They had often spoken together kindly of the dead lord, and Nathaniel felt impelled to describe his speculations on the previous evening concerning the family. It was an age of firm belief in ghostly visitations, and the most reverent souls saw visions and dreamed dreams. There were few large houses without their traditional spiritual tenants, and to Nathaniel and Olivia it seemed quite natural that the old occupants of the rooms should revisit them. So also, when she looked at the face of the youth who fell at Marston Moor, its melancholy beauty and the predestined fate in its far-seeing eyes touched her with a peculiar nearness of sympathy.

"The world we cannot see is always blending with the world we can see, and I have often had a strange feeling about those who have not been long dead, Nathaniel."

"Tell your thought to me, Olivia."

"It is, that those just gone cannot have gone very far away. Dost thou think that I presume too much?"

Nathaniel's answer was prevented by the entrance of a servant, a middle-aged man called Asa Bevin, who had been with Roger some years in London, and who now filled in Sandys the post of house-steward.

"Olivia," he said, "here be two constables from Kendal, men of Belial both of them, drunken with wine and sin, and speaking loud, swelling words against the man thou wotst of."

She turned pale, but calmly answered, "Let them be brought here to me, Asa."

At the moment, without permission, entered the two rude, half-tipsy fellows whose natural bluster had been increased by visits to every public-house between Kendal and Sandys.

Olivia looked at the advancing men with a steady face. Nathaniel rose and stood beside her. His attitude was that of a soul alert at every point, but he knew not the business of the interruption, and could not interfere without reason. Yet as soon as he looked well at the officers he divined what their errand must be, and he regarded them with such piercing scorn that it was with difficulty the bolder blustered out:

"Mistress Prideaux, it is not you, but Master Roger Prideaux, we would see."

"My father is not at home. What is the business you come on?"

"Well, if thou must know, we want t' man who came here for hiding last night; t' man called John Whitehead."

"He came not here last night."

"That 's a put-off. He came this morning then; and it is like enough, seeing that he is a proper-looking young man, that you have hid him yourself, mistress."

"He came this morning, and I have given him food and shelter."

"Then, mistress, we have a mittimus for his arrest; and a warrant to search the house for him, if we are restrained in our duty. Let us at him, or it will, mayhap, be the worse for yourself."

As he spoke he laid his hand upon Olivia's arm, and the next moment Nathaniel had drawn his sword. With the flat side of the blade he struck the offending hand, accompanying the blow with a passionate order to the men to remove their hats in the presence of Mistress Prideaux.

"The devil take you for a Quaker dog! Who may you be, pray?"

"I am Captain Nathaniel Kelder, a magistrate, and one that stands so much your lord as to see that you carry yourselves as something better than brute beasts."

"We are in our duty, and while in it we fear not the face of clay."

"Nevertheless, I will see that you do your duty decently. Show me your papers."

The men had lived in plenty and had held petty office for some years, but breed is more than pasture. Their peasant nature covered before the higher type, and with a sulky obedience they handed the writs to their superior.

"Isaac Sandal signs these, I see. Isaac Sandal is my cousin, and much beholden to me. Take care you go not one inch beyond the line of your orders." Then turning to Olivia he said:

"Mistress Prideaux, in the absence of your father you can lawfully withstand these demands, but this is within the compass of your wisdom."

She stood a few moments in perfect stillness; then crossing the room, she opened a door and said clearly: "John, thou art wanted. Fear not."

Immediately from the open door stepped a youth of about eighteen years of age. He had a bright, confident face and a refined, gentle manner, and he answered cheerfully:

"The mercy which keeps in heights and in depths, the holy Helper, is with me."

"Help may not come till the last moment, John, but thee will find that it never comes too late. And if there is a bitter cup for thee to drink, remember thy Saviour, and also thy brothers Andrew and James, who perished

unshaken and always like themselves after so many cruel scourgings and crosses."

As she spoke the hands of the officer were on him, and he began to lock the heavy irons about his wrists. Then Nathaniel said angrily: "Leave the young man at liberty. His word is better than chains. I will be his satisfaction."

"Gad! that signifies nothing. I 'm not so off-at-side as to take your Honor's word, and the means for a bond are not here, nor have I the freedom to take one."

"Fellow!"

"Better not call me out of my name that way. I 'm doing my duty."

"On whose complaint is this arrest?"

"On the complaint of as good a man as any of your breed. Parson Derby's complaint."

"What hath this lad done against the priest?"

"Ask him. To boast of his sins is a thing a Quaker likes right well."

"What is thy fault, John?" Olivia's eyes were full of pity as she dropped them upon the lad's manacled wrists.

"I spoke to the people in the fish-market of a gospel free from rites and rituals, and of the indwelling light which sets the soul free to face with God, and no man-made priest between. And I said that God raises up his own ministers, and they dispense his Word freely, making no bargains, and indeed fearing that sinful commerce which exchanges heavenly things for earthly things. And the priest railed on me, and swore that I hindered his lawful tithes, which were secured to him by the Levitical law. But I told him that if he went back so far he must take notice that under that law not only the priests, but the fatherless and the widow and the stranger had their share of the tithes. And with that his fury was great, and he set the people on me with stones, and there was a riot, but in the midst of it three or four men made a wall for me, and I escaped."

"Ay, and thou saidst a deal more of t' same make, and it would have been a famous thing if thou had been trampled under t' feet of good honest churchmen—that I say; but my song! thou shall run to thy deserts now, for I 'll tie thee to my mare, and she will keep thy feet so busy that thy tongue will have a bit of rest, mayhap. It 's high time, I 'll go bail for that!"

"I will ride to Kendal with you," said Nathaniel. "And I will take care that you exceed not your warrant, which is to bring John Whitehead in safety. And you shall set the young man on your horse and lead the horse yourself, for I will ride at your side and put my sword against your malice; and if there is any grievance in the matter, I will answer to my cousin Sandal and the priest for it. Come! I am in haste, and will be gone at once."

"When Mistress Prideaux has given us some ale and some bread and meat we will take the road."

"By troth and faith! you will take the road this very minute. I will stop neither for meat nor drink."

Nathaniel was in a towering passion, though he restrained its violence, bridling and biting it with a composure and a slow sternness of speech that cowed the craven bullies into a sulky obedience to his orders. He turned to Olivia as he left the room and met her kindling glance with one of tender assurance, and her eyes thanked him without a word. Silently they went to the door together. Nathaniel's horse was ready saddled, and it was brought with those belonging to the two constables. He saw John Whitehead placed upon one of these and then leaped upon his own animal.

At that moment Olivia stepped swiftly to the side of the prisoner. "John," she said, "this is the price of eternal peace. Is it too great for thee?"

"We must all pay the price or go empty away. I am thankfully willing. What should it profit if I gained a few years and lost immortal life?"

"Look for thy Shepherd, he shall give thee everlasting rest; for he is nigh at hand, that shall come in the end of the world."¹

"I testify my Saviour openly."²

As she spoke Asa Bevin joined them. He carried a silver cup full of wine, and Olivia took it in her hands and raised it to the lips of the youth. He moved his manacled wrists involuntarily, and then bent his head. With a slight effort she held the cup while he drank. Nathaniel saw her lifted face, saw the shadow of apprehended martyrdom in her pitiful eyes, the rapture of apprehended glory in her holy smile. He commanded by his look and manner an absolute pause while this sacrament of sacred sympathy lasted. The officers stood still, agape and silent. Asa, with bent head, murmured a half-audible prayer. Nathaniel sat motionless, looking at the bound youth and the ministering maiden. When she moved the spell broke, the picture dissolved, the momentary visitation was over, was almost as if it had not been. The constables began to grumble and bluster.

"Lend me a nag, Mistress Prideaux," the dismounted man said. "I can't go afoot all t' way to Kendal. I never said as I'd make t' prisoner do it, not all t' way. Come, mistress, it will be raining full drive afore long."

Nathaniel answered for her: "I will have you step as you purposed a better man than yourself to step. Keep at the side of Master Whitehead's horse. You shall go afoot this

day, if you never do it again. Mistress Prideaux, fare you well!" He lifted his hat to the girl he loved so dearly, and then by a sharp movement of his hand indicated the order of the journey.

Olivia watched them out of sight, but Nathaniel never turned his head. She understood the intentness of his nature. She felt it to be right that his heart should be wholly set upon the thing he had resolved to do, for the work was in the way of mercy and justice. It was the righteous indignation of his heart, and not in this case its love, which made him the defender of the helpless. Olivia understood this, and she thought the more nobly of him for it.

She sat still a long time, musing in that sympathy which steals upon the meditative mind and grows with thought. Her pale, serious face and eyes of religious purity showed even in her brooding silence a certain misgiving. She could not forbear shaping in the future things which made her heart beat quick, for never until that morning had she thought of a lover. Her life was yet a virgin wilderness, but Nathaniel was just beginning to tinge the horizon of her thoughts.

As for Nathaniel, he would gladly have kept silence and recalled every word she had spoken and every expression which had flitted across her face. But he had long taught himself to subject desire to duty, and he believed it to be his duty to give John Whitehead an "opportunity." So he encouraged him to speak of that wondrous communion which was then not only "great" but also "new" tidings. His own heart burned by the way, but it was all "foolishness" to the two officers. The idea of a Christ far off in heaven was not an uncomfortable one. But a Christ in their own souls, illuminating all the dark corners and compelling them to purify themselves, was terrifying. Like the Gadarenes of old, they besought such an one to depart.

The conversation, however, so interested Nathaniel that he remained in Kendal until the next day, hoping to obtain the freedom of the youth. But the accusing priest was also judge, and John Whitehead's imprisonment was a preordained sentence. Ironed like a felon he was sent to Appleby jail, a dreadful dungeon, dark, damp, filthy, and fever-haunted.

With a heart full of pity Nathaniel bade him "farewell." But John had that "joy within" which disdained to take into account any outward misery. His bright young face was turned towards martyrdom, but he laid his chained hands in Nathaniel's hands, and said joyfully:

"This is the way to rest, Nathaniel; this is the way to rest forever!"

¹ 2 Esdras ii. 34.

² 2 Esdras ii. 36.

IV.

JOHN DE BURG.

"About some act
That has no relish of salvation in 't."

"The wicked flee when no man pursueth."

"Of all the virtues justice is the best,
Valor without it is a common pest;
Pirates and thieves, too oft with courage graced,
Show us how ill that virtue may be placed."

THE parting between Nathaniel and John Whitehead was in Kendal market-place. It was raining as it only does rain in that section of England, full drive, raining and ceasing, and then beginning again. The rifts in the black clouds threw lines of cold, steely light upon the houses and made them look strange and gloomy. There was also a wuthering wind sobbing through the narrow wet streets, and the natural outlook could scarcely have been more dreary and depressing.

Nathaniel forced his cloak and purse upon John, heeding not the opinion of the bystanders. But, indeed, they were singularly sympathetic, for the heroic calmness of John before his judge, and his heavenly resignation in the face of so much injustice, engaged the pity of the majority. Englishmen, in the mass, love fair play above everything, and the accusing priest for a judge, with a jury of churchwardens and church officers, did not strike them as fair play; so that Nathaniel's sympathy was in the main quite acceptable to the little crowd huddled in the shelter of the archways and the market-stalls. For a man really in earnest about heaven and hell, death and judgment, may be regarded as mad and an object of pity, but he is never a subject for contempt.

Then Nathaniel turned his horse's head towards Kelderby. He galloped with a savage earnestness of purpose, and Nathaniel found himself setting his angry thoughts to the rough natural music of the beating hoofs. He staid for a few moments at Sandys, but he did not alight. He fancied that Roger was constrained and cold in his invitation to do so, and he did not see Olivia at all.

The circumstance troubled him. He had expected Roger to praise him for his partisanship, and for the trouble he had taken in the affairs of a persecuted Quaker. He had expected—and he thought not unjustly—that Olivia would feel an interest in the fate of the young man she had sheltered. In such a storm it was not likely she would be from home, and he thought she must also have seen his approach. But he was judging as mortals do judge from the presenting side of events alone, and in this case the influence of the side not

seen was not only undue but perplexing, unprecedented and incommunicable. In fact it was the influence of Anastasia de Burg, though exerted in a way outside of all his fears or suspicions.

For Nathaniel's refusal to aid in her brother's escape was really a more serious disappointment than he thought it to be. Suspicion follows hard upon mistrust, and the morning after Nathaniel's visit Stephen de Burg asserted, in a manner not to be trifled with, that he was positive he had smelt the odor of tobacco in the upper corridor on the previous night. Anastasia concluded instantly that it was best to resent this speech as an innuendo against her honor, and this she did with so much anger and such passionate and scornful asseverations of her innocence that for a time De Burg was led to doubt his discernment and the evidence of his senses.

But Anastasia knew that this was but a temporary satisfaction, and as soon as possible she went to her brother. He was in a worse temper than his father, and for the first time she saw in his face the evidence of all the sin and cruelty of which he had been accused.

"It is well you have come, Asia," he grumbled. "I am at the end of my patience. I have been twenty times on the point of setting fire to the old pile. Taking us all together we should make a nice burnt-offering to the devil."

She turned on him almost savagely. "The old pile can shelter you no longer, John. You must go, and at once."

"Where?"

"To Sandys."

"To the Quaker's?"

"This Quaker is a fool, John; and I'll swear you are ten times a fool if you work him not to your purpose."

Then she stooped towards him and said in a low voice: "If you could 'thee and thou' I should say go as a persecuted Quaker, and Friend Roger would hide thee, and Friend Olivia would amuse thee, and thy consolations would be many. But you are altogether too daring and wicked, John, for such a merry disguise. You must wear your own cavalier dress, and throw yourself upon the mercy of the man. I hear he hath a great heart."

"If but one of his servants knew my face it would be the rope or the deep sea."

"His servants are such as came from London with him. And you are in so dangerous a taking that you must be another and a better man than yourself."

"Why risk so much? In a few days my ship will be off—"

"In a few hours it may be too late for you ever to reach your ship. You anger me beyond

all patience. I have told you how full of suspicion the house is. One of us must break the wonder soon. I have brought you a cloak left by Captain Bellingham at his last visit. Here also is a rapier of my father's and the last gold pieces I have. Be warned and go at once."

"To Sandys? But how? And fit me with a name, since I may not use my own."

"I have considered all. The late lord took with him to the field a poor cousin called Harald Sandys,—a man from the south,—and 't was said that he also died at Marston. Marry! that is a lie for you to contradict. You are Harald Sandys; and the name is the more fitting that I hear this Quaker finds a great content in honoring the dead family. So onward to Sandys, for I assure you this matter calls for dispatch."

"'T is some distance, and I am but a poor walker if it be not on the deck of my own ship."

"I have been riding, and I left my mare tied under the great sycamore. Take her. At Sandys park gates you can turn her loose; she will make shift to find her way home again."

"But listen, Asia—"

"Hush!" She stood with her right hand raised in the attitude of one listening intently. Her face blanched; she whispered in an agony of terror: "That is my father's step! Fly, fly! Down the great stairway! I will keep him in speech till you are away."

John was quite cool and collected. The cloak, the rapier, the gold, he forgot none of them, and just as Stephen de Burg sharply tried the handle of his daughter's door John de Burg stepped noiselessly through the corridor and down the stairway. There were two servants in the distance, but they were deceived by Captain Bellingham's cloak, and they took no notice of his egress. He had mounted the waiting horse and was flying through the park while as yet Anastasia answered her father's demands through the bolted door of her room.

"By God and the devil, mistress! I will know who is within your room. Draw the bolt, and let me enter."

"Not on such demand. It stands not with my honor."

In like parleying, every moment growing more passionate and offensive, Anastasia delayed her father's intention for a short space. But when she found that he would call help and force an entrance she flung wide the door with words of indignation and scornful reproach.

He had his riding-whip in his hand and he let it fall with pitiless weight upon her shoulders. It was a common discipline for the high-tempered dames of those days, and Anastasia took

half a dozen strokes without any apparent sense of wrong or insult. Suddenly, however, she turned, and with a swift and unexpected movement snatched the whip from his hand and flung it beneath her feet. Her face blazed, her eyes defied him, she extended her arm and cried out in a tone impossible to contradict:

"Stand off, sir! That is sufficient for my disobedience. I have committed no other fault."

"Show me the company you had, and I will believe you. Here hath been too much whispering about it. If 't was not Captain Bell—"

"Captain Bellingham! Sir, I am your child, and faith! the De Burgs fall not to petty vices. The devil honors us all with great affairs." She dropped him a mocking courtesy with the words, and moved him to speechless anger by that untranslatable defiance which radiates from an indignant and wrathful woman.

He did not answer her specially, but went muttering about the room, throwing open awm-eries and closets, and accompanying the act with a storm of abusive and suspicious words. Then he passed into the rooms beyond, and Anastasia opened the window, cast the whip into the garden, and then stood waiting for the blast of fury she knew would soon follow.

There had been no time to obliterate in John's room the traces of its occupancy. His pipe lay upon a table, and beside it there were still the remains of meat and wine. De Burg became suddenly silent when he saw them, and a feeling almost of satisfaction blended with his passion. He had been right then. His anger was just, it needed no longer to grope about in a blind rage seeking its object. He called Anastasia in a vaunting, strenuous voice, and she answered the summons at once.

He pointed to the pipe, the food, and the bottle, and she looked at them with the calm indifference with which we regard familiar and expected objects.

"I swear! I swear, mistress, I will blush for you, since you blush not for your own shame! Lord! What have you to say now?"

"For your sake, sir, I say nothing at present."

"I bless myself at my patience! God in heaven! I 'll find a way to make you say something. Name the villain, that I may spit him on my sword to the hilt-basket. Speak!"

"I have nothing to say."

For the moment he was unable to answer, but he went back to Anastasia's room and began to search the floor in a furious hurry. She understood his motive and said calmly: "If you are looking for your riding-whip, it is as far beyond your reach as it ought to be beyond your desire. Be reasonable, sir; then I will give you the satisfaction you cannot get from me with any amount of dog-treatment.

This also is an affair for ourselves; why breed a story about it? Do you wish all the footmen and serving-maids in the county to gape over us?"

There was something in her manner which shocked him into a dazed, reluctant kind of reasonableness. Her face expressed anxiety, but not even the shadow of shame. She stood a little distance from him, silent and hesitating, for she was trying to put off her confession in order to gain every moment possible for her flying brother. The voiceless tension was soon irritating to De Burg. "This silence is a mummery," he said. "You were ever too ready to speak. Whom have you been entertaining so near to your own room?"

"One of our own name."

She let the words drop slowly, watching her father's face as she did so. It terrified her.

"You lie!"

"No, sir."

"Name him, if you dare."

"Your son, John de Burg."

"You lie tenfold! I have no son."

"My brother, John de Burg."

"The curse of God and man! How dared you bring him under my roof?" And he threw her from him with a force that would have felled a frailer woman. Anastasia reeled, but recovered herself quickly.

"It is the truth. I would have saved you the truth if you had trusted me. John, as you well know, has been hunted off the sea. He came to the home earth, and for your sake I hid him. 'T was a strange hazard, and I do not deserve to be struck for carrying it out with so much bravery. All considered, can there be anything more absurd than that you should play Brutus in your own house? Plenty of ghosts wander about these rooms at midnight, wringing helpless hands. John in the flesh is manageable, but I would not have you the one to set his soul free of it. Nor had I a mind that our affairs should breed tittle-tattle among neighbors; so I lent him my mare, and gone he is."

"Where?"

"To sea. His ship was waiting off Barrow for him. Say what you will, you cannot but know that I have acted with a wisdom beyond yourself. Sir, go not away in such haste and distraction. 'T is beyond your power to come up with him, and why then set the country howling the name of De Burg to curses?"

"There is no curse too deep for him."

"Some also might say that it was a strange thing if John de Burg was so long under your roof without your connivance, and you are not without enemies who would make the most of the doubt."

De Burg listened to her with blazing eyes

and a sullenly thoughtful face. There are generally circumstances surrounding every wrong which make it difficult or imprudent for the injured either to avenge or to right themselves. De Burg had been brought to a point which permitted him to take these into consideration, and Anastasia wisely left him to that employment. She occupied herself in putting straight the contents of a drawer, and while his mind was revolving words and deeds which could suggest nothing but the highway gibbet or the avenging knife his eyes were curiously noting her long white fingers as they folded a pink ribbon or slowly crimped a bit of English point.

At length he saw her take a lawn kerchief and fold it for a covering for her neck. The act reproached him, and he furtively lifted his eyes and saw the marks of his passion across her white shoulders. It was not a pleasant sight, so he moved in a slow, stupid way towards the door, muttering, "Where there are women there are all kinds of mischiefs"; but after having closed the door he re-opened it and bade her come down quickly and play a game of draughts with him. He was afraid of his own thoughts, and the large, empty rooms, turning shabby in the years of trouble in which nothing had been renewed, were indeed haunted even in the sunny midday with ghostly memories he could not endure to entertain.

It was at this same hour that Nathaniel was leaving Sandys as the protector of John Whitehead. Half way to Kendal the party saw John de Burg a little off the main road, riding like a man who rides to outrun disaster. The constables both turned to watch him, and Nathaniel also observed the mad hurry of the rider, the head bent to the neck of the animal, the cloak streaming out behind. The sight, after all, was only a natural one. But nothing in life deserves more attention than the things we call natural, since it is by the most natural doors that trouble enters.

As for John de Burg, he paid no attention to the party. It was not pursuing him, and his mind was wholly set upon reaching Sandys before his father could take any determined steps against him. At the park gates he dismissed the mare and made at once for the coverts of undergrowth, and thus he gradually advanced to the house. In the interval he recovered his usual cool assurance, and when the park became a garden he was prepared to meet any one wandering in its shade.

The sight of a white hood gave him pleasure. He rightly divined that the wearer was Olivia Prideaux, and he contrived to meet her in a narrow walk bordered by hedges of privet. There he threw himself at her feet

with an impetuous fear and a pretense of exhaustion which startled and alarmed the girl.

"Mistress Prideaux, have pity on me!" he cried. "My life is in your hands. Be so merciful as to care for it a little."

"I know thee not; but if thee is in trouble—"

"I am Harald Sandys. I have been to Penrith on the king's business, and am like to be run down by the king's enemies. I have come to the old home for shelter. I know not where else to go."

She looked with pity on the kneeling man, and touching his hand said: "Rise! Thou must not kneel to any mortal, and I think thou hast a right to shelter here. My father is at Ulverstone, but until he returns I will do his duty for him. Walk by my side. I am glad thou art yet alive. It was said, and fully believed, that no Sandys escaped the sword."

"Indeed, mistress, I was sorely wounded at Marston, where my noble cousin fell; but I was nursed and sheltered, and so I escaped to the king in whose service I spend my poor life."

There was no further conversation. She walked directly to the house, and John de Burg walked at her side. He felt that he had said sufficient, and that he could be silent and know that silence would be to his advantage. But he watched with a furtive delight the beautiful face at his side. Wicked as he was, he felt the purity of his companion, and he looked at the innocent girl with something of the same pleasure which a botanist feels when he suddenly discovers a wondrous flower unknown to him before.

Asa Bevin met them in the front hall, and looked with little favor on the dusty, disordered cavalier. Perhaps Olivia noticed the man's expression, for she said with a decided purpose and authority: "A neighbor in trouble, Asa. Thou wilt see that he has all things necessary for his comfort. Until my father comes home he is in thy care, and there is no other to know of his presence here."

Then she removed her hood and sat down to consider what she had done. But it was difficult even for her well-trained mind to follow out one train of thought. Nathaniel's looks and words, and his espousal of John Whitehead's case, would blend with the circumstances of this last most unlooked-for visitor. Asa's evident disapproval of him also annoyed her.

"Thou must judge with a fair mind, Asa," she said in reply to a very doubtful speech, "and thou must not let thy prejudices hinder thy kindness. I trust that Charles Stuart hath some good men in his service."

"Olivia, we have neither this nor that to do with Charles Stuart. Thou shouldst have

waited for counsel and clearness in such a weighty matter."

"The man had his life in his hand. If our enemy hunger, we are told to feed him."

"If friend or enemy hath a crime against him, we are not told to prevent justice. And Friends are concerned to testify against mixing up with the world's people. This man hath their likeness and likelihood. I have not felt drawn towards him."

"To-morrow morning my father will be home. He will doubtless be given to see his duty. Until then let the stranger be in thy charge."

"Truly I will. I think not of trusting him, for I have been counseled by that which never failed me."

"Be not oversuspicious, Asa. The shadow of divine mercy is exceeding broad."

She sat down in it and lost herself in the sweetness and peace of its consolation. Was it not sufficient for all the sure anxieties of the present, and also for those which lurked in the obscurity of the future? A great calm fell upon her soul. She was at rest in the Lord, and they who ascend that height have all things under their feet.

It was near noon on the following day when Roger returned from Ulverstone. There had been a memorable meeting there. The very room had been shaken by the power of God, and from the awful glory of that experience many had risen to give themselves and all they had to the preaching of the indwelling Christ. The light and comfort of the Holy Ghost was with Roger, its reflection on his face, and his favorite hymn singing through his heart:

Oh, be glad, thou Zion's daughter,
Joyous news to thee are sent;
Thou shalt sing a strain of sweetness,
Sing it to thy heart's content.
Now the friend of God thou art,
Therefore shalt thou joy at heart,
Therefore know no sorrow smart.¹

At that hour the gift of life, with God and eternity to bless and crown it, seemed a very precious gift to him.

The news of John Whitehead's arrest and of Nathaniel's sympathy did not darken his happy mood. He almost envied the youths their opportunity for "testifying." But when Olivia spoke of the hidden guest waiting to see him Roger was troubled. For men with God to strengthen them may face martyrdom smiling, and the same men shrink and tremble before a financial crisis which is to be a question for quibbling lawyers and prejudiced judges.

The first mention of Harald Sandys raised in Roger's mind a grave and troublous question.

¹ Old German mystical hymn.

Would this Harald be heir-at-law? Would his own purchase of Sandys be void? Would his tenure of the house be in the discretion of this young man? He asked many particulars of Olivia and of Asa, and was not comforted by any report received.

It was just at this hour that Nathaniel called with his account of the proceedings in John Whitehead's case. He saw plainly that Roger was not himself; and as he could not imagine the true reason of his mental disturbance, he followed the usual course of men and women, and began to consider what *he* had said or done to induce the constrained courtesy, and to make himself unhappy over it.

He arrived at Kelderby in that mood which above all things asks for sympathy. And it so happened that he had just overstaid the moment in which sympathy still waited for him. Lady Kelder had been impatiently expecting her son for thirty hours. During at least twenty-nine of them she had waited for him with that alternating pleasure and wonder which is ready to accord with whatever mood asks fellow-feeling. But the strain had been a little too long; she had begun to feel injured, neglected, and of small account. As she drove her wheel round she told herself, and sometimes told the baron, who sat reading opposite her, that she was very silly to expect consideration when Anastasia was her rival. And the baron, hearing her voice only as discords through the measures of

"Sydneyan showers
Of sweet discourse,"

answered vaguely that he thought likewise, and so mended nothing wrong, but rather made sense of neglect worse.

It was raining heavily yet, and the black, drizzling crags, the tilled fields swept by the wet wind, the grass black with shadows, the heights coiled with gray, ghostly vapors—everything around insensibly subdued the mind to a settled, melancholy quiet. It was such a day as breeds worries, even if they do not exist; and Lady Kelder, having waited with unused sympathy all the morning, felt now as if nothing could induce her to give what had been so long neglected. Her hour for waiting to be gracious was past, and she looked up at Nathaniel when he entered with an indifference which he felt it difficult to contend with.

The baron put down his book and said, with some effort of enthusiasm, "Glad to see you, Nathaniel! Let me tell you your mother and I have taken your delay very ill, and with rather small patience."

"'T was against my will, sir."

"Fie, Nathaniel! When a man is so passionately taken with a gentlewoman as you are

with Anastasia de Burg, his will is a very spider-web for her to break."

"My dear mother, I left Anastasia within three hours after our meeting. This, on my conscience!"

"Nathaniel, what said my cousin Stephen to your news?"

"Indeed, sir, I think he took it with light gratitude. He was for the hills, and did not wait to speak his mind, nor did I wait to hear it at his convenience."

"I lost my hopes of any good out of Stephen de Burg long ago," said Lady Kelder. "Where there is no grace, how can there be gratitude? Pray how does Mistress de Burg endure what she mockingly calls 'the reign of the saints'?"

"She was not in a complaining humor. I found her engaged in a game of battledore with Captain Bellingham and Squire Chenage."

"And dressed like a May queen, or a picture of Mr. Lely's, without doubt."

"Indeed, mother, I remember not in particulars. She was in a glow of pink ribbons, and extremely handsome."

"And mincing and stepping with a delicate grace like King Agag, I'll warrant her. And giving you such refuse of her smiles as Squire Chenage and Captain Bellingham could not miss. She had ever that kind of trick with you."

"Mother, you wrong me as much as you wrong the lady. And you are enough in my heart to know that I would humor no such beggarly grace."

"Come, Nathaniel, here is food, and I make no doubt you need it. While you eat you shall give us the rest of your adventures. Good meat and drink never yet spoiled a tale. If you left De Burg ere sunset, where spent you the night?"

"Baron, what need to ask? He spent it at Sandys, of course. Little wit is needed for that riddle."

"Indeed, mother, you have guessed to a miracle. I was at Sandys. There I found also many ladies and gentlemen of good degree; also your favored minister, John Duttred."

"John Duttred! If what you say, Nathaniel, be of your own knowledge, I will believe it; if you saw him not, I scarce know how to do so."

"What could take the minister to the Quakers?" asked the baron curiously.

"To talk with one of whom all men may learn somewhat. George Fox was there, and Duttred had some disputing with him."

"A waste of time and testimony," said Lady Kelder. "George Fox listens only to himself."

"What thought you of him?"

"I think, father, that he is such an one as God uses to shake the souls of men. I can but wonder that he sent at one time Fox and

Cromwell. Surely England has been exalted to the skies by such favor."

"I am amazed at you, Nathaniel. 'T is nothing but an insult to the Protector to set him in the same sentence with a Quaker. And he would not forgive you very quickly for it."

"Mother, if you will allow me to repeat to you what George Fox said, you must needs see how much of prejudice there is in your misliking."

"I thank God I have no itching ear for strange doctrine; 'plain blasphemy' Master Duttred calls Quakerism. And if you will talk of it, 't will be in my absence. I have no senses for such people: no eyes to see them, no ears to hear them, no tongue to talk of them; no, truly, though it were of that pattern of all virtues, Mistress Olivia Prideaux!"

With the words she rose up in a passion from her wheel and said many things too positive to be reasonable. For the finest ladies, then as now, caught the spirit of their age, and Lady Kelder thought she did well to stand by the faith in which she had trusted from her childhood. And it cannot be denied that, being in a fit of bad temper, she was not sorry to find a point of conscience to excuse it.

"You, Nathaniel Kelder!" she cried passionately. "You! you, who are of the blood of the martyrs! *You* speaking for the Quakers is a thing not to be endured! Were your fore-elders, who died in the fires of Smithfield and perished in the cells of Newgate for their testimony to God's truth, under a delusion? Was my father, hunted to death on these hills for Nonconformity, deceived by his own imaginations? No, sir! And if they were in the right, then these Quakers are scandalously, and abominably, and blasphemously in the wrong. And as for the Protector, I blame him every hour and every minute for suffering them in the land at all."

She delivered this opinion with all the vehemence of a soul-conviction, and as neither her husband nor her son felt disposed to continue a defense not as yet definite in their own minds, Lady Kelder left the room with the private assurance that her words had touched the deepest feelings of both men, and had been felt to be unanswerable.

Then there was a few minutes of that uncomfortable silence of indecision which relieves itself either by motion or by gloomy intentness. Nathaniel walked about the room, the baron sat gazing into the leaping flames on the hearth, Jael came in and removed the dishes, and put by her lady's wheel, and pottered about the fire

and the furniture until the very air of the room was irritable. But when left alone father and son were both ready to talk.

Naturally the De Burgs opened the conversation, and it turned at once to John de Burg and the proposal which had been made by Anastasia. "I acted, sir, without your advice, and I may have been in too great a passion of honor and honesty. John was born wicked. It seemeth to me that he hath inherited all the sinful tendencies of all the De Burgs before him. Perchance this ought to have been considered."

"I observe not in Scripture any special tolerance for such men, neither in nature do we make excuses for inherited evil tendencies. The dog too brutal for control is mercilessly slain. We put our foot upon the head of the adder. In foreign countries the tiger and the great serpent are not forgiven the consequences of their devilish desires because they are natural to them. And John de Burg was born under the chime of church bells, with the words of prophets and apostles in his ears. He knew the Name which would compel the seven devils within him to tremble and fly, and he never spoke it. This is most sure, or he had cleansed his soul with the good handsel of that name. You spoke well for me. My roof shall not shelter nor my bread feed him."

"If, indeed, he was truly sorry?"

"He would deliver himself to justice and pay the penalty of his crimes. His father, though a thorough malignant, hath so much of virtue and honor as to abhor the son who has linked his name with deeds conceived in devilish cruelty and wrought out with the cunning and treachery of a wild beast."

Now often when the heart is full of turmoil, restlessness, and anger, conversation about a wicked person acts as a salutary medicine. As the two men spoke of John de Burg it was as if the evil name drew to itself all that was evil or irritable in them. Gradually they spoke with less fret, until the mention of Roger Prideaux opened a holy and wonderful subject. In it they became more and more interested and in earnest. And anon the conversation was full of eloquent pauses and ellipses. Their voices grew low and solemn. In each other's eyes they caught meanings beyond words. The fire burned down to red ash, and they heeded it not. The evening shadows grew long and dim, they sat stiller and stiller in them; for the warmth of the hidden fire was in their hearts, and the glow of the inward light around them.

THE PARIS PANORAMA OF THE NINETEENTH CENTURY.

THE ARTISTS.

ONE of the attractions of Paris during the International Exhibition was the Panorama of the Nineteenth Century, the production of two talented artists, M. Alfred Stevens and M. Henri Gervex.

Those in France best qualified to judge of such a production are unanimous in their opinion that it rises far above the general average of work of that class. Instead of merely putting on canvas, as is too often the case, confused masses of fanciful personages, the two artists have taken the trouble to paint life-like portraits of a thousand or more of the most illustrious men in French history, from 1789 down to the present year.

MM. Alfred Stevens and Henri Gervex, the authors of the panorama and of the following article, are not unknown in America.

M. Alfred Stevens is the elder. He was born in Belgium in 1830, and was the pupil of Navez, at Brussels. He came to Paris when only seventeen to work in Camille Roqueplan's studio and perfect himself in the technique of his art. Since then he has never left the French capital. By the time he attained his twenty-fifth year he was the object of considerable attention on the part of artists and connoisseurs; but the turning-point in his career may be said to date from the Paris International Exhibition of 1867, to which he contributed no fewer than eighteen paintings in oil-colors, some of which, notably "The Visit," "The Lady in Pink," "Miss Fauvette," "A Duchess," and "India in Paris," at once placed the young artist in the foremost rank of living painters. Ten years later M. Alfred Stevens exhibited "The Seasons," four panels that were purchased by the King of the Belgians; "The Lady in Yellow," "The Japanese Mask," "The *Mondaines*," "The Young Widow," "The Lady Visitors," "The Enigma," and "An English Lady taking a Walk." More recently he contributed to the world of art several well-known canvases, such as "The Little Boy," "View of Havre," and "Sunset at Sea," which greatly increased his reputation. While he takes rank among the best modern painters, he is also one of the most prolific.

M. Stevens is much above medium height, of commanding presence and vigorous frame,

with a heavy gray mustache, which gives him a military air. His features are regular and evince great force of character. He holds a high position in the social world of Paris, and may lay claim to a favor rarely accorded to living men by the city fathers, that of having a street named after him.

M. Gervex is twenty-five years younger than his colleague, whose pupil he was formerly, and of whom some years ago he painted a most striking portrait. He was born in Savoy, at the foot of Mont Blanc, but he also came to Paris at a very early age, and began painting at fifteen, under the guidance of M. Brisset. Later he followed the lessons of Fromentin and Cabanel.

His *début* at the Salon dates from 1872, when he sent a study after the nude which was purchased by the state. Another work, "Diana and Endymion," sent the following year, was the object of considerable notice at the time; it figures to-day at the Luxembourg. Unshackled by the prejudices of the ultra-classical school, the young artist gave himself up entirely to the study of nature. He, too, desired to be "modern." All his more recent pictures bear the impress of that aim, as shown by "The Girl Communicants at the Church of the Trinité," "Rolla," and "Home from the Ball." In 1879 M. Gervex exhibited some cartoons for the decoration of one of the Paris *mairies* (mayoralty houses), and secured the order from the municipality over the heads of three hundred competitors. His subject was "Civil Marriage," and it ranks high as a work of art in the estimation of all connoisseurs. Among other of his works deserving of attention we may instance: "A Sitting of the Jury at the Salon of Painting," "After a Masked Ball, at Six in the Morning," "The Woman with the Mask," and "Dr. Péan at the Saint Louis Hospital." His pastel portraits of M. John Lemoine, the Prince de Sagan, M. Guy de Maupassant, and of some very pretty feminine heads, the Comtesse de Montebello, the Baronne de Heeckeren, and others, have attracted considerable attention.

M. Gervex is of medium height, with a pleasant and refined countenance. He is clever at repartee, full of merriment, and is a general favorite in society.

HENRI GERVEX.

THE PANORAMA.

PARIS was not built in a day. The same may be said of our panorama, which, far from being an improvisation, is the outcome of long, deliberate reflection. The first faint notion of such an undertaking suggested itself to our minds as we viewed the fine exhibition of portraits of noted personages of this century which was opened six years ago on the Quai Malaquais. The curiosity with which the public examined the lineaments, the details of every-day life, and even the costumes of the celebrities who had disappeared within the last thirty or forty years, struck us forcibly as characteristic of the time. The same public may be seen daily crowding outside the shop-windows wherein are displayed the photographs of men and women of note, the gods and goddesses of the hour, professional beauties, ministers in office, celebrated actresses, notorious criminals—all those, in fact, to whom the gale of popular favor lends an ephemeral existence. Exhibitions, indeed, are the craze of the present century.

It appeared to us, however, that in thus ministering to the general taste photography usurped too large a share of the public attention. Why should not painting claim a like position before the world? Why should not the artist give attention to the variegated fancies of the age, and snatch from the living scenes that

surround him a vivid sketch of Parisian life, depicting, for instance, a recent sitting at the Chambers, the last race at Longchamp, or the latest fashion in female attire? Surely such work would prove as interesting to the average sight-seer as the time-worn Andromeda, the ever-recurring Cleopatra, and all that Græco-Roman toggery with which even the French Institute itself is beginning to be heartily tired.

Often these questions came up during our long, familiar chats, when, of course, many an obstacle was suggested and many an objection propounded. Under what aspect were we to embody our notion of "actual" life? In a country so instinctively mobile as our own, might we not run the risk of wasting our time over a task that must perforce be out of date even before we had quite got through it? To execute a work that would last was of paramount importance, or we should have to give up the idea at once. Now, in order to compass such a result, and at the same time excite and retain public interest in the undertaking, we must needs find something more durable to paint than a mere picture of the present "fleeing hour." Our object should be rather to revive, if possible, a long period of time; a whole century, for instance, wherein the past and the present would be, so to speak, juxtaposed; a graphic representation that would afford to the eye of the spectator as many elements of comparison as possible, from an epoch when the French Royal Guards had muskets down to our own Lebel rifles, and from a time when our grandmothers had curtains to their bonnets until the present day, when our elegant and fashionable ladies wear feathers in their hats.

These views seemed so beautiful, so grand, so ambitious, and at the same time so difficult, nay, so impossible of realization, that we relinquished the thought of such a work as quickly as it had suggested itself to us. Indeed, we had given up all talk on the subject, when one fine spring morning, while taking a stroll after breakfast, we happened to come upon that

THE PANORAMA BUILDING (CHAMPS-ÉLYSÉES).

lovely spot which every visitor to Paris delights especially to recall—the entrance gates to the Tuileries in front of the Avenue des Champs-Élysées. Just at that moment we met two deputies, both friends of ours, who were coming from the Palais Bourbon.

“What news?” inquired we, by way of saying something, as they went by.

“Nothing,” was the answer. They were about resuming their walk, when one of them turned back.

“Oh, yes; by the way,” said he. “If this bit of news can be of interest to you, you are welcome to it. Yesterday the President of the Council of Ministers informed us that there would be an international exhibition in 1889, to commemorate the centenary of the Revolution.”

After which both took their leave.

An international exhibition! The first thought of two artists when such an announcement is made to them is to inquire mentally what space is likely to be reserved to their works in the fine-arts section, and to see what they can do to get as much length of wall as possible “on the line.” Absorbed in these selfish speculations, we held our peace for a while; when suddenly one of us struck the iron railing of the Luxor Obelisk with his cane, and exclaimed:

“I’ve an idea, my dear fellow; I’ve an idea!”

“What is it?” asked the other.

“Suppose we carry out our grand idea—the pageant of the century—for the exhibition of 1889? What do you say to a colossal panorama, where a spectator may review the last one hundred years of French history—a veritable *tableau-vivant* of the great men and the chief events of the century, evoked from out the past with all the witchery of historical reminiscences? One hundred years of history, which the sight-seer may review in half an hour, from Louis XVI. to M. Sadi Carnot; wherein, for instance,—not to go beyond the military, literary, and artistic orders,—General

Lafayette, Beaumarchais, and Greuze would open the line of march, which Marshal MacMahon, Alexandre Dumas, and Meissonnier would close!”

The one who made this suggestion spoke with such warmth that he soon brought conviction into the mind of the other, who in turn fired up, and replied:

“You have hit upon the idea. Good! I have found the background for our picture. Do you know where I would propose placing this review of the century? Right here—yonder, in the Tuileries. The old palace of the kings

of France has, it is true, founded in one of those political convulsions which afford subjects for our canvas; but the site remains. There lies the garden, and, beyond its trees, the eye catches sight, does it not? of the Louvre, which is only a prolongation of the Tuileries. We are standing in the full center, in the very heart, of Paris. All the great events of French history have been wrought within the circle of our present vision. Louis XVI., the Great Napoleon, Louis XVIII., Charles X., Louis Philippe, Napoleon III.—all have lived within that radius. Is not this

Place de la Concorde which skirts the garden even to-day the antechamber, so to speak, of the Chamber of Deputies, and the spot over which flows the Paris world of fashion and elegance on its way to the Champs-Élysées? And is not this the obelisk to which Théophile

THE ENTRANCE.

Gautier (a poet not to be forgotten in our panorama) lends the words :

Je vois, de janvier à décembre,
La procession des bourgeois,
Les Solons qui vont à la Chambre,
Et les Arthurs qui vont au Bois.

"Yes, the Tuileries, long live the Tuileries! And, while I think of it, what matters it if the palace is destroyed? The personages of our panorama must not be crowded into an edifice. To be well seen, they must stand in the open air. As for the architecture, let us adopt lofty arcades, under which every figure may be brought out in a clear light, and above which may extend a long balcony filled with handsome women, all the queens of fashion, whether ladies of high rank or actresses, who for the last hundred years have, at one time or another, thrilled the heart of the great capital."

We shook hands and parted.

The matter was now settled between us. But we had to find a third associate who would furnish the needful capital. In less than three months we had done so. Our idea, it would seem, was not only artistic, but practical, for it won over at first sight bankers who were often less ready to subscribe even to a state loan. Shortly after, we drew up a brief outline of our scheme.

In the first place, we were to retrace with the brush an epitome of the whole history of France from 1789 to 1889.

Secondly. We decided to give as perfect a likeness as possible to all the personages, whether male or female.

Thirdly. Our space being limited, we were to select from each reign or régime the more prominent scenes, and in so doing carefully set aside our own political preferences.

Fourthly. We were not to lose sight of the fact that our century is the century of Schopenhauer; but, at the same time, that our work must be as gay, chatoyant, and brilliant as possible.

These points being agreed to by both of us,

we set about obtaining full data to work upon. Soon our artist friends were at a loss to recognize us when they met us. They saw us coming home with huge, atlantean folios under each arm. They learned that we had been found at the National Library, absorbed in the reading of innumerable manuscripts. They missed us at our social gatherings, and heard that we had been seen in the company of M. Taine, that austere and rigid investigator of contemporaneous French history. For fully six months we were looked upon as demented. The truth is, that during that period of incubation we had profitably gone over again our academic education.

But the hardest part of our task was the research and reconstitution of the female fashions. Of course we readily found portraits in oils or pastel, engravings and prints of the time; but these were insufficient for the purpose of artists whose chief object was accuracy. The stuffs must be touched and handled; the cut of a skirt and the fit of a corsage must be seen to form a right judgment of the object to be painted. One epoch especially was found to be sadly wanting in proper documents about ladies' wearing apparel. We refer to a time when the famous crinoline was so much the vogue, in or about 1860. The fashionable beauties of the day, who have since become grandmothers, had kept no dress of that period; they had long been made over to their chambermaids. Toilets which had cost their husbands such big prices had long since passed from second-hand stores into the rag-picker's basket, and the once glittering and showy texture converted perhaps into this very sheet of paper upon which we are now writing. What were we to do? Where should we look to find the material with which a crinoline dress was made, so that we might fix its evanescent form and color on canvas? We knew of one odd Parisian character whose amusement it was to have dolls dressed up each year by the best *couturière*, in order, he alleged, to preserve to posterity a yearly sample of feminine futility; but the trouble was

that this otherwise precious collection began just one year too late, when the crinoline had gone out of fashion. A thought struck one of us.

"M. Worth, the renowned man-milliner, considers himself to be a great artist," said the speaker. "Now an artist, whoever he may be, always keeps a sketch of the works he sells. It is impossible, therefore, that a man of genius like M. Worth should have completely destroyed the fruit of his many midnight vigils. Let us go and see him. We may perchance yet find in a stray corner of his atelier some patterns or models of the fine dresses that in bygone years he sent out to the four corners of the known world."

The following day we called on the *couturier à la mode*. Our inference proved correct. Like a genuine artist, M. Worth had gathered as in a museum the works of his scissors for the last thirty years. The crinoline therefore figures in our panorama, and the sight of it will prove a piquant contrast with the tight-fitting style of dress, which is to-day much what it was when it came into favor twelve years ago, in 1877.

But the fact of amassing historical material and drawing up afterwards a general plan were only a part of our preparatory work. We had also to find assistants. However diligent we might be, a division of labor was imperatively demanded to get through our task by the appointed date. We sought the coöperation of several young artists of merit, who cheerfully responded to our call and labored under our supervision. Among these were M. Sinibaldi, M. Stevens, junior, M. Gilbert, and M. Picard, and for the architecture M. Cugnet. These young men were all on hand every morning at nine o'clock, and worked diligently at our studio in the Avenue de Clichy, in the midst of a picturesque but most disorderly array of stuffs, uniforms, helmets, and objects of all kinds, the *bric-à-brac* of a century.

The sketching, which entailed two years of unremitting labor, was finally at an end. The

next step was to transfer it to the panorama canvas, giving to each figure a size eight times that of the original drawing.

This part of the work was by no means the least important to execute. We must here state that our undertaking is, strictly speaking, more of a decorative painting than a panorama. We have followed the example of the great masters, more especially the Italians — Raphael and Paul Veronese — when they did fresco painting. The process is simple enough. Our decorations were traced on large cartoons and the figures appeared of the size at which they were to be painted. The outlines of the drawings were all carefully punctured with a thick needle or pointed tool, so that when powder was rubbed over the holes the drawing was found reproduced on the canvas. By this means we were enabled to obtain a most accurate reproduction. Such an elaborate process is by no means necessary in the ordinary course of panoramic painting, and if we have had recourse to it, it is only from a sense of punctiliousness.

We shall now enter upon a general description of the whole picture, which is, of course, painted in chronological order. Our first panel brings on the scene some of the members of the States-General, convoked in 1789. The *Tiers-État* — a generic expression for the *bourgeoisie* and the people — figure in the costume of the time, with the short, black, plaited cloak then worn. A deputy from Brittany, however, appears in the picturesque garb of his province. From this group Mirabeau steps forward, his arm directed in defiant gesture towards the Marquis de Dreux-Brézé, grand master of ceremonies at the court of Louis XVI. Around him gather the rising members of the Constituent Assembly, Dupont, Lanjuinais, and Sieyès. The deputies of the nobility, such as the Marquis de Rochecouart-Mortemart, the two Lameths, the Prince de Broglie, and the Duc de Montmorency, stand apart from the rest and discuss the grave events preparing. Farther off, members of the clergy, in purple

mantle, white band, and skull-cap, are also visible, while somewhat withdrawn from them and taking notes is the Abbé Grégoire, who at a later day voted for the death of Louis XVI. In the foreground are three celebrated personages—Bailly, who was mayor of Paris; Necker, then Prime Minister to Louis XVI.; and General Lafayette, in appearance still proud of the laurels he had won in America. The general has on the full costume of commander of the National Guard—white buff-skin breeches, blue coat, vest with white facings, and powdered wig.

Under one of the arcades are assembled the Girondins, and with them is Mme. Roland, the ruling spirit of their party. One young man of the group, however, turns away his head, and gazes afar off at Queen Marie Antoinette, whom he secretly loves, and who may be seen dressed in the transitory splendor of her court. By her side stand King Louis XVI. and her ladies of honor, among whom is the unfortunate Princesse de Lamballe. Louis XVI. wears the blue cordon over a mauve coat with lapels.

But events precipitate their course. Under the first arcade Camille Desmoulins, his arms upraised, incites the people to march on the Bastille. The Palais Royal is visible in the distance. Another background depicts the "Feast of the Federation." In the foreground are several members of the National Convention, among whom is Saint-Just; while under the same arcade cluster the terrible women of the Revolution, Théroigne de Méricourt and Cécile Renaud, attired in the cap and neckerchief of the time. Coming slowly down the staircase is another woman, who grasps a dagger in her hand and has her eyes steadfastly fixed on three men debating close by—Robespierre, Danton, and Marat. We know for whose heart the blade in her hand is intended, and we quickly recognize Charlotte Corday. At the foot of the stairs appear several generals, among them Dumouriez, the hero of Jemmapes, and Kellermann, the victor at Valmy.

In fact, the military epic now begins and unrolls its pages uninterruptedly. Here is Pichegru; there is Carnot, dressed as a representative of the people on a foreign mission. Beyond these are Joubert and Hoche; the latter consults a map, probably that of La Vendée, for the chiefs of that civil war, La Rochejaquelein and D'Elbée, are not far off. After these come the generals of Napoleon's expedition into Egypt, Kellermann and Desaix, side by side with such illustrious men of science as Monge and Berthollet, who shared their trials and dangers.

Farther on we find Paris under the Directory, with its *incroyables* who sport such inordinate neckties, and its belles who affect the antique peplum. Mme. Tallien and Mme. Récamier, the latter in all the beauty of her twenty-fifth year, help to make up a group in which figure such remarkable actors as Talma and such immortal painters as Prudhon and David. The latter, an old Terrorist grown tame, has an eye on the Empire, which is building on the ruins of the Directory; while two stanch members of the fated party (Barras and Rewbell) almost elbow some of the members of the Council of the Five Hundred, at whose head is Lucien Bonaparte, the brother of him who is about to assume the imperial crown.

In the next group is the Emperor, dressed in a green coat which, opening half way in front, shows the white waistcoat under it. He rides a horse richly caparisoned, and reviews his famous body-guard of grenadiers. A massing of the colors takes place, and the standards of the various regiments are conspicuous in a maze of brilliant uniforms. The Emperor holds in his hand his little black cocked hat. He salutes the flags, while those around salute him. His marshals flock about him, Ney and Lannes, Murat and Davoust, Duroc and Poniatowski, the last in a bright uniform of the Polish lancers. We have sought to depict the Empire at the period of its highest splendor and glory. "To-morrow will be St. Helena,

to-morrow will be the tomb," as Lamartine was to say at a later day. At present, it is Austerlitz.

With Louis XVIII. we enter upon a calmer period. Seated on the terrace of the Feuillants, in the Tuileries Garden, with the edifice known as the Garde-Meuble in the background, the brother of Louis XVI. wears his sky-blue coat, with the blue cordon and the cross of St. Louis. Near him stands his Egeria, Mme. de Cayla. Farther off is the lady of whom it was said that in her were condensed the smiles and gaiety of that whole reign, the Duchesse de Berri, mother of the Comte de Chambord. The duchess wears a fine gauze dress, trimmed with puffs and rosettes of satin, the corsage being adorned with *baguettes* of blonde lace. The headdress is all gauze and flowers. Under the same arcade with the duchess are three court gentlemen: first her husband, whom Louvel is to kill, then the Duc d'Angoulême, who will one day go into exile; and finally the Marshal de Bourmont, who has not yet had the glory of taking Algiers.

In 1830 the scene changes. Fronting the gates of the Tuileries extend the Champs-Élysées, with the Triumphal Arch at the top in course of erection. At the garden entrance stand a National Guardsman, a pupil of the Polytechnic School, and a workman; all three fraternize and sway above their heads the recovered national flag. Inside the garden, in front of the well-known statues which we have faithfully reproduced, figure all the great leaders of that artistic and literary renovation called Romanticism, side by side with those of the classical school, Musset and Balzac, Eugène Delacroix and Ingres, as well as the celebrated women of that period, Mme. de Girardin and Georges Sand, the latter, with uncovered head and heavy black tresses, seated in close proximity to Rachel, the great tragedian, upright in the red tunic of *Athalie*. In a less prominent position, Scribe, the prolific playwright, and Henri Monnier, the immortal author of *Joseph Prudhomme*, symbolize

the *bourgeois* element of Louis Philippe's reign, which is further characterized by the presence of M. de Rothschild and Isaac Pereire, who bring to the king the plan of the first railway line in France. The king is viewed standing under the trees of the terrace, surrounded by the members of his family, his ministers, and his Algerian generals, the vanquishers of the Arabs in white bournous close by, among whom will be recognized Abd-el-Kader.

These generals, however, will not be able to save their king. Cast a look farther on, where stands the revolutionary Raspail, who jealously keeps watch and guard over an urn, or ballot-box, wherein for the first time universal suffrage may deposit its votes. The Republic has been proclaimed, and the members of the provisional government, Lamartine, Louis Blanc, and others, with the republican scarf of office round their waists, appear under a "tree of liberty" adorned with flags, which is being blessed by Monseigneur Affre, the archbishop and future martyr. Two distinct groups, composed of Generals Cavaignac and Changarnier and the socialists Proudhon and Barbès, surround them; and as a connecting link between the new régime and that which is to follow we have represented Baudin, who fell, the 2d of December, 1851, on the barricades of the expiring Republic.

As a background for the Second Empire, we have chosen the terrace of the Tuileries which overlooks the Corps Législatif, to-day the Chamber of Deputies. The chief authors of the 2d of December are there, Morny, Persigny, St. Arnaud, and Maupas. Above them is displayed the imperial court: Napoleon III., in the uniform of a general of division; and the Empress, wearing the bee-strewn court mantle and a crown of diamonds on her head. To the right and left are Marshals Pélessier, Canrobert, Magnan, and Leboeuf; and the principal members of the Cabinet, Rouher and Walewski, with staff-officers and *cent-gardes* in the rear.

As an offset to this political and military

group, we have painted below it the salon where, then as now, Princess Mathilde welcomes her literary and artist guests. Her brother, Prince Napoleon, is by her side. Here may be seen Théophile Gautier, Sainte-Beuve, Flaubert, Viollet-le-Duc, Théodore Rousseau, Corot, Troyon, Daubigny, M. de Nieuwerkerke, and Gounod, all chatting and amusing themselves, unmindful of Marshal Niel, then Minister of War, who, lower down in the picture, prepares his vehement prophetic apostrophe to the legislative body: "In refusing to help me constitute a strong army, do you then wish to convert France into a cemetery?"

Alas, yes, a cemetery! Now comes the Franco-German war, and now the siege of Paris. Under the arcades of the resuscitated Tuileries Palace, while already the sky is studded with bomb-shells and the Hôtel de Ville exhibits its ruins in the background, General Trochu is discovered with those members of the Government of National Defense who have not left Paris: Favre, Picard, and Arago. They are conferring about the best means to carry on an unequal contest. At the same time, by a privilege of ubiquity allowable to all artists, you find yourself suddenly transported to a great distance from Paris in one of those siege balloons which dot the air with the

carrier-pigeons — our postmen of the Année Terrible. Gambetta, with impassioned brow and upraised arm, inspires with patriotic ardor the generals around him, Bourbaki, Chanzy, and Faidherbe, and even the aged deputy Crémieux and M. de Freycinet, his colleagues.

Peace is now concluded and M. Thiers placed at the head of the national government. He has crushed the Commune, whose last champions, Delescluze, Flourens, and Jourde, we have delineated, together with its last victims, Darboy, Deguerry, and Bonjean. M. Thiers is surrounded by Generals de Cissey, Vinoy, and de Gallifet, whom he addresses while issuing his instructions to M. Prouyer-Quertier and M. Rémusat, his Cabinet ministers.

A change of scene follows. Marshal MacMahon is President, and the coalition of the 16th of May is on foot. Its instigators, the Duc de Broglie and M. Buffet, endeavor to bring about a capitulation of the Republican journalists, Girardin, Ranc, About, and Hébrard, massed in a group below. To the left, at the top of a monumental stairway, Marshal MacMahon presides over the Exhibition of 1878. Ladies in fashionable toilets of the time line the stone steps. It is the last important event of the septennate. M. Grévy then comes to the front as third President of the Republic, with a number of parliamentary notabilities, M. Lockroy and M. Paul de Cassagnac, M. Jules Ferry and M. de Breteuil, side by side with various other militant celebrities, such as the late Admiral Courbet, in full uniform and blue trousers.

We now reach the present hour. M. Sadi Carnot, President of the Republic, was graciously pleased to come and sit for his portrait

at our studio. We have surrounded him with the best known military officers of the day, General Saussier, and his Cabinet ministers.

Close by him, or scattered in different parts of the canvas, appear many distinguished personages whose fame will certainly outlive any ministry. They include literary men, artists, scientists, all alive to-day, such as De Lesseps, Berthelot, Taine, Augier, and Pasteur. The illustrious centenarian, the late M. Chevreul, who had well earned the right to a comfortable arm-chair, is seated.

All of these distinguished personages, Presidents, ministers, gifted orators, writers, painters, sculptors, chemists, and doctors,— we have painted upwards of a hundred portraits,— are grouped about a monument which embodies our panoramic idea. The whole architectural conception is consecrated to France, whose bronze statue stands out underneath a gold mosaic cupola. France grasps a flag the folds of which shelter two other statues, one of which personates the National Defense sharpening the point of a sword, and the other the genius of Labor. Below these are two more statues, one allegorizing Law and the other History. On the pedestal is inscribed the word "France," and underneath is a golden palm-leaf with the two dates 1789–1889. On the left-hand side and on the right of this monument appear the personages first and last described — on the left Marie Antoinette and Mirabeau, and on the right M. Sadi Carnot and his ministers; while well in front is Victor Hugo. We thought that he who wrote "La Légende des Siècles" might without presumption be held to incarnate for France the spirit of the century at the commencement of which he was born.

A BURIAL.

THE moon, as yellow as a citron, smolders
In the brown dusk of air;
Dull, oily puce the dreadful water molders,
An image of despair.

With lurid flame the smoky torches burning
Make blinder still the night;
The loathsome flood in viscid eddies turning
Swirls in the rower's sight.

Dim, noisome reptile shapes after it thronging,
Into the dark lagoon
A thing is slipped that throbbed with love and longing
When last the sun marked noon.

Arlo Bates.

PUNDITA RAMABAI.

IN this magazine for September, 1887, the facts concerning Pundita Ramabai ended with her coming to America. Her wonderful success here in behalf of her countrywomen justifies, it seems to me, an additional word at this time.

With her five-year-old daughter Manorama, she came to this country, it will be remembered, in February, 1886, to witness the graduation of her kinswoman, Anandabai Joshee, by the Woman's Medical College in Philadelphia. The two Hindu women there met for the first time, having previously known each other only by correspondence. (For further particulars of the Hindu doctor, see the "Life of Anandabai Joshee," by Mrs. Caroline Healey Dall, published by Roberts Brothers, Boston, 1888.)

Ramabai entered heartily into the graduation exercises, rejoicing particularly in the fact that a Hindu woman was, for the first time, to receive the degree of doctor of medicine. She soon became so deeply interested in American institutions, so much impressed with a public-school system which included girls as well as boys, that, instead of returning to her work in England as professor of Sanscrit in Cheltenham College, she decided to remain here for personal investigation in behalf of her down-trodden sisters. Seeing much promise for them in the free kindergartens of Philadelphia, she not only bought the "gifts" and began to translate the games and tokens into their language, but she enrolled herself as a student in a kindergarten training-school. She also began to prepare a regular series of Marathi school-books. She could not forget that of the 99,700,000 women and girls under British rule, some 99,500,000 were unable to read and write. These exceptional few hundred thousand could in no way claim to be educated, since the school-period of a girl is usually between seven and nine years of age, the marriage period for girls among Brahmans all over India being generally from five to eleven years of age. Ramabai's heart went out especially to the child-widows, who, with comparatively few exceptions, are rendered miserable in every possible way. Those who have read the Pundita's book, "The High-caste Hindu Woman," are not ignorant of these wretched little creatures. The more Ramabai thought of them—strangers to any means of support, destitute of the least promise of education, devoid of all hope of second marriage, a curse to themselves and

the world—the more the idea grew upon her of founding an institution which would insure, first, self-reliance; secondly, education; and thirdly, women teachers. Strong in the determination to work in this direction, fully aware of the difficulties in the way, in America as well as in India, she went forth to lecture among the people. Her good knowledge of the English language made this a possibility. Her sincerity, sound judgment, and Christian faith soon won for her the attention of serious and philanthropic minds. At last, in the summer of 1887, after she had spoken in nearly one hundred and fifty meetings, a Ramabai association was discussed in Boston. By December, when the coöperation of the three Hindu gentlemen desired by Ramabai to act as the advisory board in India had been assured, the association was a settled fact, with Rev. Edward Everett Hale, D. D., as President, and Rev. Phillips Brooks, D. D., Rev. George A. Gordon, D. D., Miss Frances E. Willard, Mrs. Mary Hemenway, Dean Rachel L. Bodley, M. D., and Rev. Lyman Abbott, D. D., as Vice-presidents. The board of trustees and executive committee included names well known in charitable work. By the time the Association had been in existence a year there were sixty circles auxiliary to the central one in Boston, with nearly three thousand members. These with life memberships, scholarships, etc. pledged for the annual support of the school between five and six thousand dollars. Besides this the general fund, as reported by the treasurer of the Association, Mr. T. Jefferson Coolidge, Jr., of Boston, had grown to about twenty thousand dollars.

Not only the Atlantic but the Pacific coast claimed Ramabai's attention; for though delicate in health, still following the Hindu custom of eating neither flesh, fish, nor fowl, she traveled alone to the western coast, speaking in every important city in behalf of her Hindu sisters. She spoke in San Francisco at the educational convention of July, 1888, and at fifty other meetings in that vicinity. As a result a branch Ramabai Association of the Pacific Coast was formed with twenty auxiliary circles pledging annual support.

The outlook was now so encouraging that the executive committee assented to Ramabai's going to India to begin her school. So, instead of returning East, she sailed from San Francisco, November 28, 1888. On arriving in Japan she paused to speak, through an in-

terpreter, to large audiences on the education of women. Her arrival at Hong Kong was publicly announced. By the 1st of February she was in India. Her daughter, who had been in the care of the Protestant sisterhood in Wantage,—their first home in England,—had already arrived with a member of the sisterhood. Ramabai, on being asked why she had not left her child to be educated in England, replied: "I want her to grow up among her people, to know them as they are, and to prepare herself for the work there is before her. If I left her in England, she would grow up to be an English girl, not one of us."

Ramabai also found, on arriving in India, Miss Demmon, the young woman from Philadelphia whom the executive committee had engaged to be her assistant in the school. She had started from the East before Ramabai sailed from the West, and was already studying the language with a Brahman pundit.

With the proceeds of "The High-caste Hindu Woman," Ramabai, before leaving America, was able to purchase about six hundred electrotype plates for the illustration of her completed series of books: namely, a primer, five reading-books, geography, and natural history. This series of school-books will be the first for girls ever published in that country.

All the arrangements for school-work were made on a sound business basis. The Pundita, as principal of the school, was to receive a salary and be in regular correspondence with the trustees. She was to give one year's notice of intention to resign, also to prepare a high-caste Hindu woman to take her place in the event of her death. Industrial education was to have special attention. Bombay was finally

settled upon as the place for the school, and a building engaged. Four pupils of the orthodox Brahman caste having been promised, the school opened March 11, 1889, and Ramabai's dream of years was a reality.

The opening of this Sharada Sadan, or Home of Wisdom, as the school is named, was a great success, an occasion to be remembered in the history of India. Ramabai, feeling that here was the opportune time to depart from the old custom of having only some high official or great dignitary preside over assemblies, gave the honor to a Hindu lady, Mrs. Kashi-bar Kamitkar.

While the Bombay newspapers and intelligent, liberal Brahmans spoke well of the school, the people from all parts of India, as would be natural, criticized it, and even prophesied failure. But the Pundita was courageous and hopeful, strong in the faith that her work was ordained of God. After the school had been in existence a month there were eight pupils, six of the Brahman caste and two of the Varshya, or third high caste. The number soon increased to fifteen, and at the close of the first quarter the school contained twenty-two girls, nine of whom were living with Ramabai. In spite of this success, however, public opinion in India was still cold, even bitter, against the work. But the brave little woman, whom her friend Max Müller has called "one of the most remarkable women of this century," determined to go on "working quietly, and see if faith in God and man will not bring about the desired change."

Those interested in the continued progress of the school will find reports from time to time in Dr. Hale's magazine, "Lend a Hand."

Elizabeth Porter Gould.

NAKED BOUGHS.

THERE were troths in the hedges
 And bird-mates were true;
 There were trysts, there were pledges,
 And old loves, and new;
 There was sun at the tree's heart,
 And song in the boughs,
 And Spring in the bee's heart,
 And whispers and vows:
 There were leaves, when we mated,
 And now — naked boughs.

Ah, vows that were fated!
 Ah, loves that would house!
 Your time was belated,
 Your fate — naked boughs!

Harrison S. Morris.

THE NATURE AND METHOD OF REVELATION.

I.—REVELATION AND THE BIBLE.

IN Chillingworth's famous work, "The Religion of Protestants a Safe Way to Salvation," occurs a sentence which passed into an adage: "The Bible, and the Bible only, is the religion of Protestants." In the sense in which the phrase was used by that acute logician—a writer who had outgrown the narrowness of the school of his godfather Laud, in which he had received his early training—nothing can be more true. It is not from an infallible church that a Protestant derives his creed. With him the Scriptures are the rule of faith. They are the guide, at once authoritative, and sufficient or exclusive, on all matters pertaining to religious belief and moral conduct. These are the customary formulas, and the saying of Chillingworth is a strong assertion of the Protestant position, which stands opposed, on the one hand, to that of the Church of Rome, and, on the other hand, to the rationalism which substitutes, in matters of religion, a subjective standard, be it one's own reasonings or feelings, for the Bible. Statements like this aphorism of Chillingworth have the value and attraction which belong to any terse enunciation of an important principle. They serve as watchwords in defensive warfare when adversaries approaching from opposite quarters are to be repelled. There is small danger of extravagance in praising the Bible, as every one will allow who appreciates what the Bible contains, surveys the influence of this book in the past, and knows its indispensable service in awakening and supporting the life of religion in the souls of men. It is the simple truth, and no mere conventional compliment to the Scriptures, to say that Christian piety cut off from contact with their light-giving and life-giving power would wither away like plants robbed of the sunlight.

But we need not examine the Bible long to become aware of problems and perplexities which the current axioms relative to the sufficiency and authority of Scripture do not clear up. The searcher for truth, on opening its covers, does not find between them a dogmatic and ethical treatise in which are methodically set down the articles which he is to believe and the things which he is to do. His Bible is not a Tridentine Creed, nor an Augsburg Confession, nor a Westminster Catechism; nor

does it wear the aspect of a systematic account of "the whole duty of man." To be sure, doctrines and precepts are strewn, here and there, along its pages. But they must be picked out; and when thus collected they do not always appear at first to agree with one another. The reader discovers that numerous commandments were issued at epochs far back in the past; that they were addressed to a specific people, or to particular individuals, and have no very perceptible application to present circumstances or to himself. The Bible, from which he is expected to ascertain the purpose of life and how that purpose is to be fulfilled, turns out to be a voluminous collection of miscellaneous writings. They emanate from numerous authors, not all of whom are known even by name. These writings were all of them composed long ago, and at different times—a portion of them at dates extremely remote. Here are histories, some of them traversing the same ground, and with striking differences in the point of view, to say the least, from which they were written; poems, among them a copious collection of devotional lyrics, and one metrical drama which may be styled, in the better sense of the term, erotic; likewise, a book filled with dirges, besides a considerable number of other compilations of discourses by ancient seers; another drama, dealing with the mystery connected with the allotment of evil by Divine Providence; a collection of proverbs, also; letters of Apostles to Churches; the whole ending with a book made up of visions. This multifarious literature, so far as the older grand division of it is concerned, the ancient Jews distributed into three departments—the law, the prophets, and the hagiographa, or "psalms"; the last of the sections being a group that was brought together after the others, and is more diversified in its contents. In the later or New Testament division, several narratives of the ministry of Jesus and one narrative of the labors of the Apostles are followed by the Epistles and the Apocalypse. In neither of the two main divisions of the Bible are the component parts united even by the external tie derived from the order in which they were written. In cases not a few, the date of books is unsettled. Differences of opinion on this point prevail among the scholars who are versed in such inquiries. With reference to certain books,—for example, the first

six historical books of the Old Testament,—this diversity of opinion is very wide. No doubt the disagreement on these questions of date is owing partly to the influence of a dogmatic bias in one direction or another, to subjective leanings which are void of scientific value, but rather stand in the way of an unprejudiced verdict. But when the refraction due to innate or acquired prepossession is discounted, there is left still no small residue of uncertainty on the topics adverted to. Each of the various authors whose productions have been brought together in the Bible is plainly marked by personal traits which are reflected in both his thought and his style. Obvious limitations belonging to time and place, and to varying types of mind and culture, are stamped upon their pages. The peculiarity of the composite volume which we call "the Bible"—even this title, it is worth while to remark, was originally a plural—is strikingly felt when it is compared with the sacred books of other religions. The Vedas, the ancient Brahmanical Scriptures, are mainly collections of hymns. The Koran is composed exclusively of communications alleged to have been made by an angel to one person, Mohammed, and all within an interval of a little more than twenty years. These oracles, flowing as they do from the single mind of the founder of Islam, are identical in their style and their general spirit. It is only a minor portion of the Koran that consists of narratives; and these are only stories of the patriarchs, drawn from degenerate Jewish and Christian sources, without any direct acquaintance on the part of Mohammed with the Old Testament records. Islam is preëminently the religion of a book, held to be supernatural in its origin, with nothing before it, or beneath it, or after it.

Various as the books of the Bible are, however, in authorship, themes, and style, it is no exaggeration to say that one spirit animates them. He who approaches them in a merely critical, much more in a carping, temper, may miss the perception of it. A certain activity of conscience and moral sensibility may be requisite for the discernment and appreciation of it. This is not to fall back on a mere subjective impression, invalid save for the individual who experiences it. A deaf man, or a man with no ear for music, might as reasonably bring the same objection to one who is thrilled by an oratorio of Handel or a symphony of Beethoven. A noted American champion of disbelief, as I am credibly informed, not long ago, on his way home from a visit to Europe, made the remark with all sincerity that the admiration expressed for the masterpieces of the great painters and sculptors is all a pure affectation, having no better ground than a contagious fashion, and that there is really

nothing in these world-famed works of art to merit praise or elicit enthusiasm. But where perceptions, be they esthetic or moral and religious, are confined to no single breast, where they are awakened in a vast number of human beings, and are to a great degree independent of time and place and of peculiarities of race and education, and where, moreover, they stand related to the noblest development of character as their concomitant or fruit, they must be allowed to have a catholic worth. They assume the character of an objective proof. It is vain to decry them as morbid fancies. They are not to be dismissed as dreams of a mystic. They are the voice of human nature—a recognition by man of realities, the denial of which on the part of individuals here or there simply argues an abnormal constitution, or an "atrophy" of powers, an eccentric quality of some kind in the dissenting skeptic. How shall we designate this peculiar characteristic of the Hebrew and Christian Scriptures, taken as a whole? It may be denominated the spirit of holiness. It pervades the Bible as an atmosphere. It imparts to it, if one may so say, a supernal quality—a quality not of earth. Here are not speculations uttered by sages about man's nature, duty, and destiny. Here are not precepts such as may be read in the wisest of the heathen—for example, in Plato and Epictetus, and in the pensive chapters of the philosophic emperor Marcus Aurelius. Where there is some likeness in the content, yet the tone is dissimilar. We feel the breath of God. To say that the ethical injunctions of the Bible are "morality touched with emotion" is too vague a description. It is morality inculcated as by a voice out of the unseen. Underlying all is the relation, taken for granted more often than formally asserted, of man to God and eternity. Sanctions reaching out beyond this world of time and space give a solemn emphasis to the commandment. And the distinction here accorded to the Bible belongs to the Old Testament as well as to the New. Attempts have been made in ancient and modern times to sever the two parts of the Book and to discard the earlier collection. Such was the proceeding of Marcion, in the second century, and like views have been brought forward again and again in recent times. It is not the force of a settled tradition that has baffled every such enterprise. It is not even the recognition accorded to the Old Testament by the New which has been the prime obstacle in the way of endeavors of this nature. Rather is it the consciousness that the two parts of the Bible, differ as they may, are not at bottom incongruous and hostile, and a prevailing sense of the fact that grand elements belong to them in common. The same spirit of holiness pervades

them both, unites them, and lifts them out of the category of literature in general. The Bible not only interprets God in his holiness and unfathomable love and pity, to man; it is the interpreter of man to himself. Coleridge tells us that having striven to cast aside all prejudice, he perused the books of the Old and the New Testaments—"each book as a whole and also as an integral part." "And need I say," he testifies, "that I have met everywhere more or less copious sources of truth, and power, and purifying impulses; that I have found words for my inmost thoughts, songs for my joy, utterances for my hidden griefs, and pleadings for my shame and feebleness? In short, whatever *finds* me bears witness for itself that it has proceeded from a Holy Spirit, even from the same Spirit which of old entered into the prophets." This is not the experience of one mind alone, but of a multitude out of many kindreds and tongues, age after age.

It is true that in thus characterizing the Bible discriminations are to be made. Not all its books are in this regard, in their power to sound the deep places of the soul, on a level. We find ourselves from the beginning in an elevated region, yet a region where there are hills and valleys. It is vain to pretend that, in the quality referred to, all parts of the Bible are on the same plane. Isaiah and the Psalms, John the Evangelist and the leading Epistles of Paul, are among the portions of the Book that rise like lofty peaks in a mountain range. There are many pages within the compass of the Canon which, while not without their significance and value as parts of the collection, lack comparatively the spiritual quality which I have attempted to point out. Most readers of Scripture seldom turn to them. There is another fact to be noticed here. There are parts of the Bible which it is hard to understand. Wholesale assertions about the perspicuity of Scripture have to be qualified. The learning of the most erudite scholars and the sagacity of the most expert critics fail to decipher the meaning of a not inconsiderable number of passages in the sacred volume. Protestants have always been obliged to encounter the Roman Catholic objection to the popular use of the Scriptures, that they cannot be understood by the generality of readers. The only way of meeting the objection is that adopted by Chillingworth; namely, to insist that all essential truth, truth essential to salvation and the conduct of life, is easily discernible on their pages. In this answer it is tacitly conceded that there is left a pretty broad margin which is—to the common man, to say the least—obscure. Even one of the sacred writers pronounces some things in the Epistles of Paul abstruse (2 Peter iii. 16). Why is this so? it might be

asked; why all these dark places in Scripture, if it was directly and expressly written to serve as an authoritative text-book in religion? When one considers the difficulties of the Bible, not in any captious spirit, as if to hunt up materials for an attack, but fairly and dispassionately; when one looks at the difficulties which obtrude themselves upon the attention of those who are at all familiar with modern discoveries in natural and physical science, and with modern studies in history and ethnology; still more, when one takes into view moral difficulties in certain parts of biblical doctrine, especially in portions of the Old Testament, one may be pardoned for inquiring, Was this body of writings, in its primary intention, designed to be a manual of religious and ethical instruction? We may concede joyfully a high providential purpose in connection with the composition of the books which it contains, with their preservation,—although it must be remembered that they themselves allude to lost books which were regarded evidently as of equal authority with those in the Canon,—and with their foreseen place and office in the Christian Church. But this is quite different from saying that they were originally composed with all this in view on the part of their authors. Especially does it leave out of sight a fact respecting the Scriptures which is, in the highest degree, important for the understanding and the right use of them—a fact that furnishes a clue for the solution of the major part of the difficulties which have been adverted to.

The thesis to be here propounded is this: It was not the Scriptures that made the religion, but the religion that made the Scriptures. The Scriptures of both the Old and New Testaments are the offshoot of a great historical movement, begun and carried forward to its consummation by an agency, supernatural and divine, yet a movement that is, notwithstanding, an integral part of the history of our race. The roots of the sacred literature must be sought in the historical events and transactions that gave rise to it. It were as strange an error to consider the records of the French Revolution, the memoirs of the leaders and minor actors, the discourses and expositions called forth, at the time and afterwards, by this series of momentous events, the songs and ballads of that stormy period—to consider these multiform writings the Revolution itself, and in a confused way to confound them with it, as it is to identify the books of the Bible with the religion out of which they sprung. To see the justice of this remark, it is only needful to glance at the origin of the New Testament Scriptures. John the Baptist wrote nothing. Jesus wrote nothing. He lived and taught, he gathered about him a

band of disciples, he died and rose from the dead, and the Holy Spirit, the source of a new spiritual power and enlightenment, descended upon his disciples. Jesus laid the foundation for an organization of his followers. He created a society. It was not books that had been written or that were to be written that he styled "the light of the world" and "the salt of the earth." It was the men who believed in him and followed him. It was through them personally that the good which he brought to mankind was to be diffused abroad. By them the proclamation of God's forgiveness and love, or the Gospel, was made. Some time elapsed before anything was written — before even the sayings and doings of Jesus got themselves recorded. It was the living interest taken in those real occurrences, a curiosity on the part of Christians to know more of them, and, as we learn from the introduction of Luke's first narrative, an increasing sense of the value of a correct knowledge of them, that occasioned the composition of the four Gospels. The book of Acts owes its existence to a similar cause. As to the Epistles, of course the Churches had to be founded before they could be addressed. It is desirable to remember that Christianity was preached and believed in before anything was written about it. In an age of letters, it was inevitable that the events which form the subject of the New Testament should very soon give birth to writings. We can understand why it was impossible that the American civil war should pass by without giving rise to the composition of letters by those actively engaged in it, and the publication of books of history and reminiscence. There was a like impossibility in the case of the planting of Christianity by Christ and the Apostles. If the number of those who desired to know the facts and to be taught the significance of them was at the outset small, it rapidly increased, and their interest in the subject was deep and absorbing. Of course the creation of the New Testament literature was an act of Providence of essential consequence in its bearing on the subsequent propagation of the Christian faith. Our business is now with the second cause that led to it, and, in particular, with its relation to the historical facts out of which, as from a fruitful soil, it grew up. What has just been said of the New Testament is applicable to the Old. Stretching along, as it were, underneath the heterogeneous books that make up the Old Testament — heterogeneous as to their particular themes and their style — is the groundwork of history, of the history of God's dealings with the nation of Israel in earlier and later times. This history is related in specifically historical writings. But the historical situation determines the character and gives color to the form of

the books which do not belong under this head. For example, the prophecies of Isaiah are a series of fervent harangues having reference to the circumstances of those to whom they were in the first instance directed. Psalms and Proverbs embody the devotional sentiments and the practical philosophy of living men at definite epochs in the career of the Hebrew people. It need not be said that we do not forget the inspiration of the prophets and the quality of their utterances, which is dependent upon it, although the fact of the Divine call of the several prophets, in the exigencies in which they appeared, is part and parcel of the series of historical events. It is simply meant that, be the peculiarity of the Old Testament writings which is derived from supernatural influence what it may, the discourses of Isaiah, and the Proverbs of the wise man or men who were the authors of them, have an historical basis not less real and substantial than is true of the sermons of Jonathan Edwards and the maxims of Franklin in "Poor Richard's Almanac." When the first martyr Stephen spoke for the Christian cause before the Jewish council, he spread before them an array of historical occurrences. He went back to God's disclosure of himself to Abraham in the far-off time, and passed in review, one after another, leading personages and facts of the past down to the mission and death of the Righteous One. In the same spirit, the Apostle Paul traces everything back to a person — to Abraham and to his personal convictions respecting God. He was "the father of all them that believe," the founder of a people becoming more and more numerous, and finally bursting the confines of national kinship.

At the same time the Apostle Paul understood the value of the Scriptures. It was the signal advantage of the Jews that to them had been committed "the oracles of God." A sacred deposit had been intrusted to them. The promises of God recorded in the ancient Scriptures were in their hands. It is not alone as inspired interpreters of the facts that prophets and apostles are the organs of revelation. They are inspired to look forward and partly lift the curtain that veils the future. Thus they discharge an office in opening the way for subsequent scenes and events in the drama of Providence as it gradually unfolds itself.

The fundamental reality is not the Bible. It is the kingdom of God. This is not a notion. Rather is it a real historical fact, and the grandest of all facts. No other kingdom or commonwealth ever had a more substantial being. It is older than any other; it has proved itself stronger and more enduring than any other; if there is any good ground for the Christian's faith, it will embrace or overspread them all.

What is this kingdom? It is the society of believers in God—the society of his loyal subjects and children. In its immature stage, under the old dispensation, it existed in the form of an organized political community. Among the nations there lived one people which had true thoughts respecting God, into whose hearts he put true thoughts respecting himself. They became conscious—it was he who inspired them with the consciousness—of standing in an immediate, peculiar relation to him. That they were a “chosen people” was a conviction ineradicably planted within them. Has not this conviction of theirs been verified in the subsequent history of mankind? They were made to feel that they were not thus distinguished for their own sake, or on account of any merit of their own, but were chosen to be witnesses for God to the rest of mankind. There was a divine purpose of redemption, in which the entire race were to have a share. The civil polity and the laws of the chosen people were to reflect the will of God, as made known from time to time through holy and inspired men. The whole course of their lives was to be regulated by prescriptions issuing from the same divine source. After the monarchical form of government was established, revelation still remained the source of law. Side by side with the kings there stood the prophets to declare the divine will, to rebuke the iniquitous ruler, and, if need be, to exhort the people to disobedience. The one supreme concern of this Hebrew nation was, and was felt to be, religion. Their function among the nations of the earth was consciously wrapped up in this one interest. As they well knew, other religions besides their own were national. All ancient religions were national.

But other religions were on false foundations and were doomed to pass away. When the political independence of the Israelites was lost, their civil polity shattered, the conquered people dragged off into idolatrous lands, this consciousness of being possessed of the true religion and of a grand and triumphant future awaiting them not only survived but grew more confident. It not only outlived political ruin; under overwhelming calamities it burned with a more intense fervor. More strange than all, there was a foresight of a great advance to be made in the intrinsic character of this divinely given religion, as well as in the extent of the dominion to be gained by it. The basis of the religion was the covenant of God with the people. But the days were to come when there was to be “a new covenant with the house of Israel, and with the house of Judah.” Religion was one day to become more spiritual; obedience would then no longer be legal or constrained, but spontaneous; the

knowledge of God and his ways would be confined to no class, but would be diffused among all; forgiveness would be full and free. Such is the remarkable prediction of the prophet Jeremiah. Centuries flowed on, but the epoch thus foreseen at last arrived. The Person through whom was to be achieved this vast revolution and expansion of the kingdom, dimly discerned from afar in certain grand outlines, at length appeared. Jesus, the Christ, became the founder of a spiritual and universal society. Whoever will look into the Gospels will see that it was in this character of the head of a kingdom that he appeared. It was of the kingdom of God that John, the forerunner, spoke as near at hand. It was for professing to be a king, however the nature of that claim was misrepresented by his accusers, that Christ was put to death. The prophecy began to be realized when he began to teach and to attract to himself disciples. The kingdom was there. This he taught when, in answer to the question when the kingdom was to begin to be, he said, “The kingdom of God cometh not with observation”; “lo! . . . the kingdom of God is within you,” or in the midst of you. The kingdom was constituted by Jesus and the group of disciples who acknowledged him as Lord and Master, and who, like him, were devoted to the doing of the Father’s will. This last was the criterion of membership in the kingdom and of a title to its blessings. Those who were one with Jesus in this filial allegiance were hailed by him as brother, and sister, and mother. Yet the consummation of the kingdom lay in the future. Hence the kingdom, although a present reality, was a kingdom in the bud, and therefore a kingdom to come—to come in a double sense, in its moral progress among mankind, and in mysterious final scenes of judgment and victory. So that the prayer of all disciples was still to be, “Thy kingdom come”—a supplication that points both to the continuous progress and transforming influence of the Gospel in the world, and to the goal of that progress, the final epoch. Precisely how “the kingdom of Christ” or “the kingdom of heaven” should be defined is a point on which all are not agreed. It was declared by Jesus not to be a “kingdom of this world.” Its origin was not earthly, but from above. It was not, like human sovereignties, to be maintained and spread by force. The end of the Founder’s mission was to bear witness to the truth. The kingdom was to be made up of those who heard his voice, who believed and obeyed the witness which he gave. In the ancient era of the Church there was the Byzantine idea, which tended to regard the Christian state, with the Roman emperor at its head, as the realization of the

kingdom. In the West it was the Church in its visible organization under the Papacy that was identified with the kingdom of Christ. A broader view would bring within the circumference of the kingdom all the baptized, in whatever Christian fold. A still broader view is that which includes within its pale all souls who, accepting Christ as their Lord and Saviour, live to do the Father's will. Passing by the dispute about boundaries, the existence of a society which sprung out of Judaism, but is spiritual and universal, is an unquestionable fact. One might as well doubt whether the sun is in the sky as to question the reality of that new creation which gives its distinctive character to "the Christian era." It may be added here that all organized bodies which hold the Christian faith, including the Church of Rome as well as Protestants, unite in pronouncing that the complete deposit of revealed truth was with Christ and the Apostles. The Church of Rome makes tradition an authorized channel for the transmission of this truth. But all agree that Christianity is the absolute religion. There is a progress in the understanding of it, from age to age. But the religion itself is not defective, and, therefore, is not perfectible. Christianity is not to be put in the same category with the ethnic religions, which contain an admixture of error and are capable of being indefinitely improved. The religion of the Gospel is absolute. The allegiance of the follower of Christ is unqualified: "Ye call me Master and Lord: and ye say well; for so I am."

Keeping in view this historic kingdom, which stands forth as an objective reality, beginning in the distant past and carried forward to its perfected form by Jesus of Nazareth, we have to inquire what is the relation of the Holy Scriptures to it. The answer is that they are the documents that make us acquainted with the kingdom in its consecutive stages up to its completed form. In the Scriptures we are made acquainted with the facts and the meaning of the facts. And, as in the case of all documentary materials, viewed in contrast with literary products of later elaboration, we are brought face to face with the historic transactions and with the persons who took part in them. This is the peculiar character of the Scriptures, and is at once the secret of their transcendent value, and the occasion of countless obscurities and difficulties. By no other means could we become possessed of knowledge so immediate and so vivid. Yet they give occasion for the same sort of inquiries that always devolve, in historic investigation, on those who delve in the sources.

Let us take an illustration from secular history. We will suppose that the later narratives, such as those of Bancroft and Palfrey, by which

a New Englander learns the origin and growth of the communities to which he belongs, and their historic relations to other parts of America, had not been written—the narratives, we mean, which are based on documentary materials, including under this head older accounts whose authors stood nearer to the circumstances which they relate than the historians of to-day. We are shut up, we will imagine, to this mass of documentary materials. There is Bradford's pathetic story of the Pilgrims, of their flight from their English home to Holland, their voyage across the Atlantic, their settlement and their experiences at Plymouth. We have other writings also—the "Compact of Government" drawn up in the cabin of the *Mayflower*; the diary and the letters of John Winthrop, the Massachusetts governor; the earlier and later codes of colonial law; the "Bay Psalm Book"; Cotton Mather's "Magnalia"; later still, the history of Hutchinson; and, along with other productions, we have discourses of the most influential preachers in the successive generations. As we approach the epoch of the Revolution we have the letters and speeches of the patriotic leaders; the records of the first congresses, local and general; the Declaration of Independence; contemporary accounts of the war that followed; the Constitution of the United States, and expositions of it by Madison and others who took part in framing it; official papers of the first President and his Cabinet, etc. Imagine a comprehensive collection of these documents. It would consist of prose, and poetry, of orations, disquisitions, letters, and so forth. Obviously there would be inconveniences, especially to an untrained, unlearned student. There would be things hard to understand, obscure allusions, apparent and real discrepancies of more or less consequence. A consecutive history prepared by a modern student of sound, critical judgment would plainly have its advantages. But one superlative advantage it would fail to have. The reader would not, in anything like an equal degree, be brought into the atmosphere of the former days. He would not, in anything like an equal degree, come into living contact with the events and into direct personal intercourse with the participants in them. His impressions, if in some particulars more exact and more systematic, would lack the color, would want the vividness, which are to be caught alone from the documentary sources. The difference is like that between a treatise on geography, or even the descriptions of a traveler, and an actual journey through a country which we seek to know. Let one read either of the numerous lives of Jesus which have been written by learned scholars in recent times, even when imaginative power reënforces the erudition of

the author, and then turn to the pages of the Evangelists. He will feel at once the difference between second-hand and first-hand accounts; between those who see through their own eyes and those who have to use the eyes of others. The modern scholars furnish us with collateral information of value, illustrative of the Gospels; they collate the several narrators; they apply the canons of historical criticism with more or less skill; but where is that living, speaking portrait of Jesus, of his walk and his talk, which the original historians, the Apostles and their companions, give us? It is the difference between the herbarium and the leaves and flowers in field or forest. In the herbarium the classification is better, but we miss the bright hues and the aroma of the blossoms. To the botanist the herbarium is important, and botany is a useful science in its place. But the rose-bush, or a grapevine with the clusters of fruit hanging upon it, has a charm of its own which the botanist not more than the unlettered man would be willing to spare.

The beginnings of old kingdoms and empires are commonly obscure. They start on their career in the twilight. It is not until the day has fairly dawned, until some progress has been made on the path of civilization, that written records arise to be transmitted to later times. Even these contemporary writings are likely to be scanty and fragmentary. Traditions exist and are handed down, but they are subject to the influences that affect the oral transmission of narrative matter from generation to generation. Thus when the past comes to be studied in an enlightened age, there is no escape from the necessity of historical criticism. The historical student, like other laborers, has to earn his bread by the sweat of his brow. The facts of a remote time are to be reached only by exploring in places where the light is dim. Great rivers may traverse empires, spreading fertility along their banks, but we have to hunt for their sources. If the circumstances of the rise of the Kingdom of God should be found to accord with this analogy, there would be no cause for wonder. There would be no ground afforded for a naturalistic theory as to the origin of that kingdom, unless indeed it were mistakenly imagined that the primary design of God was not to plant religion in the souls of men, to raise up a people, and to work out historically the redemption of mankind, but rather to produce a body of writings. In this day of critical research it is the early part of the Old Testament history respecting which debates and perplexities most frequently arise. These relate largely to the Pentateuch, and the traditional views relative to its authorship. It is interesting to observe, however, that scholars of

high repute, in what is called the "advanced" school, who assign so great a part of the Pentateuchal legislation, as well as the accompanying narrative matter, to a later than the Mosaic period, do not feel justified by their interpretations of the evidence in questioning the existence of Moses, or the grandeur of his work as a leader, lawgiver, and prophet. For example, Reuss, who claims to have been first in the field with the ideas which his pupil, Graf, independently developed, says: "Moses was for all times the Lawgiver of Israel. . . . There may be a dispute as to what strictly belongs to him. But his spirit—in this proving itself to be a divine spirit—ruled the judgment of the centuries, and impressed on the national development its own stamp and direction. The continuers of his work, even the most gifted and energetic, and at the turning-points of history, did not find it needful to forget or to ignore his name, which a firm and thankful tradition connected with everything that was great and useful," etc. In addition to what he did in revealing a purer knowledge of God in the midst of the barbarism of the heathen, says Reuss, "there belongs to him without doubt the regulation and ordering of the ritual, as it afterwards existed in Israel, at least in its outlines." A critic as little wedded to accepted views as Hermann Schultz finds it unreasonable to call in question the fact of the revelation of God to Moses at Mount Sinai. He styles Moses "the man who was properly the founder of the true religion, the effects of whose influence conditioned the entire religious development of Israel. . . . Moses is, with the exception of Jesus, the most important of the religious personages concerning whom really trustworthy information remains to us." So it continues true, even in the creed of the critics of every stripe, that "the law came by Moses" as well as "grace and truth by Jesus Christ." It is confessed on all hands that when we reach the writings of the prophets we stand on the firmest historical ground. What the religion of Israel was in the eighth century B. C., the great age of prophecy, is clearly and vividly exhibited to us in their writings. Whatever the prophets may not presuppose, they certainly do imply a course of teaching and of revelation, extending far back of their day. Revelation is not magic, and the lofty plane on which the prophets are found to stand was not reached at a single bound. Not until after the sun has slowly climbed the sky does it shine down upon us in the blaze of noonday. Amos, the shepherd of Tekoa, uttered his prophecies early in the eighth century. It was to Israel that he spoke, the people whom the Lord had "brought up out of the land of Egypt," saying, "You only have I

known of all the families of the earth." Nothing can surpass the eloquence in which the universal sovereignty of God is set forth. It is "He that formeth the mountains, and createth the wind, and declareth unto man what is his thought." It is "Him that maketh the Pleiades and Orion, and turneth the shadow of death" — or the deep darkness — "into the morning, and maketh the day dark with night; that calleth for the waters of the sea, and poureth them out upon the face of the earth; . . . that bringeth sudden destruction upon the strong, so that destruction cometh upon the fortress." In the prophets of that age the nations of the world, even the mighty Assyrian power that was trampling kingdoms under foot, and advancing seemingly to universal dominion, are in the hand of God and are managed for his purposes. "This is the purpose that is purposed upon the whole earth: and this is the hand that is stretched out upon all the nations. For the Lord of hosts hath purposed, and who shall disannul it? and his hand is stretched out, and who shall turn it back?" The Assyrian, the Lord exclaims, is "the rod of mine anger. . . . Howbeit he meaneth not so, neither doth his heart think so; but it is in his heart to destroy, and to cut off nations not a few." The religion which was full of so lofty conceptions of God, both of his power and moral attributes, and of his providential plan, was not born in a day. The religion which had in itself vitality enough to survive the complete overthrows of national independence, and even to rise to more exalted heights of faith and devotion, must have had a long history behind it. There must have been, as one has said, a tap-root extending far down in the earth. There is no rational way of dispensing with the creative and organizing influence of Moses in the Hebrew commonwealth and religion. But back of Moses, in the mist of a much more remote antiquity, stands the figure of Abraham, the progenitor of many nations. Against the extreme skepticism that would sweep off the stage of authentic history this heroic character, the appeal may be made to the judgment of a scholar like Dillmann, whose unsurpassed learning and impartiality are acknowledged by all the critics. "The possibility at least," says Dillmann, "that out of the period from the twenty-second to the twentieth century before Christ historical personages may live on in recollection of after times cannot on general grounds be contested. We are not surprised when among the Egyptians, Babylonians, and Assyrians written historical memorials from those centuries confront us. Why then should not the Israelites, when they appear, somewhere about the year 1500, upon the theater of history, have preserved his-

torical recollections out of that time?" Then, after pointing out that the oldest Hebrew historians manifest a consciousness of the difference between those old times and the later with which they are conversant, Dillmann adds: "The main thing, however, is that the entire work of Moses admits of no historical explanation except on the supposition of a preparatory, comparatively pure type of religion [*eine Vorstufe höherer Religion*], such as, according to Genesis, belonged to those Fathers; and such a higher form of religion of necessity presupposes personal agents or standard-bearers. As states can be built up only through leading spirits or heroes, in like manner and much more are advances in matters of religion linked to persons rising above their fellows; and the memory of them is wont to abide in the minds of those coming after who have gathered about their faith as a center, and to hold on more persistently than even the recollection of political founders. As the head of a purer belief in God in the midst of the darkening power of heathenism that had already come in, as a man eminent for his sense of God and faith in him, who was accustomed to listen for the voice of God and to follow his guidance in all the exigencies and events of his life; as one who advanced in the knowledge of the nature and will of God, and implanted this higher knowledge in his household and among those about him — thus do the ancestral legends in Genesis represent Abraham. His existence there has in it so little that is incredible, that rather are we obliged to assume it unless we throw overboard, at the same time, as unhistorical the connection of Moses with the God of the Fathers." Dillmann calls special attention to the credibility of the narrative, in the fourteenth chapter of Genesis, of the arming by Abraham of his dependents for the rescue of Lot, taken captive by Chedorlaomer and his allied kings. It is a narrative which in various particulars is corroborated by the cuneiform inscriptions. The substance of the narrative seems to have been drawn by the Hebrew writers from written sources east of the Jordan. On the whole, then, until stronger evidence to the contrary shall be adduced than has yet been found, we are justified in believing that Abraham lived and was an immigrant from Chaldea, leaving his kindred to escape from the contagion of the incoming and spreading idolatry. These, be it remembered, are historical questions such as might arise in connection with the rise of Roman power or with the Saxon invasion of England. Even if they are variously answered, the reality of the Kingdom of God, and the office it has fulfilled in the course of human history, remain as undeniable facts.

In the prolegomena to the annals of Israel as an organized community,—becoming such by the leadership and legislation of Moses,—and prior to the story of the patriarchs, we find the opening chapters of Genesis, with their narratives; some of them double, indicative, many scholars judge, of distinct sources—narratives of the creation and of the primal transgression, of the flood, of the division and dispersion of mankind. In these narratives are mingled fragments of ballads, genealogies, etc.—all these materials being strung together on a chronological thread. Here we have the background of Hebrew history. The resemblance of the contents of these chapters to the legends of kindred nations, especially the Assyrians and Babylonians, is too marked to be the result of accident; yet, at the same time, the dissimilarity is equally striking. Both call for explanation—the unlikeness not less than the likeness. There pervades the Genesis stories a pure theism and the ethical quality which are defining characteristics of the Old Testament religion as a whole. They are thus in their inward spirit of a piece with Revelation, and even homogeneous with Revelation in the final or Christian stage of its advancement. Without exaggeration it has been said of the first three chapters of Genesis that they contain more moral and religious truth than all other books taken together which have been written independently of the Bible. Whence were these ancient narratives derived? How and when did they originate? That they were brought in at a late day in the development of the Hebrew religion from Assyrian and Babylonian sources is a theory fraught with improbabilities. It would imply that for an indefinitely long period the Hebrews were content to be destitute of any conceptions respecting the origin of things and the early life of mankind. It implies, moreover, that they were ready to borrow mythological tales from their heathen neighbors and oppressors. In the present state of knowledge, no hypothesis is so probable as that when Abraham and his companions left their primitive home they brought with them the traditions and beliefs, as to the past, of the race to which they belonged. In that region these may not then have been disfigured to the same extent as afterwards by the admixture of mythological matter. In the light of the revelation of God made to Abraham and to his descendants, this stock of inherited narrative was purged of whatever dross of heathenism was intermingled with it. The primeval traditions and tales were so transformed as not to clash with the fundamental principles of revealed religion, and were thus left to serve as an adequate vehicle for conveying essentially right

religious impressions, until the age should arrive when physical science and historical investigation should supply the knowledge which then, at the dawn of civilization, it would not have been possible for men to comprehend as it was not the office of Revelation to communicate it. If the Hebrews were left, for example, to share in the belief of their ancestors that the world was made in a week's time, they were not worse off than Christians have been until within a century past. It is well to dispossess ourselves of the notion that the Divine Author of Revelation began with casting out of men's minds the whole stock of beliefs which were included in their inheritance. There was a world of knowledge about the way of creation and other mundane things which natural science and historical study in after times would unfold to view. And natural science and historical study are not alien and inimical to religion. They, too, are methods through which God in another way discloses truth to men.

From the historical point of view the student—in fact, every one who desires to find out what really occurred in the past—craves contemporary evidence of a trustworthy nature. Those who were immediately concerned in the events, and those who were in a position to be correctly informed in relation to them, are the competent witnesses. Tradition is of no value except so far as their testimony can be reasonably thought to be contained in it. The chief interest which the historical inquirer has in criticism applied to any portion of the Bible is from the bearing of it on this question: Have we contemporary evidence or its fair equivalent? As regards the life of Jesus and the planting of the Church, including both the facts and the teaching, there can be no reasonable doubt. The genuineness of the leading Epistles of Paul has not been questioned at the present day by the most learned skeptics, the starting-point of whose disbelief, be it observed, is commonly the assumed demands of speculative philosophy far more than real difficulties of an historical nature. But these Epistles imply on the part of the Apostles—the pupils, friends, and companions of Jesus—the testimony to the fact of his resurrection. It is in the highest degree improbable that they could have believed it had they not been prepared, by their real or supposed previous observation of exertions of miraculous power by Jesus, for giving credence to so astonishing a miracle. We are not left, however, to inference in respect to this point. The assertion is often thrown out that we have no good evidence of the existence of the Gospels prior to the second century. But the assertion is made, despite proofs that ought to satisfy every can-

did person. There is no reason to doubt, and there are the strongest reasons to conclude, that the first three Gospels were written within the limits of the generation contemporary with the events recorded, and were written by perfectly veracious persons who had the means of knowing what the facts were which they undertook to record. The effort to bring the fourth Gospel down into the second century, and to ascribe its authorship to any other than to the Apostle John, encounters difficulties far more serious than those which it aims to avoid; and the only plausible alternative theory, where the Johannine authorship is given up, is that the book was composed by one of his disciples. We hear it said that in that age, the age of Josephus and of Tacitus, there was no appreciation of the nature and the value of testimony. The statement is sometimes so qualified as to make it applicable only to the Gospel writers. This would imply that Jesus Christ selected twelve persons to bear him company, and to relate to others what they had heard and seen, who were destitute of the essential qualifications of witnesses. Assumptions of this character are overthrown by a little attention to the New Testament writings. Open the earliest of the Gospels, that of Mark, an attendant of Peter. We read: "And the chief priests and all the council sought for witness against Jesus to put him to death; and found none. For many bare false witness against him, but their witness agreed not together" (xiv. 55, 56). This looks as if the Evangelist, and those from whom he received his information, had some idea of the need of testimony to substantiate assertions, and of the necessity of comparing it and sifting it. Open the Gospel of Luke, an attendant of Paul, and hear him say that the reason of his writing was that—for so the passage is correctly rendered in the Revised Version—he had "traced the course of all things accurately from the first," having derived his information, as he adds, from "eye-witnesses." This looks as if Luke was aware of the importance of being careful not to mistake fiction for fact, and understood the importance of going to the right sources of information. "Ye are witnesses of these things," are words of Jesus to the Disciples, which Luke also records. Peter, as we learn from the Acts, declared to his fellow-believers that, on account of the defection of Judas, it was requisite to choose another in his place from those who had been with the Apostles all through the public ministry of Jesus, "beginning from the baptism of John." And why from this class alone? Let Peter answer: "To become a witness with us of his resurrection." This looks as if the Apostle Peter understood what the function of the Apostles was, what they

had been chosen for, and what were the proper qualifications for the office. This account of the proposal of Peter is a portion of the book of Acts which has been accepted even by Baur and his followers as authentic history. Notice how carefully the Apostle Paul, in the fifteenth chapter of the First Epistle to the Corinthians, reviews the testimony of the Apostles to the resurrection of Jesus, and his emphatic declaration, "If Christ be not risen . . . we are found false witnesses." It is evident, as one has said, that Paul was no easy convert.

Christianity is a religion of facts. They are not appendages—ornaments, so to speak, about the neck of a king, with regard to which it matters not whether they are worn or discarded. Luther and the other reformers were wise in feeling "the extreme danger of substituting their belief for the object of it, and so destroying the reality of both." Miracles are more than proofs; they are constituent elements of revelation, which unveils not only the mercy and tenderness, but also the power of God, and his sovereignty over nature. The sign-seeking spirit, the appetite for marvels, the disposition to find nowhere except in miracles evidence of God's presence and of his own mission from God, the demand for an extraordinary, stupendous sign from heaven, Jesus rebuked. But this is all. Especially is the resurrection the perfecting of his own person, the "first-fruits" as well as the sign of the redemption of man's entire being. It is consistent for those to reject the miracles who, like the author of "Robert Elsmere," hold that "personality or intelligence" has no meaning "as applied to God." The real, but often unperceived, issue is between a distinct theism in which the personality of God, as well as of man, is fully recognized, and a real, though it be a vague, undefined Pantheism. The attempt to resolve the miracles of the Gospel into subjective experiences is to dissolve Christianity into thin air. It belongs in a scheme of Pantheistic idealism. The remark that "miracles do not now occur" is of no weight. The questions ought to be whether in case Jesus Christ were on the earth they would not occur, and whether they were not to be expected at the introduction of that spiritual and universal society of which he was the founder. That nature is not supreme and man a slave to blind laws, it was surely well for the divine Head of the new kingdom to demonstrate, and thus to meet the yearnings of the race for the revelation of a power superior to material forces. Unless there is a demonstration that "the world is subject to God and not to chance or nature; that there is an order, far more beautiful and perfect than that of sun and stars, in which men are intended

to abide, and in which everything that is great and noble within them receives its full development — I see not how this materialist superstition can fail to become the creed of every nation and to bring about the decay of all institutions and political life, all feeling, affection, hope.” “If,” adds Maurice, from whom the foregoing passage is quoted, “Christianity be the manifestation of a spiritual kingdom; if it be the satisfaction of the dreams of past ages; if it be that which was to exhibit through all the complications of after ages what is the law which governs them, and who is the Giver of that law — then we cannot see how it could enter the world without miracles, or how those miracles should not be such as the Bible affirms that they were.” If the stories of the miracles of Christ are “in accordance with the scriptural idea of the Founder of a spiritual and universal kingdom . . . we should require evidence to account for their omission in any record proposing to convey the history of such a person. We should have a right to ask, Why did he give no signs that he came to connect the visible with the invisible world; why did he do nothing to break the yoke of custom and experience; nothing to show men that the constitution which he pretended to reveal and establish has a true foundation? Take away the miracles, and there is an inexplicable chasm and inconsistency in these records which it would require a vast amount of wit and ingenuity to explain.”

It is plain that a great deal of the current criticism of the historical writings of the Bible is affected by a preëxisting bias against the supernatural element in these narratives. There is a prejudice at the start which warps the judgment respecting their date and authorship and their general credibility. This prejudice, when the purpose and scope of revelation are properly conceived, will be felt to be unwarrantable. At the same time it is evident that the wide concurrence of Christian scholars in rejecting the rigid doctrine of an absolute inerrancy in these historical writings is owing to no spirit of skepticism of the sort described. Modified conceptions on this subject have arisen and spread among students of the Bible within the Church who are not lacking in faith and reverence. They have been adopted as an inevitable incident of the conscientious examination and comparison of the writings themselves. That Apostles and Prophets were inspired of God to set forth the contents of divine revelation; that even the historical books composed by them are permeated with the ideas drawn from a supernatural source; that the writings composed by pupils or attendants of the Apostles partake of the same character and are penetrated with the perceptions that

flowed from the authoritative teachers near whom they stood; that misinterpretations of the essential nature of the Gospel were precluded by the agency of the Spirit who was to throw light on the sayings of Christ, and on the events the meaning of which was at first so dark to the minds of the Disciples, but was to become clear in the retrospect — all this is a part of the common faith of Christians. It is another thing to say that beyond this inspiration a certain divine assistance was forever at hand, when Evangelist or other historian took up his pen, to check him by a negative influence — acting after the manner of the demon of Socrates — when the author was about to misplace the date of an occurrence, or to vary from rigid accuracy in matters of circumstantial detail. What a stupendous miracle would be involved in imparting this impeccable character to so large a body of historical writings as the Bible contains — writings which run through so many ages! Of what avail would it be, unless not only the original writers, but also amanuenses and transcribers, were all to be equally guarded to the end of time? Exaggerated statements on this subject are the occasion, at present, of two great evils. One mischievous consequence of them is that the truth and divine origin of Christianity are staked on the literal correctness of even the minutest particulars in the copious narratives of Scripture. The conscientious student, seeing that such views are untenable in the light of fair historical criticism, is virtually bidden to draw the inference that the foundations of the Christian faith are gone. Moreover, some of the most impressive arguments in defense of historical Christianity, which depend on the presence of unessential discrepancies, showing the absence of collusion, and in various other ways confirming the truthfulness of the main features of the narrative, are precluded from being used, whenever the obsolescent theory that the biblical narratives are drawn up with the pedantic accuracy of a notary public is still insisted on. It is a conception of inspiration, it may be added, which the sacred historians themselves do not allege. When Luke will indicate to Theophilus that his narrative is to be relied on, he appeals to the opportunities afforded him for getting possession of the facts, through the personal intercourse which he has had with those who were directly cognizant of them. To the historical student the magnifying of dissonances and the forcing of harmonies are alike obnoxious. They are equally an affront to the moral sense. They both count for nothing when confronted by a critical tact which sees where the truth lies, divines the secret of inconsistencies, and leaves undetermined whatever the documen-

tary source offers no means of settling. Nothing that the human hand touches, no record of the past, is utterly free from blemishes. Lord Mahon writes of the Duke of Wellington: "The conversation turned as to how testimonies vary and how difficult it is to get at a real fact. The duke gave some instances of it. 'Thus there is one event noted in the world—the battle of Waterloo—and you will not find any two people to agree as to the exact hour when it commenced.'" Lord Mahon was an unusually accurate and careful recorder of what he heard Wellington say. Yet he quoted the duke as having remarked that he had counted "the presence of Napoleon at a battle was equal to a reinforcement of forty thousand men." But the duke in a memorandum made a correction. "It is very true," he wrote, "that I considered Napoleon's presence in the field to be equal to forty thousand men in the balance. This is a very loose way of talking; but the idea is a very different one from that of his presence at a battle being equal to a reinforcement of forty thousand men." There is a curious lack of agreement in the contemporary records of the last words spoken by Martin Luther at the Diet of Worms, and a consequent difference of opinion as to what he really said. On the whole, there is good reason to conclude that the common account accords with the fact; but this verdict is arrived at only after a careful collation of evidence. Variations not unlike the above meet us in the New Testament historical writings; for example, in the accounts of the denials of Peter, of the crucifixion, of the resurrection. They are not to be gotten rid of by artificial adjustments. Some of the mosaics formed in

this way are mechanical, and anything but edifying. The same critical judgment must be called into exercise that is requisite in dealing with all other historical documents. Is it said that the common man is not possessed of the requisite leisure and skill for such an undertaking? The answer is, first, that neither is he qualified for textual criticism and for making the choice between disputed readings; secondly, that he is under no greater disadvantage than he is subject to in connection with other authentic narratives, including the most approved histories of his own country; and thirdly, that the impression, the aggregate impression, made on the mind may be quite true and adequate, despite a degree of uncertainty in relation to minor circumstances. The presence in the Bible of parallel narratives covering the same field, as in the case of the four Gospels, puts it in our power not only to see how the events appeared from somewhat different points of view, but also to combine complementary accounts and to rectify imperfections. It seems an ungracious task to advert even to slight imperfections in a book so precious as the Bible, as it is an ungracious task in a child to touch on the faults of a parent. But there stands the great saying of the Apostle: "We have this treasure in earthen vessels, that the excellency of the power may be of God, and not of us." In the case of the writings and of the men the jewel was not to be confounded with the casket that held it. Some there are who are so dazzled by the treasure that they imagine the vessel to be also of gold. Others, seeing that the vessel is earthenware, hastily and obtusely fancy that its contents are of the same coarse material.

George P. Fisher.

A DREAM.

And it was but a dream, yet it yielded a dear delight.—TENNYSON.

SURELY I saw thee, Sweet, only last night—
 The golden hair was heavy on thy head,
 Thy kissing lips to mine were newly wed,
 And thrilled my waking heart with dear delight:
 Thy loveliness was lovely in my sight,
 And a strange radiance was about thee shed,
 As if 'mong far fair stars thy steps had sped,
 And caught their glistering glory in thy flight.

Yet wert thou human, too, and human fair—
 Thy soft palm warmed me with the touch of old,
 I heard thy heart beat, and I felt thy tears,
 And then of thy low voice I was aware:
 "The dream is ended, and the story told,
 Clasp hands with Memory, all thy waiting years."

Louise Chandler Moulton.

THE TAMING OF TARIAS.

D. 1840.

She was handsome, she was wayward, she was imperious; so entirely different from the other French and half-breed girls and the fair Kentuckians lately come among them that no wonder she was called "the queen"—a title she partly approved and partly resented, considering it her due as a descendant of the rightful lords of the soil, the chiefs of the Sacs and Foxes, but feeling suspicious of the jocular tendencies of the average frontiersman.

"She's French quick an' Injun stubborn; it don't pay to rile her," an ex-admirer stated, with a rueful grin; which opinion his fellow-loafers around the Agency accepted without a demur—nay, even added a vast sum of personal observations and experiences in indorsement.

"She good girl, dis Tarias," said Uncle Joe Robidoux, the head trapper and chief magnate of the Platte Purchase, to a new-comer. "She varie good girl, but she have one divil of a tempaire, an' ven she mad she play harp—she l'arn him at Couvent de Sacré Cœur on St. Louis—she play harp like she pull him all to piece-*ais!*"

The new-comer laughed and stroked his golden beard. "All she needs is tamin'," he said, decidedly. "I'll bet my rifle agin that ole shot-gun yander she ain't mean an' she ain't cruel; she's jist wild."

"So 'll you be, stranger, ef you fool roun' her much," said a bystander, feelingly; whereat the crowd in front of the "Hide an' Projuce Store" laughed uproariously. Poor Lige's discomfiture when he undertook to pay court to the queen and her fallow acres was fresh in the minds of the gossips.

He of the golden beard did not join in the general mirth. He shrugged his broad shoulders,—an action evidently habitual to him,—nodded slightly, and, with no other leave-taking, strode up the narrow street, and striking the country road which joined it was soon lost to view amid the "bresh"—as the denizens termed the thickets of hazel, wild plum, and sumac bound together by the tough spirals of grapevine and bittersweet.

"I'll lay a hoss ter a hairpin that feller's a-gwine up ter see Tarias," mused Lige, breaking the silence that had fallen on the group as its members watched the progress of the pedes-

trian. "He's a gay young gander, ain't he now? Well!"—with a mighty expectoration by way of emphasis,—“by the time Tarias is done a-pickin' at 'im the Ole Nick would n't have 'im fur a Chrismus gif', that's *my* b'liefs!"

The crowd again indulged in vociferous laughter. It saw that Lige was still sore from his defeat, and, though he was a favorite, it enjoyed the fact. As one of its members afterwards explained, apologetically, "O' course we all like Lige, but it do seem so plum redickilis fur a great strappin' six-footer ter be so sot on by a leetle gal like Beauvais's darter, Tarias, an' she part Injun ter boot. He ortent ter min' our laffin'; he ain't the on'y one, not by a long shot. Most on us has been sassed by thet leetle crittur, fur she air jist as putty as a painter [panther] kitten, an' monst'us takin' in her ways, 'ceptin' 'ith the young fellers."

She certainly did look "monst'us takin'" as Golden Beard, or, as his friends back in Kentucky called him, Dave Pope, stopped in the road in front of her father's row of cabins and took a long and searching look at her as she stood in the door of the middle one. From her crown of burnished black hair to her little moccasined feet he could find no fault or flaw in her. "Jupiter, she's putty!" he apostrophized. "I'd like ter see her open that little red mouth," he added under his breath, as he stepped nearer and asked, with a rather exaggerated deference, if she could tell him where a certain Antoine Beauvais lived.

"He?" was the answer. "He is to be found here when *chez*—when at home. At present, he fishes in the branch."

"The *branch*?"

"Roy Branch, small stream tributary to our Big—*Great* Muddy River, the Missouri."

"Uh-huh! 'Scuse me, marm, fur bein' so dumb as not ter take your meanin' at fust. I'm a stranger in these parts." ("I won't be ter some folks very long," he mused, "ef she keeps on starin' through me in that onblinkin' Injun fashion.") "When you say Mister Beauvais'd git back?"

Tarias turned her splendid eyes towards the west and looked thoughtfully over the low, verdure-clad bluffs and the whirling, hurrying waters of the Missouri, already glowing with the tints of the sunset, to the blue-black line of forest outlining what is now the Kansas shore, but what then was Indian Territory.

"He will come very soon: Will you sit on the bench outside or come within?"

"Thanky," answered the wily Kentuckian, simulating reluctance; "I guess I better come ag'in in the mornin'. I—Lord! whar did *you* come from, Jincy King?"

The exclamation was called forth by a newcomer, a fair girl no taller than Tarias, and, like her, arrayed in holiday attire consisting of a pink calico gown and sunbonnet and a little shoulder-cape of white sprigged muslin.

"Good land, Dave! is that you?" ejaculated Miss King. "Where you come from? You must 'a' drapped out o' the clouds."

"Well, not adzackly," responded Dave, removing his cap and running his fingers through his thick brown curls, "but I feel 'bout as much at home as ef I had. I jist got hyur yistiddy."

"Lawsy me! I feel like as ef I'd al'ays been hyur. Why, we come up the river in time fur co'n-plantin'. Pap an' me likes Muzzury, but Mam's ahonin' fur ole Kaintuck. Say, Tarias, I don't spec you know who this is. He's my mammy's fus' cousin, name o' Dave Pope."

Tarias acknowledged the introduction gravely, but Dave, vain fellow, flattered himself that he saw a tiny spark of admiration beginning to kindle in her dark eyes. In this he was mistaken. Her steady glance was noting every point of his personal advantages, every detail of his costume—his strength, suppleness, and fairness; his cap and hunting-shirt of fine blue cloth; his breeches and fringed leggins of buff doeskin; his polished boots; even the silver clasp of his belt, and the broad gold ring on his little finger. "So strong; Jincy loves strength. So fine; Jincy loves finery," she thought. He laughed loud at Jincy's repartees. "Hélas! he is gayer than Louis. Jincy loves mirth. Poor Louis!"

"I was jist a-tellin' Dave, Tarias," Jincy broke in on her friend's meditations, "that he had orter come ter the dance to-night, over 't our place, an' Dave he says he cayen't, cos he's boun' ter see your pa an' cayen't go home 'ith me now, an' cayen't fin' his way arterwards; an' cayen't you an' Louis fetch him along 'ith you?"

"A-h!" said Tarias, with the long-drawn breath of hesitancy; then quickly, as if a sudden purpose had sprung into her soul, "Yes, yes; truly will Louis and I be pleased to have him with us."

VOL. XXXIX.—40.

UNCLE JOE ROBIDOUX.

"All righty! Be sure an' come early, an' tell Louis—but nev' min'; I'll tell 'im myself when I see 'im."

At mention of Louis, Miss Jincy blushed slightly, but immediately after drew herself up with the air of a maiden who knew what was due herself, and, after a few giggles by way of farewell, set out at a fine pace in the path that led through the cottonwood grove to the higher, drier lands of oak and walnut. "I live beyant the warnits, on the bald perarie," she called back over her shoulder to her cousin.

"I 'm 'fraid I'll be a heap o' trouble," began Dave, more from a desire to say something polite than from any intention of taking himself out of the way of the charmer.

"Ah, no!" protested Tarias, with a vehemence that would have turned Lige and his fellow-sufferers green with jealousy. "Both Louis and also me, his sister, will be most glad to have you here."

("If I can please you—and why should I

not? others have I pleased," was the fierce thought behind the hospitable words — "Louis shall not suffer because of you. My Louis — yes, who will be so much kinder to little Jeanne than a man bold and self-loving like you.")

Louis, blind youth, did not share his sister's misgivings. The stranger won his confidence at once, also that of the elder Beauvais. The astute Dave was a fisher of men, if not of catfish, and listened at supper with a proper admixture of astonishment and enthusiasm to an eager narration of piscatorial adventure more remarkable than anything he remembered since the day, some twenty-odd years before, when his mother explained how the whale caught Jonah instead of Jonah's catching the whale.

"I've swallered more 'n the whale did, this ev'nin'," said Dave to himself as he, with Louis and Tarias, jogged towards the scene of the festivities on Beauvais's lazy horses, "but I don't begrudge the hard work. I've found out a heap o' things. First place, Tarias is smarter 'n her pa an' Louis put together. Second place, her men folks is as 'fraid o' her as the boys at the Agency. Third place — shucks! I'm jist like a circuit-rider. Anyway I mean ter marry her an' settle down right hyur, an' I don't mean ter foller arter her like her dog an' her ole witch of a nigger woman, nuther. All she needs is tamin', an' I think I'm the man fur the job."

"We are there," announced Tarias, with a calm superiority to idiomatic English.

A chorus of mongrel curs gave emphasis to her statement, and a squeaky fiddle in process of "chuning up" added its testimony to the general din.

Dave felt that the ordinary conventionalities of speech were not meet for an occasion like this. He had been in log-cabins before, but never in one so low and long, and so open to the searching of the night breeze and the winking of the stars. He had danced on punchon floors before, but never on one that rattled so loudly or seemed so loose and likely to work confusion and overthrow for the humble followers of Terpsichore by having each separate board stand on end when reels and boleros were approaching a crisis. Never, surely, had tallow dips flared so wildly, nor shadows fallen so weirdly. Never had the tow-heads of Kentucky and Tennessee looked so very white, nor the smart French-Canadians — John Jacob Astor's trappers and their progeny — looked to his eyes so very dark. Even the whisky, drunk

according to primitive custom from a corpulent brown jug without the intervention and assistance of such insignificant middle agents as cups and glasses, had a potent and peculiar strength and flavor.

He looked at the swaying mass before him, at the fierce beauty at his side. "What you

DRINKING AT THE DANCE.

goin' ter do 'ith me?" he asked quizzically, as Jincy and her lank parents struggled through the crowd, intent on hospitable greeting.

"You'd orter come sooner," said Jincy, with her usual inexpressive giggle. "Louis, he don't keer ter dance, but I 'low you do — I dunno —"

She glanced at Tarias with an appeal in her blue eyes that was quite pathetic.

"Won't you take pity on me, Miss Tarias?" Dave entreated. "I'm dyin' ter foot it with the rest of 'em."

Jincy was about to explain that her friend had eschewed dancing as one of the follies of extreme youth, but a preliminary "Tee, hee!" made her too late. When she would have spoken, her birds had flown. "L — look at 'em, Louis!" she stammered between giggles.

"I dance with him to keep him out of the way of my brother," Tarias excused herself to her conscience.

"Gone through the woods an' tuck a crooked stick o' strange timber arter all!" ejaculated Lige, shaking his head with melancholy earnestness. "Wimmin *suttinly* air the weaker vessel. Now here's Tarias, as mought 'a' had me, what she knows is her ekal, a-j'inin' 'ith a feller that like as not 's be'n run

outen his own State furhoss-stealin'. Anyway, ef he *hain't*, nobody here kin prove it."

Lige's opinion was echoed all over the room. Meanwhile the hero and heroine of the evening danced on, in, let it be hoped, blissful ignorance of the sensation they were creating. Finally a fiddle-string snapped, and the dancing perforce abruptly ceased.

"Here's the man you two want see," called an unsteady voice from the neighborhood of the whisky-jug.

"Yes, yes!" the crowd swelled the chorus. "Come yer, stranger; come yer, Tarias. Let the squire talk ter yer."

The laughing, chaffing, half-joking, half-serious little mob opened a lane in front of them, pressed against them, pushed them forward until they stood before the latest comer, the newly elected dignitary, "the squire."

"Hello, Tarias!" was the greeting of that worthy. "I s'pose ye like this feller, don't chu?"

"Have I not danced with him?" rejoined Tarias, angry, ashamed, wishing herself well away from them all, but too proud to betray the tempest raging in her soul.

"Shore nuff. Nuff said. An' you, young feller, I reckon they ain't no doubt 'bout your fayvorite?"

"Not much," growled Dave, wishing he had a club to lay about him, and looking with fond and longing eyes towards a distant corner where half a dozen guns were stacked.

"All right, then! In the name o' the gen'al gov'ment an' the laws o' Muzzury I p'nounce ye man an' wife. Gimme a dollar an' treat the crowd."

"Gosh, man, that won't do! Onsay them words, Squire!" shrieked Ole Man King, in dire consternation. "Man alive, Dave an' Tarias ain't knowed each other a day yit!"

"What 's did 's did," answered the squire, sententiously. Like some others, he was not averse to seeing Tarias "tuck down." "I war axed ter marry 'em an' I done it. I reckon 's all right. She ain't never danced 'ith *our* boys sence she kim fum St. Louis."

"Look out fur Louis!" cried a woman.

"Ye better toddle, Squire," called some one else, as the young Frenchman's arms were pinioned from behind and his pistol wrung from his hand.

The principal player of this practical joke looked about him for a second and slipped out and away, as advised. In the confusion nobody noticed his departure until the clatter of his horse's hoofs on the sun-baked road gave notice that he was getting back to the Agency in hot haste. A posse of men, with a vanguard of noisy curs, started in pursuit, "boun' ter fetch back the drunken crittur an'

make 'im ontie that knot." The trappers ranged themselves about Louis, Jincy clung to his hand, the giggles strangled in her throat by genuine sobs. The settlers,—that is, the men among them,—in a crestfallen and uneasy group, slunk towards the door. The women, French as well as American, huddled together behind the bride, while Ole Man King bawled himself hoarse in appeals, which nobody heeded, that there be no "sturrence" on his premises. As for the two most concerned, Tarias stood as motionless and silent as any of her maternal ancestors would have done under torture. Dave had taken a step in front of her protector. He had caught her arm when they were pushed forward, but she had shaken herself free of his clasp. Neither had spoken since the squire had evoked the answers that he considered sufficient grounds for pronouncing the twain one flesh.

"T ain't Dave's fault, Louis," sobbed Jincy; "an' anyway I don't see why you an' Tarias sh'd be so mad 'bout takin' one o' my kin-folks. 'Deed I don't."

"That 's so. That 's jist so," supplemented Marm King, taking one of Tarias's soft little hands between her horny palms. "Dave 's a good boy, honey; an' he comes fum a good hones' stock, 'ith money an' lan' an' niggers behine 'im too. Jes you make the bes' o' it, an' make 'em trashy fellers"—with a glance of supreme contempt towards the awkward squad of her guests—"laugh out o' t' other side o' the'r mouf. Don' you sesso, Dave?"

"Yes," said Dave, drawing a long breath, "I do. I mean it," he added, turning to his bride and trying to look into her eyes.

"You would say that to any poor girl so treated," she answered, drawing her shoulders in as if a chill wind had struck her.

"No, no! I 'll prove that ain't so, ef you gimme a chance," he began eagerly; but the words that burned on his lips died there without kindling an answering flame. Tarias was spent; dumb and unheeding, she stretched out her arms towards her brother and fell upon his breast unconscious.

Poor queen! With her scepter broken in her hand by the cruel bludgeon of the practical joker, as she was carried home in the gray of the dawn she wished, as she did many a day thereafter, that the brief unconsciousness could have lasted forever. That she was bound in *vinculum matrimonii* she never doubted. Missouri was an easy State to be married in: for a man even to present a woman to his acquaintances as his wife was as valid a marriage as if the powers of church and state had lent their kindly assistance to weld the chains matrimonial; and, on the other hand, a bill of divorcement was

considered almost as little credit to a family as the services of the hangman. Tarias entered her door feeling herself insulted and undone. She could not go to the husband who had never wooed her, she could not free herself of bonds that were none of his making, she could not bear the prying eyes of gossiping friends and slighted lovers. She went into her cabin, barring the door behind her and telling herself she was dead to her world, and craved nothing of it but to be forgotten.

In vain Dave alternately prayed and stormed without; in vain the Beauvais, father and son, coaxed and threatened; in vain Jincy wept and entreated. She would come forth for none of them, and, as her friend despairingly said, "They 's no way ter git at 'er, Dave, unless ye

In truth the Beauvais were sorely vexed at their Tarias. Every woman, they argued, should marry. Here was Tarias almost twenty—an advanced age for a maiden in a land where women were scarce and gay young bachelors overabundant. "Old maid" was on the frontier a term of deepest opprobrium. Here was a man, frank, friendly, handsome, and, as Ole Man King assured them, well off in this world's goods. He was willing to turn the joke on the jokers and take her without so much as a hint about dowry. Truly, he was a noble *parti*; why could n't she listen to reason, come forth from her self-sought prison and stop the chaffing that sooner or later was likely to be answered by a thrust from Dave's or Louis's bowie-knife?

As for Tarias, she raged and wept and prayed, unheeding the world outside her citadel, all her strength given to fighting desperately a foe within—that

Something wild within her breast

which, ever since that day in Paradise when Eve first looked into Adam's eyes and called him "lord," has at some time in her life taught every woman, gentle or simple, weak or strong, that though she may be hailed queen, below her crown beats the heart of a slave waiting to be flung at the feet of her king. Won and never wooed! Poor Tarias! Even her harp, always before her consolation, stood voiceless and unstrung. "O Mother Mary! *vierge céleste*, help, help!" she entreated. "By the passion, the thorns, the cross, the nails, intercede for me, most holy Mother! for me, most miserable of your children!"

Her prayer had a partial answer, she thought, when her father and brother went off with the Indians across the river on a grand hunt. That left her free to roam the fields and woods near home. One day she came suddenly upon Dave.

"Not gone?" she faltered.

"No," he answered gloomily. "I 'll not be laughed out of a settlement an' have the story foller me wheresomever I go. That thar is my cabin, yander. Thar I stay a-waitin' fur my wife. Why don't you act sensible, Tarias," he queried anxiously, "an' stop the fools from laughin'?"

Poor Dave! With the proverbial obtuseness of his sex, he failed to make the right appeal. As he stood there eager-eyed, blushing, anxious, as much in love as a less impetuous man would have been after a twelvemonth's acquaintance, why could he not say from the depths of his heart, "I love you," instead of, in effect, "Help me, in this great crisis of your woman's life, to get the better of a rabble bent on holding me up to ridicule."

TARIAS AND DAVE IN THE WOODS.

smoke 'er out. O' course that ole nigger o' hern feeds 'er at night."

"Why warn't the house built all in a piece," growled Dave, "'stead of a bunch of cabins a-settin' tergether like a wasps' nest? Ef she'd see us we could talk some sense inter her head. You can argify a man through a chink in the wall, but you 're boun' ter look a woman in the eye!"

"*Vraiment!* yes, yes!" assented the parent. "Une what you call woman—not at all like man! Ef she wish, she do; ef she wish not, she do not! As odds, so Tarias, yes, yes!"

TARIAS AND ISABEL.

"Let them laugh!" she cried, passionately. "If you will not be laughed out of the settlement, why should I be laughed into the cabin of a man who would not know my face if he met me in the big road? Begone from me!"

Dave had taken a step towards her, with his arms outstretched. She struck at him with her clenched hand, forgetting, in her terror of his embrace, that in it was a strong little knife with which she had been digging calamus roots. As he bent his head to look into her beautiful eyes, hoping to see some womanly relenting there, the blow descended, the knife cutting an ugly gash in his cheek.

"Ef you air a woman you air a new kind!" he exclaimed, pressing his hand to his cheek for a second, then flinging the blood from his finger tips. "No, no! don't you touch it! Maybe that han'kercher is pizoned. Anyhow gun-waddin' 's good enough fur me. Stan' back, an' don't slash t' other side! Dang it all, there *is* wild blood in you!"

Tarias tried to speak, to say she had not intended to harm him, but the words would not come. Tremblingly she took the kerchief from her neck and held it towards him, but he would none of her gift.

"I 'm a-goin' home now, Miss Pope," said her wrathful husband, giving her a title he hoped would make her writhe, "an' 't ain't likely I 'll ever trouble *you* ag'in. Ef ever you want set up housekeepin' 'ith me, you 'll do the axin'; I 'm done."

After this mishap Dave was more defiant of his neighbors and Tarias more melancholy than ever, although she no longer shut herself from the primitive Paul Prys and Mrs. Grundys of backwoods "society."

So the days wore away. Summer's delicate wild flowers and dancing green leaves faded from the low hills, the autumnal splendors of sumac, cottonwood, and locust gave place to the bare gray boughs and heaping snowdrifts of winter.

Sometimes Mrs. Pope met her angry husband, but he ostentatiously gave her a view of the scarred side of his face without speaking. How could she know, as she wept blinding tears of remorse and self-pity after each encounter, that her unforgiving lord stood half the nights outside her little window listening, as Saul unto David, to the harp which was once again her one confidant and consoler? Jincy, it is true, was now her sister, but she felt that Jincy and Louis looked on her with silent disapproval. Her father was away, nor did she sigh for his return. Old Isabel, the negress, was her only champion, and Isabel's feudal fidelity and eagerness to prove it made her a trying follower.

"Dey's gwine ter be lots o' spoht, ter-night," said the poor ducky, at the close of a blustering January day phenomenally cold for the thirty-ninth parallel. "Lots o' spoht," she continued, elevating her voice in the hope of rousing her mistress from her dismal contemplation of the coals in the open fireplace. "Bill Langston, missy, is gwine ter han'le 'im."

"Him? Who?" asked Tarias, sharply.

"Him ovah yondah," indicating the direc-

tion of Dave's cabin by a nod. "Bill sass 'im 'bout—'bout—he—weddin', an' he knock 'im down. Bill an' he gang gwine dar toreckly, tie 'im ter a tree an' whop 'im good."

"Who told you?" cried the girl, springing up. Too well she knew what was in store for an unprotected man in the clutch of the outlaws known as Bill Langston's gang.

"I war in de cohn-crib, an' Johnny Slack an' One-Eye Charley wuz a-comin' 'long an' I heah 'em."

"Oh, and it's dark now!" cried Tarias, wildly. "Give me my shawl! Tell Louis, when he comes, to rouse up the neighbors and come to Dave's cabin as fast as he can bring them."

She snatched a shawl from the old woman's hand and started on a run towards the "big road," but, suddenly changing her mind, she ran in among the trees, in her mad haste stopping and turning aside for nothing. Gnarled roots tried to trip her, ghostly branches caught at her hair, stubborn underbrush tore at her garments, treacherous scales of ice set snares for her feet, but she neither slipped nor stumbled. "If I get there in time it will atone," she said over and over as she sped onward. Fortunately, the thaw and succeeding freeze of a few days before had made a hard crust over the snow, which bore her up. The pale gleams of a wan little new moon gave light enough for her keen vision.

The distance was more than half traversed, she was out of the woods and hurrying across the prairie, when a long-continued, mournful wail came faintly across the snow. One less experienced in the ways of the wilderness would have paused, hoping to be convinced by a repetition of the sound that some pessimistic deerhound was bemoaning the inclemency of the season; but Tarias was wiser than that.

"Holy Mary, *vierge céleste*, save us both!" she prayed.

"Ah—oo! oo! oo! oo!—yap! yap! yap!" There it was again! The cabin was in sight, but—"O Mother Mary!"

"Ah—oo! oo! oo! oo! yap! yap! yap!" This time it was nearer; and from the grove

behind her, the dark recesses of the heavier timber on one side, the bare fields split by a deep ravine on the other, came answering howls and barks.

Before, she had run; now, she seemed to fly. "O God, if I should stumble!" The whole pack of famished devils had assembled and were in full cry. She

IN DAVE'S CABIN.

was fleetier than almost any boy; but who has fleetness to outrun a wolf? One moment, and she would be safe. Alas! the door was barred, and the snarling pack was close after her.

"Open, open, Dave! for the love of Heaven!"

The door was opened. Dave struck the leader with a brand caught from the fire, flung it among the prairie brigands and dragged their quarry across his threshold. The door swung shut and Tarias fell at her husband's feet.

He looked down on her in silence, searchingly, sternly.

"Come to the fire," he said, after a long pause. "You air tuckered out."

He lifted her, pushed her into his chair, and wet her lips with brandy from a tiny pocket-flask.

"Is the door made fast?" she gasped, starting up.

"Oh, yes! The critturs cayen't git in," he reassured her. "When they 've et the one I hurt they 'll go off in s'arch of other plunder."

"That is n't it," she answered, looking about her with a frightened air altogether new to Dave's knowledge of her. "Bill — Bill Langston —"

"Well, what of Bill?" he said slowly. "Hev you had a fuss 'ith 'im?" he questioned, with quickened speech and an air growing more and more stern.

Tarias hung her head like a chidden child. Evidently Dave's one thought of her was as a contentious spirit.

"What 'd he say to you?" continued Dave, sourly.

"Nothing," murmured Tarias. "He — is — coming here to-night."

"D' you mean ter say you wanter meet 'im hyur?" bawled Dave, like a fool. "Ef he comes hyur, I 'll shoot 'im like a varmint! D' you hear?"

"He comes with his gang to beat you," wept Tarias. "You must keep fast the door till Louis comes."

In an instant Dave's mood changed. "An' so you come ter warn me, did you, Tarias, at the resk o' your life?" he said softly, as he laid his hand on her hair. "Bill won't harm nobody ter-night; I see him dead drunk two hours back. But — say, Tarias, what made you come?"

She could not answer.

"What made you come?" he persisted.

She touched the scar on his cheek. "Will it atone for this?" she whispered.

Dave had an inspiration. "No," he answered, laughing; "'t won't. When I was a leetle boy," he made haste to add, "ef I got hurt, nothin' could cure me, seemed like, onless Mammy kissed the spot an' tole me it was well. That's the on'y cure now, Tarias."

The scar was very near her lips as he bent over her.

She hesitated, faltered, took sudden courage — and Dave's wound was healed.

Mary A. Owen.

EQUATIONS.

I.

YOU, so sure the world is full of laughter,
Not a place in it for any sorrow,
Sunshine, with no shadow to come after —
Wait, O mad one, wait until to-morrow!

You, so sure the world is full of weeping,
Only gloom in all the colors seven,
Every wind across a new grave creeping —
Think, O sad one, yesterday was heaven.

II.

If some great giver give me life,
And give me love, and give me double —
Shall I not also at his hand
Take trouble?

And if, through awful gloom, I see
The lightning of his quick will thrusting —
Shall I not, dying at his hand,
Die trusting?

III.

Young and strong I went along the highway,
Seeking Joy from happy sky to sky;
I met Sorrow coming down a byway —
What had she to do with such as I?

Sorrow, with a slow, detaining gesture,
Waited for me on the widening way,
Threw aside her shrouding veil and vesture —
Joy had turned to Sorrow's self that day!

THE "MERRY CHANTER."

BY FRANK R. STOCKTON,

Author of "The Lady, or the Tiger?" "Rudder Grange,"
"The Hundredth Man," etc.

V.

THE STOWAWAY.

HEN, early in the morning, after our first night on board the *Merry Chanter*, I met the butcher, I did not mention to him that I had discovered him standing, or rather sitting, guard before our cabin. I believed that the sentiments which prompted him to this delicate attention should be respected.

"Well," said I, "did everything go on all right in the night?"

"All right," he answered. "I have just peeped down the hatchway, and I caught sight of his straw hat. I guess the rest of him is there. And, if you say so, we'll let him stay till after breakfast."

When, an hour later, the captain and Doris were informed that there was a stowaway in the hold, there was great excitement on board the schooner. All thoughts of weighing anchor and setting sail were abandoned for the time. Every soul on the vessel repaired to the hatchway. Even Doris pressed as near the edge as I would allow. The stowaway was bidden to come forth, and almost immediately he scrambled up among us. The light was not very good between decks, and we could only see that he was a man of medium height and of spare build.

With Captain Timon on one side of him, and Captain Garnish on the other, the stowaway was marched to the upper deck. This unauthorized passenger was seen to possess an intelligent face and a very rusty suit of clothes. Glancing rapidly around him, he exclaimed, "We are not at sea!"

"At sea!" roared Captain Garnish. "A double-headed Dutchman of a land-lubber you must be not to know the difference between pitchin' on the sea and lyin' all night at anchor in smooth water! How dared you stow yourself away on board this vessel? Is it rope's end first, or simple chuck over the side?" he said, turning to the skipper.

"We won't be too hard on him," said Captain Timon. "Perhaps the man can't swim."

"He ain't done no harm," said Captain

Cyrus. "Let's let him off easy and set him ashore in a boat."

Captain Teelshook his head. "It won't do," he said, "to offer prizes for that sort of thing."

CAPTAIN GARNISH.

"Prizes!" cried Captain Garnish, who was evidently a man of high temper, with a strong way of doing and putting things. "I'd prize him! I'd—"

Doris now spoke up. "None of those things shall be done to him," she said, "until he tells his story. Please, sir, will you tell us your story?"

The man had a pair of plaintive eyes, and he fixed them upon Doris. "I am a schoolmaster," he said. "For nearly a year I have been teaching at West Imbury."

Each of the captains now put his head a little forward, and listened with great attention.

"I stood it as long as I could," said the schoolmaster, "and then I ran away. I am not a sailor, but I thought I should like to go to sea. Anything would be better than teaching school at West Imbury."

"Did the scholars treat you badly?" asked Doris.

"Oh, no," said the schoolmaster. "I don't mind boys, I can manage them; but it was the woman I boarded with who drove me to desperation."

"Could n't you board somewhere else?" asked Doris.

"No, not at all," he answered. "She had a contract from the town to board me for two years. She was the lowest bidder. She would

lose money if I went away, and she threatened me with the law. But my privations and misery were insupportable, and I fled."

"Who was the woman who had your contract?" asked Captain Cyrus.

"Mrs. Bodship," said the schoolmaster.

At these words each of the four captains heaved a sigh, and, involuntarily, Captain Cyrus laid his hand on the man's shoulder.

"Now that you've put yourself square afore us," said Captain Timon, "I don't know as we've got much to say agin you; but you ought

aboard he must n't do no more work than will just pay for what he eats; a bunk, not costin' anything, can be thrown in for nothin'."

This compact was quickly made and the schoolmaster, much relieved, was taken below to breakfast.

"There ain't no need," said Captain Timon, confidentially, "fur Captain Cyrus or that schoolmaster to know that Mrs. Bodship was tryin' to overhaul the schooner. It will just worry the captain, and won't do the schoolmaster no good."

"PLEASE, SIR, WILL YOU TELL US YOUR STORY?"

to have come aboard square and honest, instead of stowin' away."

"I was told," said the schoolmaster, "that you did not want any hands, and I could not stay on shore a moment longer."

"Do you wish to go to Boston?" asked Doris.

"I will go anywhere," said the schoolmaster. "I will do anything, if only you will let me stay with you."

The captains now retired and talked together, while Doris and I had some further conversation with the schoolmaster. In a few minutes the captains returned.

"We have agreed," said the skipper, "that if the owners are willin' we are willin' to let him stay on board, on condition that he is not to have any part of the profits. We are all agreed that the profits ought not to be divided into any more than six parts. So that if he stays

"Do you think Mrs. Bodship will continue her pursuit?" I asked.

"Yes, sir," said the skipper. "She's the kind of woman that don't give up easy. But I think we've given her the slip. She'll be sure to think that we've rounded this island and sailed north, fur of course we could n't have no call to stay in Shankashank Bay. It's my opinion she's gone to Boston to be ready to meet us when we get there. She's got a horse and buggy, and I calculate she'll drive herself there."

"You don't mean," exclaimed Doris, "that she can get to Boston in a buggy sooner than we can get there in the *Merry Chanter*?"

"Yes, I do," answered Captain Timon. "She's an awful woman with the whip. And the reason I think she will go in her buggy is that she'll want to call at the different ports to see if we have put into any of them for water or repairs."

"Horrible!" cried Doris. "What shall we do when we get to Boston and find her there?"

"I don't believe she'll wait," said the skipper. "She's a nervous woman, and hates to wait. I guess she'll be gone when we get there."

When the schoolmaster came on deck he had tidied himself up a little and now looked like another man. "I cannot thank you enough," he said to Doris and me, "for allowing me to remain on board of your ship. It is like beginning a new life. But I must admit that I shall feel safer when I am out upon the open sea."

"Can you swim?" asked the butcher, who was standing near.

The schoolmaster answered that he was sorry to be obliged to say that he could not; whereupon the butcher gently whistled a few notes and gazed out over the water.

I had begun to believe that the butcher was a pessimist.

"And now, Captain," cried Doris, "let us up anchor and hoist sail. There is no reason for our stopping here any longer."

"I don't know about that," said Captain Timon, dubiously. "The tide is comin' in again, and we'll get out of this bay just as quick by lyin' here as to try to sail agin that flood-tide. But if you'd like to be movin', we can take a sail along the coast of Shankashank Bay and have a sight of the country; and then, when the tide turns, we can go out on the ebb."

"Oh, by all means, let us sail!" cried Doris. "Anything is better than being anchored here."

"Am I to understand, Captain," said I, "that during our voyage we are to stop every time the tide is against us?"

"Oh, no," said the skipper, with a laugh. "That's only when we're in these bays. We sha'n't take no account of tide when we are out to sea."

During the rest of that morning we sailed along the coast of Shankashank Bay, sometimes half a mile from the land and sometimes even less. It was a pretty shore and we enjoyed it, although we were moving south, and almost directly away from Boston. There was a good wind from the west, but we sailed slowly. We would not wish, however, to sail very fast in the wrong direction.

We passed a little scattered town, with a few fishing-boats anchored along the shore. Then we came to a bluff crowned with pine woods which extended some distance back into the interior. The country, as far as we could see along the shore, appeared marshy and thinly settled.

The captains now went forward and talked together, leaving the wheel in my hands. I had determined to learn to steer, and to get as much nautical education as possible.

In a very few minutes Captain Timon returned. "We've agreed," said he, "that we'd

be runnin' agin sense and reason if we did n't lay to here and take in water."

"Water!" I cried. "Why, we have taken in water."

"Yes," said the skipper, "common water. But just the other side of that bluff there's the Kilkink Spring. A tribe of Injuns used to live there just on account of that spring. There is no better water in the world, and it's great on keepin'. Fur a long v'yage there's nothin' like it."

At first Doris and I were inclined to rebel, but suddenly she changed her mind. "It is true," she said, "that the water we have had to drink so far is flat and horrid, and now that we have a chance of drinking some fine spring water we ought by all means to get it. It can't take long."

This seemed to me a proper moment to as-

THE BUTCHER.

sert myself, and to make Doris understand that I was the one who should decide questions of this sort. But upon reflection I found that I was not prepared to take such action. When I took my true position I must be fully prepared to maintain it.

In twenty minutes we were anchored about a quarter of a mile from the bluff, and after dinner a boat with two casks and two captains went ashore for water.

The schoolmaster was ill at ease. "I do not believe," said he to me, "that I can truly feel safe from Mrs. Bodship until we are actually out at sea."

The butcher walked aft to where Captain Timon was quietly smoking his pipe. "Look here," said the butcher; "you ought to give that schoolmaster something to do. He has got a mind, he has, and if you don't set his arms and legs a-going that mind of his will run away with him."

"I have given him somethin' to do," said the skipper, sternly. "He's lent a hand at the capstan, and he's lent a hand at the sheets. That'll pay fur his breakfast and dinner, and I can't give him no more work till he's had his supper."

The butcher made no further remark to the skipper, but turning to me as I sat by with my afternoon pipe, he said: "He's so scared that he won't stay on deck for fear that she might be driving along in her buggy and get sight of him. And if she does, he says, she'll be bound to come aboard."

"What in the world is he afraid of?" I asked. "He must be very silly."

"He is afraid of Mrs. Bodship," said the butcher; "and if you knew Mrs. Bodship you'd be afraid of her too, especially if she had a contract to board you. I believe that wherever that schoolmaster goes she'd follow him and board him, so that she could send in her bill to the town." For a moment he stood in thought. "I know what I'll do!" he exclaimed. "I'll lend him one of my gowns to wear over his clothes. Then he can be on deck as much as he pleases, and if she does see him she won't know him unless her spectacles are a lot better than most."

Not long afterwards there appeared on deck what seemed to be a pair of butchers. Doris and I were much amused by the spectacle. But, notwithstanding his garb, the schoolmaster did not look the butcher. His gait, his bearing, were not those of a genuine slicer of meat and cleaver of bones. Still, he was disguised sufficiently to deceive any Mrs. Bodship who might be traveling on shore.

The butcher's efforts on behalf of the schoolmaster's peace of mind did not end here. After a few turns in deep reflection up and down the deck he came aft, bringing with him the cage which contained the wounded sandpiper.

"Look here," said he to the schoolmaster, "I wish you'd run this bird while you're aboard. I'm not such an hour-and-minute man as you are, and sometimes I forget him."

The schoolmaster took the cage and looked inquiringly at the other.

"Now," said the butcher, "there's a good deal to occupy the mind in running a sandpiper in a cage, especially if he's got a broken wing. I laid out to cure that wing, but I guess you can do it a great deal better than I could, if you give your mind to it. What he wants is plenty of mutton tallow, and a cage kept as clean as a hospital ward."

When the two casks and Captain Teel and Captain Garnish returned in the boat, the schoolmaster, with a piece of sail-cloth tied in front of him to protect his butcher's gown, was busily engaged in cleaning the sandpiper's

cage. Captain Garnish stepped up to him with an angry glare upon his face.

"Look here," he said, "that's agin contract. We did n't take you aboard this schooner to work except just meal stints."

The schoolmaster looked up at the angry captain, but before he could reply the butcher broke in. "Now, then, cap'n," said he, "this sandpiper business is a private job between me and the schoolmaster. What he gets and what he don't get is his business and mine. The sandpiper has n't got anything to do with the ship, and he could be run ashore just as well as he is run here."

The severity on Captain Garnish's countenance began to fade. "Very well," said he; "if it's private I've nothin' to say. But there's no claims fur work to be brought agin the profits."

VI.

THE MAN ON THE HILL.

DORIS and I were amazed at the slow progress made by the captains in supplying the *Merry Chanter* with pure water from the celebrated Kilkink Spring. The boat went out again, this time with the skipper and Captain Teel, and their trip was a longer one than that of the two other captains. At the end of the third trip evening began to fall, and Captain Timon said it would be of no use to try to get any more water that day.

"Any more?" cried Doris. "Surely we have enough by this time!"

The skipper smiled and shook his head. "Not fur a sea v'yage," he said. "When you once get out to sea there's no gettin' in fresh water. You see we've throwed out all we took in at Mooseley, because you said that it did n't agree with you. We don't want to make our owners sick, you know."

"I wish I had never mentioned the water," said Doris, marching away.

The next morning the process of taking in the water began again; but there was no use fretting about this, Captain Timon remarked, for the tide was coming in again and we ought to be glad that we had something useful to do while we were obliged to wait.

Restless and impatient, and tired of walking up and down the deck of our anchored vessel, Doris and I went ashore on the second trip of the boat, thinking a country walk might quiet our minds. The butcher had already been landed; but we could not induce the schoolmaster to leave the ship. We left him anointing and bandaging the wounded wing of the sandpiper.

Doris would not leave until the skipper had assured her that our going on shore would not interfere with the sailing of the *Merry*

Chanter when the proper time came. Captain Timon said he would fire a gun—he had a musket on board—two hours before he weighed anchor, and as this would certainly give us plenty of time to return to the ship, we went ashore with easy hearts.

The country which lay between the bluff and the little town was slightly rolling; wiry grass growing thinly in the sandy soil, with a few bushes here and there. At some distance, on the top of a little rounded hill, we saw the butcher, apparently admiring the landscape. As we walked in his direction, desiring

"I was looking for Mrs. Bodship," said he. "If I'd seen her driving this way in her buggy I'd been on board in no time, and had that schoolmaster stowed away among the ballast; and if he'd heaved some of it at her when she come down to look for him I would n't have blamed him, though, of course, Captain Cyrus's feelings must be taken into account when it comes to that."

"I think you are entirely too much afraid of Mrs. Bodship," said I.

"Well, she has n't come along yet," said the butcher. "But on the top of that hill there

"'I AM LORD CRABSTAIRS,' HE SAID."

to know if anything could be seen from the top of that hill, he came down to meet us.

"Do you know," he said, as soon as he was near enough, "if that schoolmaster was attendin' to my sandpiper?"

We assured him that we had left the pedagogue giving careful attention to the unfortunate bird.

"I am glad of that," he said, his countenance assuming an expression of relief. "He ought to keep himself occupied, and the captains won't let him do no more for the ship than just exactly so much. I was afraid he might get tired stayin' there doin' nothin' and might come ashore. And it would be pretty rough on him if she were to nab him before he'd got to fairly feelin' at home on the ship."

"What were you looking at from that hill?" asked Doris, who was anxious to go on.

is a man that I've had my eye on for pretty nigh an hour. In the whole of that time I don't believe he's taken his eyes off the ship. I have an idea that he has got a contract to spy for Mrs. Bodship."

"Let us go straight over there and speak to him," said Doris. "No man has a right to spy on the *Merry Chanter*."

Doris spoke so quickly that I had no time to propose this myself, but we instantly started for the distant man.

"Let me go first," said the butcher. "He may have a club or a knife about him."

Whether or not the butcher had his cleaver in one of his pockets I could not tell, but he walked bravely on.

The man on the hill did not seem at all disturbed by our approach. On the contrary, he came to meet us, as the butcher had done. He

was a middle-sized man, somewhat inclined to stoutness, but very quick and springy in his gait. His face was plump and ruddy, smooth shaven except a pair of sandy side-whiskers, and he had pleasant blue eyes. Without doubt he was an Englishman.

"Good morning to you," he said, raising his hat. "Now I dare say you belong to that ship."

I informed him that my wife and I owned the vessel.

"Really!" he exclaimed. "Now tell me where are you bound to?"

"To Boston," I replied.

"The very thing!" he exclaimed. "Boston is in the North somewhere, now, is n't it? I'm an English traveler, but I don't like your long railway carriages. In England we'd use them for bridges. I came to this place in a wagon, but it is broken to smash down there in that village. Now, I should like, of all things, to take a sail along the coast; I don't care whether it is to Boston or Salt Lake City. Now, tell me, will you book me as a passenger? It is a trading vessel, is n't it?"

Doris and I consulted apart. "I have an idea," said she, "that it is not impossible we might make more money carrying passengers than freight. He seems like an honest, straightforward man. Why should n't we take him to Boston?"

We returned and told the man that we were making a regular commercial cruise to Boston, and that if he was in no hurry to get there we would take him as a passenger.

"Good!" he cried; "I'll go. I am in no hurry, you know. But you are positively sure now that you are not going to cross the Atlantic?"

So far the butcher had not spoken, nor did he speak now; but the spasm of resigned pessimism which seemed to run through his frame, heaving his chest and gently upturning his eyes, indicated quite plainly his opinion of the *Merry Chanter* crossing the Atlantic.

Having assured the Englishman that our trade was entirely coastwise, he declared he would go instantly to the town, fetch his luggage, and be on board in no time. In fact, when we had finished our ramble and were about to enter the boat which Captain Teel had rowed over to take us back to dinner, we saw our passenger rapidly striding over the hills bearing an immense portmanteau in one hand and in the other a hat-box, a bundle of umbrellas and canes, besides various other packages. He shouted to us to wait for him, and we took him on board with us.

The captains did not object in the least to our new passenger. "Summer tenants and boarders," said Captain Timon, "and sailin' parties long and short, has got ten times more money in 'em than fish and crops, or the flour

trade either, for that matter. I go in fur pickin' up passengers all along the coast if we can get 'em."

"Always being careful," said Doris, in an undertone, "not to pick up a Bodship." At which Captain Timon gave a sympathetic grin.

After dinner Doris said to me, "We ought to have a book in which to put down the names of our passengers." Accordingly I made one out of several sheets of paper. We entered first the name of the butcher, and then I was about to write that of the schoolmaster, but Doris objected.

"We ought to have another page for a free list," she said, "and put him on that."

When this had been arranged we went on deck to inquire the name of our new passenger. We found him sitting on a coil of rope, smoking a black wooden pipe and talking gaily to the butcher, the schoolmaster, and three of the captains.

"What is your name, sir?" said I, approaching with my book in my hand.

He took his pipe from his mouth in deference to the presence of my wife. "I am Lord Crabstairs," he said.

I happened to be looking at the butcher at this moment, and saw him suddenly turn upon his heel and disappear below. In an instant he returned. His arms were folded upon his chest, but I could see beneath his white gown the distinct outlines of a cleaver. He stepped close to me.

"Maniacy is a thing," he whispered, "which cannot be allowed on shipboard."

"You may think it a little odd," said the new passenger, looking about on the various degrees of surprise and amazement expressed upon the countenances of the company, "that a member of the upper house should be neglecting his parliamentary duties and taking passage with you for Boston, where he has n't the least business in the world, you know. But when I have told you my story you won't think it so beastly odd, after all."

"Story!" cried Doris. "Let everybody sit down and listen."

And everybody did; Captain Teel being brought post-haste from the cook's galley.

VII.

LORD CRABSTAIRS.

"IN the first place," said Doris, "do you really mean to say that you are truly an English lord—a peer of the realm?"

"I do really and truly mean to say that," answered the passenger, his blue eyes gleaming with as much of an honest glow as was ever seen in eyes. "I am Henry, Lord Crabstairs

of Haviltree, Warwickshire. The family estates once covered, I am told, ten thousand acres."

The butcher listened with interest. "Cattle?" he asked.

"Oh, no," said the other; "I don't care for cattle. What I like is poultry. Just before I left England I had the finest lot of poultry you ever saw—all blooded, with pedigrees. And bees, twenty-seven hives of bees, and each one with its name painted on it in a different color from the rest—'Daisy,' 'Clover,' 'Daffodil,' and so on. The bees could n't read the names, you know, but each one knew his hive by the color of the letters."

"This is the first time I ever heard," said Captain Garnish, "that there was twenty-seven colors."

"Oh, bless you!" cried the Englishman, "it is easy enough to manage that. On one hive the letters were all red, and on another they were all blue, and on another half were red and half blue, and so on. In that way I made the colors go round, you know."

"You ought to have painted your bees," remarked Captain Timon, "and then there could n't have been no mistake. If you saw a red bee goin' into a blue hive you could have picked him up and put him into the right hole."

"No need of that, no need of that!" cried the Englishman. "The bees attend to that. They kill them if they make a mistake, you know. And there are lots of other things I like, such as flower-beds and a kitchen garden. Nothing sets me up, you know, like working in the kitchen garden. And a cow. Every morning I curried and brushed my cow until she shone like a sealskin. That cow knew me like a brother. If she happened to be out of sight in the copse, all I had to do was to drum on the bottom of a tin pail and she would come running to be milked and to get her bit of cabbage leaf."

The company looked wonderingly at one another. Was this the usual way of life with British peers?

"When all that happened," continued the speaker, "I was the happiest man in the United Kingdom. Forty years old, sound of wind and limb, no wife nor child nor any one depending on me, a nice little house in the prettiest part of Bucks County, with a great copper beech in front of my door that the earl himself would have given a thousand pounds for if it could have been taken up and planted in his park, with a little green as smooth as velvet where I used to feed my fowls, and the brightest flower-beds and the earliest peas within twelve miles of Aylesbury. I have a little income from my mother's family, and that kept things going, and from break of day till ten o'clock at night there could n't be a jollier fellow than I was.

"Well, madam, and all of you, it was on a beautiful morning this spring, with the grass greener and more flowers in blossom and the peas more forward than I had ever known them before at that time of year, not to speak of a little calf as like to her mother as two pins of different sizes, when I was sitting in front of my cottage in the shade of the beech, with my morning pipe and mug of ale, that there came to me two men,—attorneys they were from London, who had driven over from the railway station in a dog-cart,—and they lost no time in saying that their errand was to inform me that by the death of the late lamented Godfrey, Lord Crabstairs, I was now Henry, Lord Crabstairs of Haviltree.

"As you may well imagine, I jumped up in a rage at hearing this. 'None of your lies!' I cried. 'Lord Godfrey may be dead or he may not be dead, but whichever he is, he has a son and a grandson, legal issue. You need not suppose that I have not kept my eye on all that.' 'That may be,' said the speaking attorney; 'but your eye did n't keep the son from falling overboard from a collier in the Mersey, and his infant son from dying two weeks ago of cholera infantum, without issue. Whereupon, by the death of old Lord Godfrey yesterday morning you are Lord Crabstairs and no mistake.'

"Now then," said the Englishman, looking briskly around at his auditors, "I was so angry that I was ready to knock down those two men right and left. But in England it does not do to lay hands on law folk. I was well up in this Crabstairs succession, you know. I had studied it all my life, and with two good lives between me and the title I felt safe. But how could any man imagine that such beastly luck was coming to him! You see the Crabstairs have been loaded with an inherited debt for a long, long time back, and for a hundred and fifty years there has not been a lord of the estate who has lived at Haviltree. Every man-jack of them, as soon as he came into the title, was clapped into jail for debt. There was no getting out of it except by running away; which some of them did.

"The inherited debt, you know, was bigger than any Crabstairs could pay. The second son of old Lord Godfrey took time by the forelock and ran away to the Philippine Islands, where he married a native wife and brought up a large family. But he never had anything but a heathen marriage, for fear that his elder brother might die without issue and misery might come upon his wife's children."

"That was true Christianity," said Captain Teel, solemnly.

"Now," said the speaking attorney to me, 'my lord,' said he—'Don't my lord me!' I shouted. 'I renounce the title! I have noth-

ing to do with these Crabstairs! I am eleven removes from the main line.' 'You can't renounce the title, my lord,' said he. 'You are the heir-at-law, and there is no getting out of it.' Now the second attorney, who had n't said anything so far, spoke up. He took a paper out of his pocket. 'Henry, Lord Crabstairs of Haviltree, Warwickshire,' said he, 'I arrest you for debt in the amount of two hundred and eighty thousand pounds, seven shillings, and sixpence ha'penny. And we brought over a constable in the dog-cart, so the easier you make things the better.'

"On hearing this I hurled my pint pot at one attorney and my pipe at the other, and making a dash at the beehives which stood near by, I kicked over a dozen of them. A black cloud of savage stingers came howling out, and as I sprang away—not one of them after me, for they knew their master—I heard behind me such a cursing and swearing and screaming as nearly split my ears. I darted into the garden, through the pea patch, and over the back fence, and made across country, at a pace those law people could n't think of keeping up, to the railway station. I caught a train, went to town, drew all my little income that was due, and took passage for America.

"And here I am, knowing nothing in the world of what has become of my dear home, of my cow and my calf, of my flower-beds and my kitchen garden, of my beautiful flock of poultry, or of the bees and the attorneys. I have left everything behind me; but there is one thought that makes up for a lot of what has happened, and that is that for the first time in many a long year there is no Lord Crabstairs in jail for debt. And what is more," he said, rising to his feet, and his blue eyes sparkling with honest indignation, "there never will be, so long as I am alive!"

At this Captain Garnish came forward and shook the Englishman by the hand, and his example was immediately followed by the other captains and by the schoolmaster.

"I can feel for you," said the latter, "as one who flees from tyranny. May you never be overtaken!"

The butcher did not shake hands. That was not his way. He stood up very straight and said: "May I be chopped and sawed, bone-drawn and skewered, if I'd live in a country where a man can be made a lord without his having a word to say about it! If I found myself in that fix, sir, debt or no debt, jail or no jail, I'd cut and run! I say you did the square thing, sir!"

"Do you intend," asked Doris, who had listened with eager earnestness to the Englishman's story, "to continue to call yourself Lord Crabstairs?"

"Of course I do," said the other. "That is

my name, and I shall not disown it. I don't wish to sail under false colors; and more than that, so long as it is known that I am alive and holding the title they can't nab any other poor fellow, perhaps with a family."

"Very good," said Doris; "we understand your case perfectly. And now," she continued, turning to Captain Timon, "let us set sail."

VIII.

DOLOR TRIPP.

BUT Captain Timon was not yet ready to set sail. The business of water-carrying had not gone on in the afternoon, for the reason that the spring had become muddy by much dipping and required some time in which to settle and purify itself. Two casks had been left there, so it was absolutely necessary that a boat should go after them, and it was now too late in the day to make an advantageous trip.

I think Doris's impatience would have proved beyond her control had she not become interested in a plan proposed by Lord Crabstairs. This nobleman was of an exceedingly lively and practical disposition, and took a great interest in his contemplated sea voyage to Boston. He had come into this part of the country without other aim than to escape cities, which he hated; and he would not now be going to Boston but for the opportunity of going by sea. He was very fond of the sea, and when he had seen our anchored ship he had been fascinated by the idea of sailing somewhere in her.

His desire now was to plunge boldly into sailor life, to pull on ropes, to climb the mast-head, and all that sort of thing, and he had been very much taken aback when the schoolmaster informed him that nothing of the kind would be allowed.

"If you pay your passage," said the schoolmaster, "they will not let you do any work at all; and if you sail gratis, so to speak, you can only do enough to pay for your meals."

The prospect of sailing without occupation appeared dull to Lord Crabstairs, nor did the offer of the schoolmaster to allow him sometimes to attend to the sandpiper promise much relief. But his mind was as quick and active as his body.

"By George!" he cried, "I don't care for birds like that; but I will keep poultry. Fresh eggs every morning, and roast fowl for dinner. I will go on shore at daybreak to-morrow and buy some."

The butcher here remarked that if fowls were to be killed he would furnish the tools, but that was all he would do, as he had gone out of that business.

Our detentions in port had had the effect

of making Doris feel the need of occupation, and she gladly welcomed the poultry scheme. Of course there would not be time on the voyage to hatch out little chickens; but she determined, if it were possible, to purchase for herself a hen with a young brood.

The discussions regarding this new scheme proved interesting, and the captains gave their full consent. The enthusiastic nobleman went so far as to suggest the purchase of a few hives of bees, but this proposal met with no favor. A cow was spoken of, but here the butcher vehemently objected. The time might come, he said, when she would have to be slaughtered, and he vowed he would not sail in company with a cow that might have to be slaughtered.

The first thing I saw when I cast my eyes landward the next morning was Lord Crabstairs hurrying over the hillocks towards the shore, and carrying a pair of full-grown fowls with each hand. He had rowed himself ashore, and now returned with his prizes.

"There they are!" he cried, as soon as he reached the deck. "Three hens and a cock! That was all the woman would sell, but she said we might get young chicks at a house about a mile farther inland. I will go there directly I've eaten breakfast. And now what are we to do with them? Of course it won't do to put up a high fence all around the deck. But I dare say they know as well as we do that they can't swim, and so will not jump overboard. Anyway, here goes to see what will happen." And he cut the cords which bound their legs.

Instantly the four fowls began to rush madly here and there, screaming and fluttering their wings. The cock flew half way up one of the shrouds of the mainmast, and sat there croaking and evidently highly excited, while the three hens went screaming down the open hatchway on the forward deck, and then after some wild careering flew down another hatchway into the hold among the ballast.

"That will do very well," said Lord Crabstairs. "I will throw them down some bread, and there they can stay until we have mustered the rest of the flock. As for the cock, if he likes the rope ladders, he is welcome to stop there for the present."

"It is a good thing he is not an egg layer," said the schoolmaster.

After breakfast Lord Crabstairs, accompanied by Doris, who wished to select her own brood, and by myself and the butcher, went on shore on an expedition after poultry.

The house to which we directed our steps was about a mile and a half from our landing-place, and when we had approached near enough to get a good view of it we found it to be a dark, somber building without a tree near it except a great pine, which grew so

close to one corner that it seemed like a part of the house. As we drew nearer, Doris remarked that it looked more like a prison than a farm-house.

At this Lord Crabstairs laughed loud and said he hoped we should not find it full of jail-birds, as those were not the ornithological specimens we were after.

As we drew nearer, the resemblance to a prison increased. A high pale fence surrounded the house yard, and we could see that there were iron bars to the windows. The narrow gate which opened upon the road was locked, but a man was at work inside, and he came and opened it. When we told him our errand he at first hesitated, and then said we must go and ask at the house.

In a body we went up a grass-grown brick path to the front door, where we knocked. A more somber-looking house I never stood before. The building itself had a certain air of importance, but the surrounding grounds did not accord with any such air. They were flat, bare, and covered with scrubby grass; not a flower-bed nor border, nor even a rose bush. The thin grass which covered the house yard had recently been cut, and the man was now raking it into meager little piles of hay. A few out-buildings at a short distance were separated from this yard by a high fence and a gate. The building itself was destitute of any attempt at ornament, not having even a piazza.

After we had waited some minutes the door was opened as far as a stout chain would allow, and the form of a tall woman appeared at the aperture. She wore a black-and-white striped sunbonnet. We saw more of this sunbonnet than of her face.

Doris stepped forward and stated our errand. The woman listened, and then, remarking that she would see, shut the door with a bang.

"Polite, that!" said Lord Crabstairs. "I dare say she is a female convict."

The door was not opened again, but presently there came around the corner another woman, also wearing a black-and-white striped sunbonnet; but she was shorter and had a pleasanter voice than the other.

"If it's chickens you want," she said, "you can come this way. We have some to sell." She led the way through a gate to a poultry-yard, where she showed us a variety of fowls, not one of which, Lord Crabstairs declared, possessed a single drop of pure blood. He selected, however, a half-dozen of the best specimens, and Doris bought a hen with nine little chicks, together with the coop, which, with its occupants, the butcher and I undertook to carry to the boat.

While we were engaged in making our purchases another woman came out to the chicken-

yard. She also wore a black-and-white striped sunbonnet, but she was younger than the two others, and her face was quite pretty. Her countenance had a pensive expression, but her large gray eyes were quick and alert, and moved with interest and curiosity from one member of our party to another. She did not speak during the selection and bargaining, but observed everything that was done and listened to everything that was said.

When we were leaving the poultry-yard she stepped up to Doris and said: "I am glad you wanted chickens. I have not seen a stranger since March."

Delighted to have this opportunity given her to ask questions, Doris asked questions without stint.

"Yes," answered the young woman, "my two sisters and I live here all alone by ourselves. This high fence and the iron bars to the lower windows are to keep out burglars. Alwilda — she is the one who came to the front door — and Lizeth — that one over there with the chickens — are very much afraid of burglars. There is no man in the house. Our hired man sleeps in the barn. Alwilda locks the two yard gates herself every night, so he is shut out just the same as everybody else. My name is Dolor — Dolor Tripp. Tripp is our family name. Yes, it is dreadfully lonely. We don't do anything but just live here, except Alwilda; she paints."

"Paints!" exclaimed Doris in surprise, recalling the figure of the tall woman in the black-and-white sunbonnet.

"Yes," replied Dolor Tripp. "She paints pictures on the dining-room walls. She has gone only half round the room, and she has been years and years at it. Sometimes she paints things she sees, and sometimes things she remembers. The things she remembers are done better than the things she sees. She never goes outside this yard."

"And you?" asked Doris. "Have you nothing to occupy your time?"

"Not a thing," replied the young woman, "except housework, and that does n't count. I should like the chickens, but Lizeth attends to them. I hardly ever see neighbors or strangers. The minute I heard that there were people here to buy chickens I came straight out. I am glad to see anybody."

I had joined the group, and noticed that at these words a smile appeared on the hitherto somewhat pensive countenance of the speaker. She looked around and perceived that her sister and Lord Crabstairs had gone to a little distance to look at some ducks.

"Do you know," she said, "that over and over again I have felt glad that that pine tree is growing so close to the corner of the house. It never enters the minds of Alwilda and Lizeth

that there is any danger in it, but you can see for yourselves that if a burglar once got into the yard he could go up that tree just the same as a ladder, and get into that second-story window. I have sat up half the night wondering if a burglar ever would come up that tree."

"Do you mean to say," I asked, "that your feeling of loneliness is so great that you would even be glad to see a burglar?"

"I don't exactly say that I would be glad to see one," answered Dolor, "but it would be a change."

"You must indeed be lonely," said Doris, looking upon the girl with earnest sympathy, "if you consider a burglar better than nobody."

Doris looked at Dolor Tripp for a few moments, and then suddenly turned to me with a light upon her face. She drew me aside, and whispered: "A glittering idea has just struck me. Suppose we propose to her to go with us! A voyage to Boston would do her no end of good; and when we came back we could leave her here just as well as not. Shall I ask her?"

There was a deference in these concluding words which greatly pleased me. As a rule I did not desire any more women on the *Merry Chanter*, but this case was exceptional. The passage money of the young woman would be of service, it would be an excellent thing for Doris to have a suitable person of her own sex on board, and it would be true charity to give this poor girl a chance to see something of the world. As to her being a stranger to us, that did not matter. Most of us were comparative strangers to one another, and it is not customary to inquire into the character and family antecedents of passengers to Boston.

When Doris made her suggestion to Dolor Tripp the eyes of the latter opened wide and sparkled. "Go to Boston?" she cried. "In a ship? With you? Go? Why, I would go if I had to sell my hair! But Alwilda will never agree. Lizeth may — I don't know; but you can't move Alwilda one inch. But don't suppose I am not going," she added quickly. "Nothing would ever happen if you waited for Alwilda to agree. When do you start?"

"We ought to set sail," said Doris, "very soon after we get to the ship. I suppose all the water must be on board by this time."

"Oh, dear!" said Dolor Tripp. "That would be dreadfully soon. I don't see how I could manage it."

During our conversation with the young woman the butcher had been standing by, silent but observant. He now stepped forward. "I don't believe, ma'am," he said, addressing Doris, "that we can sail as soon as we get back. The skipper wants to go out on the ebb, and it must have been high tide two hours ago, so that by the time we are aboard

and everythin' is ready there won't be much ebb tide to go out on; and it won't be high water again until after dark to-night. So you see Cap'n Timon is more than likely to want to wait till to-morrow mornin' anyway."

"Well," said Doris, "there is n't really any reason why we should be in a hurry. Boston will keep, I've no doubt. And if Captain Timon thinks it is better to wait until to-morrow morning, of course we can wait until then. Will that suit you?" she said to Dolor Tripp, whose countenance was now glowing with excitement.

"That will be time enough," was the answer. "I'll know all about it this afternoon."

"Can you send us word," asked Doris, "so we may know whether or not to expect you?"

Dolor Tripp looked a little embarrassed, but before she could speak the butcher said to her, "Have you a clock in your house?"

"Ofcourse we have," she answered promptly.

"Well, then," said he, "if you will have a note ready at six o'clock precisely I'll come here and get it."

"Very well," said Dolor Tripp; "I'll have it ready. It will be better for you to go to the lower end of the yard, and I'll hand the note to you through the palings. The gate is right in front of the dining-room windows."

Lord Crabstairs and Lizeth now returned to us, his lordship having given up the idea of buying ducks, because there would be no way of allowing them to swim except by lowering them from the ship by means of a long cord; and this would be feasible only when we were at anchor. The butcher and I now took up the coop containing the hen and chickens, our disengaged hands each bearing a pair of fowls, while his lordship carried the rest of the purchased poultry, gallantly declining to allow Doris to bear the weight of even the smallest pullet.

We left behind us two happy sisters, one placidly smiling over the results of an unusually profitable sale, and the other glowing with the anticipation of unknown joys.

IX.

THE "MERRY CHANTER" AND THE TIDE.

A LITTLE before dark that afternoon the butcher appeared before Doris and me on the after portion of the deck and made his report.

"I got to that house," he said, "at a quarter before six; and as I was a little ahead of time I waited outside the pale fence, keeping some bushes between me and the house. Pretty soon that Dolor sister came out and began walking straight down to the corner of the fence; but before she got there the Lizeth sister she came out, and then the Dolor sister she turned straight towards the chicken-yard, and going

inside the feed-house she came out with her apron full of corn and began feeding the chickens right and left like mad; and the Lizeth sister she called out to her to stop wasting corn that way, and she went and took the corn from her and began to attend to the chickens herself. Then the Dolor sister she went walking about picking the weed blossoms, throwing 'em down again and picking more, and all the time moving down towards the fence; and the minute the Lizeth sister locked the poultry-yard and went into the house the Dolor one came straight to the corner where she said she'd meet me, and there I was. She put this note between the palings, and says she, 'Is there any way of getting a trunk from this house to your ship to-night?' 'Unbeknown?' said I. 'Yes,' said she. 'At least nobody here must know it.' 'Then you are going with us to Boston?' said I. 'Yes, indeed I am,' said she; 'but there will be no trouble about me. It's only the trunk.' 'Then your sisters are not willing?' said I. 'They would n't be if I told 'em,' said she, 'and so I don't intend to tell 'em. They have n't the least right in the world over me, for I am of age; but they'd make a lot of trouble if they knew I wanted to go to Boston, and I don't want to have any more trouble than I can help having.' 'When will your trunk be ready?' says I, 'and where will it be?' 'There's an empty one in a lower room,' said she; 'and after it gets pitch-dark I can put it outside by the back door, and then I can bring my things down and put them in it, but I can't move it after that.' 'At what time will it be all packed and locked and at the back door?' says I. 'Certainly by twelve o'clock,' says she. 'Then at one o'clock,' says I, 'it will be on board the ship.' 'That is beautiful,' says she; 'and as soon as the lower gate is unlocked for the hired man in the morning, I'll walk through the chicken-yard and around the sand hills till I am out of sight of the house and then go straight to the shore.' 'Where there'll be a boat to meet you,' says I. Then she said she supposed I was the cap'n, and on being told not thanked me all the same and left sharp. And here's the note."

With the exception of the statement that the writer would bring money to pay her passage, the note contained nothing that the butcher had not told us.

"I like her spirit," said Doris. "If she is of age there is no reason why she should n't go to Boston, or anywhere else she wants to. But how in the world is her trunk to be got here? The gates will be locked."

"The schoolmaster and me," said the butcher, "will attend to the trunk. He won't be afraid to go on shore when it is pitch-dark, and I'll take a bull's-eye lantern to use when needed."

This being settled, Doris and I went below to arrange for the accommodation of the new-comer. There was a little cabin back of our own, which we appropriated to Dolor Tripp. Its space was extremely limited, but we could do no better for her.

Lord Crabstairs had been so exceedingly busy in arranging accommodations for the poultry on the forecastle, and in endeavoring to entice from the rigging the cock which had first arrived on board, that he did not know of the arrangements that had been made for the transfer of the baggage of Dolor Tripp. Otherwise, as he informed us next morning, he would have been on hand, for a lark like that was much to his liking.

The butcher and the schoolmaster must have had a hard time with the trunk, but they succeeded in getting it over the high fence, and by one o'clock, as had been promised, it was on board the *Merry Chanter*.

Doris and I arose very early the next morning, and it could not have been more than half-past six when we beheld Dolor Tripp coming down to the shore with a parasol in one hand and a little leather bag in the other. Lord Crabstairs was standing near us, and the moment his eyes fell upon her he gave a jump.

"I'll take a boat and fetch her," said he. "I can do that much, anyway."

"Stop!" cried Doris. "I do not think that would be fair. After all the butcher's trouble about her he should have the pleasure of bringing her over in the boat."

"I don't quite see the point of that," said Lord Crabstairs. "'Turn about is fair play.'"

"That would be no turn about at all," said Doris; "but we have no time to argue this matter, for Dolor Tripp will get down to the water's edge and find nobody to bring her over. So, as I command the *Merry Chanter*, and everybody in it, I am obliged to say to you, Lord Crabstairs, that you cannot go after that young woman unless the butcher is willing."

It struck me that this was a moment when a word from me seemed to be called for, but I could not make up my mind what sort of word to speak.

Lord Crabstairs made a very low bow. "Madam," said he, "I submit; and I will go find the butcher and see if he will give me his chance."

In about a minute the butcher appeared from below, and made instant preparations to descend into the boat which was tied to the schooner's stern. "It will be much better," he said, "for some one who knows her to go after her. She may not like to be brought over by a stranger."

"'Know her!' 'Stranger!' Bedad, I like that!" ejaculated Lord Crabstairs, as the

butcher rowed away. "He rows very well for a butcher now, does n't he? I don't believe a man who rows as well as that can be a very good butcher. Now, do you, madam?"

"I do declare," exclaimed Doris, without paying any attention to this inquiry, "she really does seem delighted to see him! And I am so glad she has on that pretty straw hat. I was afraid she would come in her black-and-white sunbonnet."

The shore was but a short distance away, and very soon Dolor Tripp was on board the *Merry Chanter*. She was cordially received by the owners, the four captains, and the passengers, and shook hands all round.

"And now," cried Doris, "we must up anchor, hoist sail, and be away without loss of time. I long to be out on the rolling deep."

But Captain Timon shook his head. "The tide does n't serve this mornin', madam," said he.

"Oh, bother the tide!" cried Doris. "I never saw anything like it. But I beg you will make a start the instant it does serve." And with this she took Dolor Tripp down below to show her the arrangements that had been made for her accommodation.

Lord Crabstairs, who was an active fellow, now mounted aloft to compel the truant cock to get down from its elevated position in the rigging, while the schoolmaster, carrying the sandpiper in its cage, appeared on deck and proceeded to give the usual morning attentions to the wounded bird.

The butcher, his hands in his pockets and an expression of earnest thought on his face, came after me. Meeting me at the extreme stern of the vessel, he said in a low voice: "Do you know that I have got some ideas about this schooner? We have been lying here more than three days, and in all that time I don't believe she's moved around with the tide any more than that stump there on shore has moved around with it. Tide in and tide out, twice a day each way, and she's been lying here with her bowsprit pointing out to sea and her rudder pointing into shore with never a shift one way or the other. Now it stands to reason, I take it, that if a schooner like this could move with the tide she would move with it; and as she does n't move with it, it stands to reason she can't move with it."

"I never thought of that!" I exclaimed in surprise. "But, since you speak of it, I believe it is so. What do you suppose it means?"

"Means?" replied the butcher, looking around him and speaking in lower tones. "I'll tell you what I believe it means. I think that we are stuck fast to the bottom of this bay. When they first came in they put out their anchor, and then the schooner, most likely, swung

around on to a sand bar, and stuck tight and fast. If she has n't done that, what 's to hinder her moving with the tide?"

"But the captains?" I said. "If the ship were aground they would mention it. They would do something."

"They are not much on the mention," said the butcher; "and as to do, they 've been hoping every high tide would float her off. I would have been on deck this morning when the Dolor sister showed on shore if I had n't been listening to the cap'n's talk about some particular high tide that comes with a particular quarter of the moon. I was called off and did n't make out what quarter it was, but I believe they 're waiting for it."

"If that is the case," said I, "I hope most earnestly that it is not far off."

"There 's no knowing," said the butcher, rather lugubriously. "I don't care to ask 'em about it, for it 's their business to sail the ship, not mine. But there 's one thing I do know, and that is when an old schooner like this, with about seventy cart-loads of paving stones inside of her, and barnacles outside that will

weigh about as much, settles on a sand bank she 'll want a special high tide to come along at its earliest convenience if she ever expects to float at all."

I gazed gloomily over the stern. The little boat was gently pulling at her painter as the tide impelled her seaward, but the *Merry Chanter* kept its position like a Horse Guard on sentry duty. "At any rate," I said, "it will be of no use to worry the ladies with our conjectures."

"I am with you there," said the butcher. "It would n't be my way to trouble them or anybody else. But it strikes me that we 'll find things pretty crooked when we eat up all our provisions before we 've sailed an inch to Boston, and the news gets around that we 're aground in Shankashank Bay, and Mrs. Bodship comes after the schoolmaster, and either carries him off, and perhaps Cap'n Cyrus too, or else stays on board herself, which would be an everlasting sight worse, and the Alwilda sister and the Lizeth sister come after Dolor Tripp, and Lord Crabstairs gets kidnaped for the family debts while wandering on shore."

(To be continued.)

THE FLOWER OF DESTINY.

A FLOWER strange and new,
 I know not of what hue,
 I sought for even when a little child,
 Still vainly, vainly through the thickets wild.
 Could I have dreamed of it in some lost dream?
 I only know o'er meadow and by stream,
 On sunny hillside, and in shadowed glade,
 Where pine and laurel tender twilight made,
 I searched in wistful weariness, and then,
 At eventide, resolved to come again
 Upon the morrow. Spring and Summer passed,
 And Autumn killed of her own blooms the last.
 But this undaunted faith supported me:
 After the Winter I the flower shall see.
 Ah me! The changing seasons came and brought
 Flowers upon flowers, but not the one I sought;
 And years and years went by, and Hope forlorn
 Almost refused to lead me forth at morn
 With a glad smile for welcome, if should rise,
 Dewy and dear, my flower of Paradise.
 And I am old at last, ay, near the side
 Of Jordan, but my longing has not died —
 The longing for this blossom, strange and new.
 I know not what its shape or what its hue;
 But know, across a grave-mound o'er the stream,
 Beyond Earth's winter and beyond Life's dream,
 This wonder-flower of my missed destiny
 Grows toward my coming, keeps its bloom for me.

Louise Vickroy Boyd.

ABRAHAM LINCOLN: A HISTORY.¹

THE FALL OF THE REBEL CAPITAL—LINCOLN IN RICHMOND.

BY JOHN G. NICOLAY AND JOHN HAY, PRIVATE SECRETARIES TO THE PRESIDENT.

THE FALL OF THE REBEL CAPITAL.

SINCE the visit of Blair and the return of the rebel commissioners from the Hampton Roads conference, no event of special significance had excited the authorities or people of Richmond. February and March passed away in the routine of war and politics, which at the end of four years had become familiar and dull. To shrewd observers in that city things were going from bad to worse. Stephens, the Confederate Vice-President, had abandoned the capital and the cause and retired to Georgia to await the end. Judge John A. Campbell, though performing the duties of Assistant Secretary of War, made, among his intimate friends, no concealment of his opinion that the last days of the Confederacy had come.² The members of the rebel Congress, adjourning after their long and fruitless winter session, gave many indications that they never expected to reassemble. A large part of their winter's work had been to demonstrate without direct accusation that it was the Confederate mal-Administration which was wrecking the Southern cause. On his part Jefferson Davis prolonged their session a week to send them his last message—a dry lecture to prove that the blame rested entirely on their own shoulders. The last desperate measure of rebel statesmanship, the law to permit masters to put their slaves into the Southern armies to fight for the rebellion, was so palpably illogical and impracticable that both the rebel Congress and the rebel President appear to have treated it as the merest legislative rubbish; or else the latter would scarcely have written in the same message, after stating that “much benefit is anticipated from this measure,” that

The people of the Confederacy can be but little known to him who supposes it possible they would

ever consent to purchase, at the cost of degradation and slavery, permission to live in a country garrisoned by their own negroes, and governed by officers sent by the conqueror to rule over them.³

Jefferson Davis was strongly addicted to political contradictions, but we must suppose even his cross-eyed philosophy capable of detecting that a negro willing to fight in slavery in preference to fighting in freedom was not a very safe reliance for Southern independence. The language as he employs it here fitly closes the continuous official Confederate wail about Northern subjugation, Northern despotism, Northern barbarity, Northern atrocity, and Northern inhumanity which rings through his letters, speeches, orders, messages, and proclamations with monotonous dissonance during his whole four years of authority.

Of all the Southern people none were quite so blinded as those of Richmond. Their little bubble of pride at being the Confederate capital was ever iridescent with the brightest hopes. They had no dream that the visible symbols of Confederate government and glory upon which their eyes had nourished their faith would disappear almost as suddenly as if an earthquake had swallowed them. Poverty, distress, and desolation had indeed crept into their homes, but the approach had been slow, and so mitigated by the exaltations of a heroic self-sacrifice that they welcomed the change rather than suffered by it. For the moment nature was their helper. The cheering, healing, revivifying influences of the spring-time were at hand. The warm sunshine lay on the hills, the songs of birds were in the air, buds and blossoms filled the gardens.

All accounts agree that when on Sunday morning, April 2, 1865, the people of Richmond went forth to their places of worship, they had no thought of impending change or public calamity. The ominous signs of such a possibility had escaped their attention. A few days before, Mrs. Jefferson Davis, with her children, had left Richmond for the South and sent some of her furniture to auction. So also some weeks before, the horses remaining in the city had been impressed to collect the tobacco into convenient warehouses where it

could be readily burned to prevent its falling into Yankee hands.¹

But the significance of these and perhaps other indications could not be measured by the general populace. In fact for some days a rather unusual quiet had prevailed. That morning Jefferson Davis was in his pew in St. Paul's Church when before the sermon was ended an officer walked up the aisle and handed him a telegram from General Lee at Petersburg, dated at half-past ten that morning, in which he read, "My lines are broken in three places; Richmond must be evacuated this evening." He rose and walked out of church; whereupon the officer handed the telegram to the rector, who as speedily as possible brought the services to a close, making the announcement that General Ewell, the commander at Richmond, desired the military forces to assemble at three o'clock in the afternoon. The news seems also to have reached in some form one or two of the other churches, so that though no announcement of the fact was made, the city little by little became aware of the harrowing necessity.

The fact of its being Sunday, with no business going on and rest pervading every household, doubtless served to moderate the shock to the public. Yet very soon the scene was greatly transformed. From the Sabbath stillness of the morning the streets became alive with bustle and activity. Jefferson Davis had called his Cabinet and officials together, and the hurried packing of the Confederate archives for shipment was soon in progress. Citizens who had the means made hasty preparations for flight; the far greater number who were compelled to stay were in a flutter to devise measures of protection or concealment. The banks were opened and depositors flocked thither to withdraw their money and valuables. A remnant of the Virginia legislature gathered in the Representatives' Hall at the Capitol to debate a question of greater urgency than had ever before taxed their wisdom or eloquence. In another room sat the municipal council, for once impressed with the full weight of its responsibility. Meanwhile the streets were full of hurrying people, of loaded wagons, of galloping military officers conveying orders. One striking sketch of that wild hurry-scurry deserves to be recorded.

Lumpkin, who for many years had kept a slave-trader's jail, also had a work of necessity on hand—fifty men, women, and children, who must be saved to the missionary institution for the future enlightenment of Africa. Although it was the Lord's day (perhaps he was comforted by the thought that

"the better the day the better the deed") the coffin-gang was made up in the jail yard, within pistol shot of Davis's parlor window, within a stone's throw of the Monumental Church, and a sad and weeping throng, chained two and two, the last slave-coffin that shall ever tread the streets of Richmond, were hurried to the Danville depot.²

But the "institution," like the Confederacy, was already *in extremis*. The account adds that the departing trains could afford no transportation for this last slave cargo, and the gang probably went to pieces like every other Richmond organization, military and political.

Evening had come, and the confusion of the streets found its culmination at the railroad depots. Military authority made room for the fleeing President and his Cabinet, and department officials and their boxes of more important papers. The cars were overcrowded and overloaded long before the clamoring multitude and piles of miscellaneous baggage could be got aboard, and by the occasional light of lanterns flitting hither and thither the wheezing and coughing trains moved out into the darkness. The legislature of Virginia and the governor of the State departed in a canal boat towards Lynchburg. All available vehicles carrying fugitives were leaving the city by various country roads, but the great mass of the population, unable to get away, had to confront the dread certainty that only one night remained before the appearance of a hostile army with the power of death and destruction over them and their homes.

How this power might be exercised, present signs were none too reassuring. Since noon, when the fact of evacuation had become certain, the whole fabric of society seemed to be crumbling to pieces. Military authority was concentrating its energy on only two objects, destruction and departure. The civil authority was lending a hand, for the single hasty precaution which the city council could ordain was, that all the liquors in the city should be emptied out. To order this was one thing, to have it rigorously executed would be asking quite too much of the lower human appetites, and while some of the street gutters ran with alcohol, enough was surreptitiously consumed to produce a frightful state of excitement and drunkenness. No picture need be drawn of the possibilities of violence and crime which must have haunted the timid watchers in Richmond who listened all night to the shouts, the blasphemy, the disorder that rose and fell in the streets, or who furtively noted the signs of pillage already begun. And how shall we follow their imagination, passing from these visible acts of the friends of yesterday to what they might look for from the enemies expected to-morrow? For had not their President offi-

¹ Jones, "A Rebel War Clerk's Diary," Vol. II., p. 438.

² "Atlantic Monthly," June, 1865.

cially, their statesmen, and their newspapers with frantic rhetoric, warned them against the fanatical, penny-worshipping Yankee invader? And that final horror of horrors, the negro soldiers held up to their dread by the solemn presidential message of Jefferson Davis only two weeks before. What now of the fear of servile insurrection, the terrible specter they had secretly nursed from their very childhood? It is scarcely possible they can have escaped such meditations even though already weary and exhausted with the surprises and labors of the day, with the startling anxieties of the evening, with the absorbing care of burying their household silver and secreting their yet more precious personal ornaments and tokens of affection. In Europe, a thousand wars have rendered such experiences historically commonplace; in America, let us hope, that a thousand years of peace may render their repetition impossible.

Full of dangerous portent as had been the night, the morning became yet more ominous. Long before day sleepers and watchers alike were startled by a succession of explosions which shook every building. The military authorities were blowing up the vessels in construction at the river. These were nine in number, three of them iron-clads of four guns each, the others small wooden ships.¹ Next, the arsenal was fired; and, as many thousands of loaded shells were stored here, there succeeded for a period the sounds of a continuous cannonade. Already fire had been set to the warehouses containing the collected tobacco and cotton, among which loaded shells had also been scattered to insure more complete destruction.

There is a conflict of testimony as to who is responsible for the deplorable public calamity which ensued. The rebel Congress had passed a law ordering the Government tobacco and other public property to be burned, and Jefferson Davis states that the general commanding had advised with the mayor and city authori-

ties about precautions against a conflagration.² On the other hand, Lieutenant-General Ewell, the military commander, has authorized the statement that he not only earnestly warned the city authorities of the certain consequences of the measure, but that he took the responsibility of disobeying the law and military orders. "I left the city about seven o'clock in the morning," he writes, "and as yet nothing had been fired by my orders; yet the buildings and depot near the railway bridge were on fire, and the flames were so close as to be disagreeable as I rode by them."³ By this time the spirit of lawlessness and hunger for pillage had gained full headway. The rearguard of the retreating Confederates set the three great bridges in flames, and while the fire started at the four immense warehouses and various points, and soon uniting in an uncontrollable conflagration was beginning to eat out the heart of the city, a miscellaneous mob went from store to store, and with a beam for a battering ram smashed in the doors so that the crowd might freely enter and plunder the contents. This rapacity, first directed towards bread and provision stores, gradually extended itself to all other objects until mere greed of booty rather than need or usefulness became the ruling instinct, and promoted the waste and destruction of that which had been stolen. Into this pandemonium of fire and license there came one additional terror to fill up its dramatic completeness.

About ten o'clock [writes an eye-witness], just before the entrance of the Federal army, a cry of dismay rang all along the streets which were out of the track of the fire, and I saw a crowd of leaping, shouting demons, in parti-colored clothes, and with heads half shaven. It was the convicts from the penitentiary, who had overcome the guard, set fire to the prison, and were now at liberty. Many a heart which had kept its courage to this point quailed at the sight. Fortunately, they were too intent upon securing their freedom to do much damage.⁴

It is quite probable that the magnitude and

¹ "The following is a list of the vessels destroyed: *Virginia*, flag-ship, four guns, iron-clad; *Richmond*, four guns, iron-clad; *Fredericksburg*, four guns, iron-clad; *Nauesmond*, two guns, wooden; *Hampton*, two guns, wooden; *Roanoke*, one gun, wooden; *Torpedo*, tender; *Shrapnel*; *Patrick Henry*, school-ship." [Porter, Report, April 5, 1865. Report Sec. Navy, 1865-66.]

² Davis, "Rise and Fall of the Confederate Government," Vol. II., p. 666.

³ Ewell to Lossing, November, 1866. "The Independent," March 11, 1886.

Lossing, writing from both the written statement and verbal explanations of General Ewell, says: "Now General Ewell earnestly warned the city authorities of the danger of acting according to the letter of that resolution; for a brisk wind was blowing from the south which would send the flames of the burning warehouses into the town and imperil the whole city. Early in the evening a deputation of citizens called

upon President Davis and remonstrated against carrying out that order of Congress, because the safety of the city would be jeopardized. He was then in an unamiable state of mind, and curtly replied, 'Your statement that the burning of the warehouses will endanger the city is only a cowardly pretext to save your property for the Yankees!' After Davis's departure a committee of the city council, at the suggestion of General Ewell, went to the War Office to remonstrate with whomsoever might represent the department, against the execution of the perilous order. Major Melton rudely replied in language which was almost an echo of that of his superior, and General Ewell, in spite of his earnest remonstrances, was ordered to cause the four warehouses near the river to be set on fire at three o'clock in the morning." [Lossing, in "The Independent" (New York), March 11, 1886.]

⁴ Mary Tucker Magill, in "The Independent" (New York), Jan. 7, 1886.

rapidity of the disaster served in a measure to mitigate its evil results. The burning of seven hundred buildings comprising the entire business portion of Richmond, warehouses, manufacturing, mills, depots, and stores, all within the brief space of a day, was a visitation so sudden, so unexpected, so stupefying as to overawe and terrorize even wrong-doers, and made the harvest of plunder so abundant as to serve to scatter the mob and satisfy its rapacity to quick repletion.

Before a new hunger could arise, assistance, protection, and relief were at hand. The citizens' committee which went forth to surrender Richmond met the vanguard of the Union army under General Weitzel outside the limits of the city in the early forenoon, and after a formal ceremony of submission, a small detachment of white Union cavalry galloped into the late rebel capital, and proceeding directly to the State House raised the national flag over it.¹ Soon afterward there occurred what was to the inhabitants the central incident of the day—the event which engrossed their solicitude even more than the vanished rebel Government, the destroyed city, or the lost cause. This was the arrival of the colored soldiers, the, to them, visible realization of the new political and social heavens and earth to which four years of rebellion and war had brought them. The prejudices of a lifetime cannot be instantly overcome, and the rebels of Richmond doubtless felt that this was the final drop in their cup of misery and that their “subjugation” was complete. General Weitzel had arrived with the first detachment of Union cavalry; and seeing the conflagration and disorder, he sent back an aide in haste to bring into the city the first brigade he could find, to act as a provost guard.

At length they came—a brigade of colored cavalry from the division of General Devens.² It is related that about this time, as by a common impulse, the white people of Richmond disappeared from the streets, and the black population streamed forth with an apparently instinctive recognition that their day of jubilee had at last arrived. To see this compact, organized body of men of their own color, on horseback, in neat uniforms, with flashing sabers, with the gleam of confidence and triumph in their eyes, was a palpable living reality to which their hope and pride, long repressed, gave instant response. They greeted them with expressions of welcome in every form—cheers, shouts, laughter, and a rattle of ex-

clamations as they rushed along the sides of the street to keep pace with the advancing column and feast their eyes on the incredible sight; while the black Union soldiers rose high in their stirrups and with waving swords and deafening huzzas acknowledged the fraternal reception.

But there was little time for holiday enjoyment. The conflagration was roaring, destruction was advancing; fury of fire, blackness of smoke, crash of falling walls, obstruction of debris, confusion, helplessness, danger, seemed everywhere. The great Capitol Square on the hill had become the refuge of women and children and the temporary storing-place of the few household effects they had saved from the burning. From this center, where the Stars and Stripes were first hoisted, there now flowed back upon the stricken city, not the doom and devastation for which its people looked, but the friendly help and protection of a generous army bringing them peace, and the spirit of a benevolent Government tendering them forgiveness and reconciliation. Up to this time it would seem that not an organization had been proposed nor a hand raised to stay the ravages of the flames. The public spirit of Richmond was dead even to that commonest of human impulses, the willingness to help a neighbor in affliction. The advent of the Union army breathed a new life into this social paralysis. The first care of the officers was to organize resistance to fire; and instead of the blood and rapine which the deluded Virginians feared from the Yankee officers and “niggers” in Federal uniforms, they beheld them reestablish order and personal security, and convert the unrestrained mob of whites and blacks into a regulated energy, to save what remained of their city from the needless fire and pillage to which their own friends had devoted it, against remonstrance and against humanity. And this was not all. Beginning that afternoon and continuing many days, these “Yankee invaders” fed the poor of Richmond, and saved them from the starvation to which the law of the Confederate Congress, relentlessly executed by the Confederate President and some of his subordinates, exposed them.

LINCOLN IN RICHMOND.

A LITTLE more than two months before these events, President Lincoln had written the following letter to General Grant:

Please read and answer this letter as though I was not President, but only a friend. My son, now in his twenty-second year, having graduated at Harvard, wishes to see something of the war before it ends. I do not wish to put him in the ranks,

¹ The flag was raised by a young officer named Johnston Livingston de Peyster, who had carried it at his saddle-bow for a week with this purpose.

² Weitzel, testimony; Report of Committee on Conduct of the War. Supplement, Part I., p. 523.

nor yet to give him a commission, to which those who have already served long are better entitled, and better qualified to hold. Could he, without embarrassment to you, or detriment to the service, go into your military family with some nominal rank, I, and not the public, furnishing his necessary means? If no, say so without the least hesitation, because I am as anxious and as deeply interested that you shall not be encumbered as you can be yourself.¹

Grant replied as follows:

Your favor of this date in relation to your son serving in some military capacity is received. I will be most happy to have him in my military family in the manner you propose. The nominal rank given him is immaterial, but I would suggest that of captain, as I have three staff-officers now, of considerable service, in no higher grade. Indeed, I have one officer with only the rank of lieutenant who has been in the service from the beginning of the war. This, however, will make no difference, and I would still say give the rank of captain.—Please excuse my writing on a half-sheet. I have no resource but to take the blank half of your letter.²

The President's son therefore became a member of Grant's staff with the rank of captain, and acquitted himself of the duties of that station with fidelity and honor.

We may assume that it was the anticipated important military events rather than the presence of Captain Robert T. Lincoln at Grant's headquarters which induced the general on the 20th of March, 1865, to invite the President and Mrs. Lincoln to make a visit to his camp near Richmond; and on the 22d they and their younger son Thomas, nicknamed "Tad," proceeded in the steamer *River Queen* from Washington to City Point, where General Grant with his family and staff were "occupying a pretty group of huts on the bank of the James River, overlooking the harbor, which was full of vessels of all classes, both war and merchant, with wharves and warehouses on an extensive scale."³ Here, making his home on the steamer which brought him, the President remained about ten days, enjoying what was probably the most satisfactory relaxation in which he had been able to indulge during his whole presidential service. It was springtime and the weather was moderately steady; his days were occupied visiting the various camps of the great army in company with the general.

"He was a good horseman," records a member of the general's staff, "and made his way through swamps and over corduroy roads as well as the best trooper in the command. The soldiers invariably recognized him and greeted him, wherever he appeared amongst them, with cheers that were no lip service, but came from

the depth of their hearts."⁴ Many evening hours were passed with groups of officers before roaring camp-fires, where Mr. Lincoln was always the magnetic center of genial conversation and lively anecdote. The interest of the visit was further enhanced by the arrival at City Point, on the evening of March 27, of General Sherman, who, having left General Schofield to command in his absence, made a hasty trip to confer with Grant. He was able to gratify the President with a narrative of the leading incidents of his great march from Atlanta to Savannah and from Savannah to Goldsboro', North Carolina. In one or two informal interviews in the after cabin of the *River Queen*, Lincoln, Grant, Sherman, and Rear-Admiral Porter enjoyed a frank interchange of opinion about the favorable prospects of early and final victory, and of the speedy realization of the long-hoped-for peace. Sherman and Porter affirm that the President confided to them certain liberal views on the subject of reconstructing State governments in the conquered States which do not seem compatible with the very guarded language of Mr. Lincoln elsewhere used or recorded by him. It is fair to presume that their own enthusiasm colored their recollection of the President's expressions, though it is no doubt true that he spoke of his willingness to be liberal to the verge of prudence, and that he even gave them to understand that he would not be displeased at the escape from the country of Jefferson Davis and other principal rebel leaders.

On the 29th of March the party separated, Sherman returning to North Carolina, and Grant starting on his final campaign to Appomattox. Five days later Grant informed Mr. Lincoln of the fall of Petersburg, and the President made a flying visit to that town for another brief conference with the general. The capture of Richmond was hourly expected, and that welcome information reached Lincoln soon after his return to City Point.

Between the receipt of this news and the following forenoon, but before any information about the great fire had been received, a visit to Richmond was arranged between President Lincoln and Admiral Porter. Accounts differ as to who suggested it or extended the invitation, and there is great vagueness and even contradiction about the details of the trip. Admiral Porter states⁵ that he carried the President in his flag-ship, the *Malvern*, until she grounded, when he transferred the party to his barge with a tugboat to tow it and a small detachment of marines on board. Another account states that the President proceeded in

¹ Lincoln to Grant, Jan. 19, 1865. Unpublished MS.

⁴ Gen. Horace Porter, in *THE CENTURY*, Oct., 1885.

⁵ "New York Tribune."

the steamer *River Queen* until the transfer to the barge; also that another transport, having a four-horse field wagon and a squadron of cavalry, followed for the service of the President. Still a third account states¹ that the party went in the admiral's barge the whole distance, as affording greater safety against danger from any torpedoes which might not yet have been removed. The various accounts agree that obstructions, consisting of rows of piling, sunken hulks, and the débris of the destroyed Confederate vessels, were encountered, which only the tug and barge were able to pass.

The result therefore was that the party were compelled to make a landing at some distance below the proper place, at the suburb called Rockett's, and that there was neither sentry nor officer nor wagon nor escort to meet and receive them. One cannot help wondering at the manifest imprudence of both Mr. Lincoln and Admiral Porter in the whole proceeding.

Never in the history of the world did the ruler of a mighty nation and the conqueror of a great rebellion enter the captured chief city of the insurgents in such humbleness and simplicity. As they stepped from the barge the street along the river front seemed deserted, and they sent out to find some chance person of whom to inquire their way. The unusual group soon attracted the attention of idlers, and a crowd gathered. Admiral Porter ordered twelve of the marines to fix bayonets to their rifles and to form six in front and six behind the party, which consisted of President Lincoln, holding his son "Tad" by the hand, Admiral Porter, and three officers, all being on foot; and in this order they walked from the landing at Rockett's to the center of Richmond, a distance of nearly two miles. It was a long and fatiguing march, evidently not expected by the President, who during his ten-days' stay with the army had probably always had an officer at his elbow to anticipate his slightest wish for horses or vehicles. There remains no trustworthy account of this strange presidential entry; the printed narratives of it written from memory, after the lapse of years, are so evidently colored by fancy that they do not invite credence. Admiral Porter, writing on the following day, says:

On the 4th of April I accompanied the President up to Richmond, where he was received with the strongest demonstrations of joy.²

This is perhaps the most perfect historical record we shall ever have of the event, and the imagination may easily fill up the picture of a gradually increasing crowd, principally

of negroes, following the little group of marines and officers with the tall form of the President in its center; and, having learned that it was indeed Mr. Lincoln, giving expression to wonder, joy, and gratitude in a variety of picturesque emotional ejaculations peculiar to the colored race, and for which there was ample time while the little procession made its tiresome march, whose route cannot now be traced.

At length the party reached the headquarters of General Weitzel, established in the very house occupied by Jefferson Davis as the presidential mansion of the rebel Confederacy, and from which he had fled less than two days before. Here Mr. Lincoln was glad of a chance to sit down and rest, and a little later to partake of a lunch which the general provided. An informal reception, chiefly of Union officers, naturally followed, and later in the afternoon General Weitzel went with the President and Admiral Porter in a carriage, guarded by an escort of cavalry, to visit the Capitol, the burnt district, Libby Prison, Castle Thunder, and other points of interest about the city; and of this afternoon drive also no trustworthy narrative in detail by an eye-witness appears to have been written at the time.

It was probably before the President went on this drive that there occurred an interview on political topics which forms one of the chief points of interest connected with his visit. Judge John A. Campbell, rebel Assistant Secretary of War, remained in Richmond when on Sunday night the other members of the rebel Government fled, and on Tuesday morning he reported to the Union military governor, General G. F. Shepley, and informed him of his "submission to the military authorities."³ Learning from General Shepley that Mr. Lincoln was at City Point, he asked permission to see him. This application was evidently communicated to Mr. Lincoln, for shortly after his arrival a staff-officer informed Campbell that the requested interview would be granted, and conducted him to the President at the general's headquarters, where it took place. The rebel General J. R. Anderson and others were present as friends of the judge, and General Weitzel as the witness of Mr. Lincoln. Campbell, as spokesman, "told the President that the war was over," and made inquiries about the measures and conditions necessary to secure peace. Speaking for Virginia, he "urged him to consult and counsel with her public men, and her citizens, as to the restoration of peace, civil order, and the renewal of her relations as a member of the Union."⁴

¹ Manuscript narrative of Colonel W. H. Crook.

² Porter, Report, April 5, 1865.

³ Campbell, pamphlet.

⁴ Ibid.

In his pamphlet, written from memory long afterwards, Campbell states that Mr. Lincoln replied "that my general principles were right, the trouble was how to apply them"; and no conclusion was reached except to appoint another interview for the following day on board the *Malvern*. This second interview was accordingly held on Wednesday, April 5, Campbell taking with him only a single citizen of Richmond, as the others to whom he sent invitations were either absent from the city or declined to accompany him. General Weitzel was again present as a witness. The conversation apparently took a wide range on the general topic of restoring local governments in the South, in the course of which the President gave Judge Campbell a written memorandum,¹ embracing an outline of conditions of peace which repeated in substance the terms he had proffered the rebel commissioners (of whom Campbell was one) at the Hampton Roads conference on the 3d of February, 1865. The only practical suggestion which was made has been summarized as follows by General Weitzel in a statement written from memory, as the result of the two interviews :

Mr. Campbell and the other gentleman assured Mr. Lincoln that if he would allow the Virginia legislature to meet, it would at once repeal the ordinance of secession, and that then General Robert E. Lee and every other Virginian would submit; that this would amount to the virtual destruction of the Army of Northern Virginia, and eventually to the surrender of all the other rebel armies, and would insure perfect peace in the shortest possible time.²

Out of this second conference, which also ended without result, President Lincoln thought he saw an opportunity to draw an immediate and substantial military benefit. On the next day (April 6) he wrote from City Point, where he had returned, the following letter to General Weitzel, which he im-

mediately transmitted to the general by the hand of Senator Wilkinson, in whose presence he wrote it and who was on his way from City Point to Richmond :

It has been intimated to me that the gentlemen who have acted as the legislature of Virginia in support of the rebellion may now desire to assemble at Richmond, and take measures to withdraw the Virginia troops and other support from resistance to the General Government. If they attempt it, give them permission and protection, until, if at all, they attempt some action hostile to the United States, in which case you will notify them, give them reasonable time to leave, and at the end of which time arrest any who remain. Allow Judge Campbell to see this, but do not make it public.³

This document bears upon its face the distinct military object which the President had in view in permitting the rebel legislature to assemble, namely, to withdraw immediately the Virginia troops from the army of Lee, then on his retreat towards Lynchburg. It could not be foreseen that Lee would surrender the whole of that army within the next three days, though it was evident that the withdrawal of the Virginia forces from it, under whatever pretended State authority, would contribute to the ending of the war quite as effectually as the reduction of that army to an equal number by battle or capture. The ground upon which Lincoln believed the rebel legislature might take this action is set forth in his dispatch to Grant of the same date, in which he wrote :

Secretary Seward was thrown from his carriage yesterday and seriously injured. This with other matters will take me to Washington soon. I was at Richmond yesterday and the day before, when and where Judge Campbell, who was with Messrs. Hunter and Stephens in February, called on me, and made such representations as induced me to put in his hands an informal paper repeating the propositions in my letter of instructions to Mr. Seward, which you remember, and adding "that if the war be now further persisted in by the rebels,

1 "As to peace, I have said before, and now repeat, that three things are indispensable :

"1. The restoration of the national authority through-out the United States.

"2. No receding by the Executive of the United States on the slavery question from the position assumed thereon in the late annual message, and in preceding documents.

"3. No cessation of hostilities short of an end of the war, and the disbanding of all forces hostile to the Government. That all propositions coming from those now in hostility to the Government, not inconsistent with the foregoing, will be respectfully considered and passed upon in a spirit of sincere liberality.

"I now add that it seems useless to me to be more specific with those who will not say that they are ready for the indispensable terms, even on conditions to be named by themselves. If there be any who are ready for these indispensable terms, on any conditions what-

ever, let them say so, and state their conditions, so that the conditions can be known and considered. It is further added, that the remission of confiscation being within the executive power, if the war be now further persisted in by those opposing the Government, the making of confiscated property at the least to bear the additional cost will be insisted on, but that confiscations (except in case of third party intervening interests) will be remitted to the people of any State which shall now promptly and in good faith withdraw its troops from further resistance to the Government. What is now said as to remission of confiscation has no reference to supposed property in slaves." [President Lincoln's memorandum printed in Campbell, pamphlet, pp. 9, 10.]

² Weitzel, in "Philadelphia Times."

³ Lincoln to Weitzel, April 6, 1865. Weitzel, testimony; Report of Committee on Conduct of the War. Supplement, Part I., p. 521.

confiscated property shall at the least bear the additional cost, and that confiscation shall be remitted to the people of any State which will now promptly and in good faith withdraw its troops and other support from the resistance to the Government." Judge Campbell thought it not impossible that the rebel legislature of Virginia would do the latter, if permitted, and accordingly I addressed a private letter to General Weitzel, with permission for Judge Campbell to see it, telling him (General W.) that if they attempt this to permit and protect them, unless they attempt something hostile to the United States, in which case to give them notice and time to leave, and to arrest any remaining after such time. I do not think it very probable that anything will come of this, but I have thought best to notify you, so that if you should see signs you may understand them. From your recent dispatches, it seems that you are pretty effectually withdrawing the Virginia troops from opposition to the Government. Nothing that I have done, or probably shall do, is to delay, hinder, or interfere with your work.¹

That Mr. Lincoln well understood the temper of leading Virginians when he wrote that he had little hope of any result from the permission he had given is shown by what followed. When, on the morning of April 7, General Weitzel received the President's letter of the 6th, he showed it confidentially to Judge Campbell, who thereupon called together a committee, apparently five in number, of the Virginia rebel legislature, and instead of informing them precisely what Lincoln had authorized, namely, a meeting to "take measures to withdraw the Virginia troops and other support from resistance to the General Government," the judge in a letter to the committee (dated April 7) formulated quite a different line of action.

I have had [he wrote], since the evacuation of Richmond, two conversations with Mr. Lincoln, President of the United States. . . . The conversations had relation to the establishment of a government for Virginia, the requirement of oaths of allegiance from the citizens, and the terms of settlement with the United States. With the concurrence and sanction of General Weitzel, he assented to the application not to require oaths of allegiance from the citizens. He stated that he would send to General Weitzel his decision upon the question of a government for Virginia. This letter was received on Thursday, and was read by me. . . . The object of the invitation is for the government of Virginia to determine whether they will administer the laws in connection with the authorities of the United States. I understand from Mr. Lincoln, if this condition be fulfilled, that no attempt would be made to establish or sustain any other authority.²

The rest of Campbell's long letter relates to safe-conducts, to transportation, and to the

contents of the written memorandum handed by Lincoln to him at the interview on the *Malvern* about general conditions of peace. But this memorandum contained no syllable of reference to the "government of Virginia," and bore no relation of any kind to the President's permission to "take measures to withdraw the Virginia troops," except its promise "that confiscations (except in case of third party intervening interests) will be remitted to the people of any State which shall now promptly and in good faith withdraw its troops from further resistance to the Government." Going a step further, the committee next prepared a call inviting a meeting of the General Assembly, announcing the consent of "the military authorities of the United States to the session of the legislature in Richmond," and stating that "The matters to be submitted to the legislature are the restoration of peace to the State of Virginia, and the adjustment of questions involving life, liberty, and property that have arisen in the States as a consequence of the war."³ When General Weitzel indorsed his approval on the call "for publication in the 'Whig' and in hand-bill form," he does not seem to have read, or if he read to have realized, how completely President Lincoln's permission had been changed and his authority perverted. Instead of permitting them to recall Virginia soldiers, Weitzel was about to allow them authoritatively to sit in judgment on all the political consequences of the war "in the States."

General Weitzel's approval was signed to the call on April 11, and it was published in the "Richmond Whig" on the morning of the 12th. On that day the President, having returned to Washington, was at the War Department writing an answer to a dispatch from General Weitzel, in which the general defended himself against the Secretary's censure for having neglected to require from the churches in Richmond prayers for the President of the United States, similar to those which prior to the fall of the city had been offered up in their religious services in behalf of "the rebel chief, Jefferson Davis, before he was driven from the Capitol." Weitzel contended that the tone of President Lincoln's conversations with him justified the omission. Mr. Lincoln was never punctilious about social or official etiquette towards himself, and he doubtless felt in this instance that neither his moral nor political well-being was seriously dependent upon the prayers of the Richmond rebel churches. To this part of the general's dispatch he therefore answered:

I have seen your dispatches to Colonel Hardie about the matter of prayers. I do not remember hearing prayer spoken of while I was in Richmond,

¹ Lincoln to Grant, April 6, 1865.

² Campbell, pamphlet.

³ *Ibid.*

but I have no doubt you acted in what appeared to you to be the spirit and temper manifested by me while there.¹

Having thus generously assumed responsibility for Weitzel's alleged neglect, the President's next thought was about what the Virginia rebel legislature was doing, of which he had heard nothing since his return from City Point. He therefore included in this same telegram of April 12 the following inquiry and direction:

Is there any sign of the rebel legislature coming together on the understanding of my letter to you? If there is any such sign, inform me what it is. If there is no sign, you may withdraw the offer.

To this question General Weitzel answered briefly, "The passports have gone out for the legislature, and it is common talk that they will come together." It is probable that Mr. Lincoln thought that if after the lapse of five days the proposed meeting had progressed no farther than "common talk," nothing could be expected from it. It would also seem that at this time he must have received, either by telegraph or by mail, copies of the correspondence and call which Weitzel had authorized, and which had been published that morning. The President therefore immediately wrote and sent to General Weitzel a long telegram, in which he explained his course with such clearness that its mere perusal sets at rest all con-

troversy respecting either his original intention of policy or the legal effect of his action and orders, and by a final revocation of the permission he had given brought the incident to its natural and appropriate termination:

I have just seen Judge Campbell's letter to you of the 7th. He assumes, it appears to me, that I have called the insurgent legislature of Virginia together, as the rightful legislature of the State, to settle all differences with the United States. I have done no such thing.² I spoke of them not as a legislature, but as "the gentlemen who have acted as the legislature of Virginia in support of the rebellion." I did this on purpose to exclude the assumption that I was recognizing them as a rightful body. I dealt with them as men having power *de facto* to do a specific thing, to wit: "to withdraw the Virginia troops and other support from resistance to the General Government," for which, in the paper handed to Judge Campbell, I promised a special equivalent, to wit: a remission to the people of the State, except in certain cases, of the confiscation of their property. I meant this and no more. Inasmuch, however, as Judge Campbell misconstrues this, and is still pressing for an armistice, contrary to the explicit statement of the paper I gave him, and particularly as General Grant has since captured the Virginia troops, so that giving a consideration for their withdrawal is no longer applicable, let my letter to you and the paper to Judge Campbell both be withdrawn or countermanded, and he be notified of it. Do not now allow them to assemble, but if any have come allow them safe return to their homes.³

¹ Lincoln to Weitzel, April 12, 1865.

² The account given by Admiral Porter of this transaction, in his "Naval History," p. 799, is evi-

dently written from memory, without consultation of dates or documents, and is wholly inaccurate.

WITH A COPY OF SHELLEY.

BEHOLD I send thee to the heights of song,
 My brother! Let thine eyes awake as clear
 As morning dew, within whose glowing sphere
 Is mirrored half a world; and listen long,
 Till in thine ears, famished to keenness, throng
 The bugles of the soul, till far and near
 Silence grows populous, and wind and mere
 Are phantom-choked with voices. Then be strong—
 Then halt not till thou seest the beacons flare
 Souls mad for truth have lit from peak to peak.
 Haste on to breathe the intoxicating air—
 Wine to the brave and poison to the weak—
 Far in the blue where angels' feet have trod,
 Where earth is one with heaven and man with God.

Harriet Monroe.

TOPICS OF THE TIME.

The Foes of Civil Service Reform.

A DETERMINED attempt to overthrow the civil service rules and to restore the spoils system may now at any time be expected. Areas of low pressure are reported in the neighborhood of most of the State capitals; the storm-center, which is now hovering over Kansas, is rapidly moving eastward; high winds and local squalls prevail in portions of Ohio, Pennsylvania, New York, and Maryland, and the cyclone may strike Washington about the first of December. Storm-signals should be displayed upon the Capitol, and over the front portico of the White House.

It may be well to notice that the storm is wholly an artificial product; the *Æolus* who carries these winds in his carpet-bag is always a local politician. The people at large are not worrying about "the injustice and oppression" of the civil service rules; so far as they know, these rules are working very well. It is the political machinists whose wrath is kindled. Nor is this any unexpected phenomenon. Nobody supposed that the professional politicians would gracefully submit to such a sharp restriction of their power. The distribution of the offices among their friends is the final cause of their existence as politicians; when they were stripped of that function, their occupation was gone. They did not willingly surrender it; when some of them voted to part with it, it was a mere political trick, and they meant to recover it at no distant day. At the time when the civil service measure became a law it was pointed out in these columns that the action of Congress was not sincere. There were a few men in both parties who believed in the reform; but the majority in favor of the bill was gained by the votes of a large number of Republicans who wished to prevent the Democrats, then apparently about to gain possession of the government, from turning out their friends. The civil service rules would be a bulwark against the removal of Republicans from office; as such they were zealously supported by a good many Republican politicians so long as the Democrats were in power, and fiercely opposed, for the same reason, by many Democratic politicians. But as soon as the administration changed the case was bravely altered. The Democrats are now doing most of the denouncing, as witness the Ohio resolutions, anathematizing "the Republican administration for its repeated violation of its pledges in behalf of civil service reform"; while the Republican bosses are cursing themselves for their folly in permitting their own hands to be tied by these measures, and threatening to erase them from the statute books. Not a few prominent Republican leaders are now characterizing civil service reform as a fraud and a sham. These gentlemen must be permitted to speak for themselves. What they have done to promote it was undoubtedly a fraud and a sham. That there has been considerable trickery and evasion in the administration of the law may be admitted. That the resolutions of the political conventions of both parties indorsing this reform have been, as a rule, fraudulent and hypocritical is also probable. If this is what these

gentlemen mean, we must admit that they know what they are talking about. And there is no doubt that great efforts have been made, in various quarters, to make the civil service reform appear to be a fraud and a sham by getting men appointed as heads of departments and chiefs of bureaux and great offices who do not believe in the reform, and who are determined, if possible, to exhibit its methods as inefficient and odious. Much more of this kind of work is likely to be done. The more adroit opponents of civil service reform will refrain from attacking it openly; they will be well content if they can keep its administration in the hands of its foes, who will be sure to prove it a failure.

Against a conspiracy of this nature the public may well be warned. The determination to break down the civil service rules is by many politicians frankly avowed and by many others secretly cherished. The great majority of those persons who manage our politics and who manipulate the party organs may be counted as the open or insidious foes of the merit system. The establishment of this system was extorted from them by public opinion; it must be defended against them. There is need, just now, of a vigorous popular campaign against the spoilsmen. A thorough discussion of the system, its principles and its achievements, would be extremely useful at the present time. The stupid cant of the spoilsmen about the establishment of "an office-holding aristocracy" needs to be exposed, and the fact made plain that the merit system is the only method of distributing appointive offices upon purely democratic principles. The managers of the party machine constitute, in fact, an office-holding "trust" or "combine," which generally manages to monopolize the offices and to shut out all those who do not belong to their clique. No one can hope for an office who has not in some way proved himself subservient to them. The great majority of intelligent, capable, self-respecting young men have no more prospect of obtaining office under the spoils system than if they were inhabitants of some other planet. But the merit system opens the doors freely and equally to all. The applicant for office depends not upon the favor of the local boss or the member of Congress, but solely on his own character and ability. This is the system which the spoilsmen stigmatize as "a relic of European governments." It is easy to show the people the true inwardness of the spoilsman's objection and the hypocrisy of his plea. But it is only by thorough discussion and systematic agitation that the cause will prosper; public opinion must be aroused and invigorated; a powerful interest is arrayed against the reform, and can be baffled only by vigilant and resolute effort on the part of its friends.

The urgency of this reform was never more apparent than at the present time. Great questions of administration seem to be forcing themselves upon the American people. In spite of ourselves we have already been compelled to take hold of the railways. Precisely what shape the problem of supervision or regulation will assume we cannot tell; much depends upon the action of the railways themselves. But it is possible that the

functions of government are to be considerably extended in this direction, and perhaps in some others. And every such enlargement of the business of the state adds emphasis to the demand that the state's business shall be done on business principles; that the people who seek to turn our politics into a scramble for preferment and plunder shall be deprived of their power to prey upon the state.

"The Century Dictionary."

THE readers of THE CENTURY MAGAZINE will bear witness that mention of publications of The Century Co. is seldom made in these columns. But that publishing house is now putting forth a work of such transcendent literary importance, and one which will have so necessary a relation to the magazine whose name it bears, that it seems eminently fitting that exception should be made in its favor. We refer to "The Century Dictionary," an authority which will hereafter be, so far as this magazine is concerned, the standard of English spelling and usage.

In 1882-83 a body of scholars was organized by The Century Co. under the supervision of Prof. William D. Whitney and the management of Mr. Benjamin E. Smith. This consisted of a large force of workers exclusively employed on the Dictionary, and of many specialists who devoted a part of their time to the preparation of those portions of the book relating to their several studies. For years this work of making a great dictionary has gone on side by side with the work of making the magazines of The Century Co. We of the magazines have become familiar with the methods of the Dictionary editors and their co-workers, and with the refined artistic features which were in preparation contemporaneously with the literary, under The Century Co.'s art department, and especially under the management of Mr. W. L. Fraser of that department. We have known the scholarly spirit, the conscientious devotion, the cross-fire of comparison and criticism; we have been witnesses of the amazing minuteness of investigation — of the unwearied thoroughness in every branch of the work. Before the public had seen any part of it, we had observed, as it were, the laying of stone upon stone of this unique and stupendous monument of American scholarship.

It is indeed a unique position which "The Century Dictionary" occupies, not only in American letters, but among all the dictionaries of the English language; and it is because of its uniqueness that we can speak

freely of it without disparagement to the eminent lexicographical works which have preceded it, and which will continue to have their separate aims and uses. Its size and the breadth of its plan obviously place it in a class apart from such works as those of Webster and Worcester, while it is fuller than any other English dictionary of an encyclopedic character. Even when it is compared with the great dictionary of the Philological Society its individuality is clear. The aim of the latter is mainly philological, the tracing of the history of English words; that of the former is more general and practical, namely, the full explanation of the meaning and use of all that has entered into past and present English speech. Accordingly, while the dictionary of the Philological Society distinctly repudiates the encyclopedic method of definition, and makes no attempt completely to record the language of science and of the practical arts, "The Century Dictionary" carries that method to its limit, and defines hundreds of technical words excluded from its great rival. These two books thus rest on different foundations and appeal to different interests: the English work is the expression of the aims and interests of a single science; the American work, of the practical needs of those who seek for information about any or all of the sciences — a difference characteristic, perhaps, of the two nationalities.

The fact that the publishers of "The Century Dictionary" ventured more upon the publicly untested results of the labors of their editors than has probably ever before been done in like case would be a matter of no particular interest, had not both the critical and the popular verdict already fully justified the confidence of those who have stood behind the Dictionary's editors with generous confidence and unflinching support.

In this connection we are reminded of the remark of a publisher of great experience and success, — who is now no more, — to the effect that whenever he had hesitated in the preparation of a costly work, and had mistrusted the public appreciation of the very best that could be offered to it in a given line, and had thereupon begun to withhold where he should bestow, he had failed in his enterprise; whereas his most thorough faith in the public to which he was to appeal had been the accompaniment of his greatest successes. The history of "The Century Dictionary" has sustained this optimistic view of publishing enterprises of importance, and its immediate success is an encouragement to the most wisely prodigal of labors in the direction of popular enlightenment and culture.

OPEN LETTERS.

Impressions of the International Exhibition of 1889.

EVERY one must know by this time that the International Exhibition which recently closed in Paris far surpassed all its forerunners in size and beauty, in the variety of its attractions, and in the number of its visitors. It would indeed be too late to write about it did I mean to write descriptively. But I want only to record one or two main impressions, and this I can do better now, perhaps, than I might at an earlier day. They grow clearer and clearer as my five busy weeks in Paris fall farther behind me, as the myriad details of the great show condense somewhat into a coherent picture; and their significance is confirmed by many things I have seen in many other parts of France. In their totality these impressions mean a new and very deep sense of the vigor and vitality of the French nation, of the part it has still to play in guiding the progress of the world.

No one who visited Paris this summer could fail to feel that the immense success of her Exhibition had rehabilitated her in the eyes of Europe, had restored her to the rank she had seemed to be losing since the fall of the Empire. Once again the capital of France was unquestionably the capital of Western civilization. Here was the spot to which all eyes turned as to the focus of contemporary life. Paris this year has ruled in men's thoughts as never before since the days when Napoleon III. exalted her. And what one sees elsewhere in the great land of which she is the heart deepens the feeling that her rank will remain to her, because it deepens one's realization of the difference between the motives and methods that were efficacious under the Empire and those that have been efficacious this year. Napoleon and his agents, working for themselves, worked also for Paris and France—lamentably in the end, but for a time gloriously in more than one direction. This year Paris and France have worked for themselves. The change is full of cheering significance to all who have honored France as the world's pioneer in many paths, intellectual, political, and humanitarian, and have believed in her even when she seemed to doubt herself. It seems to me that the surest, the most important, result of this year's enterprise will be to bring new faith and energy into her own soul, and new belief into the mind of outside doubters.

If the Exhibition had been merely or chiefly a big fair, a big comparative display of commercial products, significant only of material progress, illustrative only of the ways in which money may be earned and spent, one would hardly write such words about it. But it was much more than this. To begin with, it was a place of recreation for the people, such as, surely, the world had never known before. Countless amusements were provided by day, entertainments for the eye and the ear and the mind; and at night—a most happy innovation—the grounds were open and gaily lighted. As one looked down from the balcony of the huge tower on a Sunday afternoon and saw the thronging

figures,—more than three hundred thousand, sometimes a population like that of a large city,—or, mingling with them, noted the vast preponderance of the “lower” over the “upper” classes, yet the perfect order and decorum, the good-humor, the gaiety, the intelligent curiosity, one forgot that here were things which artists and *savants* might well cross the earth to see. One thought first, that here, month after month, the people could amuse itself and profit by its amusement, and then, that a people needs play as well as labor, the circus as well as bread. And one respected and admired the nation that could prepare such a playground for itself without detriment to the more serious side of its enterprise, and could administer and make use of it so well.

In the second place, considered in its more serious aspect, Science and Art, not Trade, gave this Exhibition its character and determined its success. Never before had the strictly intellectual side of modern man's achievements been so conspicuously set forth. As President Carnot well said, it was a display of ideas rather than of things. The great buildings themselves were the objects that impressed one most—the daring science of their construction, the unprecedented degree of beauty that had been wrought with utilitarian iron and glass. Many people have laughed at the tall tower during the past year, but, I think, none who have seen it. Machinery Hall still more clearly illustrated what impossibilities are possible to-day. And as one passed from point to point, the feeling grew that the finest thing about the Exhibition was its aspect as a whole—its excellent planning, its tasteful adornment, the monumental dignity that had been appropriately combined with festal brightness and variety; and the impression it gave of being a magnificent whole, not a casual massing of independent parts. All this meant the triumph of Science and Art working hand in hand. Then in the domain of Science was the huge building filled with illustrations of the History of Labor in all ages, lands, and branches; the wonderful horticultural department; the instructive display of France's management of her waterways and forests; and that vast aggregate of varied exhibitions which came under the general head of Social Economy. Evidently all these and many more were exhibitions of ideas, not of mere things,—but how truly so, only those can understand who saw them. And with these may be named the seventy “Congresses” which gathered from week to week to discuss questions of vital human interest.

Art, however, was as conspicuous as Science. She had her part in the History of Labor, and her hand was shown in countless industrial exhibits, while the magnitude and splendor of the artistic collections proper cannot even be suggested in words. One saw the whole past century of France at its work, and, in still greater detail, the present day at its work in France and abroad. Nothing like the same panoramic view of modern endeavors and results had ever before been shown, and none could have been shown except

in Paris; for almost all that was good, and absolutely all that was best, had been produced there. Or, if there were exceptions, they showed the inspiration of French teaching and example. Of course, no other nation was represented a tenth part as fully as France, and some—like Germany—sent no “official” collection at all. But quality will tell to a careful eye, be quantity ever so small; the tendency of a school will show through the veriest “scratch” assemblage of a hundred pictures; the serious student will know if there are greater names out of sight than those he sees, and if he finds only confessed mediocrities will contrast them only with the mediocrities of other lands. Even thus judged, however, as cautiously and leniently as possible, and with the French Retrospective Collection left out of sight and only current French work considered, the rest of Europe made a poor showing compared with France. There was not a single foreign room—except, perhaps, our own, of which I shall speak again—where one felt that anything very well worth doing had been done. This might have been explained in some cases by the fragmentary nature of the collections. But Belgium was very fully represented, the Scandinavian countries too, and England not inadequately. And how, in any case, could one explain away this further fact, that in no room did one feel that anything very well worth doing had been conceived or attempted? There seemed but little proof that there must be better things at home than those one saw, or that better ones were likely soon to follow. There seemed as little of hopeful suggestion or promise as of rich and ripe success. Merit was not altogether wanting, of course. Good pictures had been painted here and attempted there; and here and there an interesting isolated personality was revealed. But a great *Art*—a collective movement marked by force, character, and accomplishment—nowhere showed itself except in the galleries of France. And true as this was of the painter’s art, it was still truer of the sculptor’s. The show of modern work in both departments was magnificent, but no one would have been less impressed, less charmed, less well instructed, had France exhibited alone.

This brings me to another main point of interest. As it was conspicuously in the art galleries, so it was to a lesser degree almost everywhere else. Sometimes we felt that foreign nations were the inferiors of France, sometimes we knew that they had refused to show their best in an exhibition which commemorated 1789. I need not inquire into causes more narrowly. I only want to say that, as to their general result, in very many departments the so-called International Exhibition seemed a national one. It seemed the creation of France and her colonies, and of French enterprise bringing marvelous things—like the reconstructed Cairene street—from many far-off lands. From their own point of view, the hostile governments would have been wiser not to allow France to work thus alone. They should not have given her the chance to show that, despite their hostility, she could draw enough from the outer world to make an exhibition larger, more beautiful, more varied, more interesting, instructive, and amusing, more scientific and more artistic, than had ever been made before. They should not have permitted the world to feel that even had she stood entirely alone it would have sufficed. Cold-shouldered as a republic, the Republic’s stature and strength, its vitality and its

capability, were but the more clearly shown. This triumph of modern industry, art, and science meant, in fact, the triumph of France. It was a better “revenge” than could have been gained on a battlefield; for no one who saw what Paris had done could think for a moment that, under like conditions, any other city could have done the same. If there might possibly be a doubt in some directions, there could be none with regard to matters of art. Nowhere else could so artistic an *ensemble* have been achieved, nowhere else could it have been adorned with so many thousand objects of the first artistic importance.

Turning now for a moment to that Retrospective Exhibition of French art which was the crowning glory of the whole, I think I can affirm that one painter stood out above all his fellows as the incarnation of the century’s best. I heard many tongues say the same thing: It is the apotheosis of Corot. No one quite knew him before; no one could fail to understand him here—his truth and strength and charm, his individuality, his variety, his quality of “style.” There was nothing more purely modern than his work, nothing more purely personal, nothing more purely lovely. And no one else had so united these three qualities, interpreting at once the spirit of modern art, the poetry latent in a human soul, and the perennial value of beauty. Millet stood next him in significance and charm, yet, it seemed to me, not quite so high. He was greater in mind, no doubt, and, like Corot, a poet too. But not so purely a poet, and it is the purest poetry that will live the longest in art. Nothing was more surprising in the Retrospective Collection than the immense number of admirable portraits. Here, if I must give my vote, it will be for Bastien-Lepage. This is surely another of the immortals, and again because, while no rival painted better, none seems to have felt so strongly. We cannot call him a poet in Corot’s, in Millet’s way. But it means the poet’s spirit still when a man paints another as Bastien did—with such evident emotion in face of the nature he saw and of the means with which he was to render it. It means the great gift of sympathy, of insight. But I should never stop if I tried to note all the painters who here impressed me most. Let me turn for an instant to those one saw in the exhibition of the French work of to-day. Are they as great as the French painters of twenty or thirty years ago? Not quite: far ahead of the rest of the world, yet in some respects behind their elder brothers. For technical excellence their results could not be overpraised; but there seems less of soul in them, less of feeling, less adoration of nature, less thought that each man should find some personal message to deliver. Of course there are exceptions, but it is of general facts I am speaking, and only in the most general way.

On the whole the French sculptors of to-day impressed one even more than the painters, and quite apart from the fact that their work was less familiar. No familiarity could lessen one’s admiration for their marvelous results, or one’s wonder at the long list of names that rank among the best. The general level of accomplishment was as remarkable as the variety of the problems attempted, and the personality, sincerity, and strength of their solutions. The nude in action and repose; figures of both sexes in simple, modern dress; animals of every sort; colossal groups; complicated

reliefs; the ideal, the realistic, the fanciful, the grotesque; monumental work and decorative work; the expression of infantile charm, of feminine beauty, of virile force, of decrepit age; the portrayal, not of figures merely but of ideas — everything had been essayed, and everything well done. It had not been found impossible even to blend contemporary with idealistic, symbolic figures — most difficult of tasks in view of current modes of dress. If one knew nothing of the sculptor's methods, thought nothing of the technical skill involved, the mere fact that the given conception had been so clearly incarnated was enough to astound any eye familiar with modern work in other countries. Here, too, there were no contrasts to draw between to-day and yesterday. The Retrospective Exhibition and that of current work blended together in one great stream beginning with Houdon and Rude, and wider and richer to-day than ever before. It is much in other countries if we find one or two men who even know what sculpture means. In France there is a whole race of men who know it perfectly, and can teach it to the blindest observer. One more point should be noted. We are sometimes told that sculpture is too "abstract" and "ideal" an art to be in vital relationship with modern civilization. Yet the most idealistic of these French sculptors is as modern in feeling as French; as sincere and personal as any painter could be. There has been no such work as theirs since the best bloom of the Italian Renaissance, yet they are no more like the Italians in aim or result than these were like the Greeks.

Even after seeing all that the Frenchmen had done, however, an American could walk through his own galleries without shame. They were the most satisfying, I think, after the French, and very surely the most promising. Yet only the American painters living abroad were well represented. The shipment from home very inadequately showed what is really being done at home. Taking all the works together, though, what I felt was this — and I think any careful observer who bore the youth of our art in mind must have felt the same: "Here a better foundation has been laid than we see in any other foreign room; here, more than elsewhere, we read a belief that a painter's first task is to learn to paint. The general level is already good, showing a number of capable painters, well endowed, well trained, and seriously ambitious; a few of exceptional talent and accomplishment, and one, John Sargent, who in his own line need fear no living rival. The foundation is well laid, and the prospects for further development seem good, at least in certain directions. Portraiture promises extremely well; *genre* painting only needs to be more national in subject-matter to show its strength and individuality better; and landscape gives sure signs of incarnating those very qualities which, in the French school, it threatens to lose — those personal, poetic qualities which made the glory of the French generation just extinct. The least hopeful branches are those of historical and idealistic painting and the painting of the nude."

But to note this last fact meant to note, in explanation, the general fact which was most clearly in my mind as I left the American galleries. Not talent is wanting to American artists, nor ambition, nor conscientiousness, but public appreciation. They are in the right path, and they are eager to advance, but no

one helps them, and where there is not help there is bitter hinderance, especially in what are called the "higher branches" of art. How are they to show what is in them if neither the Government nor the private citizen cares for anything they do, cares whether they do anything or not? It is not with them as it was at first with Millet and Corot and many of their fellows. The public does not reject some of them because it cares more for the work of others who work differently. It overlooks them all in favor of foreign painters who do similar things and often not half so well. An opposition founded on taste, on choice, may be overcome; one founded on indifference, on a broad prejudice, is harder to fight; and it is deadlier in its effects, for it discourages effort in all possible directions. If the public sees and dislikes your work, you may hope to change its heart. If it will not even look at it, what can you do? And yet there is so much to-day in American art that deserves to be looked at!

M. G. van Rensselaer.

The Evolution of the Educator.

THIRTY years ago the leaders of thought in the teaching profession worked in school-rooms. To-day they work in offices. The army idea has been adopted in the organization of educational work. The class teacher has lost his sovereignty and is become a private in a great army ruled by "educators." We witness a multiplication of positions filled by men who direct and supervise the work of teaching, but who do no teaching themselves. These educators have absorbed the executive functions of the school committee of old, and too often the thinking function of the teacher. The class teacher is given a course of study docketed on all sides, with methods of teaching every subject, and a boss educator is on hand at intervals to see that all mere class teachers keep in line.

Two evils result from this condition.

Teachers in large cities, having the matter and method of their work thought out and prescribed for them, are ceasing to be *thinkers* in a professional way. One boss may do the thinking for a hundred house builders, but builders of brains should do their own thinking.

Recognition of efficiency in class teaching now comes in the form of an invitation to stop teaching a class, to step out of the school-room, to become a dispensator of educational enthusiasm, a formulator of pretty theories, a thinker for other workers. The highest price paid for school supervision is paid in the annual drawing off of good class teachers to go into the "educator" business. The influence of one superior class teacher through his or her class work is more effective for good than the platitudes and reports of a dozen educators.

It is an evil day for any profession when its highest rewards bring with them an abandonment of actual professional work. Teachers must be made to see a future of honor and profit in actual class-room work. Our great city school systems are burdened with supervising officials, and are not giving substantial recognition to acknowledged excellence in class-room work.

MILWAUKEE, WIS.

William J. Desmond.

BRIC-À-BRAC.

Christmus thim Times.

CHRISTMUS thim times, lads — ay me!

None sich now'days, 's I kin see:
Great big fireplace, mouth es wide
Es hyar to yander ('n' I ain't lied!);
Brassy andines — sec yer face!
Chunks so gin'rous ha' to place
Yer chur way back agin the wall:
Circle big enough fer all,
Ole folks, com'ny, lads an' lasses,
'N' nobody 'bleeged to, whin they passes,
Ax yer 'scuse 'em, 'less'n they git
Leetle bit mo 'n they sheer o' the heat.
Tell yer, lads, don't hev no fires
Now'days, through-thim coops o' wires.
Leetle black rocks in red spittoons,
Lift'n' 'em with silver spoons,
An' puttin' a tin pan on the top
'Fo' yer kin make the blazes hop.
Then whin yer take the khiver off
(See! hit 's gi'n me this hyar cough),
Freezin' feet an' scawchin' lashes —
Fancy 'taters in thim aishes,
Or crackin' scaly-barks on that hyarth!
Lads, thim folks whar says the yarth
'S growin' better hain't ne'er sot
Roun' a Christmus chunk in a ole log-hut,
A-tellin' o' the'r yarns an' a-crackin' o' the'r jokes
The men folks a-waitin' on the wimmin folks.
Pass aroun' the live coal tell ever'body lights!
Talk about yer seegereets, 'n' new Virginny Brights!
Cawncob pipe, with a canebrake reed,
Seasoned tell it 's whitish, an' the sweet Ca'liny weed
'S good enough fer thim days. Bless me! hit 's a joke,
But my very eyes is waterin' with the mem'ry o' the
smoke.

Fust and middlemost wuz the gobbler —
Billy cotch him in the pen.
'Longside him these city turkeys
Would n't show up no mo 'n a wren.
Fawty poun' — I 'm speakin' akrate —
Turkeys run wil' in thim regi'ns.
Craw itse'f — I 've seed it medjered —
Hol' a brace o' these town pigns.
Hard o' hearin' ? 'T ain't supprisin',
Waal, yer may be a little deaf.
Tell yer ha' to put that geezud
On a platter to itse'f!
Fust an' middlemost wuz the gobbler —
Think it tuk a common pot
Fer that b'ilin' ? Niggers' heyday —
No clean duds that week we got.
Niver seed a ole-time b'ilin' ?
Fix yer pot-han'! 't to the rack,
Swing the rack on to the crossbar,
Fol' yer han's then an' set back:
All the steam flies up the chimblly,
Nary speck o' sut is seen.
Beats yer ranges, an' thim tin things
Smellin' all o' kerrysene.
— Niver et a aish-cake ? Mussy
On this weasselin generation!
'T ain't no marvel they are dwin'lin'
To a lillypushin nation —
Riz on patties o' cawn-shavin's —
Fancy name is Caraline.
Hain't ne'er hearn o' aish-cake, hones' ?
Waal, I tell yer, lads, they 're fine!
Fust yer git the bigges' cabbage,

An' the cleanes' in the patch:
Strip the outen leaves off keerful,
Gitten' two o' 'em jis to match;
Put yer cawn dough now in one o' 'em,
Make a khiver o' the tother,
Rake a smooth place in the aishes,
Pat it down an' smooth 'em over.
Tell yer, lads, I 'd ruther set 'n'
Smell that aish-cake bakin' so
'N eat a slish o' Sally Long
Riz by Devilmonico.
— An' the coffee. I 'm ole foggy,
But I 'm hones', lads, leastways.
Did n' yer gran'ma niver tell yer
How the coffee in thim days
Had a kind o' richer flaver
Than this town-made coffee 's got ?
Don't know ef 't was in the coffee,
Or the settlin', or the pot —
I hain't sot out explainin'
The whifo' an' the how,
But whin yer po'd it in yer cup
(A bowl they 'd call it now),
'Peared mo' amber-like, an' then
It warn't no everlastin' sin
When yer 'd drunk one cup
Up an' hev it filled agin.
— Buscuits ? Ain't no buscuits now'days,
Which I won't spen' time a-provin'.
Yer 'd sesso, lads, yerse'f, ef you 'd
A-peeped in that air oven,
An' see thim beauties, mos' the size
O' sassers, swellin' thar;
An' es for backbone-pie, 'n' ribs —
We 'll drap the subjic hyer.
So much fer the dinner, lads,—

I niver called yer 'tintion
 To the roasted aigs an' goobers,
 An' I clean forgot to minton
 The 'possum — an' — pertater —
 But there 's no use 'nummeratin',
 Fer I see yer mouths 's waterin',
 An' I know yer yurs is waitin'
 To hur about the frolickin'
 That follered after eatin'.
 Yer hearn tell o' that lassie, lads,
 What married Billy-Boy —
 Could make a cherry-tart es quick
 'S a cat could wink its eye:
 I hain't partic'lar marked what time
 A cat imloys a-winkin',
 But, lads, thim wimmin folkses cl'ared
 That table, to my thinkin',
 Quicker 'n a cat e'er wunk; an' we
 Men folkses, in a twinklin',
 Had slid it back, an' h'isted thar
 Ole Joe, who sot to tink'r'in'
 The banjer, 'n callin' "Han's all roun'!"
 Tell every mortil sinner,
 Young an' ole, po'ly 'n' hale,
 Ups 'n' dances down his dinner.
 Warn't partic'lar 'bout the step, lads,
 So 's yer kep' in banjer-time;
 Go 's yer please — no Garman fangle,
 No silk tails yer feet ter tangle,
 Youth thim days wuz in its prime.
 Pass yer cups, lads,—drink it down:
 Nog is nog the cent'ry roun'.
 But Christmus thim days, lads,—ay me!
 None sich now'days, 's I kin see.
 Wooden hosses, roaming candles,
 Dolls o' wax, an' stricked candy;
 Some with stockin's fat with goodies,
 Yuthers none the'r legs to khiver,
 Fer the rich folks pow'ful handy,
 Fer the po' folks —

Waal, I niver
 Sot out, lads, to preach a sarmint —
 No philosopher I be,
 Only, *es* I wuz remarkin',
Christmus thim times suited me.

Orelia Key Bell.

Knowledge is Power.

BELINDA is but seventeen,
 And yet she knows that if she flaunts
 Her painted fan and steals a glance
 At me behind its gorgeous screen
 She sets my pulses all a-dance.

So, too, she knows that if we play
 At tennis in the August sun,
 The little roguish winds that fray
 Her curls and blow them all astray
 Tug at my heartstrings, one by one.

And then again, if she and I
 Stroll down to watch the young moon shine
 A shape of gold in sea and sky,
 She knows if she but feigns a sigh
 She hears the truer ring of mine.

So she is leading me a chase —
 Why should she? Well, I won't propose
 To any loveliness and grace
 Whose only fortune is her face,
 And *that*, you see,—

Belinda knows!

Mary E. Wardwell.

Mæcenas bids his Friend to Dine.

I VENTURE to put into octosyllabic verse a dinner invitation which I received the other day. My host ingeniously wove the thread of his *menu* into the web of his request for my presence, which struck me as being a singularly good plan. When one is to dine out it is always pleasant, and sometimes convenient, to know beforehand the nature of the banquet, the probable guests, and whether there is to be any music, especially if the music is to be furnished by the German band which afflicts our neighborhood. All these points were neatly indicated in my friend's note of invitation, which I paraphrase as follows:

I beg you come to-night and dine.
 A welcome waits you, and sound wine,—
 The Roederer chilly to a charm,
 As Juno's breath the claret warm,
 The sherry of an ancient brand.
 No Persian pomp, you understand —
 A soup, a fish, two meats, and then
 A salad fit for aldermen
 (When aldermen, alas, the days!
 Were really worth their *mayonnaise*);
 A dish of grapes whose clusters won
 Their bronze in Carolinian sun;
 Next, cheese — for you the Neufchâtel,
 A bit of Cheshire likes me well;
 Café au lait or coffee black,
 With Kirsch or Kümmel or cognac
 (The German band in Irving Place
 By this time purple in the face);
 Cigars and pipes. These being through,
 Friends shall drop in, a very few —
 Shakspeare and Milton, and no more.
 When these are guests I bolt the door,
 With Not at Home to any one
 Excepting Alfred Tennyson.

* * *

St. Patience's Day.

MERRILY bounded the usher's heart
 Yestere'en as he bore his part.

Merrily beamed the usher's smile
 Greeting fair faces in the aisle.

Rosily one sweet bridesmaid blushed
 As that vast throng in the church was hushed,

And the man of God, by the altar side,
 Called benisons down on groom and bride.

For the usher had caught the bridesmaid's eye,
 And he gave a little impatient sigh.

She whispered no word, and she made no sign,
 But her message came back from the sacred shrine:

"Be patient, patient, my love, to-night;
 To-morrow is coming on wings of light."

Love makes the world go round, they say,
 But it could n't go fast enough to-day;
 For the bells are ringing at eventide,
 And usher and bridesmaid are groom and bride.

Kempfer Bocock.

A Breath.

A BREATH may fan love's flame to burning,
 Make firm resolve of trembling doubt;
 But strange! at fickle fancy's turning,
 The self-same breath may blow it out!

BUBASTIS: AN HISTORICAL STUDY.

BY AMELIA B. EDWARDS,

Hon. Secretary of the Egypt Exploration Fund.

PREFATORY NOTE.

UCH a story as the one told in the following lines is a very uncommon one.

It rarely happens that the pen of a novelist is inspired by archæological facts, and withal the pen of a gifted and favorite author turned aside from romance, though it be only for a while, because she has found the Valley of the Nile more enchanting, and its soil full of tales more strange than fiction.

Nor does a true story of things so marvellous often call for the telling. Three years ago the world little suspected that one of the chief places of Egypt might still lie concealed beneath the surface among the mounds of Tell Basta, together with the remains of a most ancient temple, beautiful and renowned. But the tidings came as suddenly as not long before came the news of the discoveries at Olympia, — disinterments most strikingly similar, — the latter a spot made famous by Pausanias, with its masterpieces of sculpture, the Hermes of Praxiteles, and the Victory of Paionios; the

former made famous by Herodotus, and rich in art treasures. Where Mariette had failed, the efforts of Naville were rewarded with brilliant success.

In order to feel the bearing of this trove on the history of art, compare the position in time of these two temples. Pheidias executed the colossal statue of Zeus in the then recently built Olympia between B. C. 437 and 433; the name of Cheops surviving on one of the stones of the shrine at Bubastis dates from B. C. 4206 — almost sixty-one centuries ago. Bubastis, as old as the earth itself used to be considered, was passing away when Olympia rose.

All the monuments reproduced in this article, it should be borne in mind, are now published for the first time. Miss Edwards has never before opened her portfolio of Bubastis views to the world. The objects pictured in this article, except the outline drawing of the prostrate priests by Madame Naville, are from photographs taken by Rev. W. MacGregor, Count Riamo d'Hulst, and M. Naville. — EDITOR.

THREE colossal figures dominate the first period of Egyptian history — Mena, an august shadow projected at earliest dawn upon the mists of tradition; Khufu (Cheops), the builder of the Great Pyramid; and Pepi Merira. Of these three representative kings, only Khufu is familiar by name to the great body of general readers. Pepi Merira is, however, as great an historical character as Khufu; and

Mena, the first king of the first dynasty, has a weightier claim than either upon the gratitude of posterity.

To Mena, as to all the sovereigns of the ancient empire,¹ it is impossible to assign any but an approximate date. Himself the earliest landmark in Egyptian history, he emerges alone from prehistoric darkness, and has no contemporary. According, however, to the chronological list of kings and dynasties compiled by Manetho,² Mena would have lived and reigned

¹ The period known as the Ancient Empire comprises the first to the eleventh dynasty.

² Manetho, who was high-priest and keeper of the archives of the Great Temple of Heliopolis in the time

about five thousand years before the Christian era. Tradition — the earliest form of history — tells of him as a mighty man of Teni¹ who by force of arms or policy reduced the prehistoric chieftains of the Nile valley to a state of vassalage, and himself assumed the sovereignty. Having founded the monarchy, he went northward and founded Memphis, the first capital of united Egypt. The Nile at that time described a westward bend opposite Helwân and Turra, and swept round by the foot of the Libyan plateau; but Mena, seeing how the strategical position of his new city might best be strengthened, turned the course of the river in such wise that Memphis lay between the Nile and the desert. This is no fable of the early chroniclers. The old river-bed is still traceable some two miles to the southward of the mounds of Memphis, and the dyke of Mena exists to this day.²

Such are the title-deeds of the first Pharaoh. He welded the primitive clans into a homogeneous nation. He achieved an engineering

feat of colossal magnitude. He laid the first stone of the most ancient and famous of capitals; and he created an empire which endured for upwards of five thousand years.

Yet one more act of his may be positively affirmed. He founded the Great Temple of Memphis — the renowned "Abode of Ptah." No record, no tradition of this event survives, but the fact is nevertheless certain; for the Egyptians, when they founded a new settlement, began, like all the nations of antiquity, by erecting a sanctuary in honor of the chief god of the district. This sanctuary marked the center of the future town, which was then built up around it. The founder of the city of Memphis was therefore necessarily the founder of its oldest temple, and the explorer who shall some day excavate the mounds beneath which its ruins lie entombed may yet bring to light an inscription commemorative of Mena.³

It sounds like a paradox to say that the one great temple of which it is possible to affirm that it was founded by the earliest historical

COLOSSAL ROYAL HEAD, WITH CROWN OF UPPER EGYPT. (TWELFTH DYNASTY.)

of Ptolemy Philadelphus (B. C. 284-246), was employed by that king to compile a history of Egypt from the ancient chronicles preserved in the library of the temple. Manetho was the only native Egyptian historian of whom we know, and he wrote in Greek. Only a few priceless fragments of his work have survived in the pages of later writers.

¹ Teni (Greek *Thinis*), a city of prehistoric antiquity, probably represented by the mound underlying the modern Girgeh.

² Linant Bey, the French hydrographer, believes the great dyke of Khokheish to be the dyke which Mena constructed to turn the Nile eastward; and it serves to this day to stem the waters of the annual inundation. Huge conduits issuing from various parts of this ancient dyke regulate the water supply of Lower Egypt.

³ The mounds of Memphis, close to the village of Mitrahinch, are to this day called Tell Menf, a name clearly echoing the ancient "Men-nefer."

character in the annals of the country was probably, and for that reason, one of the most recent of the high sanctuaries of the ancient empire. Yet such is the fact. These high sanctuaries — or, in other words, the chief temples of the chief provincial towns — were literally of immemorial antiquity. They dated back, for the most part, to that remote period when the land of Egypt was divided into some thirty or forty petty principalities, each little clan governed by its hereditary ruler and protected by its local deity. The rulers of these primitive clans were remembered in after-time as the *Horshesu*, or "Followers of Horus" — a name which possibly indicates that Horus in the prehistoric age, like Ra at a later period, was recognized as the supreme sun-god, and was universally worshiped.¹ Be this as it may, the Egyptians themselves regarded the time of the polygarchy as so immensely distant that to attribute any event or any building to the time of the *Horshesu* was equivalent to saying that it belonged to the ages before history. When, however, the *Horshesu* ceased to be independent, their principalities were converted into the nomes, or provinces, of united Egypt, and their little capitals became what we should call county towns. But these county towns, it is to be remembered, were already ancient when Mena diverted the course of the Nile to create a site for his new metropolis; and in each the oldest structure was the local temple dedicated to the local god.

How many of these primitive towns were in existence at the time of the foundation of the monarchy it is impossible to say; but we may reasonably assume that most of the great re-

¹ The great Sphinx, a personification of Horus, is believed by Maspero to be a work of the time of the *Horshesu*, and consequently the most ancient monument in Egypt. This was also the opinion of Mariette.

MAGLIOUB, OUR FOREMAN.

ligious centers — especially in northern Egypt — were already established upon the selfsame sites which they occupied in historic times. As regards the Great Temple of Ra at On (Heliopolis), the question of priority is indirectly settled by the fact that certain prehistoric Heliopolitan hymns formed the basis of the sacred books of a later age. At Edfu, the present magnificent sanctuary occupies the site of a very ancient structure traditionally said to date back to the mythic reign of the gods, and to have been built according to a plan designed by Imhotep,² the eldest-born of Ptah. This means that it belonged to the remotest prehistoric period — a period before the *Horshesu*, when the gods yet intervened personally in the affairs of men.

² Imhotep, identified by the Greeks with Esculapius, was a god of learning, a divine architect. He is represented seated, with a scroll of papyrus half unrolled upon his knees.

Again, at Denderah, an inscription discovered by Mariette in one of the crypts of the great temple expressly identifies the earliest sanctuary built upon that spot with the time of the Horshesu. It refers to a festival celebrated in honor of Hathor, the local divinity.

The servants of the goddess go before this divinity. The hierogrammatist stands in front of her. All is done that was prescribed for her festival of four days by the King Thothmes III., who did these things in honor of his mother, Hathor of Denderah. There was found the great fundamental ordinance of Denderah written upon goat-skin in ancient writing of the time of the Horshesu; it was found in the inside of a brick wall during the reign of King Pepi.

Another inscription at the farther end of the same crypt reads as follows:

Great fundamental ordinance of Denderah. Restoration made by Thothmes III. in accordance with what was found written in ancient writing of the time of King Khufu.

Now, the Great Temple of Denderah, like the Great Temple of Edfû,¹ is a comparatively modern building, having been begun by Ptolemy XI. (B. C. 106), and completed by the Emperor Tiberius (A. D. 14-37); but these inscriptions show that before the dawn of history some primitive chieftain of the Nile valley had founded a sanctuary to Hathor on the spot where the present structure now stands in solitary splendor. That first temple was already ancient in the time of Khufu of the fourth dynasty (circa B. C. 4206), who rebuilt or restored it; after which it was again rebuilt or restored by Pepi Merira of the sixth dynasty (circa B. C. 3650); again by Thothmes III. of the eighteenth dynasty (circa B. C. 1622); and lastly by the Ptolemies and Cæsars. Here, then, we have a great temple of the first magnitude with an unbroken genealogy literally dating back to the dark ages before Mena.

There were undoubtedly many other high sanctuaries of ancient Egypt with pedigrees as venerable as those of Denderah and Edfû; but the documentary records of their early history are destroyed. Some, after serving as quarries for building-material from the time of Theodosius, have utterly disappeared. Of others, as at Saïs, Buto,² and Heliopolis, the

crude brick walls of the sacred inclosure are all that remain. Others again are prostrate in utter ruin—mere heaps of fallen masonry piled up in unimaginable confusion. Such is the condition of the Great Temple of Tanis, where Mr. Petrie worked for the Egypt Exploration Fund in 1884; and such is the condition of the Great Temple of Bubastis, discovered by M. Naville in 1887. At Tanis, the earliest inscription records the name of Pepi Merira; at Bubastis, the oldest royal name is that of Khufu. Both temples are probably of prehistoric origin; but the legends which may have commemorated that origin have disappeared. Whether they did, or did not, date back to "the time of the Horshesu" is therefore a problem which now can never be solved.

Yet there is one clue to the prehistoric date of the Temple of Bubastis which must not be overlooked; and that clue is to be sought in the curious fact that Isis was traditionally identified with both Hathor and Bast,³ and that the city of Bubastis, in geographical texts, is sometimes styled "Pa-Bast of the North," to distinguish it from "Pa-Bast of the South," which was one of the names of Denderah. The foundation of these sister sanctuaries may therefore with much probability be attributed to the same remote age; while the discovery at Bubastis of the names of Khufu and Pepi Merira would seem to point to the fact that at "Pa-Bast of the North," as at "Pa-Bast of the South," Khufu rebuilt the prehistoric temple and Pepi rebuilt the temple erected by Khufu.

The finding of the Great Temple of Bubastis is one of the romances of archæology. It happened in the month of March, 1887, when the spring was already well advanced, and the exploration season was drawing to a close. M. Naville, accompanied by Mr. F. Llewellyn Griffith, had been sent out in January with instructions to excavate the mound of Tell el-Yahûdiyeh—a very interesting task, which, however, came to an end somewhat earlier than was foreseen at the beginning of the campaign, and thus left the explorer with yet another month at his disposal. Now for the tourist a month means much sight-seeing, but for the purposes of serious exploration it is practically useless. To break fresh ground, in the sense of starting work upon a yet un-

¹ The first stone of the present Temple of Edfû was laid, according to one of the many thousands of inscriptions with which its walls are covered, on "the 7th Epiphi, the 10th year of Ptolemy Euergetes," *i. e.*, on the 23d of August, B. C. 237; and it was completed in the reign of Ptolemy Auletes, B. C. 80-52.

² The site of the Great Temple of Buto was identified three years ago by Mr. Petrie at Tell Ferain, adjoining the Arab village of Ubtu, which obviously perpetuates—with the transposition of the first two

letters—the ancient name of the city. The mounds are about a mile in extent, and the great temenos wall is nearly perfect. The temple, however, has been razed to the ground, and has quite disappeared.

³ According to a text of the Temple of Edfû, Bubastis is "the place where the soul of Isis was in Bast." The name of Bast is, in fact, composed of the words *Ba-ast*, or *Bi-ast*, the "Soul of Ast," or Isis. As goddess-mother and nurse of Horus, Hathor and Isis were in all respects one and the same.

opened mound, was out of the question. The time was too short for anything but a beginning, and to make a beginning at the end of the season would be simply to attract the Arabs to a new hunting-field which they might plunder at leisure during the summer months. A new site was therefore to be avoided. But at no great distance from Tell el-Yahûdiyeh there was an old site,—a site which Mariette had tried, and tried in vain, some years before,—where a few experimental trenches might be cut without much loss of time or money. That site was Tell Basta, the ancient Pa-Bast, or "Abode of Bast,"—called "Pi-Beseth" by the Hebrews, and "Bubastis" by the Greeks,—a spot once famous above all the cities of Egypt for the beauty of its temple and the popularity of its great annual festival.

Herodotus, who visited it three and twenty centuries ago, says :

At the town called Bubastis there is a temple which well deserves to be described. Other temples may be grander, but there is none so pleasant to the eye as this of Bubastis. . . . Excepting the entrance, the whole forms an island. Two artificial channels from the Nile, one on either side of the temple, encompass the building, leaving only a narrow passage by which it is approached. These channels are each a hundred feet wide, and are thickly shaded with trees. The gateway is sixty feet in height, and is ornamented with figures cut upon the stone, six cubits high, and well worthy of notice. The temple stands in the middle of the city, and is visible on all sides as one walks round it; for as the city has been raised by embankment,¹ while the temple has been left in its original condition, you look down upon it, whosoever you are. A low wall runs round the enclosure, having figures engraved upon it, and inside there is a grove of beautiful tall trees growing round the shrine which contains the image of the goddess. (Book II., chaps. 137, 138.)

Such was the Pa-Bast of olden time—the high sanctuary and joyous court of that puissant goddess who, as the cat-headed Bast, represented the springtime warmth of Ra the life-giver, and, as the lioness-headed Sekhet, stood for the devastating heat of the summer solstice. It was to this her shrine that 700,000 Egyptians were wont to throng every year from all parts of the country, some by land and some by water, with shouts and choral singing, and music of flutes and tambourines, and rattling of castanets and clapping of hands; so that from the Ethiopian frontier to the sea it was one universal carnival.

¹ This is an error on the part of the old historian. The rise of the surrounding city, as on the sites of all ancient Egyptian towns, is entirely due to the fact that the houses of the inhabitants were built, like the huts of the fellahen of the present day, of mud bricks dried in the sun, which crumble with age, and are continu-

ally being leveled to the ground, and rebuilt of similar materials. Thus each new house, being erected on the débris of the former house, stands at a higher elevation—a process which in the course of many centuries has raised the ancient towns of Egypt to a considerable height above the plain.

An ancient Egyptian text thus describes a festival:

The gods up in heaven are jubilant. And the ancestors¹ rejoice. Men run gaily hither and thither, their heads dripping with perfumes. All are drunken with wine and crowned with garlands of flowers, and the little children sport from sunrise to sunset in honor of the goddess.²

The vine, now so little cultivated in Egypt, was then abundant, and wine was drunk in excess at these pious saturnalia. The great festival of Hathor at Denderah was called the "Festival of Drunkenness," and of the great festival of Bast, Herodotus himself tells how more "grape-wine" was consumed at this season than in all the rest of the year. It was by reason

triumph of the Babylonian arms, and Ezekiel foretold that fire should be set in Zoan,³ and that the young men of Aven⁴ and of Pi-Beseth⁵ should fall by the sword. (Ezek. xxx. 14, 17.)

Diana at Ephesus was not more beloved by the Syrian multitude than Bast at Bubastis by the Egyptians of the Delta. As at Ephesus the local craftsmen fashioned silver shrines of the great Diana, and made their wealth by selling these toys to the devotees who crowded about her shrine, so at Bubastis there was an immense trade in bronze images of the goddess and her sacred animal. All, or nearly all, those engaging bronze cats and slim cat-headed Basts which figure so pleasantly under glass cases in every museum of Egyptian antiquities

come from Tell Basta. They were made in all sizes, and sold at all prices. As votive offerings, they were dedicated in the temple by tens of thousands; as amulets, they were worn by the living and buried with the dead. Even the sacred cats, when they departed this life, had their funerary bronzes laid beside them in the grave.⁶

For all its splendid traditions, for all its glories departed, Tell Basta had, however, the reputation of being a thoroughly hopeless place—a place which had been ransacked and quarried for so many centuries that there was literally nothing left save a ring of jagged and fantastic-looking mounds, in the midst of which might yet be seen the huge quadrangular hollow where in ancient time the

temple stood in the heart of the city. M. Naville had visited those mounds and looked down into that hollow. He had traced the

VIEW ACROSS THE LARGE TRENCH.

of these excesses, and their social consequences, that Egypt had already become a byword and a reproach. Then Jeremiah prophesied the

¹ The "ancestors"; i. e., the Manes.

² This text is found at Denderah, and is descriptive of the annual festival of Hathor; but it applies with equal truth to the annual festival of Bast.

³ Zoan (Tanis).

⁴ Aven (On, Heliopolis).

⁵ Pi-Beseth (Bubastis).

⁶ The bronze cats and kittens of Bubastis have never excelled for truth and suppleness of modeling. As for the cat-headed Basts, so admirably is the head of the intelligent Egyptian tabby adapted to the graceful proportions of the goddess, that we lose our perception of the incongruity, and find the combination perfectly natural. The name of the cat in the ancient Egyptian language is *mau*—a name evidently onomatopoeic, and so affording no clue to the original nationality of the animal, which was certainly unknown to the Egyptians of the Pyramid period. Lenormant remarks with truth that Bast in the time of the Ancient Empire was invariably represented with the head of a

lioness, and that it is only with the advent of the twelfth dynasty that she begins to appear upon the monuments in the likeness of a cat. This was the time of the great raids of the Pharaohs into the land of Kush (Ethiopia); and it is a notable fact that the cat and the Dongolese dog are first represented in the wall-paintings of Beni-Hassan during the reigns of the User-tesens and Amenemhats. Rüppell has shown that the cat of the wall-painting and bronzes is identical with the *Felis maniculata* still found in a wild state in Upper Nubia and the Soudan; so that it may fairly be taken for granted that the sacred animal of Bast was an importation of the twelfth dynasty Pharaohs from "the Land of Kush." This view is strikingly corroborated by the tenor of a demotic papyrus recently translated by Professor Revillout, which professes to record the philosophical conversations of "The Jackal Khûfi and an Ethiopian Cat." This cat is half a goddess, and that she should be designated as "Ethiopian" points with

line of the old fortifications, and the direction of the street described by Herodotus as leading from the Temple of Bast to the Temple of Hermes;¹ and, somehow, the place attracted him. The mere fact that it had been unsparingly condemned may perhaps have led him to wish that it might have one more trial.

Let the sand-buried chambers of Ombos be cleared if it be deemed worth while; and by excess of precaution let it be ascertained whether the mounds of Lower Egypt, such as Thmuis, Tell Mukhdam, and Bubastis, where so many monuments have been eaten away by the nitrous soil, may not yet contain some fragments of Ptolemaic work. This done, the epoch of the Lagidæ and the Cæsars will make no more demands upon us.²

These were discouraging words; but even a few blocks of Ptolemaic work, if inscribed, might throw some new light upon history. A vague rumor also had been floating in the air touching a recent discovery of tombs at Tell Basta, and these tombs, it was whispered, were of the time of the eighteenth dynasty; a fact which, if true, would be of great importance; for, with the exception of a single sculptured stone found at Benha, no traces of that famous and powerful line of Pharaohs had yet been discovered in the Delta. At Tanis, for instance, where almost every great phase of Egyptian history is represented by obelisks, statues, and inscriptions, there is not so much as a single cartouche belonging to the warlike dynasty which expelled the Hyksôs and restored the liberties of the country. This puzzling fact had long exercised the ingenuity of the learned, some of whom contended that the Pharaohs of the Restoration purposely abandoned the desecrated temples of the Delta, while others went so far as to suggest that the foe continued to hold the northern provinces till finally dislodged by the kings of the nineteenth dynasty.

Hoping, therefore, to decide this important question, M. Naville marched his little army of diggers from Tell el-Yahûdiyeh to Tell Basta, and pitched his camp on the verge of the cat cemetery at the northwest corner of the

COLOSSAL FRAGMENT OF A ROYAL PORTRAIT-STATUE.
ARCHAIC STYLE, USURPED BY RAMESES II.

mounds. From this point of vantage the explorers commanded a distant view of rich alluvial flats, and a less picturesque foreground of railway and town; the ancient city being within a few minutes' walk of Zagazig junction.

The first day's survey proved the reported tombs to be of Ptolemaic or Roman date, and quite barren. The mummies were mere dust and ashes, and the coffins were all decayed. This was the first disappointment. Next, the cat cemetery, which for the last twenty years or more has been systematically plundered by the fellaheen, was apparently exhausted. This was the second disappointment. M. Naville had calculated with confidence on at least reaping a harvest of feline bronzes; but the bronzes were gone, and only the mortal remains of many generations of sacred pussies were left.

The cat cemetery [wrote Mr. Griffith, in a report addressed to the present writer] stretches southward along the edge of the mound in a broad band

special significance to the original habitat of the animal sacred to Bast. Strangely enough, M. Naville reports of the remains of the sacred cats in the cat cemetery at Bubastis, that the species there buried was not that of the common cat of Egypt, either of ancient or of modern times, but that of apparently another species of the feline tribe. The skulls found are much larger than the skulls of any cats known to naturalists. They may possibly be the skulls of some kind of small lynx. M. Naville suggests that they may represent the animal sacred to Mahes, son of Bast, a divinity also worshiped at Bubastis. Mahes is figured as a lion-headed man, and, whether in bronze or in glazed pottery, his statuette is of extreme rarity.

¹ The Greeks identified Thoth, the Egyptian god of letters, with Hermes. The Temple of Hermes mentioned by Herodotus was therefore a subsidiary temple, or chapel, in honor of Thoth. Some remains of this structure were excavated during the present year by M. Naville; but the site is covered with arable land, and it was with difficulty that he succeeded in purchasing the right to dig over a limited area.

² See *Extrait d'un mémoire intitulé, "Questions relatives aux Nouvelles Fouilles à faire en Egypte,"* par M. Mariette; read at the annual meeting of the Academy of Inscriptions and Belles-Lettres, Paris, November 21, 1879.

ANCIENT FORT ON THE LINE OF THE CITY WALLS.

for about a quarter of a mile. Here the bones of millions of these animals have been thrown out by antiquity hunters. There are evidences of fire in the pits, and the bricks of which the pits were built are burned red, the bones being massed together in a kind of conglomerate that looks like slag. We have cleared one pit, or rather chamber, some ten feet wide by thirty feet long. The interments here had already been disturbed; but under the bricked floor we found a second layer of bones, six or seven inches deep. Among them were two small bronze statuettes of Nefer-Tum, quite spoiled by the action of fire.¹

Further examination showed that here, as at the cat cemetery of Tell el-Yahûdiyeh, the sacred animals had been cremated; whereas in Upper Egypt and the Fayûm they are found mummified and bandaged.

No results being obtainable from either the tombs or the cat-pits, M. Naville had now no resource but to attack either the mounds of the ancient town or the quadrangular hollow which marked the site of the temple. In this hollow, besides some fragments of a group of miniature palm columns,—apparently the remains of a small chapel,—there were a few blocks of much weathered red granite upon

which the names of Rameses II. (nineteenth dynasty) and Osorkon II. (twenty-second dynasty) were yet legible. Mute witnesses to the barrenness of the soil, the abandoned excavations of Mariette added the last touch of desolation to the scene. Most men would have struck their tents and shaken the dust of Tell Basta from their feet. Not so M. Naville. He doubled the number of his diggers, and started five parallel trenches across the presumed axis of the temple. The labor would not be in vain if it merely served to determine the level upon which this famous building originally stood. The hollow described by Herodotus—who gives no measurements—must certainly have been deeper in his time than in ours, the washings from the surrounding mounds during the rainy season having inevitably deposited a considerable stratum of mud in the course of a score of centuries. This problem alone was worth solving.

It was solved in three days. It would have been solved years before had Mariette been less easily discouraged. At a depth of but a few feet from the surface, the picks and spades of the diggers struck granite all along the line. Broken columns, capitals, architraves, building-blocks, roofing-stones, and large slabs covered with elaborate sculptures in low relief were uncovered in swift suc-

¹ An exploration in another part of the cat cemetery conducted this year (1889) by Dr. F. Goddard, the American student attached to the Fund, resulted in the discovery of a few fine bronzes of cats, etc.

VIEW OVER THE RUINS OF THE HYPOSTYLE HALL.

cession. Then the plan of the structure began gradually to unfold itself. It was oriented, as usual, from east to west. At the lower, or easternmost end, two enormous columns with palm capitals, now prostrate and broken, marked the entrance to what seemed like a great first hall. The next trench, about 150 feet higher up, disclosed another hall, situated apparently about the middle of the building. A hundred and fifty feet higher yet, it was evident that the site of the Hypostyle Hall was laid open. Lastly, at the sanctuary end, the diggers encountered a vast and confused pile of enormous granite blocks, and a mass of limestone chips.

It was clear that Mariette had made a fatal mistake, and that the site which he had so hastily condemned was a mine of unexplored wealth.

"It is not a few stray blocks that we are finding at Tell Basta," wrote M. Naville, in the first flush of his great discovery; "it is a whole temple."

All hands were now toiled off to the two trenches which promised the richest results. The trench of the Hypostyle Hall, as it was daily widened and deepened, yielded more and more columns—some square, some round; some polished, some unpolished; some with palm capitals, some with lotus-bud capitals, and some with square dies sculptured on two sides with a colossal head of the goddess Ha-

thor. All were in red granite, more or less shattered; and wherever there was space for an inscription, there, in large and deeply cut hieroglyphs, were emblazoned the names and titles of Rameses II. Some of these inscriptions were flagrant usurpations, being reëngraved over the erased names of Usertesen III. and other earlier kings.

The diggers in the second trench continued, meanwhile, to discover an apparently inexhaustible supply of massive slabs closely covered with small figure subjects; the spaces above, below, and between the figures being filled in with minutely executed hieroglyphic inscriptions. These bas-reliefs formed part of one vast historical tableau, or series of tableaux, representing an important religious ceremony. Here, also, jammed in between slabs and roofing-blocks, or lying prostrate under piles of débris, were the shattered remains of an extraordinary number of statues of all sizes, of all materials, and, as it seemed, of all periods—heads without trunks, trunks without heads, feet and pedestals without either heads or trunks. This hall had been a walhalla of sculptured kings and gods, the whole magnificent structure having come down apparently with one tremendous crash, and entombed them as it fell. As fragment after fragment was dragged out, nine in every ten proved to be indorsed with the oft re-

HEAD OF RAMESES II. WITH THE ATEF-CROWN.

peated insignia of Rameses II. The remains of four pairs of colossal portrait-statues of this one Pharaoh were here identified in the course of a few days—two in black granite of great size, the eyes seven inches in length; two in gray granite, two in green granite, and two in red granite; besides fragments of several huge groups representing the king standing or enthroned, now with a goddess, and sometimes as the third member of a divine triad. Other statues of the same Pharaoh were of heroic size, and some of life size; to say nothing of innumerable heads belonging to statues which had been broken up for building-material at a later period. Among these, one was especially noticeable for the exquisite modeling of the face and the delicacy of its execution. It had belonged to a life-size figure in red granite, representing Rameses II. as a youth of about eighteen or twenty years of age, crowned with an elaborate Osirian helmet issuing from a diadem encircled by uræi. This charming head—the most beautiful portrait of the hero of Kadesh which has ever been discovered—is in the Museum at Gizeh. This helmet is known as the atef-crown.

From this time till the end of the month every day's work brought fresh monuments to light, each monument a fragment of history. From these slight and scattered data it soon became possible to reconstruct an imperfect outline of the rise and fall of the temple.

The discovery of a stone inscribed with the throne-name of Pepi Merira showed that it was either founded by that very ancient king, or was already standing in his time. Between the inscription of Pepi of the sixth dynasty, and the inscriptions of Useresen III. of the twelfth dynasty (B. C. 2943), there lies an interval of seven hundred years; and it is to Useresen III. that M. Naville attributes the erection of the Hypostyle Hall. Another great stride of more than fifteen hundred years carries us on from Useresen III. to Rameses II. (nineteenth dynasty, B. C. 1405), who emblazoned the temple all over with his titles, and peopled it with his statues. Some four hundred and sixty years later Osorkon II., third king of the Bubastite line (twenty-second dynasty), added a magnificent hall entirely constructed of unpolished red granite, the walls being lined with slabs elaborately sculptured in low relief. Later still, about B. C. 380, Nectanebo I., of the thirtieth and last native dynasty, built a large sanctuary with extensive wings at the western end of the pile.

Here, then, with but two trenches worked, and two-thirds of the area yet unexplored, five great epochs in the making of the temple were already ascertained, and those five epochs, beginning with the sixth dynasty, and ending with the thirtieth, extended over a period of nearly 3300 years.

The gaps between these dates were enormous; but further excavations, it was hoped, would go far towards supplying the missing links. When, therefore, M. Naville disbanded

STONE OF PEPI MERIRA.

his men at the close of the fourth week, he had not only found a large number of very precious monuments in a surprisingly short space of time, but he left the ground chronologically staked out.

The task thus begun in 1887 was resumed in 1888, and finished in 1889. Great as were the expectations raised by the successes of the first season, they were surpassed by the results of the second. Every week, every day, of that exciting campaign beheld the discovery of new statues, new inscriptions, new historical data. The main object being to clear the whole of the temple area, the excavations were pushed on as rapidly as possible in every direction — eastward, in search of entrance-courts and pylons; westward, in the direction of the sanctuary; and to north and south as far as the blocks extended on either side, so as to determine not only the length but the breadth of the structure. Work on so large a scale called for a proportionate number of workers, and M. Naville's "hands," including overseers, diggers, basket-carriers, and miscellaneous helpers, rarely fell below four hundred. Among these were included a gang of "Shayalin," or native porters — men as tall and powerful as their brethren, the Hammals of Constantinople — who belong to a local guild and earn large wages by carrying cotton bales at Zagazig station in the cotton season.¹

At this time a visitor to the explorer's camp wrote as follows:

To see these hundreds of Arabs at work is worth a much longer journey than from Cairo to Zagazig. Long before you reach the spot, you hear a strange sound which comes and goes upon the air like the "murmuring of innumerable bees." Not, however, till you have climbed to the top of the mound commanding a view of the temple site do you realize the fact that the bees are human bees, digging, chattering, singing, swarming to and fro like ants on an ant-hill. The sight, as one looks down upon it from this point, is really extraordinary. Below you yawn three huge pits, which are rapidly merging into one. These pits are full of swarthy, bare-legged laborers, lightly clad in loose shirts and drawers of blue or white calico. They work vigorously with pick and spade, the stuff they throw out being scraped up by the women and girls, who are all day slowly toiling up and down the crumbling slopes, with baskets full or empty on their heads. The women wear shining silver bracelets on their brown arms, and black veils, and dark blue robes that trail in the dust. They look wonderfully stately and picturesque. Even the little girls have their floating rags of veils; and all, as they scrape, and fill, and carry, and empty their baskets, chant a shrill monotonous chorus which has neither tune nor rhythm, nor beginning nor end. Meanwhile, you see the "pathway men" doing police duty by keeping the paths open and the carriers moving; messenger boys running to and fro; and here and there,

easily distinguishable from a distance by their long staffs and white turbans; the *reises*, or overseers, at whose approach gossips are stricken dumb, and idlers start into spasmodic activity. And now, perhaps, while you are looking on, there is a sudden movement in the direction of the farthest pit, where a group of Shayalin has been hauling on a rope for the last quarter of an hour without being able, apparently, to move the block to which it is lashed. But now they have dragged it out, and are looking

BACK VIEW OF THE SITTING STATUE OF AMENHOTEP,
GOVERNOR OF BUBASTIS.

into the hole in which it was embedded. What have they uncovered? Something of importance, it is clear, for yonder come two of the overseers; and now a slender brown mite of a boy runs off at full speed, in the direction of the camp, to summon the howadji.

To this may be added an extract translated from a letter addressed by Madame Naville to the present writer:

Nothing is more exciting than to watch these enormous blocks being turned over, thus showing inscriptions which have been concealed for centuries. The difficulty of turning them may, however, be imagined, when a mass weighing several tons is wedged in between three or four huge fragments of colossal statues, with not one foot of *terra firma* for the men to stand upon. Once raised, a block of only a few hundredweight is slung between poles, and easily carried to a clear space on the brink of the excavation. The larger ones are lifted and turned by means of rollers and levers between two long lines of ropes. The sheik of the Shayalin dresses the

¹ Zagazig is the center of the Egyptian cotton trade.

LEGS AND THRONE OF SECOND HYKSÖS STATUE.

lines of men with his stick, and marks the time by shouting some sing-song and well-accentuated phrase. When at last the block moves, it often happens that a statue—till then completely hidden—appears underneath. The work of taking paper impressions has become very heavy, and there was much rejoicing when Count d'Hulst arrived the other day to the assistance of M. Naville and Mr. Griffith. I watched him yesterday going from block to block, clearing the sand and soil from the hollows of the hieroglyphs, washing the sculptured surfaces, damping the paper, and taking the impressions. Wherever he went, he was followed by a fellah woman carrying a bowl of water, which she continually refilled.

Thus vigorously pushed, the second season's campaign went on apace. The mound being cut away between the trenches at the eastern end, the ruins of a third great hall and the remains of a colonnade were brought to light. The hall proved to be the work of Osorkon I., or possibly a restoration; the colonnade, like the sanctuary at the other extremity of the temple, was due to Nectanebo I. Discoveries of great interest now followed so quickly that the weekly letters from Tell Basta read more like pages from the descriptive catalogue of some great museum than reports from a site under excavation.

The first great historical sur-

prise of 1888 was the discovery of a group of monuments belonging to the school of the eighteenth dynasty.

This group consisted of (1) a bas-relief tablet of Amenhotep II. in adoration before Amen enthroned;¹ (2) the upper half of a black basalt statuette of a young man engraved on the breast with the name-cartouche of Amenhotep III.; (3) two life-size sitting statues, unfortunately headless, of a nobleman who flourished during the reign of Amenhotep III.; and (4) a fragment of a

block sculptured with the sacred oval of Atenra—a monument which it is impossible to attribute to any but Khuenaten, the disk-worshipping Pharaoh of Tell el-Amarna. The headless nobleman was a namesake and high official of Amenhotep III.; he sits cross-legged, with an open scroll upon his lap, upon which it is graven in hieroglyphic characters that he was "the prince, Amenhotep, the good Friend who loves his Lord, Chief of the works of his King, Governor of the

¹ This tablet was re-inscribed about 130 to 150 years later by Seti I. (nineteenth dynasty).

DOOR-JAMB OF RED GRANITE WITH CARTOUCHE, AND PART OF INSCRIPTION OF APEPI.

City, and of the provinces of the marshlands"; upon the brooch which fastens his garment is inscribed the name of Amenhotep III.; and over his shoulder are suspended the palette and ink-bottle of a scribe. Now, these monuments convey much more than appears upon the surface. They supply the long-sought link which connects the eighteenth dynasty with the Delta, and they show that the authority of the Pharaohs of the Restoration not only extended as far as the Bubastite nome, but that it was enforced throughout the littoral provinces, even to the marshlands around the mouths of the Nile, and the mazes of the Serbonian bog. Proving this, they at once dispose of the theory of a foreign occupation of the Delta during the term of this dynasty.

The most startling discoveries, however, were yet to come. Early in March, in an open space at the eastern extremity of the temple area, where the ground was low and swampy and the water yet lay in muddy pools, the diggers one morning unearthed a colossal black granite head of unmistakable Hyksôs type. Though split across the face, the two halves were fairly perfect. On the head was the folded "kluft," or shawl, and on the brow the basilisk of royalty.

A shock of excitement thrilled the little band of explorers; for that Bubastis had been a Hyksôs settlement was an utterly unexpected revelation. Except one barbaric bust found in the Fayûm, a sphinx discovered at Tell Mukhdam, and two heads in private collections, all the Hyksôs monuments known were found by Mariette in the ruins of the Great Temple of Tanis; and even at Tanis, their chosen capital, no portrait-statues of these alien rulers had been discovered. Yet here, some thirty-five miles nearer to the apex of the Delta, in a spot which had never been associated with Hyksôs traditions, was a colossal Hyksôs head, some six times the size of life, evidently a portrait, and adorned with the insignia of Egyptian sovereignty!

"We are making anxious search for the rest of the statue," wrote M. Naville, immediately after the event, "in the hope of finding a name; but, even if we are successful, I fear the cartouches will have been erased by Rameses II."

A day or two after these prophetic words were penned, the lower half of the statue was found lying upside down in a deep pool of water. It proved to be a seated figure, the legs, throne, and plinth in one huge block, weighing

from twelve to fifteen tons. As foreseen, however, by M. Naville, the royal ovals on the front of the throne had been erased and re-engraved by Rameses II., the vacant spaces at each side being filled in with six columns of inscription in honor of Osorkon II. Here, then, was a twofold usurpation, and no trace left of the original legend.

And now, although the ground in this part was as treacherous and spongy as a bog, dis-

FELLAH WOMAN AND HEAD OF SECOND HYKSÔS STATUE.

covery followed fast upon discovery. The feet and plinth of a second sitting figure, sculptured in the same granite and upon the same scale, were found within a few yards of the first. Next came two enormous fragments of this second colossus, consisting of the legs and throne in one piece, and part of the trunk in another. Desperate efforts were now made to find the trunk of the first and the head of the second statue. At last, after days of suspense, when further search seemed well-nigh hopeless, the international cable flashed a message of good news from Zagazig to London:

Second Hyksôs head, nearly perfect.—NAVILLE.

M. Naville has since then described the finding of this head as the most exciting event of his five winters' experience in the Delta. It was already late in the afternoon when he heard a loud cry of "*Râs! Râs!*" ("The head! The head!") He ran to the spot, and there, midway between the base and torso of

"SHAYALIN" CARRYING A BLOCK.

the last found colossus, on the shelving bank of a deep pool, he saw the top of a huge head just visible above the surface. The men were hauling, shouting, damming back the water, and flinging out great handfuls of the mud in which the face was embedded. Was it perfect? Or was it broken, like its fellow? M. Naville and Count d'Hulst waded in, feeling eagerly under the water, and passing their hands under the yet half-buried features. Finding the end of the nose fractured, M. Naville had, as he afterwards confessed, "an instant of despair"; but his despair the next moment became exultation on finding the face well-nigh perfect. Then the dusk rapidly closed in, and they left their treasure in the water, only to haul it out next morning, high and dry, and photograph it on the spot.

Now, a pair of colossal figures stationed just outside the first hall of a temple, and at so short a distance apart, must have been seated on either side of the entrance. When, therefore, by and by a massive door-jamb in red granite was found, engraved with the cartouche of Apepi and part of an inscription stating that he had erected "many columns and bronze doors" in honor of some god whose name is missing, a clue was at once obtained to the identity of one, if not of both, of the statues. For, strange to say, the faces of the pair, though strikingly alike, were not the same; the broken head representing a man of maturer age and harsher features than the original of the head last discovered. They may, however, be portraits of the same king at two different periods. The famous diorite statue of Khafra¹ in the Gizeh Museum represents him at about thirty years of age; but flung into the same well in which that masterpiece of very early art was discovered were also found the shattered fragments of eight other statues of this king, one of which shows him old and wrinkled. The difference between the two Hyksôs heads of Bubastis is not so great as that between the two Khafras of Gizeh. The older may be half way between fifty and sixty; the younger is scarcely more than forty.²

Another stone sculptured with the "ka-name"³—commonly called the "standard-name"—of Apepi was found in 1889, close to

the spot from which the colossi were recovered in 1888. Nor is this the only evidence which points to the identification of at least one of these statues. The younger head closely resembles the celebrated andro-sphinxes discovered by Mariette at Tanis, and the andro-sphinxes of Tanis—one of which, under an erasure, still preserves recognizable traces of the name of Apepi—have long been accepted as portraits of the last of the Hyksôs kings. As, however, there seems reason to believe that the cartouches of a yet earlier Hyksôs originally occupied the place of honor on these sphinxes,⁴ it is not worth while to insist upon any identity other than that of race. The ethnological characteristics of the Tanite monuments and the Bubastite colossi are at all events the same; and those characteristics are unquestionably Turanian. The high cheek-bones, the eyes inclining slightly upward, the prominent jaw, the curious muscular bosses at the corners of the mouth, the open nostrils, the full lips curving sternly downwards, the hard lines about the mouth, are alike in all. It is a saturnine, melancholy, Mongolian type, as distinct from the national Egyptian type as the Dacian from the Roman.

The obscure story of the Hyksôs invasion need not be recapitulated in these pages. Enough that somewhere about B. C. 2000 the Delta was inundated by a vast wave of barbarian hordes from over the northeastern border, and that the conquest thus achieved by sheer force of numbers was held by the strong hand of the invader for five hundred years.⁵ Like the armed hosts which in a later age flooded southern Europe under the banners of the Goth and the Vandal, this conquering multitude consisted of warlike tribes of various nationalities. The bulk were doubtless Semites from Sinai, Syria, and the banks of the Tigris and Euphrates; yet the classic tradition which ascribes the early subjugation of Asia and Egypt to a warrior-king from the steppes of Scythia may not have been without some element of truth. The Idanthyrus of Strabo is scarcely to be accepted as an historical personage; neither is it practicable to assign a date to his somewhat mythical expedition; yet it must not be forgotten that Justin

¹ These statues of King Khafra (Chephren) of the fourth dynasty were found in the well attached to his funerary chapel, the so-called "Temple of the Sphinx," at Gizeh.

² Though the one statue is now at Gizeh and the other in the British Museum, they may still be compared by those who visit either Museum. Beside the older Apepi, M. Grébaut has placed a plaster cast of Apepi the younger; and a plaster cast of the Gizeh statue will shortly be placed *vis-à-vis* of the younger in the Egyptian Gallery of the British Museum.

³ See Mr. Petrie's discovery of the meaning of this term, "A Season in Egypt," chap. iv., p. 21.

⁴ The name of Apepi, which has been hammered

out, but is still traceable, is on the right shoulder, the place being reëngraved with the cartouches of Menepthah, fourth Pharaoh of the nineteenth dynasty. On the chest of the sphinx are sculptured the cartouches of Pisebkhanu, an obscure king of the twenty-first dynasty. Professor Maspero has, however, discovered that the cartouches of Pisebkhanu are also carved over an erasure; and as the chest was undoubtedly the place of honor, this shows that the earliest name of all is missing.

⁵ The dates and figures adopted throughout this paper are those of Manetho; but the dates of Manetho are not accepted by some Egyptologists, and statements of numbers and periods are not to be taken literally when derived from Oriental sources.

also takes note of a supposed Scythian invasion of Egypt in very remote times. Both traditions are possibly based on vague echoes of the Hyksôs period, and may point to a dominant Turanian force by which the masses were led and organized. Were the Egypt of to-day to be invaded by her Asiatic neighbors, we should witness a precisely similar phenomenon.¹ The enemy would be of Semitic race, but they would be offered by Turks; and the Turk of the present, like the Scythian of the past, is Turanian.

The Mongoloid characteristics of the Tanis sphinxes were long since recognized by Professor Maspero, by the two Lenormants, and by Professor Flower. It is therefore satisfactory to know that Dr. Virchow, who visited Tell Basta a few days after the discovery of the second colossal head, not only pronounced the ethnological type to be identical with the ethnological type of the Tanite sculptures, but concurred with Professor Flower and the above named eminent authorities in pronouncing that type to be distinctly Turanian.²

The names of a few Hyksôs kings have been preserved by Josephus and other early historians,³ but they contribute little towards the solution of this question. Salatis or Silites, Bnôn or Bêôn, Pachnan or Apachnas, Staan, Iannas, Arkhlês, Asseth, Aphobis or Aphophis, have a strange, barbaric sound. Aphobis or Aphophis is a cumbrous transliteration of Apepi, and we have existing monuments of two Hyksôs kings of that name. The rest may be Scythian names Grecized; but they probably retain little of their original aspect. It is to the second Apepi⁴ that M. Naville attributes the inscriptions and — with due reservation — the colossi of Bubastis.

Notwithstanding that they had yielded this harvest of unexpected treasures, the ruins had yet another surprise in store. I quote from M. Naville's report dated March 18, 1888:

I had noticed on Friday the corner of a block of polished black granite which I thought might belong to some good monument, and I had it unearthed yesterday. It proved to be the lower half

of a life-size figure of very beautiful workmanship, with two columns of finely cut hieroglyphs engraved down each side of the front of the throne to right and left of the legs of the statue. These inscriptions give the name and titles of an absolutely unknown king, who, judging from the work, must belong to the Hyksôs period, or at all events to one of the obscure dynasties preceding the Hyksôs invasion. One cartouche, containing the coronation name, reads User-en-ra, which is not unknown. The other reads "I-an-ra," or "Ra-ian," a name unlike any I have ever seen. He is described, most strangely, as the worshiper of his ka (*i. e.*, his ghost, or double⁵). . . . Since writing the above I have been over to Boulak, and have shown my copy of the inscription to Ahmed Kemal-ed-Din Effendi, the Mohammedan official attached to the museum. He was deeply interested, and said at once: "That is the Pharaoh of Joseph! All our Arab books call him Reiyân, the son of El-Welid." He then wrote the name for me in Arabic, which I inclose herewith. For my own part, I know nothing of Arab literature or Arab tradition. I should not, however, be disposed to attach much weight to this curious coincidence. Still, it is curious, and certainly interesting.

Now, Ahmed Kemal-ed-Din Effendi, who is also a high authority on Arab literature, enjoys the unique distinction of being the only Oriental Egyptologist in the world. His opinion is therefore highly esteemed by his fellow-countrymen; and that a "Frank" had found a statue which the Effendi identified with the Pharaoh of Joseph was a fact which at once found its way to the columns of the native press. The result was novel. For the first time in the history of exploration in Egypt a genuine interest — an interest altogether independent of the greed for treasure or the trade in "antikahs" — was awakened in the better-class Cairenes; and among the visitors who thronged daily to Tell Basta to watch the progress of the work, there might now be seen an unwonted sprinkling of grave and turbaned Arabs. For Joseph is a typical hero of Arab legendary lore, and a nucleus of local tradition. The pyramids, for instance, were his granaries, in which he stored Pharaoh's corn against the seven years of famine. He, and

¹ See a paper read by M. Naville at a meeting of the Victoria Institute, July 5, 1889.

² Dr. Virchow, although he identifies the ethnic type, is not prepared to specify to which branch of the great yellow race the men of the Tanite sphinxes and the Bubastite colossi belonged.

³ Josephus, Africanus, Eusebius, and Syncellus have all quoted the names of a few Hyksôs kings from the lost history of Manetho; but, as shown above, they spell them variously.

⁴ Apepi was a name borne by at least two Hyksôs rulers, one of whom belongs to the fifteenth and one to the seventeenth dynasty. The Hyksôs Pharaohs established their capital at Tanis, the biblical Zoan, also called in their time Avaris, which they fortified, and which was the nucleus of their great armed camp. From this stronghold they were expelled by the Theban princes at the close of the war of liberation begun

by Sakenen-ra-Taa-ken and brought to a victorious issue by Ahmes I., first Pharaoh of the restored legitimate line. The war of liberation, though traditionally said to have lasted for one hundred and fifty years, did not probably last more than thirty. Apepi II., the last of the Hyksôs according to some, the last but one according to Manetho, beautified Tanis and there built a temple to Set, of which every vestige has disappeared. This king is the hero of a celebrated Egyptian popular tale — founded probably on an historic basis — which has been translated into English by Professor Lushington and the late C. W. Goodwin, and into French by Chabas and Maspero. The original manuscript, known as the First Sallier Papyrus, is in the British Museum.

⁵ See a paper entitled "The Nature of the Egyptian Ka," in "The Academy," January 5, 1889, in which I have ventured to suggest another interpretation.

none other, founded the city of Memphis. A canalized branch of the Nile, of immemorial antiquity, is to this day known as the Bahr Yûsuf, or Canal of Joseph. The old palace of Saladin in the citadel, which was pulled down in 1829 to make room for the mosque of Mehemet Ali, was called "Joseph's Hall"; and a rock-cut well, most probably of ancient Egyptian work, on the eastward side of the citadel hill, goes by the name of "Joseph's Well." As for the biblical history of Joseph, it is filled in and colored to suit the national taste. The anonymous Pharaoh of the Mosaic narrative becomes Er-Reiyân, son of an Amalekite king called El-Welid; Potiphar's wife figures as "the fair Zuleika"; and Joseph himself, seen through a mirage of Arab romance, becomes a curious combination of the Mohammedan santon and the errant prince of the "Thousand and One Nights."

The Arab chronicles which identify the Pharaoh of Joseph with Reiyân are unanimous in ascribing a foreign origin to that prince and his dynasty; and although the details of the story are somewhat variously related by different historians, the leading incidents remain for the most part the same. It is thus told by El-Makrizi, the topographer of Cairo, and author of many learned works. "The Amalekites," he says, "led by Welid, son of Dumî," invaded the land of Egypt, then ruled by Aymen of Qûs (Coptos). A great battle was fought. The Egyptians were defeated "with an exceeding great slaughter," and Pharaoh Aymen fled. The conquerors then chose their leader, El-Welid, to reign over them; and El-Welid, having reduced the Egyptians to slavery, and passed through many adventures, ruled for one hundred and twenty years, "till he perished."

Then his son Er-Reiyân, the son of El-Welid, the son of Dumî, one of the Amalekites, reigned; and he was one of the most powerful of the people of the earth in his time, and the greatest king. Now the Amalekites were descended from Amlîk, son of Laud (Lud), son of Sâm (Shem), son of Nua (Noah); and Er-Reiyân was the Pharaoh of Yûsuf (Joseph), on whom be peace. . . . And it is said that the Pharaoh of Yûsuf was the grandfather of the Pharaoh of

Moses, his father's father, and his name was Barkhû; and he was lofty of stature and beautiful of countenance. And after him reigned his son Dârimush, and he is also called Darim, son of Reiyân, and he was the fourth Pharaoh, and Yûsuf was his Khalifa.

Admitting the fantastic character of the Amalekite genealogy and the absurd chronological transposition which makes Moses antecedent to Joseph, one cannot help asking whether this legend may not, after all, breathe a faint echo of historic truth? As the Amalekites are said by El-Makrizi to have chosen their leader El-Welid to reign over them, so Manetho relates of the Hyksôs invaders that "they made one among them to be their king, and his name was Salatis."¹ That Arab tradition should ascribe the great conquest to a people of Asiatic origin is natural enough; and, as we have seen, it is more than merely probable that the foreign hordes were mainly Semites. Arab chroniclers, eagerly gathering up every thread of local tradition in an age when the Egyptians yet preserved some vague memory of the early history of their nation, would, as a matter of course, ignore the Hyksôs supremacy, and give the command and the victory to a race akin to their own.

But the main point is that the Arabic "Reiyân" exactly transliterates the group of hieroglyphs rendered by "Ra-ian." Ra-ian, however, may as correctly be read Ian-ra,² which bears a close resemblance to "Iannas," classed by Manetho as one of the Hyksôs or "Shepherd" kings — "Hyksôs" and "Shepherd," according to Josephus, being convertible terms.³ Now, that the Hebrew settlement in Egypt befell during the Hyksôs dynasties is an accepted proposition, and the internal evidence of the Mosaic record⁴ goes far to corroborate a very ancient Christian tradition which places the ministry of Joseph under a Pharaoh of that time. Syncellus, a Byzantine chronologer of A. D. 800, actually specifies Apepi as the Pharaoh in question. Unfortunately, the Pharaoh of Joseph, like the Pharaoh of Moses, is not once mentioned by name in the Bible. Which, then, are right —

¹ On a Hyksôs sphinx found at Tell Mukhdam in the Delta, Mariette and some others believed that the name of Salatis (or Shalati) was recognizable in a broken and very illegible cartouche.

² In Egyptian solar names (*i.e.*, coronation names affiliating the king to Ra) the "Ra" is often transposable, as Ra-meri — Meri-ra Ra-men-kheper — Men-kheper-ra; Ra-en-user — User-en-ra, etc.

³ *I. e.*, "Hyk," ruler, "Sôs" or "Shos" from "*Shasû*," shepherd. This etymology, however, is scarcely satisfactory.

⁴ Whether the story of Joseph be accepted as strictly historical or as an Oriental legend embroidered upon a background of fact, this indirect evidence is equally valuable as pointing to the nationality of the anonymous Pharaoh. Joseph, for instance, is represented as counseling his brethren to tell Pharaoh that

they were shepherds, for the reason that "every shepherd is an abomination to the Egyptians." Here we have good inductive evidence that what was an abomination to the Egyptians must have been a passport to the favor of the king, and consequently that the king himself was of shepherd origin. The sequel of the story confirms this conclusion. The sons of Jacob follow Joseph's instructions, and the king not only makes them welcome, but grants them "the best of the land" for their abiding place. This, however, by no means proves that Pharaoh was, like themselves, a Semite of Syria. The Scythians, and other Mongoloid tribes, were nomadic shepherds, like the "Shasû" of Syria and Arabia, and the term "Hyksôs," in the sense given to it by Josephus, would apply equally to all nations living the life of wandering herdsmen.

the Christian chroniclers who place Joseph under Apepi, or the Arab chroniclers who place him under Reiyân? Without more direct evidence, that is a question which cannot be authoritatively settled; but neither are necessarily wrong. There is much evidence to show that the war of national independence under Sekenen-ra-Taa-ken,¹ Prince of Thebes, broke out during the reign of Apepi, and that Apepi was the last Hyksôs who ruled in Egypt.

The lists of Manetho, however, place Iannas after Apepi. In either case Joseph, who is reputed to have lived to extreme old age, would in all probability have served under two successive kings.² As for Iannas, who is said by Manetho to have reigned for fifty years and one month, we have no reason to doubt that he was as genuine an historical personage as Apepi; though whether he preceded or succeeded Apepi remains for the present an open question. He may or he may not be the Ra-ian of the Bubastite statue; but that the Bubastite statue represents an historical personage cannot for a moment be doubted. A portrait-statue dedicated in a temple and inscribed in full with the customary Pharaonic titles is as good evidence as would be the mummy of the king himself.

Whether Ra-ian of Bubastis and Reiyân of the Arabic chroniclers are one and the same is perhaps the most difficult point under consideration. Only those who have made an especial study of Arabic literature are, however, qualified to pronounce upon it. The following letter addressed to the editor of "The Times" by Dr. Rieu, Keeper of Oriental MSS. in the British Museum, is therefore of great value, as representing the opinion of one of the first of living authorities in this department of scholarship:

The name of King Raian, recently discovered by M. Naville at Bubastis, is all but identical with the name which Arab tradition gives to Joseph's Pharaoh. Mas'ûdî, who has been followed by all the later historians, says in the *Morûj ud-Dahab* that the Hamites who peopled Egypt had been for some time ruled over by women, in consequence of which kings from all quarters were lusting after their lands. An Amalekite king named al-Walid invaded it from Syria, and established his rule there. After him came his son, Raïyân ibn al-Walid, in whose time Joseph was brought to Egypt.

¹ The mummy of this prince was among those discovered in 1881 in the hidden vault of the priest-kings at Deir el-Bahari in western Thebes. Sekenen-ra was evidently slain on the field of battle. His skull is cloven in two places; the frontal bone is pierced as by a dart and the jaw is laid open.

² Makrizi, in the passage previously quoted, expressly says that Yûsuf was Khalifa under Darimush, the son of Reiyân, thus showing that he served under two kings.

³ Published in "The Times," April 10, 1888.

It is hard to believe that so striking a coincidence should be due to mere chance. But the question it raises cannot be finally settled until the Arab tradition shall have been traced to its source. Meanwhile, the alien character of the dynasty may be noted as an additional point of resemblance.

BRITISH MUSEUM, April 7, 1888.³

Such, with many omissions, were the principal discoveries of 1888, a season momentous in the annals of exploration, and unparalleled for the wealth of its results. A small part of the temple area had, however, not yet been dug over, and many blocks were still unturned. M. Naville accordingly went back to Tell Basta in the month of February, 1889, for the purpose of completing the excavation. The party consisted of M. Naville, Count Riamo d'Hulst, the Rev. W. MacGregor, and Dr. Harley Goddard, a young American archæologist who was sent out from the United States in the capacity of traveling student attached to the Fund.

So much had been done during the two previous seasons that little remained to enliven the labors of the third. All, in fact, that remained for the explorers to do was to clear up the site, to make an exhaustive search for inscriptions, and to complete their series of paper impressions from the bas-relief sculptures of the halls of Osorkon I. and Osorkon II. These tasks occupied them from the beginning of February to the end of March; and when M. Naville and his party at the end of this short season came to "fold their tents, like the Arabs," it was with the satisfactory certainty that there remained no gleanings for any future explorer. M. Naville had now literally left no stone unturned in that vast area. Every block had been lifted, rolled, and examined on all sides. Every inscription had been copied. Every bas-relief had been reproduced in paper casts, and many had been photographed. Of the minutely sculptured subjects covering the lining blocks of the Festival Hall of Osorkon II., some hundreds of invaluable "squeezes" were taken, each "squeeze" capable of a second and more permanent reproduction in plaster or by photography.

The objects found in the course of this final campaign were few. They included, however, part of a large black granite tablet in praise of Rameses II., several inscriptions, a much-weathered colossal group of Rameses II. and Ptah, a few good bronzes, and a huge bronze pivot, or "crab," consisting of a ponderous mass of metal measuring $8\frac{1}{2}$ inches square by 10 inches deep, with a large boss in the upper surface, upon which the hinge worked. It was yet embedded in part of the door-sill, a deeply scored quadrant on the surface showing where the door had scraped and swung. This fragment of door-sill was probably the only stone found *in situ* in the whole course of the exca-

ventions. To suggest that the pivot formed part of one of the bronze doors added to the temple by Apepi would perhaps be to consider the question too curiously. Of inscriptions, M. Naville had a melancholy tale to tell. "The work of Rameses II. at Bubastis," he wrote in one of his latest reports, "was chiefly a work of usurpation. I never saw so many erased inscriptions. I have very carefully examined all the large architraves, upon which the hieroglyphs measure two feet in height, and there is not one which is not engraved upon an erased surface. In fact, I have found but *one* moderately long inscription of this Pharaoh which is not cut over an effaced inscription of earlier date." In other words, Rameses II. had destroyed the records of his predecessors in order to substitute his own names and titles for the names and titles of those by whom the different parts of the building were erected.

If, however, the most conspicuous surfaces were thus usurped, some very precious original documents were found on smaller blocks, many of which had been re-used — perhaps more than once — for building-material. Up to 1889, for example, the earliest royal name discovered in the ruins was that of Pepi Merira of the sixth dynasty;¹ but two stones unearthed towards the close of last season (1889) showed the temple to have been in existence as far back as the time of the fourth dynasty, one block being sculptured with the ka-name of Khufu,² the builder of the Great Pyramid, and the other with the throne-name of Khafra,³ the builder of the second pyramid of Gizeh. The date of the Great Temple of Bubastis is thus carried back to a point some six hundred years earlier than the first estimate, and its period extended over nearly 3900 years.

To write the history of this temple, which it has cost so much time, labor, and money to excavate, is impossible. The data are too imperfect; the gaps are too many and too wide; the destruction wrought by time, flood, and the hand of man has been too complete. The ruins tell their own tale; but they tell it imperfectly. The wreck of the great stone book is there, but more than half its pages are gone,

LEGS AND THRONE OF RA-IAN.

and whether we indeed possess a fragment of the first of those pages, or even of the last, who shall say? The ka-name of Khufu registers the earliest fixed point from which it is possible to reckon; but was Khufu the founder of the building? Is it not more probable that the site was already occupied, as at Denderah, by a prehistoric sanctuary which Khufu, in like manner, rebuilt? Rebuilder or founder, that mighty autocrat who arrogated to himself "the labor of an age in piled stones" put his mark upon the structure, and it has survived to this day. Khafra, though he left his pyramid and his magnificent red granite chapel without a line of inscription, gave his cartouche to the temple, thus showing that he had carried on, or completed, the work of Khufu. Then comes the first great blank. Six hundred years go by, and Pepi Merira — a pious king, who feared and honored the gods — follows Khafra in the royal roll of Bubastis. With Useratesen I. (circa B. C. 3055) we pass from the sixth to the twelfth dynasty. An inscription of this Pharaoh, found a few days before the excava-

¹ Circa B. C. 3650.

² Khufu (Cheops), circa B. C. 4206.

³ Khafra (Chephren), circa B. C. 4143.

tions were finally closed, states that the early temple was yet standing in his time. Now, from the reign of Khufu to the reign of User-tesen I. represents about a century more than from the reign of Edward the Confessor to that of Victoria; if, therefore, the first temple of Bubastis were of no higher antiquity than the Great Pyramid, it was already, in the time of Usertesen I., more venerable by a hundred years than is our Westminster Abbey at the present day. Next taken in hand by Usertesen III., it was so greatly enlarged that it ranked thenceforth as a temple of the first magnitude.

Of the Xoite line, and of the first two Hyksôs dynasties, the temple ruins have nothing to tell. Nor do they take up the broken chain of history till Apepi holds his court at Tanis, and the Theban princes are preparing for war. With the Hyksôs monuments we touch the fairly approximate date of B. c. 1750, the restoration of the legitimate line being with great probability placed at about B. c. 1703.

Next comes the glorious eighteenth dynasty; the earliest record of this period being a bas-relief block of Amenhotep II., followed by the monuments of Amenhotep III., already

COLOSSAL GROUP OF RAMESES II. AND PTAH, SHOWING ALSO A BAS-RELIEF BLOCK FROM THE FESTIVAL HALL.

Up to this time it would appear to have covered no more than the space occupied at a later date by the first and second halls; but Usertesen III., besides building the Hypostyle Hall, added considerably to the second hall, and must certainly have built a new sanctuary, of which, however, no vestige remains. The Hypostyle Hall, like the rest of the temple, was constructed entirely in the red granite of Syene, the roof being supported by alternate rows of round columns with lotus-bud capitals and square columns with Hathor-head capitals.¹ An architrave carved with the ovals of Sebekhotep I. bears solitary witness to the rule of the thirteenth dynasty, and with this one stone the great period of the Middle Empire passes away.

¹ The two finest specimens of these gigantic capitals have been presented by the Egypt Exploration Fund to the Museum of Fine Arts at Boston, and may be seen in the new Egyptian room lately added to that building.

described. Of actual additions to the structure by the Pharaohs of the Restoration there are no traces. For some reason—probably a very simple one—these great builders and soldiers apparently took no interest in the cities and temples of Lower Egypt. It may well be that they found it occupation enough to conquer the known world of their time; to plant temples and fortresses along the banks of the Nile from Middle Egypt to the Isle of Argo in Ethiopia, and to carry the terror of the Egyptian name as far northward as the upper waters of the Euphrates. The marvel is, not that they left some things undone, but that they achieved so much. A single inscription inserted in a blank space upon the bas-relief of Amenhotep II. is the only record found of Seti I. (B. c. 1455–1404). This brief entry marks the advent of the nineteenth dynasty (B. c. 1462–1288). Next came Ramses II., who appears to have added nothing to the structure, while, by con-

STONE SCULPTURED WITH THE "KA-NAME" OF KHUFU.

verting it into a huge palimpsest, he robbed it of much of its history. Handed over to the tender mercies of an army of masons, the records of many kings of many dynasties were industriously effaced; the pompous titles of "The Golden Hawk," "The Powerful Bull," "The Lord of the Two Lands," "The Son of Ra," "Rameses, Beloved of Amen," being substituted on architrave and pillar, lintel and soffit, from end to end of the building. Also, as we have seen, he multiplied his own image in the halls of Bubastis almost as profusely as he multiplied his cartouches. Menepthah, his son and successor,—the supposed Pharaoh of the Exodus,—is next represented by various broken statues; and after him the next link in the historic chain is represented by Rameses VI., of the twentieth dynasty. Fragments of several statues of this king were found, and the upper half of a fine red granite colossus, now in the Gizeh Museum.¹

The twentieth dynasty expires. The twenty-first dynasty runs its obscure race, and the princes of the twenty-second dynasty—by some believed to be of Hyksôs descent,² and by others of Libyan origin—obtain possession of the double crown before the ruins again take up the story of their changing fortunes. This time something like one hundred and thirty years have elapsed, of

which we know nothing. What happened at Bubastis during those one hundred and thirty years? What happened during the same interval at Tanis? The wrecks of both temples are silent; but even their silence is eloquent of some tremendous and unrecorded catastrophe. Both were among the most gorgeous of their time, and both were at the height of their splendor under the nineteenth dynasty. At Bubastis the last Ramesside Pharaoh of whom a memorial has been found is Rameses VI.; at Tanis it is Rameses III., both of the twentieth dynasty. After these, in some form which we can only surmise, came ruin. Of invasion or rebellion between the twentieth and twenty-second dynasties history preserves no record. Earthquakes, however, were more frequent in the Egypt of ancient days than at the present time, and it is difficult to understand how the destruction wrought at Bubastis and Tanis in the tenth century before our era could be due to any other cause. That Bubastis was of old a center of seismic disturbance may be inferred from a very ancient tradition which tells how the earth opened at this place in the reign of Boëthos (Butau), a king of the second dynasty, and swallowed up many of the inhabitants. Be this as it may, the kings of the twenty-second dynasty found the Great Temples of Bubastis and Tanis in a condition of utter ruin, and they repaired them with the material found upon the spot. At Bubastis, Sheshonk I., the founder

THRESHOLD STONE AND BRONZE PIVOT.

¹ Monuments of Rameses VI. are extremely rare.

² This is the view adopted by Mr. Le Page Renouf, who regards the Hyksôs as Turanians of Edom, and the

Bubastite kings as their descendants. Mr. Renouf derives the name of Sheshonk, the founder of the twenty-second dynasty, from two Aramaic words signifying "the man of Susa."

of his house, is represented only by a statuette, whereas at Tanis, among other works, he cut up the largest colossal statue ever executed by the hand of man,¹ to build a pylon gateway. His immediate successor, Osorkon I., did apparently nothing at Tanis; but at Bubastis he rebuilt the Hypostyle Hall and the first hall of bas-reliefs, to which Osorkon II. added the Hall of the great Festival. That the two Osorkons practically restored the whole structure is shown by the way in which the building-blocks were shifted — sculptured stones which had

the works of their predecessors, it is inconceivable that the Bubastite princes should have purposely destroyed the most splendid ornaments of these temples for mere building-material. Had they not found the statues already shattered, like the structure which they adorned, the new Pharaohs would assuredly have reinscribed and appropriated them. This is virtually proved by the fact that they did appropriate some which may be supposed to have escaped the general wreck, as, for instance, the two Hyksós colossi.

COLOSSAL "LOTUS-BUD" CAPITAL FROM THE HYPOSTYLE HALL. (NOW IN THE MUSEUM OF FINE ARTS, BOSTON.)

originally formed part of dado subjects having been rebuilt into the walls of the new Osorkon halls at what must have been a considerable height from the ground. As the monster colossus of Rameses II. was converted into a gateway at Tanis, so were the innumerable colossi of the same king cut up at Bubastis to make the lining blocks for the Festival Hall. Many of these, when turned over by M. Naville's Shayalin, proved to have the serene and smiling features of the great Pharaoh on one side, and part of a processional subject of twenty-second dynasty work on the other. Little as Egyptian kings were wont to respect

But the Osorkons, besides restoring the Great Temple of Bubastis, made a very important change in its religious history. Notwithstanding that Bast was the tutelary goddess of the province, and although her temple — Pa-Bast, "the Abode of Bast" — gave its name to the city, yet in that temple she had hitherto occupied but a secondary position. It was placed under her protection, as local divinity; but it was dedicated, like the Temple of Tanis, to the cycle of great gods — Ptah, Khnum, Tum, Ra, Amen, and Set; but principally to Set. Before the worship of Set went out of fashion, Bubastis must, in fact, have been a principal center of the

¹ See "Tanis," Part I., by W. M. F. Petrie, published by the Committee of the Egypt Exploration Fund. This immense statue, of which Mr. Petrie has

identified various fragments, was sixteen times the size of life, and it represented Rameses II. standing erect.

cult of that deity.¹ But the kings of the twenty-second dynasty, when they adopted Bubastis as their capital city, also adopted Bast as their patron goddess. In her honor they deposed the cycle of the great gods, and changed the dedication of the temple. Thenceforth it was not only the Great Temple of Bubastis; it was the High Sanctuary of Bast herself, wherein she reigned supreme. Taken in this connection, the fact that Osorkon II. should have held a magnificent festival in honor of Amen assumes a certain significance.

This festival was entirely distinct from the annual festival described by Herodotus. It was a special ceremony which, according to an inscription found upon the spot, was held at Bubastis every fifty years. It took place on this occasion in the twenty-second year of the king's reign. There is nothing to show that it was now held for the first time. More probably it commemorated some ancient tradition, and was merely celebrated by Osorkon II. with extraordinary splendor. Why this king should have elected to do more than customary homage to the Theban god may not be beyond the reach of conjecture. He was the husband of two wives, Queen Karoama and Queen Maut-hat-ankhes, both Theban princesses. Of these two royal ladies Queen Karoama was highest in rank and position. A daughter of the royal Amenide line,² she not only inherited sovereign rights over the principality of Thebes, but she was also hereditary high-priestess of Amen.³ A festival in honor of the supreme deity of her native province would therefore be, in some sort, a festival in honor of Karoama herself, and Osorkon may thus have emphasized the importance of an alliance which legitimized his own claims as suzerain of Thebes.

The walls of the Festival Hall were lined

¹ This fact alone would account for the choice of Bubastis as a Hyksôs settlement, Set having been identified by the Hyksôs with Sutekh, their own national deity.

² *I. e.*, the twenty-first dynasty of priest-kings founded by Her-hor.

³ It is a remarkable fact that in the time of the twenty-

up to a considerable height with processional subjects in bas-relief representing the various stages of the ceremony. The figures vary in height from about ten inches to four feet, and the ground-spaces between are closely filled in with minute and exquisitely carved hieroglyphic inscriptions. The granite is left unpolished. Were none of the blocks missing, it would have been possible to reconstruct the whole of the tableaux in consecutive series from the paper casts. But the ruins have been largely plundered in ancient times, and perhaps nearly half the original number of blocks are wanting to complete this wonderful illuminated chronicle in stone. From such as are left, however, much of the character of the ceremony may be gathered.

The name given to the Festival Hall by M.

second dynasty the pontificate of Thebes was transmitted through the female line, precisely as the double crown of Egypt had been transmitted in the time of the seventeenth, eighteenth, and nineteenth dynasties. See "*Les Momies Royales de D  ir el-Bahari*," par G. Maspero; "*M  moires de la Mission Arch  ologique Fran  aise au Caire*," Tome I., 4^{  me} fascicule.

Naville is a literal translation of the name given to it in the dedicatory inscription, which reads thus :

In the year 22, the first day of Choiak,¹ the appearing of His Majesty in the Hall of Festival. He reposes on his throne, and the consecration is begun ; the consecration of the Harem,² of the House of Amen, and the consecration of all the women who have dwelt as priestesses therein since the days of his fathers.

This preliminary statement is succeeded by the first item in the programme, "The carrying of the king upon his throne"; but the block which should show this scene is missing. The procession of the queen probably followed the procession of the king. Then came

block to block, each priest carrying a bird in one hand and a fish in the other. A short inscription specifies in every instance to what deity that bird or fish is sacred. On other blocks are depicted rows of shrines, and in every shrine the statue of a god, his name and titles being given in full. All the local gods of Egypt would seem to have been present in effigy, each attended by a deputation of priests from his own sanctuary.

The consecration of the handmaidens of Amen being apparently the main feature of the festival, it is not surprising that we find an important part performed by women. Slender and graceful, in close-clinging robes, some car-

BROKEN COLOSSUS OF RAMESES VI., IN RED GRANITE.

endless files of shaven priests represented in horizontal rows, often five rows deep in a single block—the "Sam," or high-priest, in his panther-skin garment; the sacred scribe with pen and palette; the "Fai Senneter," or incense bearer; the "Ab," or libation-pourer; the "Neter-atef," or divine father; and so on, through all grades of the priesthood. Some bear aloft sacred standards surmounted by the emblems of various gods; others carry flails, staves, libation jars, and offerings for the shrine of Amen. These offerings are of various kinds, as live geese, cranes, and fishes. There are long processions of priests continued from

rying water-jars, said to be fashioned of electrum, others bearing sheaves of flowers, others grasping the "ankh," or emblem of life, they pace in single file, as in a kind of Panathenaic procession. Some are clapping their hands to the measure of a chant which they are singing. Foremost among them are Queen Karoama and "the royal daughters," three of whom are seen standing behind their mother. Their names, here known for the first time, are Tasba kheper, Karoama, and Armer. The queen, exercising her prerogative as hereditary high-priestess of Amen, assists the king in making offerings; but he is more frequently accompanied by Bast herself. Sometimes he stands in a shrine, as if he were a god, wearing the double crown and grasping the flail and crook.

¹ *J. e.*, October 8 of our reckoning.

² The priestesses of Amen were designated as wives of the god.

COLOSSAL ARCHITRAVE ENGRAVED WITH A DEDICATION TO SET.

Most curious of all are certain tableaux representing what might be taken for scenes from some kind of religious drama, or "mystery," performed by priests wearing costumes and bearing titles elsewhere unknown. Some perform feats of posturing; some hold scrolls of papyrus, and appear to be in the act of declaiming; some kneel on one knee, the right hand pressed to the breast, and the left upraised, in the traditional attitude of the "Amemu," or genii of the earth. Elsewhere we see bearded priests with fillets on their heads, lying flat on the ground in groups of three together, their hands and feet extended, as in imitation of swimming. Others hold hands, and are said in the inscriptions to "turn round," thus evidently executing a sacred dance such as was danced of old by the Semitic nations, and is danced to this day by the dervishes of Cairo. A procession of misshapen dwarfs walking with staves, and a strange figure of a man wearing what resembles a grotesque mask and wig, look curiously like impersonations.

The dwarfs might be there in the character of the pigmy god Ptah-Sokar-Osiris, and the masker is strangely like Bes, the semi-barbarous deity of music, mirth, and dance.¹ For a full explanation of these singular subjects we must await M. Naville's translation of the texts, which, however, are more than commonly difficult.

An inscription engraved upon a scene where Amen is carried in his sacred boat shows the hall to have been erected expressly for the festival. The god speaks, thanking Osorkon for this building made in his honor, and promising him by way of guerdon "thousands of panegyries";² a promise which could be fulfilled only in the next world. One very interesting block represents Amen enthroned upon a lofty dais approached by a flight of steps. A file of worshippers advances, and the leader of the procession mounts the steps in order to do homage. This bas-relief is now deposited in the Mu-

seum of Fine Arts at Boston. Another, sculptured with full-length portraits of Osorkon II. and Queen Karoama, has been presented to the British Museum. These are the only two blocks from the Festival Hall which have as yet been removed from the scene of the excavations.

As a contribution to the history of an obscure dy-

nasty, the discovery of the Festival Hall is one of the most important results of the work at Tell Basta. It shows Osorkon II. to have commanded large resources, and—if we may literally accept some of the speeches put into the mouth of Amen—to have made his power respected beyond the limits of the Egyptian frontiers. "The Upper and Lower Rutennu," says the god, "are under thy feet."³

All that is splendid in the ruins of the Abode of Bast expires with the twenty-second dynasty. Two small statuettes mark the reigns of Apries and Achoris, kings of the twenty-sixth and twenty-ninth dynasties, and carry us on to the time of Nectanebo I. (thirtieth dynasty, B. C. 378). With Nectanebo we bid farewell to the last native dynasty, and almost the last native Pharaoh. Finally, we touch the comparatively modern age of the Ptolemies. A certain Apollonius, son of Theon, who claims to be "one of the king's friends," would seem to have erected two votive statues of himself within the precincts of the temple; but of these only the black granite pedestals were found, each pedestal engraved with a dedication to Ptolemy V. and Queen Cleopatra the first; thus bringing down the chronological data to some point intermediate between B. C. 205 and B. C. 182. Last and latest, an inscription of the time of Ptolemy IX. carries the history of the temple forward to within less than one hundred and fifty years of the Christian era.

PROSTRATE PRIESTS.
(FROM A BAS-RELIEF BLOCK OF THE FESTIVAL HALL.)

¹ He is described in the accompanying inscription as an "Ua-Ua," or southeastern Ethiopian.

² A panegyry was a popular festival, or jubilee, held on the thirtieth anniversary of the accession of the reigning Pharaoh.

³ A warlike nation of Syria, divided into the Upper

and Lower Rutennu, whose territory extended over the whole of Palestine and the coast of Phenicia on the west, and as far as Damascus on the east. On the north they held the country as far as the Amanus, while on the south their frontier was coterminous with that of Egypt.

OSORKON II. MAKING OFFERINGS TO BAST, WITH PART OF THREE PROCESSIONS. (BAS-RELIEF FROM FESTIVAL HALL.)

How long it continued to flourish after this, it is impossible to say. Except the ruins of some small structure—possibly a fort—built with Roman bricks, no trace of the Roman period, no fragment of Latin inscription, not even a Roman coin, was found. Yet it would be rash to conclude from merely negative evidence that a temple so exceptionally beautiful, so popular, and within so easy a distance of Alexandria, was already abandoned to decay in the time of the Cæsars. Whatever its condition, we know, however, that it must have shared the fate of its fellows when the national religion was proscribed by the edict of Theodosius, A. D. 389. All were alike given over into the hands of the spoilers. Statues of kings and gods were flung into the Nile and the canals; vessels of gold and silver were cast into the melting-pot; sacred groves were

felled; mud-built huts sprang up like fungi within the sacred precincts; and in those holy halls which before were fragrant with incense and resonant with chanted hymns, the fellaheen of fifteen hundred years ago stabled their asses and stored their grain precisely as their nineteenth century descendants swarmed of late with their poultry, and pigeons, and beasts of burden in the storied chambers of Edfû and Luxor.

The work begun by the Christian iconoclast was completed by the Mohammedan invader. In a manuscript treatise preserved in the French National Library it is said by El-Makrizi that Bubastis was one of the cities awarded by way of appanage to those Arab tribes that had taken part in the conquest of Egypt. We do not need to be told what treatment the ruins of the Abode of Bast would receive at the hands of

the followers of 'Amr. Every temple, every pyramid, every tomb in Lower and Middle Egypt, became at that time a quarry for the architects of palaces, fortresses, and mosques. Limestone buildings were demolished, and granite buildings were wrecked for the sake of their limestone foundations. At Bubastis, as at Tanis, pavements and foundation courses were systematically quarried out; and, as a necessary consequence, the superstructure came down *en masse*.

From the time of El-Makrizi to the advent of the French commission in 1798 the history of Bubastis is again a blank; but with the brief report of M. Malus on "Thal Bastah," in the first volume of the "Mémoires sur l'Égypte," it emerges for a moment from oblivion. Referring to the dividing point of the Pelusiac and Tanitic arms of the Nile, he says that from thence he first saw the mounds of "Thal Bastah," which he estimates as distant seven leagues from the Nile and half a league from the canal:

We there found many ruins of monuments illustrative of Egyptian architecture. We remarked among other objects a fragment of cornice in a massive style, with the sculptures in good preservation. This block, which measures about eight feet in length and six in height, is of a very hard, brown-colored granite. The work is highly finished, and it is covered with hieroglyphs. . . . Enormous masses of granite, almost all broken, are piled up in an extraordinary way.

It is evident from these words that a considerable part of the ruins was yet above ground ninety years ago, and that all, or nearly all, those "masses of granite" which so impressed the French savant must have disappeared since his time. Following Malus at a distance of some sixty years came Mariette. By a strange oversight, he missed the axis of the temple, sinking his pits in a northeasterly direction, instead of from west to east. Missing the axis, he missed the great discovery so fortunately achieved thirty years later by M. Naville.

Amelia B. Edwards.

THE UNDERTONE.

THY word, O Lord, for evermore is true:
 The deep without calls to the deep within.
 Here on the sunlit crags I lie at ease,
 Whence I behold an endless vast without,
 And dimly know a deeper vast within.
 One with eternal voice of pealing sound,
 And one with ceaseless crying of the soul,
 While each to each a solemn answer gives.
 Hearken! My soul, be still and understand!
 Swept by swift winds and drawn by secret power,
 The waters break in music on the shore,
 And with a speechless yet a meaning voice,
 Not to be heard but by the fortunate ear
 Attuned to high and spiritual sounds,
 These waters cry, behold, they cry aloud,
 Moaning in tender sympathy with pain,
 Shouting anon with fresh and childlike glee,
 Or murmuring low as in love's fond embrace,
 Or like the prayers of saints about to die,
 Then thundering the warrior's battle-shout;
 The market's hum, the gold of eloquence,
 The ever-wearying wrangle of the schools,
 And the vain babble of the idle crowd.
 All these I hear, repeated from the world,
 But underneath them all, in deeper strain,
 Binding the whole in smooth, unbroken rhythm,
 Is one low marvelous voice, as thunder strong,
 Divinely clear, and sweet as heavenly bells,
 That pauses not, nor ever changes tone,
 But speaks unto the soul for evermore
 Its one eternal prophecy of peace.
 That wondrous voice, O God! is surely thine;
 That selfsame voice, Eternal God! is mine.

FRIEND OLIVIA.

BY AMELIA E. BARR,

Author of "Jan Vedder's Wife," "The Border Shepherdess," "A Daughter of Fife,"
"The Bow of Orange Ribbon," etc.

v.

ANASTASIA AND OLIVIA.

"With how secure a brow and specious form
He gilds the secret villain!
..... sets his countenance for deceit,
And promises a lie before he speaks."

"Heaven has no rage like love to hatred turned,
Nor hell a fury like a woman scorned."

"My heavy heart, the prophetess of woe,
Forebodes some ill at hand."

T is not necessary that we run glittering like a brook in the open sunshine in order to be happy, yet every heart seeks some flower of pleasure with which to adorn its daily duty; even as the wealthy wheatfield wears with the bending corn the useless, splendid poppy. Nathaniel had many important things to attend to during the week ensuing his visit to Kendal, for the oversight of the estate was on him, and there was wood-cutting in the forest, and there were folds upon the hills, and the farm servants and the fishers and the shrimp-gatherers all waited for his orders. But though these duties brought him a sure satisfaction he thought very often of Olivia, and the memory of her voice was like some one calling him wherever he went. And he longed, even in his busiest hours, for the sight of her face and for that nearness of her presence which was in itself a simple delight.

Sometimes the baron rode or walked with him, and the two men meeting a solitary shepherd on the hills, or a fisher tugging his boat on to the shingle, or a silent man driving the plow before him, they would stop and talk awhile, first of the work going on, but sure finally to drift to the subjects uppermost in every heart—life and death and the conditions pertaining to them; how "man that is born of a woman is of few days, and full of trouble," and how he can be justified with God.

These thoughts, which the ancient Chaldean pondered under the stars of the desert, and which survive all changes of race, manners, and dynasty, had at that day in England a

tremendous vitality. The Bible in the vulgar tongue was as yet a new book. Men and women loved it and trusted in it with a passionate sincerity which it is hard for us to understand, who use it as a schoolbook, and make anagrams and puzzles out of it for the amusement column of the weekly newspaper. Every word between its covers was the word of God. No one doubted a tittle of it. It was read upon the knees. It was never touched but with clean hands. Upon its stand or table no other thing was permitted a place. In the household and the church it was the holy of holies. Men then really did sell a field and buy this pearl of price. And they were not content to read; they searched the Scriptures for hid treasure, and they found it.

And as God is his own interpreter to every man, and to no two men alike, no wonder that it was an age of spiritual conversation and discussion. Even on Kelder's estate he found the great truths, which all acknowledged, tinged by a variety of individualities. The shepherds had ærial visions, the husbandmen strong and stern convictions, the dwellers by the sea believed in supernatural forms of sight and hearing. But with all of them Nathaniel had strong sympathies. The Bethlehem shepherds, watching their flocks by night, had seen a vision of angels; he knew no reason why Westmoreland shepherds should not be equally blessed. He could understand how these grave men, even when fighting the battles of the Lord, had pined for the upper pastures with their long twilights, and their wide view, and their free life.

Several of the farmers had been soldiers in Cromwell's army, and to obey God's will and do duty to its last particle was their ideal of righteousness; special tokens of love, particular help or visitations, they looked not for. The "well done" of the Master at the close of their labor was sufficient. In such strong self-abnegation Nathaniel grew in spiritual stature. And there were times when even the melancholy mysteries of the coastmen fitted into his mood. He could feel with them the harbinger of death going overhead, and see and hear in their dubious, dreamlike intimations as men do and see and hear who

go down to the sea in ships and see God's wonders in the great deep.

One morning, more than a week after this eventful journey, Nathaniel was sitting with the baron upon a large boulder overlooking a great extent of country. Suddenly he had an impression that he ought to go to Sandys. The desire to do so had been with him all the week, but he had felt hurt at Roger's constrained manner, and an honest haughtiness of self-esteem, not to be blamed, had hitherto prevented him from humoring his inclinations.

"Father," he said, "I feel that I must go to Sandys. It appears to me that I have no time for delay."

"Consider whether the feeling be of desire or of duty."

"There are commands which I have no right to consider. This is one of them."

He rose as he said the words and began to unfasten his horse and arrange the bridle. The baron rose with him. The calm induced by their previous conversation was all gone; he looked anxious, and in a wistful, warning voice said, "Before you mount look to the girth."

The words had a much deeper intent, and Nathaniel caught it and nodded a grave assurance in reply. Then he rode away with the hurry of a man who is sent as a swift messenger, and the baron led his own horse down the green, slippery sheep-path, and somehow, for the dim turmoil of his uncertain feelings, he could find no ejaculation but one: "Oh, the changing years! Oh, the changing years!" And though to others the words would have been unintelligible, to Odinel Kelder they were the sum of a life full of vivid emotions and stirring deeds.

Nathaniel reached Sandys in the afternoon. He had been detained a little by a tide-swollen stream, and had lost some of that enthusiasm of conviction which had hurried him at his first setting out. Roger Prideaux was not at home: he had gone to neighbor Gill's, Asa said, but might be back at any hour. Now Nathaniel was a great favorite with Asa, and he had the utmost reliance upon his heart and judgment. He knew, quite as well as if Nathaniel had told him so, that the young man loved Olivia; and he favored the idea of such a marriage. For he thought Olivia too self-reliant and too authoritative for her sex, and expected her to find in Nathaniel's strong character and will a force sufficient to make her obedient to him. Indeed, the only point in which Asa considered Quakerism vulnerable to mortal criticism was its acknowledgment of the spiritual equality of men and women. Asa was willing that God should speak to women, but he was not willing that women

should be in any respect God's messengers to his own sex.

He had been much struck with Nathaniel's determination and authority in the case of John Whitehead. He felt sure that he was exactly suited to keep Olivia in that gentle but positive subjection which he thought was not only the natural but the wisest state for women. So, though he had been told by Roger to admit no one into the house during his absence, he made bold to read the order in the light of his own judgment, and to give Nathaniel the opportunity for a little private conversation with Olivia.

"Friend Roger is gone to neighbor Gill's, but thou canst talk with Olivia. And if thou hast anything to say, say it quickly. I am thy friend in this matter, for I have turned the fleece on both sides. Now, therefore, if thy mind is made up, seasonably insist upon it."

Nathaniel did not receive this advice as kindly as its interest warranted. Olivia was so set apart in his own mind that he could not endure that others should speculate about her affairs or her future, especially where that future touched a subject so personal as his love for her. He answered Asa's advice by asking precisely the same question he would have asked had the advice not been given: "Is Mistress Prideaux within the house?" Asa was "led to think so"; but about women and their ways he never ventured on any statement more positive.

Nathaniel went at once to the dining-room. He opened the door with the quick, decided movement natural to all his actions. Olivia sat in a chair by the window. John de Burg sat near her. He had a book in his hand and was reading aloud. In a moment the scene changed. Olivia came a step forward to meet him, and John de Burg rose and laid the volume upon Olivia's work-table. Her face was suffused with blushes, her manner confiding and yet deprecatory.

"Nathaniel, thou art welcome. This is Harold Sandys, the cousin of thy friend who died at Marston Moor. He was mercifully spared, and, being in danger, has been led to select the old home as a good place of safety. Nathaniel, from thee he has nothing to fear, I know?"

John bowed so profoundly as to suggest a defiance or an impertinence. The eyes of the two men met, and swift as the firing of a gun the pupils of both dilated with anger. Nathaniel's flashed with a blue flame, and the blood rushed crimson over his face and brow. For it was a glance of recognition to him. He was sure that he saw John de Burg, and he knew why he had been sent to Sandys.

John was the only person at ease in the situation. He lifted a volume of George Herbert

and began to read stray lines and couplets from it, and to invite Olivia to comment upon them :

Dare to be true : nothing can need a lie ;
A fault, which needs it most, grows two thereby.

John found an illustration of this dictum in his own experience. He made Olivia confess that it had been better for him as Harald Sandys than it would have been had he assumed another name. He kept to this subject with a persistence which drove Nathaniel to the verge of passionately assailing his identity ; for in the few minutes' observation of his face while speaking Nathaniel's insight had changed suspicion into certainty.

The fine profile of almost savage intensity was the De Burg profile, exaggerated by John's especially wicked character. The eyes somber, tawny in color, cold and sinister in expression, moved in the same bluish opal that made Anastasia's soft orbs so remarkable. He carried his head high, with the same domineering look which distinguished all the De Burgs. He had also their full, abrupt voice, but the cool stare, bluish as that of a bull, was doubtless a quality which he owed entirely to his own shameless cultivation of it.

The desultory reading and conversation went on for about ten minutes, during which time Nathaniel was observing and deciding. Suddenly into the strained, suspicious atmosphere came the sound of a shrill, gay voice, the tapping of light heels upon the stone passage, the swish and rustle of trailing silk garments. Olivia stood up pale and discomposed, while a quick intelligence as to the interruption flashed into John de Burg's face. This circumstance was instantly noted by Nathaniel ; so that the final confirmation of Anastasia's entrance was scarcely needed by him. She advanced trippingly, with the prettiest courtesy and the brightest smiles.

"Mistress Prideaux, I am hugely pleased to see you. Faith, I thought I never would come at you ! There is a stupid old man at your door who would have denied me entrance at all points, had I let him. Captain Kelder, you look yourself to a miracle. Pray, do you ever mean to smile again ?"

She had taken Olivia's hand and was gazing into the girl's face with all the inquisitive mockery of her nature. But by this time Olivia was quite composed. It had taken her but a moment to reflect that Harald Sandys could be in no political danger from Mistress de Burg, and she said with a grave, sweet manner : "Doubtless Harald Sandys is known to thee. We have been favored to give him help in trouble."

"All who suffer for the king are known to

me," answered Anastasia ; and she gave her hand to her brother with a face full of conflicting feeling, though Nathaniel perceived that the humor of the situation was predominant, and that the girl had much to do to prevent herself turning it into an occasion for mirth. A glance from her brother brought her to reason, and with the utmost manner of a fine lady she said :

"I am but a bad neighbor, Mistress Prideaux, and you have good reason to be rude to me now, but to say truth I have been hindered from coming a score of times ; for I assure you that I have not fallen out with all the world because the Lord Protector and my cousin Kelder cannot agree with me. Yet truly"—and she looked at Nathaniel with eyes full of reproachful sadness—"I have been tempted to fly from so many unkind circumstances. 'T is said the king hath ever a welcome for a merry heart, and I hear there is a ship lying off this coast for some who will take refuge with him."

This last piece of information was given with a meaning glance at her brother, and Nathaniel instantly understood why Olivia had received a visit from Mistress de Burg. John's ship was waiting for him, and she had come to give him the information. Having done so she turned the conversation with a rapid and graceful adroitness upon the weather, and the flowers, and the gentlewoman whom she was going to visit as she passed through Milnthorpe. Her name again brought up that of the king, and John, either carelessly or as a matter of defiance, spoke of the Protector as "Old Noll."

The very atmosphere of the room was tingling and provocative. John, in the sense of the security afforded by the near presence of his ship, assumed an attitude indescribably irritating. Anastasia's conversation was full of covert innuendoes, thinly veiled by an almost offensive politeness. Nathaniel's face showed that he had made his last concession to the social courtesies the situation demanded. Then Olivia, whose repose of manner and low voice had been in singular contrast to the restless, irritable spirit of her visitors, rose, and, saying something about "refreshments," left the room. For eating and drinking together has ever been the English fetish for averting quarrels, or for their reconciliation.

As she closed the door John and his sister went towards an open window, but Nathaniel, who was radiating anger as a lamp radiates light, could restrain himself no longer.

"John de Burg," he said, "go at this moment, or I will arrest you in the name of the Commonwealth."

"My excellent cousin, John is *now* ready to

go. The pretty Quakeress has served his turn." It was Anastasia who spoke, facing him suddenly with her sweeping courtesy and her scornful smile. Her brother's countenance was an epitome of every evil passion, and he instantly supplemented his sister's words with the remark:

"I am going on my own orders, not on yours."

He was counting some gold as he spoke, and as he put it in his pouch he glared at Nathaniel with an impudent and rancorous leer, and added, "I am in your debt, Cousin Kelder. I will pay you. I will pay you well. By every devil in hell, I swear it!"

Nathaniel's hand was on his sword, he was in the act of advancing, when John by a rapid leap through the window evaded the intended arrest. Anastasia instantly placed herself in the way. She was the incarnation of rage, and through her set teeth she hissed at him the first contemptuous words which came to the relief of her passion. They were too unwomanly to be answered, and Nathaniel heard them with profound shame and sadness. They ended, as such words generally do, in a threat.

"John will pay you, sir, for these two minutes. And I will help him."

"Anastasia, you will do as you desire in the future. At this moment you will do as I desire; that is, you will leave Sandys at once. You have shamefully wronged its kindness and goodness. Make your adieus when Mistress Prideaux comes in. You shall not eat and drink with her. You are unworthy to be in her presence."

"The sweet saint! So that is the way the wind blows, is it?"

He did not answer her, and she continued her passionate tirade, making both her face and her body partners with her tongue in the expression of her contempt and hatred.

"The canting little Quakeress!" with a snap of her long white fingers. "I am to do her honor and homage, am I?" with a scornful courtesy to the words.

"Only make your respects to her as quickly as possible."

"Faith, sir! I will make no respects to her. Too much grace for the simpering 'thee' and 'thou'; and, with the contempt of the words defacing and darkening her beautiful face, she passionately flung open the door and left him.

The temper of her departure she cared not to hide, and amid the hurry and clatter of carriage doors and carriage horses it was easy to distinguish the imperious tones of her shrill, clear voice.

In the height of the turmoil Olivia returned to the room. She had in her hands a small

silver tray holding a seed-cake and some cow-slip wine. Her plain black dress and the snowy purity of its deep lawn cuffs and neckerchief accentuated the slight flush upon her cheeks. Her clear eyes were troubled, her gentle manner had lost something of its serene repose. She looked at Nathaniel curiously, and then noticed that he was alone.

"It seemeth as if something was wrong. Was it indeed Mistress de Burg who left in such anger? Where is Harald Sandys? Surely thou hast not been quarreling with them, Nathaniel?"

"The man who was here is not fit for your presence. I have sent him away."

"Thou art angry, and thou art going too far. My father's wisdom passeth for a general report, and he thinketh well of the young man."

"But I know him to be only evil."

"We are forbidden to judge, and Harald Sandys—"

"He is not Harald Sandys; he is the brother of Mistress de Burg."

"John de Burg?"

She could hardly ask the question, and Nathaniel answered her only by a movement of affirmation. The horror of the girl was unmistakable, though she sat down and remained for some moments motionless. It was evident John de Burg's history was known to her, and indeed Nathaniel had little to add in explanation of his conduct. For, knowing all, Olivia saw at once that it was the only possible course, and she was the first to speak of what had hitherto escaped Nathaniel's notice—the possibility of her father getting into trouble with the Government for sheltering its outlaw.

"My father did it willingly; for nine days he has sheltered him. He also asked from Edward D'Acre a change of clothing for him. O Nathaniel! my heart misgives me sorely."

Nathaniel looked at the sorrowful girl, and his heart ached to comfort her. Words of affection sprang to his lips, but he would not, at their first outflow, mingle them with words of fear and wrong. Besides, he saw that Olivia was inclined to silence. She was waiting for a greater Comforter and Counselor than himself. So he went away from Sandys soon after Anastasia, and rode slowly towards his home by the road on which he expected to meet Roger Prideaux.

He was very much disturbed and depressed; apprehensions came in crowds, and the low, melancholy tones of the bleating flocks seemed to voice them. He met Roger about five miles from Sandys. His broad face, shrewd and homely, had not its usual benignity; indeed, it had the expression of a man who had worries of his own. Nathaniel told him plainly whom he had been entertaining, and the man-

ner in which he had rid him of his guest. The news startled and troubled Roger; yet it was not altogether bad, for he confessed that he had been anxious about the man's right to Sandys, and had entered into an obligation to buy that right for a sum of ready money. And he had just been to a wealthy neighbor's to obtain a temporary loan for the purpose, as the claimant, he said, had become uneasy to get forward on the king's business.

"It is most certain, Roger, that your guest was John de Burg, and that, after trespassing upon your home, he intended to rob you of your money. I have no doubt he fell a-laughing at you a dozen times a day."

"God forgive him!"

"I would at once convey to the proper officers all particulars of this affair. I fear, otherwise, that it may be made an occasion against you."

"What time hath passed since the man left Sandys?"

"About two hours."

"Then he is manifestly beyond arrest. I doubt not there was a small boat waiting at the nearest point for him. He is on his own ship by this time. I will seek after counsel and clearness before I speak abroad of the matter."

"It is such a matter as may be severely dealt with."

"It is, indeed, a weighty and perplexing dispensation, but I trust that I shall be given to see the right way. Whom dost thou fear? Speak plainly."

"Mistress de Burg."

Roger smiled dubiously. "She hath her own plans; they touch not me or mine, I think. And I have proved that the strength of silence is greater than the strength of speech."

Then they parted, Nathaniel full of a vague trouble, yet in sacerdotal sympathy with all around him. The soft, gray afternoon was fast merging into a dull red on the horizon, the hedgerows were growing indistinct, the wider landscape was a dim outline of light and shadow. Soon the vapors rolling down the valleys made the lonely scene more lonesome. The events of the day fitted themselves into it: the singular impression which sent him to Sandys, John de Burg's threat of injury, Anastasia's words of scorn and hate, all grew remote and indistinct as the natural world around him, while the dull, heavy sound of the sea, its confused tones, its sighing surges, seemed the indistinct utterance of his own unutterable emotions. And as he approached Kelderby the moon rose, and in its light he was conscious of a strange backward prescience, a mysterious memory of some ex-

istence where the sandy shores were longer, and the hills far higher, and the sense of life more sweet and strong.

It was strange that amid all these thoughts Olivia had no distinct preëminence; for the soul is not always on its watch-tower: it has periods of carelessness for which it often sorrows with a hopeless regret. And no intimation of what followed on his leaving Sandys troubled Nathaniel. He had seen the departure of John and Anastasia de Burg, and it never entered his mind that either of them would return. But he knew nothing of the nature of a woman like Anastasia. Before she had quite reached Milnthorpe the devil whispered a few words in her heart which turned the tempest of her passion into a sudden calm.

"Why not?" she asked. "Why not? If he is still there I will confront them both. I will claim his hand, and vow I had his promise. The little saint will be so much of a woman as to believe me. If he is not there—I can say whatever pleaseth me. Yes, I will grant myself this gratification. I can rest all night at Milnthorpe with Mistress Cecil. Faith, I will not go back to De Burg owing myself so much."

Instantly she turned the carriage back to Sandys. Fortunately, Olivia saw her approach while she was yet at some distance, and her well-trained mind instantly began to subdue itself to a settled calm and purpose. Anastasia fully expected to find her in tears and distraction, for she reasoned thus: "If Nathaniel has delivered her so much of my affairs as to explain that Harald Sandys is John de Burg, she will be weeping out her horror to him. If he has not told her, they have probably quarreled on the secrecy of the affair. Do Quakers quarrel? 'T is a point of indifference. For if she speech not her anger it will nest in her heart and breed more and worse."

Asa Bevin met her at the door with a doubly forbidding aspect. But his deliberate speech and manner was no impediment to the resolute woman. She had passed him before his first words of remonstrance were uttered, and again Olivia heard her rapid tread upon the flagged passage, and again saw her enter the room in a still more exaggerated flurry of rustling silk and flying ribbons.

She was dashed by its perfect stillness and order. The wine and cake had been removed. Every chair was in its place. Olivia sat with her hands dropped on her lap, gazing out of the window. She rose courteously as Anastasia approached, but with an air of reserve, and waited for her visitor to address her.

"Mistress Prideaux, I left in something of a hurry, for, to say truth, Captain Kelder roused in me more temper than I usually carry about.

To speak plainly, you must know that he hath the promise of my hand — a promise which lately he values too little. I am advised that *you* are the excuse for his unkindness."

"I am sorry thou thinkest so unworthily of him, and of me. I have given thee no reason."

"Marry! I believe you not. Captain Kelder is such a man as would be beyond the nay-say of a girl of your breeding and condition."

"My breeding teaches me to take no man into my thoughts until he has sought them with honor."

"That is beyond Captain Kelder. He is already promised."

"And my condition is one that may ask civility, even from thee."

"I tell you plainly that Captain Kelder is bound to me. You have no right to entertain him."

"Thou art going too far. Thou must keep to thy own rights."

"I will take no correction from you."

"But thou must in this matter. My father's guests are to be entertained by me."

"Captain Kelder is a liar and a villain. You ought to give me credit for the warning. I'll swear I cried for you when I saw him here."

"I am sorry thou hast such evil thoughts. And if Nathaniel Kelder hath been false to thee, then truly it is best to weep for thyself."

"O you cunning Quaker wench! Faith, but you are clever in bandying words!"

Olivia turned slightly from her but did not speak.

"Answer me!"

"I am forbidden to give railing for railing."

"Day of the devil! You shall answer me."

"I will have no quarrel with thee. Be pleased to remove thyself from my presence."

So far both had remained standing. Olivia now returned to her chair. Anastasia made an attempt to follow her example, but the impetuosity of her passion would not brook the constraint of the posture. She stood, she walked, she stood again before the girl she was torturing, feeling a certain dominance in the attitude which increased her insolence.

"I will go anon—when I am ready. Do you know that you are in my power—under my feet? For I shall please myself with giving information against you. Yes! it takes a Quakeress to hide a handsome malignant plotting against the Commonwealth. Faith! you shall pay sweetly for the pleasure of Harald Sandys's company."

"Thou art not speaking the truth. Thou knowest that Harald Sandys was never here at all."

"With your gracious leave I will affirm he was! 'T was your own tongue told the lie, and it puts me in a humor of delight to confirm it."

"Thou knowest well that I was deceived, and that it was thy own wicked brother."

"It was my—'own—wicked—brother'? Lord! I would give my golden scent-coffer if my—'own—wicked—brother' could hear you. John de Burg in the seat of the godly, listening to experiences, favored with an evidence, waiting for counsels, and feeling drawn towards thee all the while. It is most delectable. You sweet saint! Do you know what you will have to pay for this honor? John is a luxury. Outlaws cost money. Pray, did he make love to you? Did he vow that for your sake he would forswear murdering and practice praying? And is Nathaniel, the dear religious youth, jealous of him? Lord! I shall die with the fun of it. 'T will serve me to laugh at for seven years to come."

At this moment Asa Bevin entered the room. He cast his eyes first upon Olivia. She had covered her face with her hands, but she was not weeping. She had only shut Anastasia from her sight, in order that she might the more easily be deaf to her reviling and center her whole consciousness upon Him who could hide her in a pavilion from the strife of tongues. The perfect stillness of her attitude relieved Asa; he felt that she had retired into a peace beyond the fretful fever and stir of this world, and he turned suddenly upon Anastasia:

"Thy chariot is waiting, and thou must go."

She looked with contemptuous anger at the little old man in his prim garments and tall stiff hat, and asked:

"Pray, who may you be? The goldsmith from Paul's Walk, eh?"

"I am not bound to tell thee my name, but so far I will humor thy poor pride. I am Asa Bevin, house-steward to Roger Prideaux. Thy chariot is waiting, and thou must go."

"Base-born churl! Off with your hat in my presence!"

"A good man is the son of the living God, and it is a crime in thee to call him 'base.' And thou mightst as reasonably bid me off with my coat as my hat. I will off with neither in thy presence. Wilt thou go? Or shall I send thy men for Stephen de Burg to bring thee to thy own place?"

"What say you, fellow? Out of my way! I have a month's mind to make my men flog you for an insolent Quaker rogue. Mistress Prideaux, remember this 29th of May. You shall date many an evil day from it. Fellow, open the door! I am thankful to escape this pestilent house. And tell your master I will haste to do him all the mischief I can."

"Thou wilt do what thou art permitted to do, and no more. The wrath of man—ay, even the wrath of woman—shall praise Him, and the rest of the wrath he will restrain."

"I will move heaven and earth for his ruin."

"Heaven and earth are God's, not thine."

"A pack of sniveling, canting, Quaker knaves!"

"Canst thou not speak without snarling dog-words? The Lord rebuke thee."

"You are an impudent varlet. I swear I will bring you down to extremities."

"Well, then, Christ for my share."

Asa was growing calmer at every threat, and the angry woman, feeling her impotence against his steady soul, was glad when the clashing of her chariot-door and the trampling of her horses' feet gave her the semblance of a triumphant escape from the scene of her shameful assault. For, though she had met with so little resistance, she felt herself to be utterly defeated and humiliated.

Roger met her in the park. He stood aside to permit the chariot to pass and caught a glance of the handsome, angry face within it. He had also a presentiment that it was Anastasia de Burg, and a sudden fear for his daughter made him hasten his steps. But when he entered the parlor there was no trace of the stormy act of which it had just been the scene. Asa was directing the spreading of the evening meal, a servant was putting fresh logs upon the fire, Olivia sat in the hearth-light, knitting. The homely duties quieted him. When his eyes saw them his lips uttered a blessing. But he sat long with his child that night, talking over the events of the day, for they felt that the situation was one involving danger and trouble.

"How forcible are right words!" said Job. But he might have said, with equal truth, How forcible are wrong words! It was impossible to exorcise the influence which Anastasia had scattered abroad. The room retained the clamorous echoes, the atmosphere of unrest and fear and hate, with which it had been charged by the passionate woman. So the stillness and peace of the upper chambers was a sensible relief. Roger shut the door of his bedroom and then asked himself:

"Why art thou so heavy, O my soul? Thou art girded round by God. This is the rest that never can be shaken."

Olivia was equally glad of the change. She stood motionless a few minutes in the center of the spotlessness and peace of her sanctuary. But she was conscious of a great inward tumult. Anastasia's bitter words still stung her soul, and she could hardly restrain the sharp, low cries that would fain have voiced her suffering. If Anastasia spoke truth, then how false was Nathaniel Kelder!

The first sorrow of womanhood had found her out. Its restless pain amazed and terrified her, and for a few moments she gave way to the passionate fear and love in her heart. She

trembled like a reed in a great wind, and the word "Nathaniel!" broke through her closed lips. At the sound she fell upon her knees and buried her face in the white drapery of her couch. It was the revelation of mortal love, and its first monitions filled her with fear. Was she indeed putting the creature before her Creator? a mortal man before Him whom her soul loved and who had loved her from everlasting?

With a swift abnegation, with eyes raining tears, she resigned everything, gave up all her will, and all her desire, and all the sweet thoughts of love that had sprung up within her heart. Then a great calm encompassed her, and her soul refreshed itself in waves of peace and joy that came, as come the winds of God—whence, and how, unknown to mortal comprehension.

VI.

SORROW HATH MANY FEET.

"King of the Pelasgians, various are the ills of men; nowhere canst thou behold the same wing of trouble."

"But every one bears a ready evil tongue, . . . and to speak slander is an easy thing."

THE village of Kelderby consisted of about fifty cottages clustered around the church and its burial-yard. It was inhabited chiefly by shepherds and husbandmen; the fishers and shrimp-gatherers dwelling in a smaller hamlet below the cliff, almost upon the sea-sands. The two hamlets were known in the neighborhood as Upper and Lower Kelder, but the village had no market, and no special industry, neither was it upon any great highway—only a pretty, lonely place, as natural to its locality as the bluebells were to the hills around it.

As Nathaniel rode through the winding street a pleasant sense of its homeliness fell upon his heart. The calm, serious men smoking on the stone benches by their cottages, and the women with their arms folded under their aprons—both alike gave him a cheerful "Good e'en, sir." And the little lads and lasses playing "How far to Babylon?" stopped their game a moment to doff their worsted caps or drop a courtesy to him. And in the dim, misty gloaming the men and the women and the elfish-looking children affected him very much like figures seen in a dream. He knew them, and they knew him, but the far-off, sensitive mood of his mind gave to all the unreality and remoteness of a vision of the night.

When he entered the park he made an effort to fling off this unworldlike phantasm, and with the help of a brisk gallop he entered Kelderby in a more lively and vigilant temper.

The house was still and duskish. It was just the moment at which it might, or might not, be lighted for the evening, and as it happened Jael was in the more lingering humor.

The sitting-room was empty, and though the baron's chair by the window held a volume by Mr. Richard Baxter, it had the air of a book which did not expect to be talked with again that night; and Lady Kelder's wheel by the hearth wore also the same aspect of loneliness. Nathaniel had prepared himself for sympathy and he felt disappointed. However, he guessed that his mother was in her own room and he went thither. His light, decided tap was instantly recognized:

"Come in, Nathaniel."

There was extreme sadness in her voice, and Nathaniel opened the door with an uncertain fear. Lady Kelder knelt by her dower chest, her elbows were upon it, her brows rested against her folded hands; a book lay below them, and Nathaniel seeing it understood the pathetic resignation of her attitude. He knew that if he should lift it he would find the "Prayer on the Death of a Child" wet and crinkled with tears, especially at the top of the page which had been turned to for its "Consolation":

If it stayed not here to enjoye Pleasure, see neither did it Stay to be pined away with Sorrow and Care. It lived not long enough to be versed in all the Vexations of our State, nor to run thro' that Great Varietie of Miseryes and Misfortunes which are incident here to our Nature: But went off before it had time to trye how much evil is to be Endured in this Life; yes, before it was come to aggravate any afflictions by imagination, or to anticipate the same by Fear, or to reflect in bitterness of Spirit, and lay to heart what it did endure.¹

"My dear, dear mother!"

He stooped and gently removed her folded hands, and lifted her wet face and kissed it. "My mother, my dear mother!"

"It is twenty years ago to-day, Nathaniel. Surely you have not forgotten! I can see them taking her to her burial. Down that path they went"; and she rose and looked from the window. "The coffin was covered with hawthorns and lilies, and twelve of her companions, wearing white lawn, carried her. They were singing as they went, and, O Nathaniel, I hear their voices now! It was such a lovely afternoon, and the sounds filled the garden. The lilac trees were all abloom: if they could speak they would tell you they had not forgotten."

"Mother, none of us have forgotten. But should we weep for her? Think of all she has gained — and of all she has missed."

"Missed! Yes, the child-bearing and the child-losing — the vain cares, the still vainer

hopes, the terror of griefs looked for, the agony of those that come; all the wrongs of wifehood, all the bitter wrongs of motherhood, she is well out of them. Little joy has earth, and much sorrow, much and hard sorrow."

Nathaniel could not answer. He only drew her close to his side and kissed her wet eyelids. And as he did so the tears filled his own eyes, and he said to his soul, "Oh, wonderful mother-love!"

"Come, we will go to the parlor. The dead wish not to wrong the living."

She cooled her face with some sweet-majoram water, and then put her arm through her son's. Slowly they went together down the wide oak stairway, making — though they thought not of it — as charming a picture as any Mr. Lely ever painted: the aging mother in her black-silk dress and hood of white lace shading her white hair; the son, tall and strong, in high boots and Spanish leather and a handsome doublet of black velvet.

The baron was standing on the hearth gazing into the fire. As they entered he turned his face to them with a smile. The waiting-men instantly began to serve supper. Jael stood at her lady's chair with her shawl and footstool. As the two women met they looked understandingly at each other. Jael had been weeping also. She had been the dead girl's nurse. But, O mystery of Life, from what lowly depths proceed thy comforts! Lady Kelder on sitting down saw by her plate a handful of wild-flowers, and her white face flushed and a gleam of happiness and hope came into it — a few primroses and violets and some leaves of rosemary, tied with a band of scented ribbon-grass. She looked gratefully into her husband's eyes, and perceived that while she had been weeping in her chamber he had been to the grave to weep there. The rosemary grew at its head, her own hands had planted the primroses that starred the turf, and the violets that made it sweet. The father-love had not forgotten either the child or the mother.

Nothing was said during the meal about Nathaniel's sudden visit to Sandys, but as soon as possible afterwards he told the whole strange story. It made a most unhappy impression, and Lady Kelder, who was weary with emotion, very quickly grew fretful over it.

"It is easy to sit still and look troubled, Odinel, but what is to be done? I asked you to let these De Burgs alone. I told you that it was dangerous and foolish to help the wicked; but you were wiser than seven wise men that can render a reason, and I was not heeded."

"My dear Joan, it is not a question of wisdom, but of kindness. God is good both to the evil and the righteous."

"Yes; and God gets very unhandsomely

¹ "Deathe made Comfortable." Devotional book of sixteenth century.

treated for being good to the evil. Did you expect you were to be better served than the Almighty? It passes my patience that men should ever be trying to imitate God's generosity without his omnipotence."

"My intentions must cover the mistake — if there be one; they were good and pure."

"Oh, indeed! I observe that mistakes are punished without regard to intentions. Good intentions will be but a poor roof-tree when De Burg turns you out of your home."

"Softly, softly, Joan. Why should you think that De Burg will do such a thing?"

"Because it will give him pleasure to do it. See how he has served Roger Prideaux, who never wrought him harm, unless he raised his malice by buying Sandys."

"I think, with Nathaniel, that De Burg knew nothing at all of John's deception. It was the doing of Anastasia. No one hath a greater horror of his son's crimes than Stephen de Burg."

"I am not so far gone in folly as to believe all that Stephen de Burg says on that subject. Furious, of course, at whatever blacks the honor of his family, but at the same time conceiving his family to be vastly superior to the rest of the world. If there be trouble about this affair, De Burg will go to Charles Stuart, and his forfeiture will be demanded of you."

"It will be to his interest to say nothing."

"Do you think Anastasia will take rest under the insult of Nathaniel's dismissal? Truly she will not. And by my faith! I know not why Nathaniel should have interfered in the matter. 'T is the Quaker's bad broth, and if Nathaniel thinks he can sup against the devil and the Quaker and the De Burg, he will need a long spoon."

"Roger Prideaux is not to be put in such company, mother."

"Indeed, others are of my judgment. Sin is like poison — many kinds, but all in their measure deadly. Stephen and Anastasia de Burg are of a quality differing from Roger Prideaux, but all poison — all poison."

There were a few moments of painful silence; then Kelder, hoping to change the subject, said: "I met D'Acre in the graveyard. He has had a stone of the prime quality put over his father, and was looking to it — a young man of a very sober humor, virtuous and discreet, I think."

"High time he remembered his father. He has been taking a wife, and so forgot the leading virtue until he had convenience."

"Nay, but he is forward in all honorable deeds. He was discoursing with me over some new plot of the Fifth Monarchy Men."

"By troth and faith! I am right sorry for the Protector. Between the Fifth Monarchy

Men who say the Lord Christ is coming, and the Quakers who say that he is come and dwelling with them, he hath but a quarrelsome time." Then stooping forward and touching Nathaniel's arm: "This concerns not us in the main particulars; our first duty is to secure Kelderby. That rests with you, Nathaniel. To-morrow go and see Anastasia. Better bring her to Kelderby as your wife than lose Kelderby forever."

"Mother, how can I marry Anastasia, she being such a woman as I have told you?"

"There is good and evil in her, as in all other women. And I blame her not for her passion. Indeed, it was beyond pardon to be put beneath that Quaker girl. And one thing I see plainly, if we would save Kelderby it will have to be by giving Anastasia an interest in it."

"There must be some other way, mother. Such a course would stand neither with God's word nor with my own conscience."

"Joan, my dear heart! We are but making and widening breaches. Let us patiently digest what we have heard until to-morrow. Clearer reason may come with another day."

"Reason! That is guessing at right and wrong. What is reason, pray? A twinkling little light, fooling men between shade and shining. I have a feeling that I trust beyond it; and it tells me that Kelderby can be saved only by Nathaniel making Anastasia his wife."

"Peace! and in God's name let the thought go. To save stone and mortar shall we ruin our son? No, Joan! If it come to the pinch you will say 'No' and stand to it firmer than any one."

The baron's tone and expression, more than his words, silenced Lady Kelder. She had been supposing a calamity, the dread of which lay in her heart, for the sake of having it contradicted. She had hoped that both her husband and her son would ridicule her fear. It gave her a shock to find that her threat was at once accepted as a likelihood. She had at that hour no more courage to gainsay anything, and a feeling of despair invaded her.

Then that impulse which makes us speak of trivial things when the mind is occupied with some great affair led Nathaniel to talk of additions to be made in the farm offices, and the baron gave him such attention as he was able to give. But the influence of the circumstances was inexorably dominant: their somber eyes reflected it; their voices had the weary tones of those whose thoughts are afar off; and as the fire burned low, and the day came to an end, every word was toilsome, mysterious, weighed down with the heaviness of anxious hearts.

Lady Kelder left the two men earlier than usual. She was glad to escape to the more

loquacious Jael; to whom, sooner or later, she always unfolded her anxieties and sorrows. Jael was truly shocked at the position in which the baron's kindness and Nathaniel's rudeness to the De Burgs had placed Kelderby. But though she had plenty of sympathy she had very little tact in its appliance.

"God-a-mercy!" she cried; "'t was not for nothing that the moles began burrowing about the house New Year. Secret enemies and a-flitting. I pray they go not all round, and add death to it."

"Jael! Jael! It is wicked to bottom our expectations on such things. How could a blind mole that sees not in the present foresee the future?" But the poor lady was in a tremor of sad confirmation, passionately denying what she tremblingly believed.

"Indeed, my Lady, the dumb animals carry God's messages a long way better than man; for, right or wrong, man will add his own words to God's words. The winged birds prophesy, say what you will against it. I've seen enough myself. When Pierson had to fly to Holland, a week afore he left the rats came by hundreds to Pierson Hall, to summons him out. The rooks knew when Squire Fell was to die. The sea-birds show the fishers what the weather will be, and where to find the fish. Dogs and horses see spirits. Cocks tell the time of day; and when men were cowards all, one of them covered shuffling Peter with shame. I think a deal, my Lady, of what beasts and birds know."

"Then you think the moles know that we are to leave Kelderby? O Jael! how could you tell me?"

"They may get back orders, my Lady. I bethink me of much ill-luck turned to prosperation. The sentence had gone out against Nineveh, and there was a free set by after it. Many lets and bars God puts in a down way. And, my Lady, it is hard for ill-luck to keep foot with prayer."

But the gift of prayer is not always in our power. Words of fear, bearing Heaven a grudge at the bottom of the heart, are not prayer; and this was the definition of Lady Kelder's present mood. But as day after day went by, and nothing further was heard of John de Burg, Anastasia's threats lost their terror and their sting. Every one in Kelderby began to regard the event as past and finished, and cut off from the life which was now to go on, as if it never had happened. Lady Kelder again busied herself in her still room, the baron resumed his pleasant communion with nature and his books, while Nathaniel began to wonder if he might not with propriety pay another visit to Sandys. For the thought of Olivia was with him night and day, and the space dividing him from her was full of void and heartache.

Anastasia had not, however, forgotten them; she was even contemplating with enjoyment this very condition of affairs. "They think the evil has passed by"; and the smile upon her face was so happy that it might have answered the sweetest and kindest of affections. Hitherto she had passed for a gay and frivolous, good-natured woman. No one suspected her of a capability for malicious wickedness. But many bad people pass for good people because they have not reached the bottom of their character. Anastasia was herself surprised at her own persistence of wrath. She had expected, even feared, that her anger would not serve her long enough to carry out any plan of revenge. It gave her a feeling of satisfaction to find that it had grown steadily in will and intensity, and that a week's interval had only intensified her hatred and her thirst for revenge.

Her delay had arisen from two causes: first, she had not been able to decide upon the course likely to give the most trouble to Sandys and Kelderby and the least to herself; secondly, her success, in any case, depended upon her father's coöperation and sympathy, and she was aware that there was a time to ask and a time to forbear asking. In certain moods Stephen de Burg would remember his cousin Kelder's kindness, and indignantly repudiate any ungrateful return. In other moods he would regard the insult offered to his daughter, not only as canceling all good-will debt, but also as an occasion for passionate retaliation; and it was this mood Anastasia was waiting for.

One afternoon, ten days after John de Burg had regained his freedom, Anastasia was sitting thinking of him. Captain Bellingham had just left her, and Captain Bellingham usually knew whatever happened in the country-side. But though she had questioned him skillfully, he had given her no news which held the faintest suspicion of John's visit to his home. It was certain, then, that he had reached the coast in safety, found the waiting boat, and gained the security of his ship. At that hour he was probably hundreds of miles away from his enemies. As for John de Burg, *she was the only soul that had knowingly seen him*. She laughed merrily to herself at the idea which suddenly flowed to her from this circumstance. It seemed to her that she had found the clue to a vengeance worthy of the wrong.

Her father entered in the midst of her private mirth. He was in an equally jocund mood, having got the better of "some canting Round-heads" who required taxes of him. "But I showed them that I was only a lodger at De Burg, being there at the pleasure of their Commonwealth; and therein Sir John Freemantle said I was right, and so on. Then comes Mr. Allen, and he thinks the taxes should be col-

lected of my security, and some fell a-laughing at the proposition, and some forsoothed it, but Sir John stood bravely by me, and the case will stand finely. A pleasant day, Asia, and all things else."

"I am extremely glad on it"; and she touched the strings of her lute lightly, and sang :

"Lay by your pleading,
Love lies a-bleeding,
Burn all your poetry,
And throw away your reading.
Piety is painted,
Truth it is tainted,
Love is called a reprobate,
And Schism now is sainted."

The bright June sunshine was all over her, giving to the brilliant colors of her silk gown the prismatic rays of the peacock's feathers. Her black hair fell curling over her shoulders and upon her warm, white neck and bosom, and her hands sparkled with colored gems as they twinkled among the strings. She was the loveliest realization of a gay and brilliant woman, formed for the delight of the senses and the enchantment of thoughtless men.

De Burg watched her with pride and pleasant speculation, and she divined his thoughts, for she suddenly snapped the song in two, and said in a low voice, "Let me tell you the secret of Sir John's complaisance: the king comes soon to his own again."

He opened his eyes wide and flashed their intelligence into hers; and she nodded back a charming assurance ere she continued, "There's a *feel* in the air, a whisper in the wind, a bird in my breast, that tells me so; and besides, a word from London that confirms all."

"Old Noll hath caught an ague."

"He hath caught death."

"Well, then?"

"If we would have the full pay of our loyalty, you know, we must go to the king. In the day of rewards those who have done so will be remembered. As for the general mass who wait for him to come to them, they cannot expect any honor in particular. Faith, sir! before a year be gone, I warrant you, men and women will be drinking the king's health upon their knees in the market-places and on the housetops."

"Well, then?"

"Go to the king."

"My cousin Kelder would have just cause to complain of me."

"We owe nothing but hatred and ill-will to cousin Kelder, and with your good help I will pay it."

"What mean you?"

"Oh, I am deadly mad at them!" Then she laid down her lute and carried a chair to her father's side. "You must know, sir, that when

I was but a maid in ankle-shoes Nathaniel made love to me and vowed me his hand."

"Pray, what did you want with the sour Puritan?"

"Indeed, that is one of the miracles. But now he wants not me. He hath fallen into the toils of the Quaker girl at Sandys."

"I have seen her. A month ago I met her with D'Acre's wife; a pretty pair of sucking doves, truly!"

Shelaughed and clapped her sparkling hands together.

"Sucking doves! Marry, sir! Prideaux's girl hath the temper of a wild cat. She ordered me out of her presence."

"Surely you joke, Asia; and 't is a poor subject for your mirth."

"Never trust me if I speak not the truth. I called at Sandys for a purpose."

"For what purpose?" He asked the question peremptorily, for like not a few men of small stature he not only was easily made angry, but was rancorous when he had a grievance to avenge. "Pray, what purpose had you at the Quaker's house?"

She looked him steadily in the face and said, "I went to see Harald Sandys."

"What foolery is this? Harald Sandys was killed with his cousin at Marston battle."

"My Harald Sandys is, I hope, now so far out at sea as to be beyond his enemies."

All mirth had vanished out of her face. She was in a mood which demanded attention as she continued: "Be so good as to listen to me. For your sake, 't is all I shall ask, sir."

"Put it in the number of my sins that I kept secretly for many weeks under your roof this gentleman—a fact that you will be best to forget, since it concerns you not, and is beyond your advantage. But presently, when there was like to be suspicion, I sent him to Roger Prideaux, for he hath an affectation of great kindness for the old owners of the house he bought."

"The rogue fancies that dingy guineas, made in some sort of mechanical work, can buy a right to an old estate like Sandys. I had looked to add it to De Burg, as was most natural. For only Bellingham lies between us, and there is so much of ancient intermarriage as would justify the king in making me heir where there is no other heir. Oh, I would have taken Sandys in payment of all scores against him, and then if it had come into your mind to marry Bellingham, there would have been an estate worthy of an earldom."

"I wonder not that you have ever been against this Quaker."

"Nothing moves me to anger like his name."

"All goes well, then, for now you have a good occasion to work Sandys out of an owner again."

The Quaker hath doubtless been harboring a malignant, whom he knew to be on the king's business."

"Make me wiser on the whole matter."

"T was on the 29th of last month. I went out, as I commonly do, to ride. I took the way to Sandys, and at the gates I bethought me of the civility of making a call upon the strange lady there. Being come to the entrance, a cross old man withstood me at all points, and with many excuses. But having determined to gratify my curiosity I would not be restrained, and, with such apologies as left him far behind, I went to the parlor. There I found Mistress Prideaux, and Nathaniel Kelder, and a man whom Mistress Prideaux, with much discomposure, introduced to me as Harald Sandys, 'there being nothing to fear,' she said, 'from one of my affection for the king.'"

"Come, this grows hugely. Nathaniel is in the plot, then?"

"So much belongs to the public ear. For your own there is much more, if you care to listen."

"Oh, I will hear to the last comma."

"Nathaniel was so much annoyed at my visit that he was hard set to give me the commonest courtesy, and when Mistress Prideaux went for a glass of wine for my refreshment he took the opportunity to insult me beyond all patience or endurance."

"The grounds?"

"I had mentioned a ship lying off the coast, supposed to be there for certain of his Majesty's friends, and he turned on Sandys and called him John de Burg,—ordering both him and me to leave at the moment. He said, moreover, that I was unfit and unworthy to sit in the same room or to eat in the presence of Mistress Prideaux, and he bid me depart in such a way as left me for the moment at his word, seeing that I would not, for my own sake, prejudice the escape of the young man. But I went back."

"Oh! you went back?"

"And I found her alone."

De Burg laughed uproariously. "Did you take her eyes out?"

"I promise you I am nothing in her debt."

The whole plot was as clear as daylight to De Burg; but there are none so blind as those who will not see, and clearness of sight in this direction was neither to his interest nor to his pleasure. He looked with something of pity and something of admiration at the sullenly handsome face of his daughter. He saw that her anger burned like a fire, and was likely to grow with the thoughts it fed on. For though mortified feeling turns to ridicule in cold natures, it turns to bitter hatred in passionate ones; and hatred, however it may punish others, is self-punishment of the severest kind.

He rose and walked thoughtfully about the room. Anastasia sat in the gloomy stillness of a soul stumbling from thought to thought of angry love. For when she began to hate Nathaniel then she found out her love by her hate. She could not forget his severe, youthful beauty as he watched with gathering wrath the unfolding of her guilty plot, and his grave rebuke added to it an invincible grace. Her soul was tossed, as in a hurricane, with scorn, anger, mortified love, and a burning longing for revenge.

"Asia!"

"Sir."

"What was, and is not, may be as if it never had been. And of what it is unnecessary to speak we will speak no more. This event begins with your visit to Mistress Prideaux. Do you understand?"

"This moment. I have forgot everything before it."

"In all cases, and to every one, are you prepared to stand to that condition?"

"I'll swear to it."

"Other affairs fit into this one with a strange evidence. 'T is well known the Quakers have made many remonstrances to the Pro—I mean to Old Noll, praying for more justice than he gives them; and also that they are dissatisfied and disquieted at his indifference to their complaints. 'T is likewise well known that the king has been in communication with leading men of all parties and all creeds, sending them promises of liberty in all matters of conscience. We may suppose—we have a right to suppose—that Harald Sandys's visit to Roger Prideaux was as the king's emissary to the Quakers, Prideaux being a man of wealth and weight among them. And old Noll's sickness has brought every one to a consideration of what is to come when *he* goes to the devil. The eye of a Kendal magistrate will see a great matter of treason in this affair, I'll warrant it."

"But Nathaniel—is he to go free? I wish him to suffer, and this is nothing towards it."

"You have a woman's trick of seeing only one thing at a time. Does your mind live in a lane? Nathaniel shall suffer on every hand and in every person. But I foresee in this affair the conclusion of much and the beginning of more. The king must not come home before we go to the king. We have lost too much to lose the claim which entry with him will guarantee. Prepare, then, for such a visit by giving your beauty the advancement of a flashing bravery of dress, for there is nothing like making a show of gentry in his presently shabby court. Thank your stars that I take this matter out of your hands; for it will require to take both wisdom and patience with it."

"Oh, sir, I neither wish nor need for a better stand-by. I can leave all in your care, with great contentment."

"And I swear you satisfaction. Faith! in these dull days of discontent it will be a great delight to me to turn things a little upside down, and as I owe you something for the pleasure, you shall have my Lady Levin's Iceland dog. I am advised that it is for sale."

Half an hour afterwards Anastasia heard her father ride away towards Kendal. She

was not afraid, she was not sorry, for the thing she had done. She went upstairs, washed, dressed, and perfumed herself, but in all her sweet coffers there was no wash or unguent for her restless soul. Reckless and contradictory, sick with a vague trouble which she would neither face nor acknowledge, she muttered defiantly:

"Well, I have set the ball rolling. Where it will go, and when it will stop, the devil only knows!"

(To be continued.)

Amelia E. Barr.

THE CRUCIAL TEST.

IT was down on the Altamaha. The Dugarres always spent the summers in their large, old-fashioned mansion, on their own plantation, coming out from Savannah in May and returning in November. It was a picturesque house, with its wide halls, its piazzas, and its white columns that a man's arms could not reach more than half around. It had withstood the changes of time, and war, and the passing away of several generations. It was a landmark of the old South, and though the row of cabins in the rear still had a few dusky occupants, they were farm-laborers, hired to work by the day.

The Dugarres were famous for their hospitality, and entertained guests from all parts of the Union. An unusually large party lounged on the shady piazza one hot, languid summer afternoon, representing Charleston, Atlanta, and even New York, not to speak of the fair Savannahians, and of Valentine Dugarre, all the way from Brazil. It was too warm for exertion, all quiet amusements had flagged, and even conversation had become a stupid effort, when Edward Dugarre brought out a dusty old CENTURY and read Stedman's poem "Hebe." It roused both the lazy and the meditative to lively comments, all agreeing in their condemnation of Florina's revenge, so summary and so terrible. Did I say all? There was one exception — Valentine Dugarre. But some of them looked upon *her* as half savage, because of her Brazilian birth, and her perfectly frank way of speaking out her thoughts and feelings. The Dugarres themselves were half afraid of her and rejoiced when she became engaged to Frank Black, a handsome young Savannahian of good family but of rather weak, unstable nature. She had been sent up to them to have an American finish put to her education and manners; but alien blood flamed in

her veins, and she had been worshiped and spoiled in her own home until she had become as imperious and exacting as princesses are supposed to be. She could do the rashest, most unheard-of things when enraged, or when in a generous mood — such, for instance, as taking a ring from her finger and giving it to a ragged beggar when he asked her for five cents. When scolded for it by her shocked aunt she impatiently exclaimed:

"Can't you see that he is starving? What real need have I for the thing? Let it go, if it can be the means of bringing him food and clothing. I do not care to be rich, to wear jewels, while others are perishing with hunger."

And that summer afternoon she sat among those people listening in silence to all their comments, and waiting until the last to have her say about the matter.

She was an imperial-looking girl, dark, but with a faint, delicate bloom on her cheeks, and the color of a rose on her lips. Her eyes were not black but golden-brown, and her hair had the texture of silk. Her very dress seemed to set her apart from the other women, who clothed themselves according to the decrees of fashion. It was fine woven yellow linen, its full loose folds girdled in about the waist with a broad band of silver, its sleeves open half way up, revealing beautiful rounded arms. She set at open defiance all forms and rules, and laughed contemptuously at the conventionalities of society.

"I quite approve of Florina's revenge," she said at last, "only I would have killed the woman also"; then she smiled with scornful contempt to see the blood forsaking Helen Lawrence's face. "Why do you turn pale, Miss Lawrence?" she asked, leaning towards her with a gleam of mockery in her eyes.

"I — because it is horrible to hear you talk so," said Miss Lawrence, quickly recovering herself, for she shrank, if Valentine did not, from a crossing of words, as it was known by

all in the house that the young Brazilian was jealous of her.

"Val. does not mean it," said Edward, soothingly.

"I do mean it. What right had she to come between them, to use all her smooth little ways and arts to make him faithless? Yes, by all means, Hebe should have feasted upon her first."

She glanced at her lover, but he was looking intently across the sunlit cotton-fields to the shining sweep of the river, apparently not in the least interested in the conversation. Then she looked around on the disapproving faces of the other women.

"You may all look shocked, but I am different from you only in the expression of my thoughts. There is an untamed savage in every heart, no matter how finely the owner of that heart may be civilized, how highly polished."

"There is also a spirit of divinity, Miss Dugarre," said Mark Livingston, the young Charleston lawyer, in his grave, calm voice.

"But in some unguarded moment, some crisis, the savage conquers all. It is easy to be good until one is deceived or thwarted."

"But what cause have you to talk like a disappointed, soured woman of the world, Valentine?" her cousin exclaimed, a little impatiently.

"Oh, none whatever, of course." But a note of bitterness thrilled her sweet voice, and her jealous eyes saw the glance Helen Lawrence exchanged with Frank Black. She bit her full under-lip, until the blood almost started.

"You believe, then, that the evil in human nature is stronger than the good," said Livingston.

"I do; for is it not true that many a lifetime of noble deeds has been wrecked in a moment of passion, the man stripped of his goodness, as of a garment, leaving the naked savage, fierce, revengeful?"

"But if there are such instances, so we can as easily recall others, where men and women in moments of supreme sorrow, or danger, have so far risen above all personal feeling as to be willing, nay eager, to help their worst enemies."

She turned to her lover. "What do you think, Frank?"

"That it is too warm for argument, and that Ed. might have selected less tragical reading for our amusement."

He laughed a little as he spoke, to give a jesting turn to his words, and, rising, walked away into the hall. Valentine's eyes flashed with anger, but in a moment she rose and followed him into the cool, duskily shadowed library.

"Dearest, did I disgust you with my savage talk?"

"I do not like such sentiments from you, Valentine. It does not sound womanly, and those people criticize you severely enough as it is."

Her eyes darkened again, her lips curled.

"What do I care for their good opinion!"

"It is well for us to care for everybody's good opinion."

"Miss Lawrence has taught you that great and noble truth, has she? You have grown very critical of my speech and manners yourself since she came among us. Frank, Frank! what is it coming between us?" she cried in sudden, piteous entreaty.

"Your jealous imagination, Valentine. A man does not like to be doubted, frowned upon, every time he speaks to, or looks at, another woman."

"Is that all? Tell me, on your honor."

"Yes," he said; but his eyes shifted under her eager gaze, and a slight flush rose to his face. But she was too anxious to believe him to heed such fine changes of expression.

"I *am* a miserable, jealous creature, all fire and wicked temper," she humbly acknowledged. "I have tormented you, I know; but unfortunately for me I love you with all my heart, instead of just a little bit of it, and it is a great strong heart, dearest, if it is wayward and untamed."

She leaned towards him with luminous eyes, her beauty softened, as sweet and gentle as that of any other woman. What man could resist her in such a mood? He raised her arms to his neck, and kissed her on lips and eyes.

"You love me, you do really love me?" she whispered.

"Love you! How can I help it, my princess?"

They had a little dance at Dugarre that night—a merry, informal party. A large number of young people, came out from the neighboring town, the parlors were cleared, and Uncle 'Riah, the old white-haired fiddler, was called in to play for them. It was a moonless night, and to add a little to the picturesqueness of the fine old house and grounds the negroes built a great bonfire on the lawn. It threw its ruddy light afar under the trees, and a rain of glowing sparks fell here and there on the grass, and some even floated away on wreaths of pearly smoke over the roofs.

The ladies of the house were all in evening dress, but it was acknowledged that Valentine Dugarre and Helen Lawrence carried off the palm for beauty. Valentine appeared her loveliest and best. No suggestion of scorn or anger marred her face. Her dress of thin, creamy

silk was Greek-like in its flowing lines and its full draperies, and her throat and arms were bare. She wore no jewels, except her engagement ring, and a single diamond star in her hair. She was radiant, yet so sweet and gentle in all her ways, that those who thought they knew her best wondered what new whim possessed her. She even smiled approval when Black led Helen out on the floor and danced with her. If he had stopped at that!—but he asked her after the dance to walk on the piazza with him. She hesitated, cast a hurried glance about the room, saw Valentine in a distant corner talking to Livingston, and consented.

They walked the length of the long piazza, and then Black drew Helen into the deserted library. She took her hand from his arm, her usually pale face burning with color, her calm eyes agitated. It was enough to set his faithless heart aflame, to call forth treasonable words of love. Curiously enough it was on the very spot where a few hours before he had given Valentine such assurance of his love. The remembrance stung him to shame, but it could not silence his tongue. His love for Valentine had been an infatuation, but Helen held his heart. So he told himself, so he had been telling himself for a month, though he had never before confessed as much to Helen. Valentine was not the woman to make him happy, with her jealous, tempestuous moods and passionate temper.

"But you, you are an angel of sweetness and goodness," he said, kissing her hands, even the folds of her pale-blue silken sleeves.

Helen shivered a little as she listened to him, and cast uneasy glances about the room, for there was a good deal of cowardice in her nature, and she feared Valentine.

"What if she should hear you?" she said, trembling, yet leading him on with her soft eyes, her half-yielding manner.

"Why speak of her, think of her, now?" he exclaimed. "My bondage is not yet hopeless, and I—I cannot help not loving her."

"But you are engaged to her, and it is all wrong to talk so to me," she said, tears starting suddenly to her eyes. What she had deliberately begun as a flirtation had become as serious to her as to him. Her emotion nearly distracted him. Still rasher words trembled on his lips, when—

"Is this tableau for the benefit of the public, or only for your own amusement?" a voice inquired near them, causing them to start guiltily apart, for it was Valentine herself standing there, white as her dress, and with eyes that were terrible in their rage and anguish. "Mr. Black will be perfect in the art of love-making if he continues his present rôle. You

need not tremble, and look as if you'd like to run away, Miss Lawrence. There is no Hebe here to crunch your delicate bones, richly as you deserve such a fate, and willingly as I would give you to it."

"Blame me for it all, Valentine, not her," exclaimed Black, feeling like a craven between them.

"So you would protect and defend her. What a chivalrous gentleman; what a man of honor! Do you think I have been blind and deaf to the sighs and glances, to the thousand little arts she has used upon you—she, the example that has been held up to me by my aunt as worthy of imitation? Well, I congratulate her on the conquest she has made. Two months ago you were ready to grovel at my feet, and to-day—yes, only a few hours ago—you assured me that you were true, that you loved me; and I believed you." Her passion rose again to violence. "I would like to kill you both; yes, with my own hands!"

"Hush, for Heaven's sake!" exclaimed Black. "Do you want all those people in here?"

"Oh, no! It does n't, of course, make any difference if you break my heart, but it would be shocking for the world to know it. I will hush, and leave you to console and reassure Miss Lawrence; but do not expect me to break our engagement. You shall never be free until I die—never."

And then she left them, disappearing through the open window as swiftly and noiselessly as she had come upon them. Livingston met her on the piazza, and, without questioning his presence there, she allowed him to take her hand and lead her to a seat. He looked almost as pale as she, and far more agitated, and when she turned from him, covering her face with her hands, his self-possession deserted him entirely.

"Don't—don't cry, Valentine. He is not worth a tear, or one pang of that dear heart of yours."

"I know his worth; but that cannot alter my feelings now. I love him."

"And I—I love you, Valentine, even as you love him."

Valentine turned and looked at Livingston. "Then I pity you," she said, simply, but with such pathos that he himself felt like dealing out summary punishment to Black. He did not attempt to plead his own cause then, knowing that it would be not only selfish but worse than useless. She had no thought for him or for anybody or anything but her own sorrow and bitterness. "I wonder if animals can have souls, because if they do I must have been a tigress."

She laughed tremulously, crushing up folds

of her gown in her hands. "I'd like to kill them, I would indeed," she exclaimed, her eyes burning through a veil of tears.

"You think so now because you are excited," Livingston said gently, as though speaking to an angry child.

"Excited! I think I must be mad."

"You could not do them any violence, Valentine, were it really in your power. I know your generous, noble nature better than that."

But she turned away again, with hidden face, jealous rage melting into anguish.

NOBODY could ever tell just how it happened. The most reasonable theory was that it caught from some of those vagrant sparks flying up from the bonfire, but deep in the darkness and silence of that night, long after the household had all retired, a little tongue of fire shot up from the roof, growing larger and brighter until its light shone across the woods and fields beyond the river.

It was Valentine who, turning on her pillow to look from the window, saw the strange illumination, and, springing up, discovered its cause. One could hear the curl and crackle of the dry boards as the flames devoured them, feel the heat, smell the rolling volumes of smoke. Confusion reigned supreme as Valentine ran through the halls, waking the slumbering people. Nobody attempted to save anything, but all fled for their lives from the old house, which burned like so much tinder. The great trees surrounding it were shriveled in the heat, and falling flakes of fire set barns and stables ablaze. The low clouds caught the lurid reflection, the river shone like a mirror, while along the horizon the darkness was so intense, so thick and inky black, that it seemed as if all the night had been compressed into it.

The Dugarres wept to see the old house falling to ashes before their eyes—all but Valentine. Its walls held no loving associations, no precious memories for her; but the force, the awful destructive fury of the fire fascinated her.

And then, from group to group, ran a cry for Miss Lawrence. She could not be found. Had she been left, forgotten in the terror and confusion? Then indeed men and women looked at one another with blanched faces and eyes of horror.

"It would be death to go in there now," said one man.

But, death or not, one had gone, running across the lawn, up the steps, and into the clouds of smoke filling the piazza and wreathing the great white columns—Valentine Dugarre. Black and Livingston would have followed her, but were forcibly restrained. It was enough, they were told, that two lives should be lost, without throwing their own away. But in a few moments a joyful shout drew all to the side of the house, where they saw Valentine at a second-story window, with Helen Lawrence half fainting at her side. She helped her through the window, and those below could hear her eager words of encouragement as Helen dropped safely down to the hands outstretched to receive her.

"Now, Valentine, quickly, dear," cried her cousin, sharply.

"Yes, for God's sake!" Livingston cried. But it was too late. A volume of flame seemed to burst up at her very feet, curling in the folds of her white gown and circling about her head. Out of that fiery nimbus her face shone for a moment, and then with a creaking of burning timbers and a great flare of light, the whole building fell in.

Matt Crim.

LONGING.

ARIADNE! Ariadne!
 On the sunny lea I sought her,
 Traced her footsteps by the water,
 Followed them through grove and meadow,
 Calling in the forest shadow,
 "Ariadne! Ariadne!"

LONGING.

Gray at even grew the air;
 Red, behind the fire-edged mountains,
 Dropped the tired sun; the fountains
 Of the sea flowed dim, and weary
 Fell the bird into its eerie
 Nest to dream, and night was there.

While my soul lay wrapt in vision,—
 I of Ariadne dreaming,—
 All that is was lost in seeming,
 All that seemed was more than real,
 With the joy that dreams may feel,
 With an ecstasy Elysian.

But the morrow came and found me
 Restless, searching for the dream,
 Lost, as are the things that seem,—
 When a sudden turning showed
 Naiads, where a runlet flowed,
 Grouped in loveliness around me.

Startled into sudden hoping,
 Thinking Ariadne nearer,—
 She than all the great world dearer,—
 Quickly did I scan each face,
 But in none her own could trace:
 And my spirit sank, a-moping.

Glad because my joy was brief,
 Happy that my hope seemed dead,
 Then they closer drew them to me,
 With their arms to bind and woo me,
 Smiled upon me, captive led.
 But my soul turned faint with longing,
 For, though beauty rare is thronging,
 Love, *unloving*, still must see
 Only happiness in grief.

So they ceased, with arms outlaid;
 Songs of banter rudely singing,
 Laughter from their lips came swinging,—
 And before me, silent, white,
 Stood the hope of my delight,
 Ariadne, goddess-maid.

As I clasped her with a bliss
 That with keenness stung my heart.
 "Nevermore," I cried, "to part,
 Mystic maiden! Bride of Light!"
 Scarce had fed my starved sight,
 Scarce I held her, when I felt
 All her clinging softness melt,
 Part from me as day from night,
 Leave me, empty, wond'ring there.
 And the unimpressed air
 Mocking, wafted back my kiss.

Ariadne! Ariadne!

THE AUTOBIOGRAPHY OF JOSEPH JEFFERSON.¹

OLD CHATHAM STREET (NATIONAL) THEATER, NEW YORK.

FROM STOCK TO STAR.

HERE is nothing a young actor enjoys more than itinerant theatricals. It is so grand to break loose from a big tyrant manager in the city and become a small tyrant manager in the country.

I was one of those juvenile theatrical anarchists who, after having stirred up a rebellion in the greenroom, would shout to my comrades, "Let's all be equal, and I'll be king!" I had annual attacks of this revolutionary fever, and having saved up all my salary during the regular winter season would lose it patriotically in the summer. It was on the eve of one of these excursions that I received my first telegram. It came in the form of a despatch from my partner, who was in Baltimore, I being in Cumberland. I could not believe it, but there it was; a reply to my letter of the day previous, which he could have received only an hour before the message was delivered to me. I called at the office to inquire if it were really so: yes, there could be no doubt about it. A small group of people had collected about the operator, some having received messages of congratulations at the establishment of the line, others sending them away to the same effect, and all wearing a look of surprise and incredulity. We began showing one another our despatches, and, looking with respectful awe at the mysterious little machine that was ticking away as if worked by some invisible spirit of the other world, wondered what they would do next. The whole town

was up in arms about it. People were running to and fro with little messages in their hands, and stopping one another in the street to talk and wonder over the new event. If I were now to receive a message from the planet Mars offering me a star engagement, I could not be more astonished than I was on that day.

It is said that the man who invented spectacles was imprisoned for daring to improve on the eyesight that God had given us; and that these comforts of old age were called the "Devil's eyes." So, in the height of this telegraphic novelty, did many wise old Solons shake their solemn heads, declaring that the wrath of God would fall on those who dared to take a liberty with lightning. The people with universal consent made the occasion a holiday, and as this was our opening, in the evening the hall was full.

We should have considered it a good house if the receipts had reached forty dollars; but when I made up the account I found myself in possession of more than a hundred dollars, all in silver. Loaded down with this weighty fortune I started after the play for the hotel, being supported on either side by the walking gentleman and the property man, utilizing them as a body-guard lest I should be waylaid and robbed. In this flush of fortune, and as a requital for their valuable services, I stood treat to my escort and dismissed them for the night. My room was in the third story, so there was no fear of burglars from without; but as I fancied that every robber in town must by this time be in full possession of all the information concerning my late acquisition, I ascended the stairs with a solitary tallow candle and a nervous step. The long, dark entry seemed so very favorable for an attack that at each landing I imagined that I should be stabbed in the back. I thought it therefore just as well to hum a tune in a careless way, as though I was quite used to this sort of thing, and thoroughly prepared for any emergency. Sauntering slowly along to the tune of "My Pretty Jane," I reached the door of my room, which I entered as quickly as possible, locking it at once. The next thing was to dispose of my treasure, which I did by placing it between the mattresses of the bed. I spread it all out so as to make it look a good deal when my partner arrived. One always takes delight in showing his partner how well

things have gone during his absence ; it is so delightful to make him feel that he is not of half so much importance as he thinks he is. Having placed the chair under the knob of the door, I could see no chance for a successful burglary unless the operator came down the chimney. I confess this rather worried me, as I felt that in the event of his making a descent upon me by the flue I could not possibly keep him out with the blower. I went to bed with the idea that I should be found murdered in the morning, and dropped off to sleep dreaming of Jack Sheppard.

At daylight I was startled by a loud knock at the door. "Who's there?" I said, still somewhat alarmed. "Sefton," said the voice of my partner. "Are you sure?" said I. "Of course I am," he replied. I opened the door and admitted him. "How was the house?" was the first question. I made no reply, but turned down the mattress and displayed the full receipts to his astonished gaze.

Now our managerial labors began in earnest. The town did not contain more than five hundred playgoers, so that we were obliged to change the performance nearly every night. After the play we would go out and, taking our property man with us as an assistant, put up our own bills. This we continued to do until at last our financial condition enabled us to afford the luxury of a bill-poster.

No one who has not passed through the actual experience of country management, combined with acting, can imagine the really hard work and anxiety of it—daily rehearsals, constant change of performance, and the continual study of new parts ; but, for all this, there was a fascination about the life so powerful that I have known but few that have ever abandoned it for any other. It had a roving, joyous, gipsy kind of attraction in it that was irresistible. Who would not rather play a good part to a bad house than a bad part to a good house?—ay, even if he were the manager! Then just think of the eagerly looked-for criticism in the morning papers, of no consequence to the world at large, but of much importance to the actor: how anxious I used to be in the morning to see what the critic said, quickly scanning the article and hurriedly skipping over the praise of the other actors, so as to get to what they said about me. Then after breakfast, sauntering down to the drug-store where the reserved seats were for sale: not to look at the diagram to see how the seats were selling—certainly not, that would appear undignified ; but just to inquire if there were any letters. These were the delights that always sweetened the poverty that went hand in hand with country acting. In the present instance we were in possession of a gold mine. We had

captured the town, having been the first to attack it.

It is seldom that partners in theatrical management agree. Wood* and Warren, of Philadelphia, were never on very friendly terms, and Ludlow and Smith were in partnership for many years without exchanging a word except on business. How they managed it, or rather mismanaged it, I can't tell. Sefton and I were but human beings, and this sudden success had the same demoralizing effect on my partner and myself. He was obstinate, and so was I.

Dogberry says, "An two men ride of a horse, one must ride behind." Now as neither of us would consent to take this undignified seat, I sold Sefton my share of the animal and retired ; he vaulted into the vacant saddle and rode his charger to death. About three months afterward I received a letter from him—business had been bad, and he was in great distress—urging me to play a week with him. I did so, partly to help my old partner, and partly to see my name in large letters. This was the first time I had ever enjoyed that felicity, and it had a most soothing influence upon me. My hotel was just opposite the hall, and when I arose in the morning and looked across the street I gazed delightedly upon my name in bold "Roman caps,," though I was much annoyed at seeing the citizens pass by this important announcement without taking any notice of it ; and the conduct of two strangers who met precisely in front of the theater and began an earnest conversation, without deigning to bestow a glance at the bill-board, was positively insulting.

I had to contend on my opening night with a local favorite in the shape of a rival comedian. This was no easy matter, for not only was he a clever actor, but a feeling had been engendered among his many friends that I had entered into a dark conspiracy with the manager to dethrone him. I had acted here the season before and was something of a favorite, so my reception was very cordial ; but as soon as it ceased I was greeted with a storm of hisses. This sudden and unlooked-for demonstration took the audience and myself by surprise, and of course checked the progress of the play. In the midst of this confusion my rival was loudly called for by his friends, at which the curtains of a private box were violently shaken, then jerked apart, and in their opening appeared the form of my rival. He stepped unsteadily upon the stage ; one side of his trousers had crawled up his leg, revealing an untied shoe, the brim of his hat was slightly bent, and he swayed from side to side with folded arms and disheveled hair. There was a mingled air of defiance and melancholy in his looks, plainly

showing that he was not only persecuted but intoxicated. The wild encouragement from his friends clearly proved that they were in the same condition, indicating that the entire party had partaken freely of "Dutch courage" in order to stimulate them for the fray. After a maudlin speech, which first amused and then bored the audience, he was led from the stage and the play proceeded.

Actors in sickness or distress are proverbially kind to one another, but little professional misunderstandings will take place now and then. Some overzealous defenders of our art have asserted, I think erroneously, that no true artist is jealous of another. This is going a little too far, and giving us credit for more virtue than we possess. Jealousy is unfortunately an inborn quality, entirely independent of art. If a man has this unfortunate passion he feels it whether he is a true artist or not. In this instance my rival was a good actor, but not too good to be jealous of me, and if our positions had been reversed the chances are that I would have been jealous of him.

FROM STAR TO STOCK.

It was during this, my first star engagement, that I received a telegram announcing the sad intelligence of my mother's death. I started at once for Philadelphia, but by some accident was detained on the road for two days, arriving too late to look upon her face. My brother, my sister, and myself passed a week together after the burial of my mother, and then separated, they returning to New York, whence they had been summoned, and I remaining in the city to look after an engagement.

On the corner of Ninth and Chestnut streets stood the Amphitheater. At this establishment in the winter season the circus used to amalgamate with a dramatic company and make a joint appearance in equestrian spectacles, which were produced under the stage management of Mr. Joseph Foster. This gentleman had studied in the best school of the highly colored melodrama — Astley's, on the Surrey side of London. He came to America as property man with Cook's company somewhere about 1836; in this position he continued for some years, ultimately joining the Amphitheater in Philadelphia. His industry, backed up by long experience, made him so valuable that he soon became stage-manager, and was holding this position when I called on him to apply for a situation as comedian. He had been prepared for the visit, having heard something to my advantage as an actor, but he was undoubtedly disappointed with me at first sight. As I entered the managerial sanctum, he lowered his bushy eyebrows

and scowled at me with anything but an engaging expression of face.

"Humph!" was all I could catch of his first greeting. Then, after a slight pause, he said, "Oh, you are the new young comedian, eh?"

"Yes, sir," I replied. "There is no doubt about my being young; but how much of a comedian I am remains to be seen."

"Humph; quite modest too. Modesty is a good thing if it is not carried too far," he said. "Humph; where have you been acting lately?"

I told him that I had just finished a starring engagement in Cumberland.

"Starring, oh! Then you are not so modest after all," he replied. "I suppose you have heard that my present comedian is a failure?"

I told him that the welcome news had reached me, and as I had also been informed that in consequence of this the gentleman was about to retire from the Amphitheater, I made bold to apply for the vacancy.

"Well," said Mr. Foster, "my funny man is certainly the most dismal piece of humanity I have ever met with. I engaged him on his face. I never saw such a comical outside belonging to such a serious inside. The man's 'mug' is as funny as Liston's — whom he resembles, too, very much; large, round eyes, fat chops, and a turned-up nose. I thought when I first saw him that, like the milkmaid, his face was his fortune; but no, as soon as he opens his mouth all the humor seems to vanish. But now about yourself. I suppose you know that our plays, such as 'Mazeppa,' 'Dick Turpin,' 'Timour the Tartar,' 'The Terror of the Road,' are not celebrated for good low comedy parts; the actor has a great deal of hard work to do. It is what I call physical comedy; and you are too light for that kind of business, I fancy."

I told him that I regretted this, for if he engaged me by the pound, my salary would perhaps be as light as myself.

"But you do not look like a comedian," said he to me. "You have a serious, melancholy expression; you look more like an undertaker."

This last remark was rather crushing, so I endeavored to put on a jovial, quizzical expression, and failed. In a short time we arranged terms — twenty dollars a week, with a third-clear benefit. The engagement being settled, he gave me a part to study for the next play. I acted all this season at the Amphitheater, and a curious experience it was. The low comedian of a melodramatic theater is generally used as a stop-gap, and his artistic efforts are confined to going on in "front scenes" and amusing the audience, if he can, by speaking some long, dry speech, supposed to be full of humor,

while the carpenters are hammering away behind and noisily arranging an elaborate set. Under these conditions it is very difficult to gain the confidence of an audience, or to distract their attention away from the painful fact that there is a hitch in the scenery. They seem to know that something has gone wrong, and decline to be consoled by a feeble comic song.

Upon the initial performance of the nautical drama of "Captain Kidd," Mr. Foster had given me a long, dismal ditty to sing, in order that I might divert the audience in case of an accident. It was privately understood between us that as soon as the scene was ready he would wave his hat at me from the wing as a sign that everything was right; then I was to finish my song and make my exit. The much-dreaded accident occurred, and I was deputed to go on and distract the audience, which I certainly did. The lines of the song ran thus:

My name is Captain Kidd,
As I sailed, as I sailed,
And wickedly I did, as I sailed, etc.

There were just twenty-five of these verses, equally humorous and grammatical. The audience bore them patiently for the first time, but when I looked towards the wing for a comforting wave of Foster's hat, to my horror he was not there; so I began again. It is said that republics will endure tyranny with more fortitude than empires, but it is possible that I had gone too far even for the forbearance of our free institutions, for many voices in the audience cried out: "No more! We can't stand that again." Other remarks were made too numerous and uncomplimentary to mention. I still tried to get a hearing "as I sailed"; but, with the hammering behind the scenes and the hooting in front, my efforts failed to make any impression, so I retired amidst the confusion.

Of all theatrical entertainments, the equestrian drama is perhaps the most absurd. The actor and the horse refuse to unite; there is nothing of the centaur about them. I have seen the tyrant *Timour the Tartar* stride about the stage tempestuously, inspiring the audience with the idea that nothing could daunt the imperious spirit within him, but as soon as he espied the prancing steed that was to bear him to victory his passion cooled, and with a lamb-like submission he would allow himself to be boosted up into the saddle, where he would sit unsteadily, looking the picture of misery.

Foster was a short, stout man, but extremely active, and as alert as a lynx. Nothing escaped his quick eye. If the house was crowded and the drama going well, he was the personification of good-nature. At such times he would stand with his legs wide apart, his hands clasped

behind him, his face beaming with smiles and his eyes fairly glistening with delight; but if the slightest hitch took place in the performance, he knew it in an instant. He would then jump as if he were shot, rush to the wing, shake his fist at the delinquent, and taking his high, black-silk hat off his head would trample it under his feet in frenzy.

The grand spectacular drama of "Mazeppa" was announced for the Easter holidays, and was produced with great splendor. Charles Foster, a son of the manager, was cast for the hero. He was a handsome, dashing young fellow, possessed of considerable dramatic talent, and, added to this, was one of the finest riders I have ever seen: his graceful figure and youthful appearance fitted him perfectly for the romantic lover of the *Princess*. The announcement that this drama was to be produced caused a slight commotion in the theater, for there was attached to the company an old melodramatic actor by the name of Cartlidge; he had been a leading man of Astley's Amphitheater in London during the days of the famous Ducrow, and was now seventy years of age. I met him at the greenroom door just as he came in to look at the cast. "I hear they are going to play 'Mazeppa,'" he said, with some agitation. "Is this true?" "Yes," I said; "there is the cast." He went over to the cast-case and looked at it in mute bewilderment, and then, as if he could not believe his eyes, took out his spectacles, wiped the glasses, put them on, and stood for a long time gazing in blank amazement at the cast. As he turned around I saw tears in his eyes. He walked slowly out of the greenroom, and, going into a dark corner of the stage, sat down despondently. I knew pretty well what was the matter with him, so I thought I would go up and comfort the old man, for he was usually cheerful, and it was sad to see him so dejected.

I sat down beside him and asked him what was the matter. He took out a large handkerchief, and, burying his face in it, began to sob. After he had recovered himself he said, "Foster has cast me for the Khan." Then turning on me with his eyes full of tears and a retrospective look in his face, he continued: "Young man, I was the original *Mazeppa* fifty years ago, and now I am cast for *Mazeppa's* father. Why should I not play *Mazeppa* still? I may be a little too old for it, but—" Here he broke down again, and as he sat there with his eyes and his spectacles both full of tears he looked more like *Mazeppa's* grandfather than like *Mazeppa*. The fact is, if he had been cast for the part he would have realized that the time had gone by for him to look or act it, and he would have declined: the self-inflicted blow would have fallen lightly on him; but to receive the

stroke from another hand was more than he could bear. It made him feel that he had outlived his usefulness, and brought before his mind the glowing days of his youth when he had been the idol of Astley's. The painful truth that he was getting old and was no longer wanted came upon him.

It is natural that the world should smile at the old and senile as they are pushed aside, but no deposed emperor feels the force of compulsory abdication more than the stage king who has outlived the liking of the people.

"St. George and the Dragon" was the grand final production of the season. I was not in the play, so I saw the first performance from the front of the theater. The opening act ends where the seven champions of Christendom assemble to have a conference, pledging themselves to stand by one another in any emergency. The glittering armor of the knights, and the prancing of the fiery steeds as the grooms led them on, stirred the audience to enthusiasm.

Young Foster was a picture as the gallant St. George of England. His manly form was encased in a rather vulnerable armor of pure spangles, and he shone like a sheet of silver. At a given cue he vaults into the saddle, and waving his bright sword and throwing back his fine, classic head, he shouts, "Up, knights, and away!" Now St. Denis of France, St. Patrick of Ireland, St. David of Wales, St. Andrew of Scotland, and one or two other knights mount their chargers and gallop away, following their leader, the gallant St. George, as the curtain falls upon the animated scene. It so happened that St. Denis of France and St. Andrew of Scotland had been cast to two actors who were not what would be called daring horsemen. All of the knights with the exception of these two mounted their horses and galloped off in the interest of Christendom with unmistakable ardor. But the steeds of St. Denis and St. Andrew had but little faith in their knights, and the knights seemed to have no faith in themselves. This timidity communicated itself from one to the other, and as the riders hopped about on one leg trying to mount, the horses kept going slowly round to avoid any further intimacy. The audience was roaring with laughter, and I knew by this time that Foster was standing on his hat, if not on his head. At last the knights made a powerful effort to "bestride their foaming steeds." St. Denis, being very tall, scrambled up, but over-shot the mark. "He o'erleaped his saddle," so that his head hung on one side and his heels on the other, while the horse kept going round with him in this dreadful position. At this juncture the curtain came down, cutting off the other knight, St. Andrew, and shutting

him outside of it and close to the footlights. Unfortunately in the excitement of mounting this gentleman had got the wrong foot in the stirrup, so that the gallant Scotchman found himself in pursuit of glory with his face towards the horse's tail. Finding that he would make but little progress towards Christendom in this position, he slid gently off behind, still clinging to the bridle, while the horse dragged the unlucky warrior across the front of the stage. The audience shouted as the animal pulled his rider along. The horse now changed his tactics, and standing upon his hind legs came slowly but surely towards St. Andrew, who scrambled for protection into the nearest private box. The horse, still on his hind legs, looked down on the orchestra as if meditating a descent upon the musicians, at which the entire band fled "for safety and for succor," some of them retreating under the stage, while the majority scattered among the audience. The curtain had to be raised and a groom sent on to take the poor frenzied horse in. There was now some anxiety to know what had become of St. Andrew. That gallant Highlander, seeing that the coast was clear, jumped out of the private box where he had been concealed behind the curtains, and, half denuded of his armor, rushed frantically across the stage and darted behind the curtain amid the unqualified approbation of the audience.

I was not twenty-one at this time, but being an old young man, and looking upon life perhaps more seriously than one should at my age, I bethought me that it was time to marry and settle down in life. My brother strongly objected to this; he believed that I was too young, and I believed that he was jealous. The first serious words we ever had were in relation to my prospective marriage, he insisting that my wife and I had not known each other long enough to form any estimate as to the strength of our attachment; but I was obstinate, and the wedding came off.

I wished this marriage to take place privately, well knowing that otherwise my friends of the company, from the leading man down, would be at the wedding in full force, not so much out of compliment, perhaps, as for the purpose of indulging in that passion for quizzing which seems to be so deeply planted in the histrionic breast. My betrothed desired that the ceremony should be solemnized in church, fearing that ill-luck would follow if it came off at any other place. I consented to this. Now I hate to be quizzed, and I think most people do; particularly those who indulge in the habit of quizzing others. Revolving in my mind, therefore, the best method of avoiding ridicule, I boldly told the company that I was to be married at church

JUNIUS BRUTUS BOOTH AS "SIR GILES OVERREACH."

(FROM A WATER-COLOR BY W. HEATH.)

a hero, and a public benefactor. To be successful, he must combine force of character and self-control with artistic taste and executive talent. He stands between the public and the actor, the actor and the author; he must judge them all, and unite them harmoniously. To contemplate the amount of skill and industry that is lavished on the splendid dramatic productions of to-day is appalling to a man who wishes to enjoy a good night's rest. If you have a passion for the dog, the rod, the gun, the yacht, or the country, don't think of entering into theatrical management. The eye of the master is absolutely imperative in the conduct of a theater, and only those succeed who give it their undivided attention.

But to return to the managerial partnership between Mr. Ellsler and myself. The relations between us were very pleasant, for as our lines of business were quite distinct, there was no professional jealousy. Besides this, our duties in the management differed widely; consequently we never clashed. He had full control of the front of the house, while I managed behind the curtain, and I think we enjoyed the fullest confidence in each other.

Our season in Macon was quite good, but in Savannah our fortunes had a reverse. From some unknown cause the business here was very bad. I say "from some unknown cause," for it is characteristic of the members of the theatrical profession to attribute their failures to anything or everything else but themselves. It is so disheartening to feel that we are responsible for the disaster. In mercantile affairs, if losses are incurred, the loser can console himself with the fact that it is the merchandise that is worthless; if an artist's picture be refused admittance to the gallery, it is his work that is disregarded; but if an actor fails, it is himself who is neglected. The mortification of a personal and a public slight is so hard to bear that he casts about for any excuse rather than lay the blame upon himself. This is unfortunate, for if we only had the courage to acknowledge that the fault lies within ourselves, we could more speedily set it right; but to go groping on in the dark, with the blind consolation that others are to blame, only retards our advancement.

As I had been married a year, and our first child had just been born, I was naturally beginning to feel the weight of a new responsibility.

A WANDERING STAR.

It has always been my habit, when anything important was to be thought over, to get off alone somewhere in the woods, or to lock myself up in a room, where I can turn the matter over quietly. I had left the theater after re-

hearsal and was walking along in search of some solitary place where I could ruminate.

Savannah is a lovely city at all times, but in April it is like fairy-land. The beautiful Southern houses of semi-tropical architecture are surrounded with live-oak and magnolia shade-trees, and the gardens are laden with flowers. The city was peaceful and quiet — too much so for a manager in distress. The air was redolent of orange blossoms and bad business. I was looking down one of the long, solitary avenues of trees for which this city is famous, when in the distance I espied the tall figure of a man walking leisurely towards me. His height was so enormous that I thought some optical illusion caused by the long vista through which I was looking had elongated the gentleman beyond his natural proportions. No; as he came nearer he seemed to get taller and taller; he was at least six feet six inches in height. He sauntered leisurely along with an elegant carriage and an aristocratic bearing, not assumed, but perfectly natural. I had never seen this man until now, but I imagined that I knew who he was, for if I was not mistaken in his height and appearance I had already heard of him. As we approached nearer, his ease and confident manner were almost impertinent. He had one hand in his pocket, and with the other slowly twirled a long, gold-headed cane. As we met, there was on his handsome face a self-sufficient smile, and he turned his large eyes from one side of the street to the other, with the air of a man who owned half of Savannah, and was contemplating the possibility of getting a mortgage on it with the ultimate view of purchasing the rest of the city. After we had passed I turned to look back, and found that he had done the same. We were both caught dead: there was no disguising it, so we approached each other.

"Pardon me," said I, "if I am mistaken, but are you not Sir William Don?"

"Quite right, old chap. How are you?" he replied. We shook hands and there was a pause. He looked at me with a quizzical twinkle in his eye, and said: "Well, which is it — Jefferson or Ellsler? You can't be both, you know."

I laughed heartily at this: not so much at what he said, which was commonplace enough, but at the way in which he said it. I thought to myself, "This must be a great comedian." He saw he had made a hit, and laughed in the enjoyment of it.

"My name is Jefferson," said I. "Mr. Ellsler is my partner."

"Well, Jeff, old fellow" (as if he had known me all his life), "I'll be frank with you. Here I am, a star in search of a manager."

"Well," I said, "I will be equally frank

JUNIUS BRUTUS BOOTH AS "SIR GILES OVERREACH."¹

with you. I am a manager in search of a star."

"Capital!" said he. "Will I do?"

"Will you do? You are the very man," I replied.

"Hurrah! We will play 'Box and Cox' together." Then throwing his arms around me, he quoted from the farce, "'You are my long-lost brother!'"

"Sit down," said I, as we came to a bench, "and we will talk terms."

"What are you going to offer me? Don't be modest — put it high. 'Lay on, Macduff, and damned be him who first cries, Hold, enough!'"

In our present delightful frame of mind there was no difficulty in settling terms — we both would have agreed to anything. I told him I would give him one-third of the gross receipts, with a half-clear benefit at the end of the week.

"Quite right; anything you like. But will your partner ratify this?"

"Oh, yes," I said. "He attends to the finan-

cial part of the business, leaving all matters connected with the stage to me; though, of course, I must consult him before we consider the matter settled."

We walked to the theater and I introduced Ellsler to Don, telling my partner of the arrangement we had made. He acquiesced at once, and seemed quite as much pleased at the prospect of the baronet's engagement as I was.

"Stop," said Don; "I have just thought of it. My wardrobe is in Charleston. Can we get it here by Monday?"

"Yes; but we must send for it at once," said I.

"All right," he replied. "Just let me have fifty dollars, and I will telegraph. It's in pawn, you know."

"In pawn?" said I.

"Yes, I lost a hundred dollars at poker (queer kind of game, is n't it?) on the steamer coming from New York; so I was dead broke

¹ Unless otherwise stated, the pictures in this article are from the collection of Thomas J. McKee.

when I got to Charleston, and I left my traps at my 'uncle's' for money to pay my bill at the hotel, you know—the Charleston Hotel, is n't it? Large columns outside—tough steak inside."

Matters were all settled, and a bill for the first night was arranged—"Used Up" and "The Rough Diamond." Sir William told me that he had a number of letters to the first people in Savannah.

"Don't lose a moment," said I. "Deliver them at once. This will sound your arrival through the city."

"All right," said he; "I'm off. I wish you could go with me; I should like you to see how I cultivate a new acquaintance. No? Very well—by-by." And away he strode, taking such enormous strides that he looked like the Colossus of Rhodes at the commencement of a walking-match.

My partner and I, congratulating ourselves

THE SAVANNAH THEATER PREVIOUS TO 1834. (FROM A PHOTOGRAPH LENT BY J. D. JOHNSON.)

on this new treasure, began making preparations for the opening. As I had predicted, the quiet city began to stir with an undercurrent of aristocratic emotion. As the week wore on the tide swelled, and by Monday had reached the high-water mark of excitement.

The theater on Sir William Don's opening night presented a picture of beauty and refinement. Families that seldom visited the house, except on the conventional Friday night, crowded the auditorium; costly silks and laces fluttered in the dress circle, and old-fashioned rose and table-cut diamonds glittered in the private boxes. Elderly dames with their white hair dressed à la *pompadour*, and with long and brilliant pendants in their ears, nodded majestically to one another, and prim old gentlemen in stiffly starched cravats looked coldly on. A live baronet was on view!

The curtain rose, and the play proceeded quietly until at last some action revealed that the new star was about to shine. The audience leaned forward as the center doors opened and the baronet stalked upon the stage. As he appeared the applause broke forth; fans and handkerchiefs were waved at him from all directions, and kid gloves were ruined in frantic enthusiasm. The audience at last quieted down and the scene proceeded. The people in front seemed anxious and nervous: I was in the same condition, for I saw that Don, with all his assurance, was suffering from stage fright. His face was pale as death, and he cast his eyes down on the stage. I knew the latter was a bad symptom; he wanted encouragement. I was at the first wing, and catching his eye gave him an approving nod. He seemed to take courage, and, as the audience began to enjoy his acting, warmed up. He finished the great speech of the scene, ending with, "I have been

to the top of Vesuvius and looked down the crater; there is nothing in it." He did this admirably, receiving a tremendous round of approbation. As he sauntered up the stage he again caught my eye; and giving me a comical wink as the applause was continued, he said, so that I could hear him, though the audience could not: "It's all right, old chap. I've got 'em."

His engagement proved a great financial success. I was disappointed in his acting: he was amusing and effective, but he was an amateur from head to foot, which in his case meant a good deal. I am of opinion that "once an amateur, always an amateur." There are many good actors that have this peculiar, raw quality who have been on the stage for years; and it is because they begin their careers by acting leading characters. Mrs. Mowatt and James H. Hackett were examples of many in our profession who have committed this fatal error. No matter how bold and dashing they may appear, there is a shyness and uncertainty about everything they do. It exhibits itself in the casting of the eyes down upon the stage in an embarrassed way just after they have made a point. This is very disastrous. When a strong effect is made, the eye, the

pose, the very feeling, should be, for an instant only, a picture, till the public digest it. If it is disturbed by some unmeaning movement the strength is lost, and the audience will at once discover that they are not looking at a master. This characteristic of the amateur may wear off in some instances, but I do not remember any.

Sir William went with us to Wilmington, North Carolina, where we opened with the stock, he appearing at the beginning of the second week. The audience here did not like his acting; they seemed to prefer our domestic goods to the imported article. He saw this, but did not seem to mind it, and so bowed to the situation. He became very much attached to the company and remained with us some time, joining in our fishing and boating parties. His animal spirits were contagious; and as we had no rehearsals, the mornings at least were devoted to amusement. We would do the most boyish and ridiculous things. Three or four of us, himself the central figure, would go through extravagant imitations of the circus and acrobatic feats that were then in vogue. "The Bounding Brothers of the Pyrenees" was a particular favorite with him. We would pretend to execute the most dangerous feats of strength — lifting imaginary weights, climbing on one another's shoulders and then falling down in grotesque and awkward attitudes, and suddenly straightening up and bowing with mock dignity to an imaginary audience. Once he did an act called the "Sprite of the Silver Shower," pretending to be a little girl, and tripping into the circus ring with a mincing step. Then, with a shy look, he would put his finger in his mouth, and mounting a table would go through a daring bareback feat. Nothing that I ever saw was more extravagant.

While in New York during the next summer, I got the following note from Don :

ST. NICHOLAS HOTEL, June 25, 1851.

MY DEAR JEFF: I have just arrived from Boston, where I have been playing a bad engagement. The modern Athens was not overwhelmed by my nobility. The critics went so far as to say that I was anything but a good actor. What execrable taste! Well, here I am at the St. Nicholas. Fine rooms, but abominable cooking; everything tastes alike. I am beginning to think that the Frenchman was right when he said that in America you had fifty religions but only one gravy. When shall I dine with you? Make it early. I will drop in just as one of the family — pot-luck, you know. Do not put yourself out for me; a pair of canvasback ducks and a bottle of Johannisberg, or two; is am not particular.

Yours, DON.

The day for the dinner was arranged — the Fourth of July; but as it would have needed a journey to the coast of Labrador to get a pair

SIR WILLIAM DON.

of canvasback ducks at that time of the year, I ordered roast beef and plum pudding instead. The occasion being a patriotic one, as far as the date was concerned, it struck me that an English dinner would be in good taste for Sir William. But we were doomed to disappointment, for at ten o'clock in the morning a strange man came to the door and gave me the following note from Don :

LUDLOW STREET JAIL, July 4, 1851.

MY DEAR JEFF: You will see by the heading of this that I have changed my hotel. Was it you or your father who wrote the Declaration of Independence? If it was your ancestor, you are not responsible, and I have nothing to say; but if "in the course of human events" it was yourself, never hope to be forgiven. See what that absurd and unimportant document has brought me to. If America were still one of her Majesty's colonies, an English nobleman would not be treated with this disrespect. Here I am languishing in prison because some old Jew says I borrowed one hundred dollars from him on false pretenses. (He may think himself lucky that it was not a thousand.) I said that I would pay him out of the money I made in Boston. Well, I did not make any money in Boston, so I looked upon the matter as settled. Come and see me. If you have never been in this establishment it will be quite a treat for you. Yours, DON.

Don was a singular character, at once generous and unjust, genial and slightly cruel. He would borrow from his friend for the purpose of lending to his enemy. His wit was charming and original, and he was quite unconscious of his own brilliancy, apparently

setting no value on it. He had that thorough contempt for tradesmen which stamps this type of English nobility, and he would walk ten miles to help an old woman or to escape from a tailor.

THE BALCONY SCENE.

THE love of management still clung to me, and my partner sharing my enthusiasm, we resolved to make another trial of our fortunes in the Southern circuit. Our limited means compelled us to adopt the most economical mode of transportation for the company. It was settled, therefore, as it was necessary, that we, the managers, should arrive at least a week in advance of the opening of the season: our passage must be made by rail, while the company were to proceed by sea.

There was in those days a line of schooners that plied between Wilmington, N. C., and New York. The articles of transportation from the South consisted mainly of yellow pine, tar, and resin, which cargo was denominated "marine stores." Feeling confident that we could procure cheap passages for our company by contracting with one of these vessels to take them to Wilmington, we determined to conclude a bargain with the owners.

The arrangement was made at a rate that suited all parties except, perhaps, the members of the company, who, I fear, had some slight misgivings that they were to be conveyed to their destination as a kind of ballast. The day was fixed for their departure, and Mr. Ellsler and myself went down to the wharf at Peck Slip to see them off. If we had felt any uneasiness before in the thoughts of sending our comrades off in this way, what was the depth of our remorse when we saw the dreadful old tub in which they were to depart. It was an ill-shapen hulk, with two great badly repaired sails flapping against her clumsy and foreboding masts. The deck and sides were besmeared with the sticky remnants of her last importation, so that when our leading actor, who had been seated on the taffrail, arose to greet his managers, he was unavoidably detained. The ladies and gentlemen of the company were uncomfortably disposed about the vessel, seated on their trunks and boxes that had not yet been stowed away. There were handsome John Crocker, our juvenile actor, leaning with folded arms and a rueful face against an adhesive mast; pretty Mrs. Allen, then only eighteen years old and just married, nestling upon the bosom of her husband, with her lovely dreaming eyes serenely wondering, not when they would start, but whether they ever would return; Mrs. Ray, the first old woman, with an umbrella in one hand and a late dramatic paper in the other, sitting on a coil of rope and unconsciously

ruining her best black dress. It was a doleful picture. The captain, too, was anything but a skipper to inspire confidence. He had a glazed and disheveled look that told of last night's booze. Our second comedian, who was the reverse of being droll on the stage, but who now and then ventured a grim joke off it with better success, told me in confidence that they all had been lamenting their ill-tarred fate. Ellsler and myself bid our company as cheerful an adieu as we well could, but there must have been a tinge of remorse in our farewell, for on talking the matter over as we watched the wretched old craft being towed away to sea, we concluded that we should not forgive ourselves if our comrades were never heard of again.

On our arrival in Wilmington the days were spent in preparing the dusty old rat-trap of a theater for the opening, and our nights in wondering if our party were safe. The uneasiness was not lessened, either, by the news that there had been bad weather off Cape Hatteras.

Within a week, however, they arrived, looking jaded and miserable. Another week for rest and rehearsal, and our labors began. It was customary in those days, particularly with provincial companies, to vary the dramatic bill of fare so as to suit the different tastes of the public. Comedy and tragedy were therefore dished up, and I may say hashed up, alternately, as for instance Monday: Colman's comedy of "The Poor Gentleman," fancy dances by the soubrette, comic songs by the second comedian, concluding with the farce of "The Spectre Bridegroom." The next evening we gave "Romeo and Juliet."

The name of this latter play calls to mind an anecdote connected with its performance in Wilmington that will not be amiss at this point. I have before said that a portion of my early theatrical education was drawn from hard work in the paint and property room of a theater, so that when I became a manager I delighted in the "get-up," as it was technically called, of plays, so far as our slender means would permit. To fashion and paint a rustic bridge, with a wide board behind it, set upon two shaky trestles, for *Rob Roy* to cross over, was a special privilege. A profile boat for the "Lady of the Lake" was another delight. This perfectly unsafe-looking skiff was always set on a trunk mounted upon four little wooden wheels that no amount of black-lead could induce to keep from squeaking. The rope must be steadily pulled — the slightest jerk and over goes her ladyship into the gauze waters. But let us return to the story.

"Romeo and Juliet" being announced, I felt that the balcony scene should have some attention, and I conceived a simple and eco-

JULIA DEAN. (AFTER A PHOTOGRAPH BY BRADLEY & RULOFSON.)

nomical idea that would enable me, at a day's notice, to produce the effect in a manner "hitherto unparalleled in the annals of the stage." Skirmishing about the wharves and the ship-chandlers', I chanced to light upon a job lot of empty candle-boxes. By taking a quantity the cardboards were thrown in, and nothing makes a finer or more imposing but unsubstantial balustrade than cardboard. The boxes, placed one by one on top of each other and painted a neat stone color, formed a pleasing architectural pile. Before the play began I had cautioned *Juliet* that when "she leaned her cheek upon her hand" she should let her elbow rest gracefully but lightly on the frail structure that was to support it. *Romeo* also had to be cautioned, for as the house of Capulet was already about his ears, it was necessary that at least his shins should escape any contact with the foundation. The scene opened with a backing of something, supposed to represent the distant city of Verona, with my new balcony in the foreground. *Romeo* and *Juliet* were warm and energetic in their love passages,

but still acted with becoming care and gentle consideration for the balcony about which they fluttered. All seemed to be going well till presently there came the sound of half-suppressed laughter from the audience. "Crocker," said I from the wing, "are you shaking the balcony?" "No," he whispered; "I have n't touched it." "What are they laughing at, then?" "Can't imagine," said he. The laughter increased, and it was quite evident that something not announced in the bills had gradually attracted the attention of the audience till at last the whole house had discovered the mishap. *Juliet* retreated in amazement and *Romeo* rushed off in despair, and down came the curtain.

I rushed upon the stage to find out what had occurred, when to my horror I discovered that one of the boxes had been placed with the unpainted side out, on which was emblazoned a semicircular trade-mark, setting forth that the very corner-stone of *Juliet's* balcony contained twenty pounds of the best "short sixes."

JULIA DEAN.

FROM Wilmington we journeyed to Charleston, South Carolina, where, after three weeks of stock and star, we were joined by Julia Dean.

Julia Dean and I had been in the utility ranks of the Mobile Theater during the management of Ludlow and Smith, and as this firm was noted for the economy of its organization, we were made good use of. In the various dramas produced during this season Julia and I had gone hand in hand, alternately espousing the cause of tyranny and virtue for the small sum of six dollars a week. For this reward we were content to change our politics and our costumes at the will of the stage-manager. As brigands, gentle shepherds, or com-

our dramatic corps, so that impromptu talent is a scarce commodity with us. Stanley suggests, "Perhaps Miss Dean can do it." "Oh, no, impossible!" replies the manager; and then a gentle but clear and steady voice says, "I think I can, sir." What, quiet, shy, and modest Julia! Whence comes the courage to avow all this? It does not spring from vanity — she has none; it is begot of that honest confidence which often underlies ability; it wins the manager, who in his dilemma clutches at a straw. While the sweet volunteer is robing herself in the dress of *Lady Priory*, left by the invalid, a friend reads the lines of the first scene to Julia, who drinks them in with eagerness; and the audience are told that they must be charitable to the young novice.

The play proceeds and *Lady Priory* enters; we, her comrades, are standing at the wing. Take courage, girl! There beats not here one heart that envies you. The gentle eyes are raised, so full of innocence and truth, and now she speaks. Who ever thought that Julia harbored such a voice — so low, so sweet, and yet so audible! It sinks deep into the hearts of all who listen. They are spellbound by her beauty, and as she gives the lines with warm and honest power a murmur of delight runs through the house, and from that moment our lovely friend is famous.

Just seven years after this I found myself manager in Charleston, and Julia Dean, then the leading juvenile actress of America, engaged to play a star en-

gagement in my theater. I was rather proud to feel that while my young friend had in the meantime risen to be a brilliant star I was at least a manager, if not a successful one. On the morning of her arrival in Charleston I called at the hotel to pay my respects. I sent up my card. I knew she would smile at the very idea of my having a card; so I wrote in pencil under my name, "All the utility people wanted at ten for the country dance." As the door opened I entered her drawing-room. She burst out laughing, and, giving me both hands in the frankest way, said, "So here we are again." The tall lanky figure of a girl of sixteen, with deep blue eyes and golden hair, had rounded into the graceful figure of a charming woman.

Mr. Ellsler and myself had been struggling along in the old up-and-down way, but were looking forward to an improvement in business as soon as our new star should shine —

munists we gained our daily bread together. We changed our religion without the slightest compunction; as Catholics we massacred the Huguenots, while as Pilgrims we bade a sad adieu to our native land, from which we had been driven by religious persecution. Lay or secular, it mattered not to us. So we trudged on, with perhaps a lurking thought that some day we might lead to victory as we were then following to the death. Straightway comes a change; not for me, but for my gentle comrade. Let me recall the scene. The greenroom is in a high state of excitement; a lady has fainted and is borne to her dressing-room "insensible"; the prompter, George Stanley, brings intelligence to the stage-manager that she is too ill to act. The play to be given is "Wives as They Were and Maids as They Are." The audience must be dismissed unless some one can be found to read the part. The economy before referred to has permitted no overflow of genius to glut

JOHN GILBERT AS "SIR PETER TEAZLE." 1

and shine she did. The town fairly went wild with enthusiasm. The star was fêted and entertained by those to whom she would vouchsafe her presence. All vied in paying homage to her beauty and her virtue. She received these attentions with simple dignity and grace unspoiled by flattery or success, and in those days of her artistic splendor she would delight to laugh and chat over the olden time when we marched together in the glorious preparatory ranks. The success of this engagement was quite an event in the annals of Charleston theatricals. At the end of the first week we shared \$900 each—think of it, \$900! My partner was more sedate than I, and I fancy took his good fortune with a quiet, philosophic air. But for me, I was in the clouds, a plutocratic comedian! During the whole week I had been covetously eying two watches in the jeweler's window of Hayden & Greg—one a small, blue enameled one, having a real diamond in the center, with which I intended to, and did, surprise my wife; the other a patent eighteen-carat lever, with which I was bent upon aston-

ishing myself. These purchases were eventually made, absorbing a large portion of our profits.

I had my watch for many years. It was a true and valuable friend. I will not say that we never parted; there were moments of embarrassment when a temporary separation was imperative.

LEGITIMATE COMEDY.

THE following season I was engaged to act the "first comedy" under the stage-management of Mr. John Gilbert, at the Chestnut street Theater. This being a period when stars were rare and combinations unknown, the regular companies were fully commissioned, and generally supplied with excellent actors.

At the Arch, Wheatley and Drew had a most popular stock company, and the ladies and gentlemen attached to it were undoubtedly the dramatic heroes of the city.

Our company at the Chestnut street was not quite so capable, but we produced the stand-

JAMES E. MURDOCH.

ard plays with considerable effect, and were thought, by ourselves at least, to be formidable rivals of the other actors. I had played *Dr. Ollapod* and *Bob Acres* before, so that in these characters I was comparatively at home; but when the cast of the "Heir-at-Law" appeared in the greenroom I felt rather nervous, though, of course, I was delighted at the prospect of acting the important part of *Dr. Pangloss*. But now there came upon me a dreadful mortification. The speeches of the erudite doctor are filled with classical quotations, and as I knew but little of Latin and nothing of Greek there was only this course left me, I must go to Mr. Gilbert and confess my ignorance. That gentleman kindly offered to assist me in mastering the classics, at least so far as the learned doctor was concerned.

The first thing to be accomplished was to get at the exact meaning of the quotations, that they might be delivered with intelligence. And the next and really most important point was to familiarize myself with the correct pronunciation of them. In two or three days we accomplished this to our mutual satisfaction, and when acting the part I gave out the quotations with such gusto and confidence that I am quite sure the audience was convinced that it was listening to a very learned fellow. I do not feel any remorse, however, at the imposition, for I have no doubt that two-thirds of the spectators who applauded my pronun-

ciation of Greek and Latin knew as little about the matter as I did.

In 1853 I became stage-manager at the Baltimore Museum for Henry C. Jarrett. He was known as the railroad manager, from a habit he had contracted of getting up excursions between Washington and Baltimore. These flying trips were both startling and inconvenient for nervous actors, as he would frequently arrange for one of his stars to play a short piece for the opening performance in Baltimore, and then hasten him, on a mile-a-minute trip, to Washington, in a special train, terminating the entertainment in the latter city with the same attraction.

On one occasion he produced the "School for Scandal" at the capital with a cast so strong, including as it did the first comedians of the day, that some account of it here may be interesting. The characters were distributed as follows :

<i>Sir Peter Teazle</i>	MR. HENRY PLACIDE.
<i>Charles Surface</i>	MR. J. E. MURDOCH.
<i>Joseph Surface</i>	MR. J. W. WALLACK.
<i>Sir Benjamin Backbite</i>	MR. A. H. DAVENPORT.
<i>Crabtree</i>	MR. THOMAS PLACIDE.
<i>Sir Oliver Surface</i>	MR. GEORGE ANDREWS.
<i>Moses</i>	MR. JOSEPH JEFFERSON.
<i>Snake</i>	MR. EDWIN ADAMS.
<i>Lady Teazle</i>	MISS LIZZIE WESTON.
<i>Mrs. Candor</i>	MISS KATE HORN.
<i>Maria</i>	MISS MARY DEVLIN.
<i>Lady Sneerwell</i>	MRS. JANE GERMON.

Being stage-manager, of course I was delighted to have this vast array of talent under my direction. Naturally my position on this occasion was a sinecure, as there was but little to do in the way of management. These great lights had been accustomed to manage themselves, and were not likely to expect advice or to brook it from a youngster like myself; so I was contented to get the credit of arranging the whole affair, which had really cost me but little thought or labor. I fancy though, from what I remember of myself about that time, that I went about with a wise and profound look, as though the destiny of nations rested on my head. I have since seen older men than I was assume this importance.

JAMES E. MURDOCH AND HENRY PLACIDE.

THE undoubted hero of this occasion was Murdoch in the character of *Charles Surface*.

James E. Murdoch, as an actor, was not only extremely versatile, but entirely original. Neither the popularity of Forrest nor the fame of Booth could tempt him to an imitation of either of these tragedians, and his comedy was equally free from resembling the style of the Wallacks or that of Charles Kemble—for the school of the latter was still lingering upon the stage. I do not mean to say that the traditions of these great actors were not worth preserving.

On the contrary, they possessed, from all accounts, a dignity and finish that would be welcome at any time. I cite the fact to show that Mr. Murdoch,—though I feel sure that he admired the great ones that had gone before and were surrounding him,—while he strove to emulate, disdained to imitate them. He stood alone, and I do not remember any actor who excelled him in those parts that he seemed to make especially his own. He was one of the few artists that I can call to mind who were both professed elocutionists and fine actors.

There was a manliness about his light comedy that gave it more dignity than the flippant style in which it was usually played. This method elevated the characters exceedingly. *Charles Surface*, *Major Oakly*, and young *Mirabel* cannot be acted with the same free and easy manner that might be thrown into *Richard Dazzle*, *Littleton Coke*, or *Mr. Golightly*. I do not say this in contempt of these latter characters; they are natural pictures of modern men, but they are eccentric rather than elegant. I saw Charles Mathews in the part of *Charles Surface*, and it was a failure. He had been for years acting the London man-about-town style of character, and the modern air and rather trifling manners, which were admirable when introduced into those parts, were entirely out of place in old English comedy. The quaintness of the language and the fashion of the costume seem to demand a courtly carriage, which a modern swagger, with one's hands thrust into one's breeches pockets, will fail to give. It was the finish and picturesque style of Murdoch's acting that agreeably surprised the audience of the Haymarket Theater when this actor played there some forty years ago. The public was unprepared to see comely old English manners so conspicuous in an American actor, and he gained its sympathy at once. The modern light comedians, with a few exceptions, seem to have discarded the quaint manners of the stage, thinking them antiquated and pedantic. And so they were, for modern plays; but it is dangerous to engraft new fashions upon old forms. I should as soon expect to see *Mercutio* smoke a cigarette as to find him ambling about the stage with the mincing manners of a dude.

And speaking of this very character, Charles Mathews told me that, during Macready's Shakspearean revivals at Drury Lane Theater, he was engaged to play *Roderigo*, in which light and frivolous part he made such a hit that Macready tried to persuade him to act *Mercutio*. He was delighted with the idea at first, but upon reading and pondering over the part he felt convinced that it was beyond him. Macready urged, but Mathews would not undertake the responsibility. Some years afterward Charles Kemble returned to the stage for

a short farewell engagement and acted *Mercutio*. "Oh," said Mathews, "when I saw this elegant and manly actor dash across the stage with the confident carriage of a prince, and heard him read the lines of Shakspeare as though they had been written for him, I felt that I had made a fortunate escape in dodging this first gentleman of Verona."

HENRY PLACIDE.
(FROM A PHOTOGRAPH BY FREDERICKS.)

The next important figure to James E. Murdoch, in the powerful cast of the "School for Scandal" just referred to, was the *Sir Peter Teazle* of Henry Placide. It was one of this actor's most striking characters. His style, during the latter part of his career, was said to have been founded on that of William Farren, the great English actor. If so, from all the accounts we get of Mr. Farren, the model was superb. Henry Placide was considered a finished artist, but somewhat cold and hard in his manner. These features, however, though they mar the more delicate points in acting, would be less objectionable in *Sir Peter* than in most of the old men in English comedy. Except in the scene where he speaks feelingly of his wife to *Joseph Surface*, the part is stiff, testy, and formal; the humor is dry rather than unctuous. The career of Henry Placide was long and brilliant. He was a strong feature of the old Park Theater for many seasons, and starred in the principal cities of America with success. He was an acknowledged favorite, whose talents as an actor made him a valued member of the theatrical profession.

A PLAY IS AN ANIMATED PICTURE.

I REMEMBER that during the rehearsal of the "School for Scandal" I was impressed with the

idea that the performance would not go well. It is always a difficult matter to bring a company of great artists together for a night and have them act in unison with each other; not from any ill-feeling, but from the fact that they are not accustomed to play together. In a fine, mechanical contrivance, the ease and perfection with which it works often depend upon the fact that the cog-wheels have their different proportions. On this occasion they were all identical in size, highly polished, and well made, but not adapted to the same machinery. Seeing a hitch during the rehearsal in one of the important scenes, I ventured, in my official capacity, to make a suggestion to one of the old actors. He regarded me with a cold, stony gaze, as though I had been at a great distance,—which I was, both in age and in experience,—and gave me to understand that there was but one way to settle the matter, and that that was his way. Of course, as the company did not comprise the one regularly under my management, I felt that it would be becoming in me to yield; which I did, not, however, without protesting that the position I took was the proper and only one, under the circum-

stances; and when I saw the scene fail and virtually go to pieces at night, I confess that I felt some satisfaction in the knowledge that my judgment had been correct. In fact the whole entertainment, while it had been a financial success, was an artistic failure. People wondered how so many great actors could make a performance go off so tamely.

Harmony is the most important element in a work of art. In this instance each piece of mosaic was perfect in form and beautiful in color, but when fitted together they matched badly and the effect was crude. An actor who has been for years the main attraction in his plays, and on all occasions the central and conspicuous figure of the entertainment, can scarcely be expected to adapt himself at once to being grouped with others in one picture: having so long performed the solo, it is difficult to accompany the air. A play is like a picture: the actors are the colors, and they must blend with one another if a perfect work is to be produced. Should they fail to agree as to the value and distribution of their talents, then, though they be ever so great, they must submit their case to the care and guidance of a master hand.

(To be continued.)

Joseph Jefferson.

A DAMASCUS GARDEN.

AMID the jostling crowd, she dwells apart,
Girt by it, but not of it. To and fro
She watches the world's commerce come and go,
With laden caravans for every mart
That craves such traffic. Hers the mystic art
To keep unparched by desert winds that blow,—
By skies that burn, and sands that scorch below,
All the lush freshness of her tropic heart.

Find but the gate of entrance: turn the key,
And gaze within. What fountains leaping bright! —
What palm-like aspirations, rich with bloom
Of lofty passion! What a mystery
Of pure emotion hidden in fragrant gloom!
What a Damascus garden of delight!

PROBLEMS OF THE FAMILY.

THEIR MAGNITUDE.

FEW years before his death the late Dr. Mulford, whose great book "The Nation" has been the instructor of many statesmen in the higher conceptions of our political institutions, wrote in a private letter that he thought the sixteenth amendment of the Constitution of the United States ought to be on the family. His meaning was made clear in some later conversations upon the subject. He saw that marriage, divorce, and polygamy, with perhaps other connected subjects, are so interrelated that nothing short of one inclusive constitutional provision on the family will meet the case when it shall finally be made up for this highest form of political action upon it. Other subjects seemed to him so much beneath this in real dignity, or to be so much more within the scope of the States themselves, that he thought this one should take precedence of them all. But such are the nature and place of the family in the social order, so many and grave evils arise from its present legal and social conditions, and these matters are of such a fundamental, universal, and urgent character, that he thought, as he again wrote and repeatedly said, that "the family is the most important question that has come before the American people since the war." And as the war had brought into the Constitution certain amendments relating to the individual, so he thought the time would come when the results of study and peaceful discussion on the family might find their way into the organic law of the nation. But no one saw more clearly than Dr. Mulford the long and thorough work that needs to be done in preparation for this great end; and for some time before his death he had seriously thought of undertaking a book on the family. No one, certainly no one in this department of pro-

found philosophical thought upon political and social problems, could have taken up the task with larger promise of usefulness.

I have found substantial agreement in this opinion of Dr. Mulford, as to the supreme importance of the family in our social problems, among many persons whose opinions are entitled to the greatest respect. Mr. Gladstone also has lately given the weight of his name to a still more emphatic statement. For he says, "The greatest and deepest of all human controversies is the marriage controversy. It appears to be surging up upon all sides around us. . . . It is in America that, from whatever cause, this controversy has reached a stage of development more advanced than elsewhere."

THE SCOPE OF THIS DISCUSSION.

THIS paper will not attempt to go into those deeper relations of the subject which lead to the proper apprehension of the grounds on which such opinions rest. For an explanation of them must come from a scientific knowledge of the nature and movement of nearly all the great social institutions and forces which have shaped the Western civilization of twenty-five centuries. It is enough to remark one or two things in passing. The year 1861, the opening of our civil war, was the year in which Sir Henry Sumner Maine, by the publication of his "Ancient Law," introduced to English readers a system of study that, by its use of the historical method upon the material afforded by law, has given us new and larger views of the social life which lies back of and interprets our own. Within nearly the same period a very different school of students of social problems has sprung up — that of those who would account for the present order of society upon the theory of evolution. Whatever may be said of some of the conclusions of this latter school, its facts and theories demand consideration by every one who would understand modern social problems. It is not too much to say that under the combined influence of these two very unlike classes of writers, and from the mighty forces of the

¹ The first Present-day Paper, "The Problems of Modern Society," appeared in THE CENTURY magazine for November, 1889.

present, the problems that are connected with the family are taking on new forms; and it is only as we study them in their historical relations as well as in the more common ways that we can hope to solve them or even understand them. With these remarks, it is purposed to confine this presentation of the subject to the more practical problems before us and sketch some of the work that immediately needs attention.

SOME LINES OF INVESTIGATION.

THE true way to begin is undoubtedly with the use of investigation. For the time has come when social studies demand that we start with indisputable facts, so far as they can be discovered. Dogmatism and sentiment are more and more coming under ban as guides in the work of social reform. We shall gain much if we can enter upon the hard work that is to be done for the family from the solid basis of fact. The statistical report of the Department of Labor at Washington on marriage and divorce was originated for this purpose. It begins at the beginning. It gives, for the United States, and the most of Europe, the fundamental facts as to law and its operations as they bear upon two points: first, the existence of the family as this is affected in its entrance into being through marriage, and secondly, by its unnatural and premature dissolution by divorce. In effect, it is an official report of facts on the vitality of the most fundamental and universal institution of society in the greater part of Christendom. It demonstrates a suspected, but hitherto not clearly proven, fact that the official disruptions of the marriage bond have more than doubled within twenty years on both sides the Atlantic; that the exceptions to the general rule are few; that the movement still goes on and has reached huge proportions in the United States, where the laws regulating the formation and dissolution of the family are extremely lax, indefinite, and conflicting.

The discovery of this uniform tendency of the social tissue to break up into its individual units points to the need of further investigation. For this fundamental fact in social statistics demands more study both by itself and in its relations. That is to say, there are many additional points concerning marriage and divorce to be investigated, and beyond this those matters which are closely related to these subjects should become the object of special inquiry. Licentiousness, that most difficult of all social evils for the student and reformer, needs attention, however reluctant we may be to give it. For licentiousness corrupts the physical basis of the family, whose maintenance in the vigor of absolute purity is of more concern to society than anything else in the physical conditions of

human welfare. Its extent, forms, the classes affected by it, its influence upon pauperism, crime, insanity, intemperance, and its hereditary results are subjects that call for investigation. The study of the productiveness of American families in children, by careful examination both of birth-rates and of death-rates, is another. A knowledge of this subject by classes, whether of so-called native stock or of foreign birth, whether Irish, German, French, Canadian, Protestant or Catholic, white or black, rich or poor, if carried on, as has been done in a good degree in the State census of Massachusetts, will be of great value. It has been found in that State that the birth-rate among foreign mothers is much larger than among others; that the death-rate among their children is also greater, but not enough so to offset the greater birth-rate; and that in the last ten years there has been a decided gain in the number of children in families of native stock, and a loss in those of foreign origin. Any one can see the great value of such inquiries. It is not hard to understand that the future of this country is dependent in part upon the relative operation of these powers of reproduction. The common method of improving society by individual conversions to better ways may need to be supplemented by some control upon the organism of the family, instead of being content in the degree we have been to pick out individuals one by one. In this way we may perhaps turn to our advantage the greater reproductive powers of certain classes against which we now contend with doubtful success. But competently conducted investigations, with their definite and indisputable results, will be needed to fix attention and direct action. And to these several inquiries one more especially needs to be added—the investigation of the home as itself a unit of the various social forces. For it is not enough that we study the effects of its virtues or its vices, one by one, separately. Such is its vitality, and its interrelations are so important, that we miss much if we dissect it and test it by parts only. I believe that the relation of the home, as a social unity, to poverty, crime, intemperance, and other vice, is worthy of the search of the statistician under the direction of social science. The composition of the family, its housing, its relation to the industries of its members and society, its influence in supplying the saloon, the brothel, the almshouse, and the prison with victims, or in resisting the allurements of these places of vice, as well as its own sufferings from them, are subjects of pressing importance. For just here, and very largely by the statistical method, is to be sought that exact information which is almost indispensable to the greatest success in social reform.

CONFIDENCE IN SCIENTIFIC STATISTICS.

NOR is there any need of serious hesitation about using statistical methods here because of the obstacles to mathematical estimates of social forces. That there are difficulties no thoughtful statistician will deny. But the principle on which the statistical measurement of social elements and their movements rests is as sound as that which justifies the man of business in his use of bookkeeping. Indeed, social statistics are only the application of the well-established methods of business and science to social affairs. The units of measurement are less easily managed than in material things, but they are by no means beyond control. And besides, we are continually depending in our practical action upon what is called common observation. That is to say, the judgments and actions of mankind upon social matters are continually made up upon the very material which the statistician uses. But he simply gathers the exact matter for an opinion, reduces it to precise order, and gets out of it the real truth it holds so far as his methods can accomplish the task. In other words, he systematically extracts the reducible truth and puts the rest where its real value can be better understood, even though it is seen to be incapable of measurement by his instruments. He does not put in order the mere observation of one man nor that of all men concerning a class of facts, but goes to the facts themselves and compels the observer to see them all in their proportions and relations. I speak of this matter at some length because the time is evidently near when the call for this kind of work will be more general than it has been, and to direct attention to its essential trustworthiness. There

1 A striking illustration of the value of such statistical work as has been urged in this paragraph, and of the use of it in correcting the opinions of the people, is afforded by some figures that have come to hand since it was written. They are drawn from the report on marriage and divorce already noticed, and throw light upon the probable effect of that uniform legislation which is widely advocated. Uniformity is often sought because it is expected to prevent a great part, if not the greater part by far, of our divorces, since these are supposed by many to be granted largely, if not chiefly, to those who have left their own State in order to obtain them more easily or secretly. But the facts are as follows:

Out of the total of 328,716 divorces granted in the United States in the twenty years from 1867 to 1886, inclusive, 289,546 were granted to couples who had been married in this country, and only 7739 were from marriages celebrated in foreign countries. The place of the marriage of 31,389 is unknown. One-fourth of these latter are reported from Connecticut, as that State does not require a disclosure of the place of marriage in its libels for divorce. Now the report shows that out of the 289,546 divorces whose place of marriage was in this country and was ascertained, 231,867, or 80.1 per cent., took place in the same State where the persons divorced had been married, and 57,679 couples, or 19.9

is, as already intimated, a growing distrust of sentiment as a safe guide, and a readiness to accept the methods of scientific investigation as the basis of social reform, and it is well to know the really high degree of confidence which we can put in these methods. The economist, as I shall try to point out later, the advocates of temperance, sexual purity, prison reform, and the prevention of poverty and of all kinds of vice, have a deep interest in the results of statistical and other investigations touching the home and its social influences. We are now working blindly and wastefully in many of these directions for lack of more exact information about our subjects. And more than this, the popular mind, and even its leaders, need to see the number and tremendous force of the influences that emanate from the family or center in it.¹

With this plea for preliminary and general investigation, let us look at some of the more practical work that needs to be done for the family and about it, as, for convenience, we follow along the line of the cardinal classes of American social institutions. We naturally begin with religious institutions—the most fundamental and important of all. Let us take these on their practical side. We shall soon see that the Church has quite overlooked or negligently used one of its most important forces.

TREND OF ECCLESIASTICAL DEVELOPMENT.

THE American religious life of this century has had two chief centers of development. One of these is the local church. This has been made the subject of a series of inventions that have produced most remarkable results in the Christian organization and life of the more progressive of our communities. The Sunday-

per cent., obtained divorce in some other State. The migration from State to State to obtain divorce must therefore be included within this 19.9 per cent. But it cannot be even anything like the whole of it. For in 1870 there were 23.2 per cent., and in 1880 22.1 per cent., of the native-born population of this country living in States where they were not born. Of course this last class comprises persons of all ages, while that under special consideration is made up of those who migrated between the date of marriage and that of divorce. The length of married life before divorce in the United States averages 9.17 years, which, I think, is from one-third to one-half the average continuation of a marriage in those instances where divorce does not occur. Careful study may lead to a reasonably correct approximation to the proper reduction from the 19.9 per cent., and thus give the probable percentage of cases of migration to obtain divorce, but at present I would not venture an opinion on the point. It certainly is a very small part of all the divorces of the country, though varying in different States. But the necessity of such investigation is the point it illustrates. The discovery of these facts alone justifies the cost of the invaluable report of the Department of Labor. It can hardly fail to compel the study of the problem of uniformity from almost entirely new points of view as to its real nature and place in the general question.

school, the prayer-meeting, the Young Men's Christian Association, the Society of Christian Endeavor, children's societies, and religious guilds of various kinds are examples of a large number of devices that have been made for the use of the churches. But they are all only varying forms of a single sociological type. One underlying principle has been the controlling idea in their construction. Their chief purpose has been to make most effective the method of religious influence through the use of an assembly of the people of a given vicinage. The primary social form for religious work is taken to be the congregation, and seemingly every possible way of turning it to account has been sought out and made the subject of inventive skill. The Sunday-school is the most notable of these recent developments. Not only has it a literature devoted to its work of instruction which perhaps is now larger in amount and the subject of more thought than that of any other single department of religious work, but it has almost created an architecture and system of organization and work peculiar to itself. We have made a great science of the organization, the housing, and the successful operation of the Sunday-school system. This is more or less true of the other later forms of doing religious work in collections of the people of a locality. They are fast becoming elaborate. And the same tendency is seen in those churches which formerly stood aloof from this complete surrender to the idea of dependence upon congregations or local assemblies. Even the Methodist Episcopal Church in New England, if not elsewhere, seems to have lost something of its former reliance upon the class and its meeting and upon the house-to-house work which that institution and the circuit-riding system accomplished in their best days.

I am not pointing to this tendency either to approve or to condemn it, but to call attention to the fact. It has undoubtedly greatly increased the efficiency of Christian work. But we do well to reflect upon the nature of this remarkable process by which most local churches of nearly all Protestant faiths have become as unlike their earlier selves as the modern factory is unlike its predecessor of two generations ago.

Another development has gone on in connection with this of the congregation. I refer to those larger forms of religious action that in some degree are regarded as representative of the life or organization of the local churches. Some of these are truly representative of the lower congregations, both in form and reality. Others are so in name, but in fact only partially, having a dominance of either clerical or other ecclesiastical influence that is neither democratic in origin nor truly representative. Some of these have sprung up in due constitutional

form out of their politics. Others are anomalies as judged by their relation to their politics, but have had a more or less natural development. As society has become more complex, nearly all the Christian denominations have multiplied these larger forms of work to meet the necessities of their times. This is especially true of those politics founded on the theory of the essential independence of the local church.

In this respect the simpler forms of ecclesiastical order have been following that earlier movement in political institutions which has given us the modern state with its interacting parts of national, State, and local institutions. And just as the development has been truly representative of the constituent congregations, or been dominated by the paternal idea with power emanating from a superior order, the religious development has reproduced one or the other of the two great systems of political life. In some directions the representative form of development has done much to improve the former, that is, the congregational. It has often greatly helped the latter to better methods and a larger life. It has quietly brought to the community those broader conceptions and rules of action that have made public opinion a power for good. By use of the two the individual, who is the common object of their solicitude and beneficent care, has been touched and made to feel his relationship to his fellows and his responsibility for the discharge of the duties that grow out of it as apparently could be done in no other possible way.

CONSEQUENT SUPPRESSION OF THE FAMILY.

Now while American Christian life has been making great development in these two directions, or, perhaps, some would say in this one direction, from the inevitable tendency of communal life to expand into the association of communities, there is one of the three great types of social order which has received nothing like the care and skill that have been bestowed upon the others. I refer to the family. While it has not been forgotten, the family has been comparatively neglected. As soon as one attempts to institute a comparison between the labor spent in bringing out and developing the resources of the congregation in the various forms of it, to which allusion has been made, he can scarcely fail to feel the force of my contention. The Sunday-school, the Sunday-school teacher, Sunday-school relations and duties, and Sunday-school rooms and literature have been abundantly, though still probably far from exhaustively, studied and planned for. This and those institutions of the Church which are constructed on the similar principle of work through use of pop-

ular assemblies may be said to have come into full self-consciousness and found abundant recognition and care. But nothing like this has been done for the family as a distinct religious institution demanding a correspondingly distinct treatment. Considerable advance in the welfare of the home may be freely conceded without abating the force of the charge that it has been relatively neglected. There has been of late years considerable talk in the newspapers and elsewhere about doing things for the home, and this is a token of good. But the form it assumes is rather disheartening. It reveals a lack of faith in the home itself. For the plea for the home almost always ends in an exhortation to some other institution to attempt some work for this precious charge of society whose constitution and training are assumed to be too delicate for any effort towards its own support. The irreligion of the home is usually met only by some redoubled effort to bring its inmates into the various congregations of the Church.

ITS PERIL TO THE CHURCH.

THE consequences of this method are very serious. For one thing, we are limiting our religious work to the conditions essential to its success under the peculiar forms we have imposed upon it. Having committed our task to the congregation, we have put ourselves under its limitations to the extent of our dependence upon that ecclesiastical form and the higher one that works upon and through it. We can go where our congregation can be gathered, but we must stop with the length of its rope, or cut loose from it and make our way beyond as best we can, deprived of most of the aids that have been provided for it. Accordingly our hold upon the people fails as we get away from the conditions under which congregations are gathered and do their work. Distance alone cuts us off from some millions of people in the United States. Let no one start at this word millions, for it is true to the facts. The experience of the American Tract Society in the work of its colporteurs and a statistical examination of a large section of rural Vermont go to show that one-third of our people outside the cities—and this means about one-fourth the entire population of the country—live beyond easy access to church. In Vermont thirty-six per cent. live more than two miles from the nearest church of any kind, and the proportion of non-attendants upon public worship was found to be fifty per cent. greater as we passed this limit of two miles. The reader will understand how very large this part of the population is when I say that a careful study of the census of 1880 shows that in the fourteen Northern States east

of the Mississippi River, where a little over one-half of the entire population of the United States was found in that year, there were more people by about a million in the country townships of less than 2000 inhabitants than there were in all the large cities and towns having 4000 or upwards. Any one must see, what the facts prove conclusively, that the attempt to evangelize these great numbers by main reliance on the various forms of congregational effort must largely fail of its object. Statistics for Vermont, where this kind of information has been better gathered than elsewhere, show this. That State has about six hundred churches, spending nearly a half-million dollars annually on her third of a million of people, and yet nearly one-half of the population do not go to church at all. This probably pretty fairly represents the condition of things in a large part of the country. The occupation by two or more churches of the same field has much to do with this state of things. But the limits of Christian action fixed by the conditions of work through public assemblies has a large part of the responsibility for it. We distribute our work far too much with reference to its relation to some church edifice; and where we cannot hope to secure church organization or church attendance we too often let things go, or work our defective method as we can.

But other things operate against the congregational method of doing our work. The social barriers of dress, manners, sympathies, the conditions of health, household cares, and other like influences, often have all the effect of distance. And here the problem is very much the same in country and in city. In the city and larger villages very much has been accomplished by the great working churches, as they are called, through the variety of ways already noted. But the thoughtful student of these methods must see that their simple extension or the intensive development of their work will not fully meet the case even in denser populations. While we may not neglect this, we must soon add something else to it. And I suggest that there is more hope from the recognition and better use of the family than in any other one social instrument within our reach. The latent religious powers of the average American home, of which I am more especially writing in this paper, almost need discovery. They certainly need to be recovered to their legitimate place in Christian service.

RELIEF BY THE USE OF THE HOME.

NOTHING else can be used with so great effect to meet the obstacles presented by distance and the other hinderances to public worship as the home. The home is always in contact with

the vast numbers of the unchurched both in city and country. It is, so to speak, always on the ground. Distance, weather, dress, and the many social considerations that hinder church attendance disappear before the home. Natural affection, parental duty, and domestic interest are pleading for its offices. It brings to its task something of more worth than mere intellectual qualification or professional enthusiasm. And these forces wait the development and direction which the Church can give if it will apply its energies and resources to the work with anything like the way in which it has spent itself over the Sunday-school and similar institutions. In the judgment of the sociologist that cannot be a healthful or permanent adjustment of the forces of the Church which does not distribute them proportionately among the three great forms of social institutions represented by the family, the congregation, and the larger bodies formed out of the latter. The family is the primary social institution. It is the most universal in its inclusion of members and in its presence. It is the most constant in its influence. It comes into the closest contact with persons of all ages and sex, though it touches especially the young, and it is the great channel of woman's influence. To develop into all their complex relations the other social institutions and yet keep the life of the family sound and duly vigorous is the great task of modern society. As our modern civilization pushes out its wonderful growth on this side and on that, it continually finds itself compelled to look to its primary constituents and see that they are kept at their very best. It does this on peril of dissolution. The clearest lessons from the history of Aryan civilization, enforced too by the stress laid by early Christianity upon piety in the household, point in this same direction.

Here, then, is a place for some practical work in the development of the latent religious uses of the family. While we may not cease our talk with men about public worship and the duties they owe it, we may well learn to go to them in behalf of the family. But this must not be done as if the family were a beggar, with self-respect lost, waiting for the dole others may condescend to give it. We have had too much of this sort of treatment of the home. We have made it helpless by the methods of our charity long enough. It is time to help the home to self-respect by our own respect for it. There is in it a slumbering consciousness of itself which needs to be called into activity. It is time we ceased to make people feel that there is no salvation except by way of the church-door, in simple justice at least to Him who said, "I am the door." Where He is there is the church, is at least Protestant doctrine, and no form of ecclesiasticism, not even that of the most

orthodox Protestantism any more than that of Rome, can shut Him within church walls or look to the congregation as the place for the greater part of His work.

Work in this direction will be slow at first. Long disuse of the powers of the family, or perhaps I should say the great neglect to train and use them fully, has had the effect of partial paralysis or of infantile weakness. It is easier to work upon larger collections of people than it is to take single households, just as we can make shoes cheaper in a factory than in the old-fashioned way.

AN EXAMPLE.

BUT the work can be done. I give an example, which is only one, and in the single direction of religious instruction. I refer to the home department of the Sunday-school. This is the name given to an extension of the Sunday-school beyond the limits of the collection of its members in congregations. It secures the enrollment of all it can of those persons who cannot attend with much frequency the central Sunday-school, as its members in the home department of the school. These are supplied with the necessary material and helps, and are pledged to give at least a half-hour every Sunday to the study of the international lesson or some other Scripture at home, either alone or with other members of the family. A record of attendance upon this duty and of other matters is made and sent regularly to the school, which in its turn gives similar information. This is the leading feature, to which others have been and may still be added. This device has been very successful, almost always adding at least one-fifth to the membership of the school, and sometimes doubling its numbers. Several hundred schools probably have adopted it in country towns, where it is working remarkably well, and of late it has been most successfully tried in some cities.

The principle of this is evident, and it is capable of enlargement and application in several directions. It reaches more people than the congregational method of work can do by itself. What is more, it has planted anew in the popular mind the idea of the responsibility of the home to itself and the possibility of doing its own work in some measure. Now we may go on to other arrangements of this general sort. Household worship and perhaps liturgical aids to it, studies in the ethics and esthetics of home life, the assignment of definite parts of religious instruction to the home along with those pursued in the church school, may be named as within the range of the American family of ordinary intelligence. Such a course in Bible study as Dr. Munger lately

outlined in *THE CENTURY*,¹ and also the salient points of Church history, the confessions, collects, hymns, music, and missionary work of the Church might become parts of systematic study at home in the more intelligent families, if not in most.

THE FAMILY IN THE EDUCATION OF THE PUBLIC SCHOOLS.

I NEED touch but briefly the application of this principle in the field of so-called secular education. The same vicious tendency prevails here as in our use of religious institutions. The public school, which is based on the collective principle, and the periodical press are now compelled to do their own work and much of that which belongs to the home. If there is popular ignorance of morals or even religion, we seek a place for instruction and call for text-books on these subjects in the public school. Our cherished school system is in some danger of breaking down under burdens that do not naturally belong to it, by a thoughtless attempt to put upon it the whole task of education. One of the popular needs of the time is a careful survey of the entire range of educational forces — the home, the school, the church, the great university of literature, and the vocation, with a view to determine the province of each and the contributions these various parts should each make to the whole and to one another. Among these the family demands particular attention. For a hundred things in thought, feeling, speech, manner, and morals are determined quite as much by the home as by the school. The home and the school cannot afford to work inharmoniously or at cross purposes.

PRACTICAL SUGGESTIONS.

THE state among us generally confines itself to the regulation of the education of the schools. But it may point out to the people what must be expected of those educational institutions which it does not attempt to control. It may open the way for a closer interrelation of home and school, and so break up the tendency to concentrate educational thought upon the teacher and pupil to the comparative neglect of the parent and child. The teacher now longs for what the parent does not give, and the parent is sometimes shut out of a participation in what should be common work. Besides this, we are now trying to secure the education of the entire people by concentration of effort upon the younger half. There is a consequent loss in two directions. We work against the unedu-

cated part of the population that is outside the school-room, and we do nothing for the adults. But if we should bring about some coöperation of the parent with the school we should reënforce the work of the teacher with that of the parent and in some degree educate both together. A certain kind of social vitality would be given to what otherwise is too mechanical. Instead of combating nature we should secure her aid. By educational tracts and by other means, like a series of cards reporting weekly or monthly the subjects of study, their methods of pursuit, and such general matters as the proper pronunciation and use of certain words, the points made in manners, morals, and the principles of industry and frugality, very much can be accomplished for the children and much indirectly for the parents. The general life of the home and the instruction of the school-room would then more happily blend with each other. It would seem to be a proper thing for both state and church — perhaps after a common agreement — to take up the work of outlining their respective provinces in education with the purpose of clearly defining each and the duties growing out of their relationship. At present one part of the church seems to be engaged in a determined effort to secure to itself the entire educational functions of society because the state does not do full religious work, while another part is as zealous in its effort to force religious work to a certain degree upon the state. The last is often done on the weak plea that since the church and family do not reach certain classes with instruction in religion and morals, the school must be made to do their work for them. The idea of recalling the two former institutions to their own share in the work is hardly entertained. The only way out of the difficulty consistent with the American political system, and the way that will strengthen all educational interests, would seem to be in the direction here indicated. But it cannot be taken without turning attention to the family as a factor of unmeasured value in our educational problems.

THE FAMILY IN ECONOMICS.

ECONOMIC institutions are the third class where there is new work for the family. It is significant of the need of this that the original meaning of the term "economic" has been lost, and it no longer refers to the law of the house, as the word strictly means, but we use it almost wholly in the larger sense. For our science of wealth is now *political* economy, or the science of wealth in city and State, or rather the nation and the world. In this we have moved so far away from the primary institution — the

family—that the primary sense of the term has dropped well-nigh out of sight. It clings to the word economic merely in etymology. But any one who has ever traced the great historical movements of the institution of the family and property must have been impressed with their close interrelations and mutual dependencies. Few things in the history of the civilization of Western Europe are more suggestive than the great changes in property from the time when it was largely the corporate possession of a household or village community down to its present form of individual ownership. This history of the growth of individual out of corporate property, of modern capital and the new organization of labor, of the will as a means of transmitting property, of the emancipation of capital and labor from the bonds of status to the liberty of contract, and of the industrial activities of women and children, is closely interwoven with that of the family. In some way or other the family has been deeply affected by all these social changes. And in this movement, as in religion and education, the family has made surrender of one after another of its functions to the institutions above it and to the individual members of itself. The family is still continually yielding something to the boarding-house, the factory, the school, the church, and that multitudinous combination we call society. This is by no means wholly wrong. For it is the very process of life in highly organized society, and the family receives much for what it gives. But it is my present contention that we should know just what has been going on, so that we may act intelligently, and not needlessly run into danger. There may be need of arresting the process of differentiation in some directions, and of turning our thought to re-integration in more constructive lines of work. The friction of our present social life finds a part, at least, of its explanation in this suggestion. The corporate forms of capital and of the industrial organization of the times belong to this class. The irritation over the working of the modern will, by which the individual fixes his property for all time to uses defined by the conceptions of his own short life, is another. So completely has the modern commercial theory of endowments and trusts as affairs of pure contract taken possession of the popular mind, that any other view seems to most people, who do not know the history of law on this subject, either absurd or dishonest.

THE MOVEMENT IN BEHALF OF WOMAN.

THE bearing of modern industrial methods on the family and on the future of woman deserves more study than has yet been given to

it, in order that we may detect the real causes that lie underneath. What some call a woman's movement for industrial liberty is not quite what it is claimed to be. It is largely an incident in the movement of property, which is seeking its own ends, caring very little for either sex or age. In order to find an easier place under the common industrial yoke that rests upon the neck of every individual, women seek more and more employments. But it is not so much womanhood as it is property that is the real impelling force. Let me state the principle concretely. It is the desire of capital, or property in accumulation, to get things done at the smallest cost to itself. If it can have enough intelligence and character to insure the end it seeks, the less there is in labor beyond the ability to accomplish the end the less costly the labor. Put the few indispensable qualities of successful labor into a machine, or supply them in a human being, and mere capital cares little for anything besides. It is under this law that women are continually taking the place of men in our industries, and children that of both. Under it the Irish, the French-Canadians, the Italians, Hungarians, and Chinese successively supplant each other in the lower forms of labor. I do not, of course, forget the powerful and beneficent upward movement that comes to all classes from this. But we must not shut our eyes to the difficulties that the operation of this principle puts in the way of those near the foot of the social ladder, nor the bondage it imposes on all who feel the pressure of it. Its effect upon the family is one of the most serious things in the whole modern industrial problem.

THE DISINTEGRATING WORK OF PROPERTY.

THE general movement of property has, so far, been like that of a huge glacier, breaking and wearing away into their elementary atoms all forms of corporation, whether political or economical. Its ultimate atom is the individual; its favorite corporation is the largest possible combination. The family has in it the greatest cohesive strength, and consequently has most successfully withstood the grinding power that has tended to crush everything subjected to it. This operation of the modern industrial system, and the commercial outgrowth of it, combine with other social causes to help postpone marriage and reduce the size of families in those sections of society where these tendencies are the least needed. It brings the family into the labor market as a mere collection of individuals on the same economic footing as the unmarried. For small provision, at the best, will be made in fixing wages, for the rearing of children, the care of

other dependents, and all those little things that make the home. In the market of wages the family is the accident of the laborer rather than his essential. There is great need that these differentials between the economic value of society as a mere mass of individuals and what it is as actually composed of men, women, and children, living in families and having domestic and social wants above those bare material necessities to which capital is inclined to confine its thought, be carefully sought out and estimated.

Political economy may well think of calling statistics into its service for their aid in the solution of this problem, which is clearly a difficult one. But it may not be impossible, for example, to get the approximate economic value of ten thousand persons of the usual proportions as to age and sex and compare it with the pecuniary returns of the labor of the same number of like proportions in respect of age and sex who are outside real family life. And something like this is the important statistical problem of measuring the share of the home in the general accumulation of wealth. If some work like this could be done even fairly well, it is probable that we should recognize as we never have done the large place of the home in a realm of study where it has been greatly ignored.

THE FAMILY AS THE SUBJECT OF LAW.

THE last field of work for the family is in the region of law and politics. The official report on marriage and divorce shows the need of legal reform. There is dangerous looseness both in the statutes and in their administration.

There is nothing like a scientific and harmonious system of law upon these subjects for the whole country. Great confusion prevails. In too many States and Territories the family can be formed in marriage and dissolved by divorce in the most careless and irresponsible manner. In most there are no provisions for official information on these most important matters. On the other hand, Europe has recovered largely from her early looseness, particularly in respect of the law of marriage, and has pretty generally secured scientific and conservative systems for the civil recognition of marriage and the dissolution of its bond. It has in some countries realized the idea of family law as an organic whole, and as the point from which to treat specifically marriage and divorce laws. Meanwhile we have done very little to reduce to order the colonial confusion and the unrelated growths of the new States. It is not easy to find the term family in national or State constitutions. It is by no means frequent in our statute-books.

Indeed the title has found its way into the encyclopædias only in recent years. We have come at the family in fragments and legislated accordingly. Our ideas of it are extremely individualistic, and so we are dominated by the conception of marriage as a mere contract, with little thought of the family and its relations of status. In this respect law only reflects the common sentiment. There is a vast deal of work to be done here—a work that is scarcely begun.

THE FAMILY IN POLITICAL SCIENCE.

THE more strictly political problem of the family is, if anything, still farther from our present views of public questions. Democracies necessarily part with the political significance of families as Europe understands the idea. Among us has culminated that prolonged social movement by which the family has surrendered its early political functions to build the city, the State, and the nation. And we are now confronting the question whether the last point shall not be yielded, and by the enfranchisement of women secure the completed substitution of the individual for the family as the ultimate and only true depository of the prerogatives of political power. Those who advocate this final step triumphantly quote one of the great generalizations of Sir Henry S. Maine—that the movement of society has been from the family to the individual, assuming that social movements go straight on in the direction they have hitherto been taking. But some of us may well recall another of the remarks of that great scholar. For he has said that "Civilization is nothing more than a name for the old order of the Aryan world, dissolved but perpetually reconstructing itself under a vast variety of solvent forces." An American student of social institutions also reminds us that "The family perpetually reproduces the ethical history of man and continually reconstructs the constitution of society." If these statements of Maine and Dr. H. B. Adams assert historical facts, as will be readily granted, it certainly is high time that we considered more thoroughly than has yet been done the part which this primary and universal social institution is likely to have in the politics of the future. The recovery of an institution like the family to its true place in the ultimate social order, carrying along with it the subordinate problem of the determination of the political functions of woman, may be an early necessity of our political stability and vigor. The wiser political thought may refuse to speak positively on the enfranchisement of woman until it has studied more carefully the political relations of the family.

Whether it be for weal or for woe, the proposed perfection of the economic, political, and legal individualization of modern life is the most momentous of social propositions, and the gravity of the problem is not diminished when we remember that the world has yet to witness the first successful attempt of a civilization at the reconstruction of its own social order after it has reached high achievement and decay has once begun. If pessimism is to be shunned, let us not forget that it is also unscientific, at least, to proclaim with unhesitating confidence the ultimate triumph of our present social order.

RETURN TO THE FAMILY OF THE PAST IMPROBABLE.

BUT we may not by any means return to the exact type of even the better family of the past. For social movements, as already implied, do not vibrate like a pendulum between two extremes, rising to a fixed point only to return to the exact place whence it started. The cry heard in some quarters, which calls simply for "the good old family of former times," may not be a wise one. For it is a recovery to yet unexperienced possibilities rather than to a narrower domestic life that seems most likely. We have been tending politically towards nationalization; that is, to the concentration of more and larger functions in the highest political forms of government. This almost necessarily goes on at the expense of the state, the municipality, and the family. The whole modern industrial system tends to compel all the minor social organizations to give way. The Trust, as we now feel it, is the latest evidence of this tendency in the field of economics.

Economic forces have of late years had an immense influence in shaping public and private law. As has been already intimated, the family is the strongest natural barrier to that great disintegrating process which constantly tends to reduce to their lowest terms all intermediate combinations or institutional forms between the individual and the largest conceivable organization; in short, between the individual and the largest massing of social force. Social readjustment along truly natural and therefore proportional lines, in which each social combination shall have its true place and share of work, is the great task before us.

No one can think long upon the point without seeing that in this great work the family, from its nature as the original germ and permanent tissue of society, will become a leading object in the study of the problem. Its profound study is indispensable to the solution of the problems which underlie socialism.

EDUCATIONAL WORK TO BE UNDERTAKEN.

THIS leads to a final suggestion. Since the problems of the scholar and the statesman among us are preëminently those of the people, there is need of fundamental educational work in which both classes can share. Chairs of sociology are needed which shall begin work by such analysis and historical study of social institutions that the framework of society may be understood both as it now exists and from the comparative point of view, and our concrete social problems be made to appear in the light of their relation to the great social institutions whose working has given rise to them. The trouble with much of our social therapeutics is that our practice is not based on sufficient anatomical knowledge. Comparative social anatomy and physiology are strangely neglected. There is need of some provision by which young men who are to be legislators, clergymen, missionaries, and writers for the periodical press, and young women, too,—for whom there is plenty of work based on this very kind of knowledge, both in city and country, in touching the home-life of our people,—may be trained so as to be able to understand the chief features of the social order about them. I mean that such shall have the advantage of knowing the social life around them in the way they know things in the inferior departments of biology. Have we not come to the time when the biology of society demands some place in the majority of our higher institutions, such as it is just beginning to have in one or two of them? Such study will bring out the place of the family in the development and present constitution of society. It will help us to forecast in some degree our future work. It will equip for their work—at least partly—the educated young men and women whose opportunities for usefulness in the solution of social problems increase with the years.

Some of these subjects open fresh fields for monographs. We need, for example, a good manual on social structure and functions. Then another needs to be written, making, as I suggested some years ago,¹ a critical historical study of the development of the family in Christianity. For there is reason to think, as I there tried to show, that the family has not come out into its proper perspective, even in the thought of the Church at the end of all these centuries, as a distinct well-proportioned whole. Its practical and theoretical aspects in their several and separate parts have usually been the subject of study and precept. But now a singularly fortunate convergence of several of its fragmentary prob-

¹ In an article entitled "The Family in the History of Christianity," "Christian Thought," Dec., 1885.

lems make it a fit time to bring forward the inquiry whether the family is not soon to receive something of that special and larger thought which has been occupied during the last hundred years with the individual. The great treatise upon the family, and indeed anything worthy the subject, is yet to be written. And before that is done, we need to measure accurately what has and what has not been already achieved. We might well go much farther and examine anew the ground of antiquity, on which, in some parts at least, we do have some valuable books, and study the place of the family in all the great religions. A special treatise on its relation to property or to education is equally needed. And it might be well to consider the usefulness of distributing this great work among those who should take up its various parts with the co-operation and under the direction of that increasing number of scholars who are becoming competent for tasks of this kind.

POPULAR STUDY OF THE FAMILY.

MORE popular agencies for study should be set in motion. The great Chautauqua idea of home study deserves its vigorous prosecution. But we need to go beyond this. There is work enough for the energies of a great publication society. The great publication societies seem slow to perceive that the times have outgrown the piously written but often weak tract of former days and demand almost a new order of literature. The Christian spirit, the scientific accuracy and method, the liter-

ary form, and the practical touch upon such subjects as are treated in this paper might be combined, in the hope of the widest usefulness, in issues from some of the old publication societies which have lost their hold upon large portions of our people. These tracts should be written by or under the supervision of the best teachers of their subjects whom we have, and by well-educated young men and young women mostly, who have taken in the fresh thought and methods of recent years at every step in their education. For it is useless to disguise the fact that recent advances in scientific methods have made rubbish of a great deal that was well enough a generation ago.

It is, then, my conclusion that much original and other special work, both in study and in the practical application of its results, needs to be done for the family; that this should be applied to the family considered by itself and to it in its relation to religious, educational, economic, and political institutions, with the multifarious practical problems to which their working gives rise; that the collection of facts by the aid of statistical science be continued and extended in various directions and be supported by the other departments of scientific inquiry; and finally, in order that we may accomplish all these ends in the best way, that we ought as speedily as possible to lay broad and deep the foundations of a thoroughly scientific training in that department of sociological study which is connected with the family; and to do all we can meanwhile to bring the best results of such knowledge as we have into the service of those who have practical uses for it.

Samuel W. Dike.

ANDREA MANTEGNA (1431-1506).

(ITALIAN OLD MASTERS.)

MANTEGNA must be ranked among the very few artists of the highest order to whom fortune was always kind and whom every material circumstance in his life led in the direction of his highest abilities. Born near Padua ("of a most humble stock," according to Vasari), only one condition was lacking to his artistic development—that, like Bellini and Raphael, he should have been born into a painter's house. He lived at an age when state and church were more than at any other time in a vein of appreciation of what was best in the art of the day; when that art was also true and progressive; and in a city where the spirit of the day was in a remarkable sympathy with his mental

tendencies, intellectual, severe, and genuinely classical, and where the best Italian art of the preceding century had lavished its noblest work: Giotto and some of his best followers formed his taste, and the high-tide of the Renaissance had set in on Padua; Paolo Uccello and Filippo Lippi had painted there; the sculptor Donatello had shown how the antique was to be accepted by the modern artist, not in the inane repetition of accessories and of imaginary prescriptions as in the more modern classical school, but in the Greek manner of seeing nature. Mantegna no doubt saw Donatello's equestrian statue of Gattamelata and the marvelous reliefs of S. Antonio fresh from the founder's hands; and though we have no record of his having lived or worked in Venice, it is

impossible that with his early intimacy with the Bellini, he having been the fellow-pupil of Giovanni with old Jacopo, he should not often have been in Venice, whose campaniles are almost in sight of Padua; while the vigorous individuality of the brothers Bellini, his contemporaries and personal friends, was well calculated to make him eclectic and defiant of mere precedent. Squarcione, the master to whom he seems to have owed the earlier part of his technical education, was not, as Vasari takes the pains to tell us, "the finest painter in the world," but he was a more or less original painter who had traveled, and we are told had been to Greece and brought back antiquities which he set his pupils to draw from.¹ But the character of the designs of Mantegna makes it clear that the source of his knowledge of antique art was rather Roman. There is nothing in his manner or material which suggests a direct knowledge of pure Greek architecture, but always of Roman, and it is probable that, in common with his pupil Squarcione, he was carried away by the great Italian Renaissance of which the originators were the Pisani, and which had invaded the Venetian and Tuscan schools before Squarcione began to paint, which is the more indicated in the fact that he began life as a tailor and embroiderer, and had therefore presumably taken up painting comparatively late in life. He probably knew the technical processes of fresco and tempera, and the habit which he formed in his pupils of drawing from the model was probably the substantial part of his teaching, which does not seem to have been very fruitful; for, though his pupils numbered 137, the only two of them who attained distinction were Mantegna and Niccolo Pizzolo. He was probably a simple drawing-master who had not individuality enough to do his pupils either good or harm. In the sacristy of S. Antonio of Padua there are some cupboards in marquetry after his designs and executed by his pupils. To the training in this school, and the habit of drawing from the round which an artist of his intensity was certain to do with great sincerity and elaborateness, we may be indebted for the careful drawing and modeling of the details of his pictures which distinguish Mantegna from all his contemporaries. We found in Benozzo Gozzoli the practice of drawing all the figures from life, and ineffaceably stamped with the *pose-plastique*; but in Mantegna, while the model is generally to be felt, there is more of Donatello's portraiture of the ideal, his re-

alization of a certain conception of character, and in this character an ideal of the antique is to be found. And this ideal in Mantegna is always Roman, as are his architecture and his decoration. In the fresco of the "Trial of St. James," in the Church of the Eremitani, Padua, the head of the magistrate before whom the saint is brought, or that of the officer who superintends his execution, might have been taken from a Roman portrait, and perhaps they were, for he continually introduces Roman monumental portraits in his ornamentation. But nowhere is there a hint of anything Greek.

From an inscription which has been preserved — though the picture to which it belonged has not — Mantegna seems to have appeared as an independent painter as early as his seventeenth year. The picture was an altarpiece in the church of S. Sophia, and the inscription was: "*MCCCCXLVIII Andreas Mantineas Patavino ann. septem et decem natus sua manu pinxit.*" This should at least settle the question of his having been born in Padua, and not, as has been suggested, in Vicenza. In 1452, at the age of twenty-one, he was so far a recognized master that he was called to paint the fresco of SS. Bernardino and Antonio over the door of the church of the latter saint in Padua, and in 1453 the Benedictine monks gave him the order to paint the altarpiece for the church of S. Giustina — a Gothic arrangement of twelve pictures on panel, this survival of the Byzantine usages being the orthodox type.

According to the letters found by Basquet in the archives of Mantua, Mantegna was under engagement to the Marchese Lodovico Gonzaga soon after to go to that city. The Marchese writes, January 5, 1457, mentioning this engagement and desiring him to leave Padua and come to execute the commissions he had at Verona, where he had also an engagement with the prothonotary and where he would be nearer his new patron. Gonzaga waited fifteen months, during which time Mantegna was at work in the Eremitani, and then renewed his urgency. A subsequent letter was still more pressing and more explicit, offering fifteen ducats a month, with a house for his family, corn for six persons during the year, and wood for all his household uses, and gives till 1459 to finish all other work he may have in hand. Again, fearing that Mantegna would not be punctual, he writes, on the 26th of December, further to impress on him his agreement. Gonzaga is informed by some one who has seen Mantegna that he is still at work for the prothonotary of Verona in January of 1459, and he accords him a new delay of two months. On March 24, Giacomo Marcello, the podesta, begs for a further delay, as Mantegna is at work finishing a little picture for him. On the

¹ It is far more probable that the Greece intended was Constantinople, Greece proper having for centuries been ravaged and desolated by barbarian invasions, and certainly nowhere in the land now known as Greece could he have purchased antiquities.

4th of May there is another letter pressing the painter to come on to Mantua, and accompanied by twenty ducats for the journey. On the 28th of June the Marchese writes again, "Come for a day to see our chapel." He probably arrived in Mantua at the end of 1459, and after some absences remained there.

This chronicle is of interest as showing how high the painter was in the graces of those whose favor was fame and fortune, and it tells us also the date of the great frescos of the Eremitani, *i. e.*, from 1457-1459, before he was thirty years of age, though they may have been begun before the former date.

The work on which he was engaged at Verona was a frame of subjects painted for San Zeno, and the prothonotary who ordered it was Gregorio Corrarò, "Abbate Commendatore" of the church. It was composed of six pictures: the upper portion was a Madonna surrounded by angels, with side panels of saints; the lower a Calvary, with side panels of the Resurrection and of Christ on the Mount of Olives. It was carried off to France in 1797, and the lower part still remains there — the "Calvary" in the Louvre, while the side panels are in the Museum of Tours.

Mantegna seems sometimes to have been dissatisfied with his treatment at Mantua: in December, 1466, he writes to the Marchese from Goito, one of the hunting-seats of the latter where the painter was doing some decorations, that he had not had his pay for four months. In this year he was sent to Florence by the Marchese, who was then constructing the greater chapel of the Annunciata. Giovanni Aldobrandini, who had charge of the work, writes to Gonzaga saying that Mantegna had arrived and that he had given some advice on the subject; and in the same year Mantegna writes to Gonzaga to borrow one hundred ducats to enlarge his house, the money to be repaid by keeping back instalments of three or four ducats a month from his salary. In 1468 he writes to complain of the gardener and his wife, whose disorderly conduct annoyed him greatly, as well it might, considering how incessantly he was occupied in the designs of every kind he was making for his patron's country houses, for tapestry, architectural decorations, etc., as well as portraits, as we learn by a letter which the Marchese writes him requesting him to bring the two portraits he had just finished to show to Zanetti of Milan, who was coming expressly to see them. In 1472 he goes to Bologna at the desire of Cardinal Gonzaga, who wishes to show him his antiquities, and in 1476 we have a memorandum of the Marchese having given him land near the church of S. Sebastiano to build himself a house.

In 1478 Lodovico died, and Mantegna, full of disquietudes as to his future and his expenses, passed on with other princely appanages to the successor Frederico, who treated the artist with the same indulgence and friendliness that his father had shown to him. There is especial mention of another room at Mantua which Frederico was anxious to have finished that he might occupy it. He died the year that it was finished, 1484, and his successor, Giovanni Francesco II., kept up the traditions of the family and of Mantua; but Mantegna had probably the usual fortune of artists, no matter what their stipends, for he writes that year to Lorenzo de' Medici for a little money to enable him to finish his new house, though orders were pouring in on him from the different courts — more, in fact, than he could accept. There is mention of a madonna painted for the Duchess of Ferrara in 1485, and the same year the Duke of Ferrara mentions having seen him at work on the "Triumphs of Cæsar"; and three years later Pope Innocent VIII. writes to Francesco to lend him his painter for a while. Mantegna went to Rome and decorated the Belvedere chapel, since destroyed, in the Vatican, with four frescos, the "Baptism of Christ," the "Entombment of the Virgin," the "Nativity," and the "Adoration of the Magi," with decorations after his manner in grisaille, "finished like miniatures," as Vasari tells us. Mantegna seems to have remained in Rome two years, for in 1489 Francesco begs the Pope to send back his painter for the festivities of his marriage with Isabella d'Este; but he was ill and unable to return till 1490, when he was nearly sixty, but in the height of his powers, as he shows by finishing the "Triumphs of Cæsar" for the San Sebastiano palace in the following year. As extra compensation for this and the decorations of the new room he receives a grant of a piece of land free from taxes. Francesco being commander of the Venetian forces in the war with the French King Charles VIII., Isabella was often regent for him, and was especially gracious to Mantegna and continually asked of him new designs, and his son was employed at court and received a salary. Isabella wished to order a statue to Virgil, and Mantegna made a design which is now in the Louvre, but the statue was never made, the Marchese having many embarrassments at the time. In 1499 Mantegna married his daughter Taddea to Antonio Viani, and gave her a dowry, which shows at least that he was getting forehanded in money matters; though later on, and perhaps in the decay of his powers, he was obliged to sell to Isabella a bust of Faustina to which he was much attached; but this was in 1506, shortly before his death. In 1501 a gentleman of Ferrara writes of having

been at a theatrical representation at which the designs of Mantegna, the "Triumph of Petrarch," formed the decoration of the room, and between this and 1505 the lovely decorative designs now in the Louvre had been executed for the Marchesa—"Parnassus" and "Wisdom Triumphant over Vice," which must be ranked among his very best work in refinement and fertility of invention. In 1504 he made his will, leaving an endowment for a chapel to S. Andrea, of which 50 ducats were for the decoration and 100 for the purchase of a piece of ground large enough that the light might not be cut off—a characteristic provision of a painter who had perhaps not always found the corresponding forethought in his patrons. The decorations were to be executed within a year after his death. He afterward added a codicil in favor of an illegitimate son, Giovanni Andrea, the child of a connection formed after the death of his wife. At the age of seventy-three he engaged to paint for Francesco Cornaro, a Venetian, the "Triumph of Scipio," the price being stipulated as 150 ducats; but as he found this too little, he seems not to have gone on with the work, and Cardinal Bembo wrote to the Marchesa in 1505 to beg her to urge Mantegna to go on with it. This is now in the National Gallery of London. It was apparently his last work, for in 1506 he wrote to Isabella saying that he had finished the "Comus" she had ordered, adding that he had paid 340 ducats for a house and that his purse was empty, and offering her the Faustina, which she sent her bailiff to buy, she being then at one of her country houses on account of the plague which was raging.

Five weeks later he died and was buried in the chapel he had ordered, where he lies, with his bust by Speranzio above the grave. Considering the unbroken prosperity of his life, and the uninterrupted favor which he enjoyed with the sovereigns of the little north-Italian states whose capitals were the refuge of all that was most distinguished in art and literature, and whose taste was, for an official taste, singularly good and refined, it is difficult to understand his continual complaints of pecuniary embarrassment. His sons, of whom he had two legitimate and one illegitimate, may have brought him into difficulties, and we know that Francesco, the one who was in the service of the court of Mantua, fell into disgrace and was exiled, but we have no hint of his personal extravagance. On the contrary, the devotion to his art, shown by the enormous amount of work, involving the most concentrated effort, which he maintained to the last days of his life, denies the suspicion of any irregularities or excesses; and the singular absence of the sensuous element in his work—its dry, severe,

and imaginative intellectuality—indicates its remoteness from the common temptations of the artistic temperament: next to Michael Angelo Mantegna rises into the serene regions of abstract intellect.

As an artist he must rank with the very greatest whose works we possess. Color is to him only the means to the same end as his minute finish, *i. e.*, the complete representation of whatever he undertook to tell. Invention and imagination were in him at their maximum, and to these he added a scientific and archaeological fervor quite his own, the combination of which qualities gives him a position apart from all other painters. The reproach that his master Squarcione brought against him, that his works were conceived in the spirit of sculpture, is only so far justified as that he cared nothing for color *per se*; and as was the habit of his time, even in the Venetian school, he never painted direct from nature, but from drawings which must have been of extreme finish and naturally in monochrome, or with but slight indication of color, and that conventional rather than realistic. He was an idealist of intense vision, and his reproduction of his conceptions has only that in common with the modern idea of realism which any intensely elaborate representation must have. It was this intensity of imagination which led up to his introduction into art of the element of emotional expression, which no preceding artist, with the exception of Giotto,—and he to a very limited extent,—had ever before made the object of his art. The student of early Italian art, if he follow his studies in Florence and with the system which they require, will, when he comes to make the acquaintance of the little triptych from which the illustration of Mr. Cole has been taken, find in that example something of which he had never before noted the existence—the pathos in the face of the little Jesus, who, shrinking from pain, turns to his mother for a refuge, to which the grave, pathetic face of the mother responds, as who should say, "Cruel, inexorable fate"; and that of the high-priest, with the kindly pity of a tender-hearted surgeon who performs an operation which cannot be escaped. This triptych was painted in Mantua soon after Mantegna arrived there, and Vasari mentions it as "Una tavoletta non molto grande ma bellissima" ["A panel not very large but most beautiful"]. Of the "Calvary" from the altarpiece of S. Zeno, already mentioned as being in the Louvre, it has been said that "It is one of the finest works of art the world has ever produced." Although classifications of this kind are not always easy to justify and never possible to prove correct, I am not disposed to quarrel with it, for certainly in the quality of dramatic expres-

sion, which is its highest artistic motive, no painter has ever surpassed Mantegna; and the subject of this composition, the crucifixion, was that which, to the devout Christianity in which the painter was educated and for which he worked, made the highest demand on his powers of delineation and called out his greatest intensity. The Virgin sinks fainting into the arms of her women—a heterodox conception of the event, as I had to notice in the case of Masaccio, who shows the same sign of the merely human nature of the Virgin, who is supposed by the Church to have borne the great sorrow without yielding to human weakness; a disciple tells his pain by a gesture of desperation; and the faces of the bystanders betray an emotion in complete sympathy with the great woe of the consummation of the divine sacrifice: their eyes are red with weeping, and their lips are parted in their pain. It is this command of the expression of dramatic emotion that distinguishes Mantegna from all his predecessors and contemporaries. The elaboration of his detail is not so intense as that of Gentile da Fabriano, or more tender than that of Fra Angelico: his archæology is not an artistic quality but a purely scientific one; but in this power of rendering the pathos of the sacred emotion, the tragedy of the sacred history, without a tinge of exaggeration or the least display of the *pose-plastique*,—a power given only to the most vivid imagination,—he is rivaled only by Giotto, and Giotto was too impetuous in his nature and too much driven by the exuberance of his invention to delay over the subtleties of expression and delight in the elaboration of suffering, as Mantegna could and did.

Of his extraordinary fertility of production it is hardly necessary to speak, for the number of works I have mentioned would fill the life of an ordinary painter; but his frescos have mostly disappeared. He painted the façade of the Pescheria Vecchia at Verona and the upper part of the façade of a house near the gate of the Borsari belonging to Niccolo Giolfino, his painter friend, with whom he staid, and he made many engravings of his works. He is chiefly to be known by these engravings and his easel pictures, and is best studied at Paris and London. With the exception of passages of the St. Christopher subjects the Eremitani pictures (Padua) are in good condition, though I find some difficulty in accepting the decorative part of the upper two subjects of the St. James series as by Mantegna. But the work of this kind unmistakably by him is of a delicacy that is scarcely approached by any other work of the kind. The modeling of the fruits, the pine cones, and the ears of grain in the lower frames is as delicate as if they

were human heads;—nothing is slighted, or treated as if it were of less importance.

The perspective of these pictures is evidently something on which Mantegna prided himself, and on which he spent a great deal of labor, but it is, in my opinion, the weakest point of all those involved in his art. It is laborious, ostentatious, and in the main overdone. It is done by rule and calculation, and does not betray the eye for perspective which we found, for instance, in Giotto. It has the effect of photographic perspective as given by wide-angle lenses when the subject is so near the camera that it seems distorted. We seem to be under the buildings of Mantegna. This is especially the case with the subject in which St. James on his way to be judged stops to bless and heal a believer, evidently a blind man. At the left of the picture is a tower in the middle distance, which he has put askew on the street, apparently to show his knowledge of perspective, and he has drawn it wrong. In one of the St. Christopher subjects he has made the architectural elevation of his principal building with an elaborate pergola covered with a vine in full bearing, the grapes hanging through the interstices, the whole like an architectural drawing, and in the second distance is a brick building in which every brick is pointed with the most exemplary patience and quite correct; but between this and the next important building he seems to have found it necessary to put in a bit of unimportant brick wall, also pointed with care but utterly wrong in perspective, and so conspicuously so that if he had had a correct eye for perspective he must have seen it to be so. In the "Martyrdom of St. James" a railing separates the spectator from the action. Just beyond lies the saint, and above him stands the executioner; but a soldier, who also stands on the other side, leans over the railing to the side of the spectator to see the execution. The impression produced is that the mallet with which the saint is to be killed is going to spend its blow on the railing.

The landscape is formal but full of invention of delicate detail: a fig tree in one of the St. Christopher subjects and an oak in the St. James are drawn leaf for leaf and the stems carefully modeled. The minuteness throughout is amazing, and the compositions are full of little incidents of by-play—people happening to look out of the windows, side conversations, friezes in the architecture, medallions, etc.; and considering the period in his life in which these works were executed and their relation to previous work we must recognize in them the justice of the claim which has been put forward for them of being the most important mural painting of northern Italy. The frescos in the castle at Mantua have disappeared, with

the exception of a portion of those in the room called the Camera de' Sposi, of which there are some remains. Those of the room which Frederico was so anxious to have finished are effaced, and the frescos painted for the Pope were destroyed in enlarging the Vatican Museum, having already gone out of favor in Rome.

Of his easel pictures the "Madonna della Vittoria," now in the Louvre, painted in commemoration of the battle of Taro, is considered the best; but to my feeling the triptych in the Uffizi holds that place, and for the qualities in it that I have described.

W. J. Stillman.

NOTES BY TIMOTHY COLE, ENGRAVER.

THE Mantegna triptych, from which the detail of "The Circumcision" is taken, is in the tribune of the Uffizi, Florence, and is composed of the "Adoration of the Magi," "The Circumcision," and "The Ascension" (improperly styled "The Resurrection"). The whole measures, with the frame, seven feet wide by three feet seven inches high. It is painted in tempera on panels. The panel to the right is "The Circumcision," and is thirty-four inches high by seventeen inches wide, and the figures measure from ten and a half inches to twelve inches high. By taking this portion only I was enabled to get at the expression of the faces and the detail, which is remarkable for delicacy of finish, though this has been to the sacrifice of the full length of the figures and the grouping of them, which is very graceful; and also of the lofty and beautiful interior of the temple, which, however, could never receive justice in a small engraving. The group is composed of the Madonna and Child, accompanied by two female attendants, and a child who is standing near the skirt of the foremost. The priest is accompanied by the altar-boy, and following him is Joseph, who carries a small basket containing the "pair of turtle doves," the offering for a sacrifice according to the law (Luke ii. 24). Behind the priest rises a yellow jasper pillar for some two-thirds of the distance up. This is surmounted by an ornamental capital in gray marble of a warm tone, from which spring two arches of the same material, to the upper corners of each side. In the space above and between the two arches is a triangular panel of a variegated, deep-colored marble, with a seraph painted in gold upon it, ornamentally filling the space with its outstretched wings. Beneath the arches are semicircular panels of dark spotted green marble, illuminated with scriptural subjects painted in gold. These are deeply framed in a frieze of dark red granite illuminated in gold with ornamental scrolls of foliage. The panels thus framed are supported by pilasters on each side of the jasper pillar, of the same dark red granite, and illuminated in gold in the same manner, and having fine capitals of the same material. The spaces on each side of the pilasters and beneath the panels just described are filled, that to the right of the priest by a sideboard in marble, the upper portion of which is composed of four panels of precious marble or jasper of various glowing hues. These are framed in marble of a soft gray dove color. The lower portion of the sideboard is of the same gray marble formed in panels decorated in low relief with sculptures of foliage in ornamental designs. This space forms the background to the standing figure of Joseph and the altar-boy. The space answering to this to the left of the Virgin, and forming the background to the two attendant females, is filled by two oblong panels of dark wood highly ornamented in gold, framed in the dove-

colored marble, and capped by a beautiful sculpture of two cornucopias mingling their fruits and flowers. The pavement is checkered with alternate squares of dark red spotted granite and yellow Sienna marble. The beauty and finish of all this work is indescribable. What patience it must have required, for instance, to work in the infinitesimal and innumerable spots in the dark red granites, and each with its characteristic shape and various color, and the delicate, soft graining, veins, and clouds of the various colored marbles and rich jaspers, and the exquisite finish of the gold illuminations — all true to nature. But outvying these tints are the rich hues of the draperies. That of the Madonna is of a deep rich shade of peacock blue; the folds are illuminated with touches of gold that sparkle and blend with the drapery, the variety and grace of the forms being most pleasing to look upon. Her underskirt is of a garnet shade, illuminated in like manner with gold in the high lights. The robe of the priest is of a rich, soft shade of ultramarine blue of a changeable hue, being shot with purple in the part over the breast where it recedes from the high light of the shoulder. The ornamental border is of gold upon a ground of deep blue or bright crimson, according to the pattern. His white garment and the towel falling over his shoulder — beneath the other portion of which the form of his hand is clearly marked as it gently supports the thigh of the Child — are of a soft, cool, creamy shade tinged with blue. The folds are strongly marked, with delicate ones in low relief playing in between. The linen head-dress of the Madonna is thus treated, also the white robe of the altar-boy, the headdresses of the female attendants, and the towel which the older one holds. Their charm of color depends upon viewing them in their proper relation to the surrounding brilliant hues; for when looked at near and out of this relation they appear quite warm and yellowish in tone, but from a few feet and as a whole, their juxtaposition to the rich garnet and yellow robe of Joseph, and the brilliant vermilion of the dress of the Child, renders them of a cool and bluish cast, and the difference is surprising.

The flesh tints throughout are warm and glowing, and have all the depth and softness of nature. I was much struck with this on looking through my magnifying-glass at the face of the priest: the softness and decision of the detail, the quick intelligence of the eye, and the mobility and tenderness of the expression made me smile at my audacity in attempting such wonders by great coarse lines in boxwood.

But how my heart beat when I came to the face of the child Jesus! I always leave the most difficult part of my work till the last, so that while engaged upon the easier portions I have time to study over and work up gradually to the climax. Fortunately on this I had the benefit of Mr. C. F. Murray's criticisms, as he

DETAIL OF "THE CIRCUMCISION," BY ANDREA MANTEGNA, IN THE TRIBUNE OF THE UFFIZI.

happened in at the Uffizi when I had about finished the block. The appealing look the child casts to his mother, and her sympathy, are very touching. I had to do every stroke on this block before the original, or rather in another room next to where the picture hangs, and this kept me running in and out the whole time, so that I was enabled to accomplish but very little in a day; the original being marvelously finished and exquisite in detail, and the photograph being very bad and quite altered in the expression of the heads, I was kept down to every eighth of an inch.

MANTEGNA AS AN ENGRAVER ON COPPER.

MANTEGNA was a famous engraver on copper, and was among the first who practiced the then new art. His style is grand, and it is a pleasure to note the vigor and spring of his lines. He cuts everything — drapery and all — in slanting lines, all in one direction, and it is wonderful how he suggests the form of things in so simple a manner. Everything yields to the power

and magic of his touch. His marvelous mechanical dexterity, unerring precision, and perfect mastery of the smallest part of his art are here displayed in all their energy and brilliancy. With what vim he runs through a background, making each line sparkle with life and character! With what freedom and nonchalance he dashes off his heads; as in his Bacchanalian pieces! He must have cut with lightning-like rapidity; and he drew in much of his work with the tool as he went along. The directness with which he plows along is amazing. How fearlessly he takes his trenchant blade in hand! What a sculptor he appears in the faces of his "Battle of the Sea Gods"! The forms of his lights, so delicate and true, appear as though freshly chiseled out in marble, and shine like silver. I could dwell for hours over this exciting work. Every line is electric and bristling in sympathy with the fury of the scene.

Then, too, the charming grace and airy lightness of his engraving of the "Dancing Nymphs"! Buoyant, classic forms tripping hand in hand in breezy move-

ment, with flutter of flying draperies, all in a delicate silvery key. Nothing more completely translates one into the realm of the mythological than his treatment of such themes. His masterpiece on copper is his engraving of the "Entombment of Christ," and in this he rises to a sublime height.

Raphael must have dwelt over this marvelous work.

This is clearly perceptible in his treatment of the same subject in the Borghese Gallery at Rome, where the figures bearing the body of our Lord walk backward.

Considering the few engravings made by Mantegna,—not more than twenty or twenty-five,—the virility and freedom of his technique are all the more remarkable.

T. Cole.

DAUMIER, CARICATURIST.¹

DE TOCQUEVILLE.

AS we attempt, at the present day, to write the history of everything, it would be strange if we had happened to neglect the annals of caricature; for the very essence of the art of Cruikshank and Gavarni, of Daumier and Leech, is to be historical; and every one knows how addicted is this great science to discoursing about itself. Many industrious seekers, in England and France, have ascended the stream of time to fol-

This, by the way, makes one wonder considerably at the failure of caricature to achieve, as yet, a high destiny in America—a failure which might supply an occasion for much explanatory discourse, much searching of the relation of things. The newspaper has been taught to flourish among us as it flourishes nowhere else, and to flourish moreover on a humorous and irreverent basis; yet it has never taken to itself this helpful concomitant of an unscrupulous spirit and a quick periodicity. The explanation is probably that it needs an old society to produce ripe caricature. The newspaper thrives in the United States, but journalism perhaps does not; for the lively propagation of news is one thing and the close interpretation of it is another. A society has to be old before it becomes critical, and it has to become critical before it can take pleasure in the reproduction of its incongruities by an instrument as impertinent as the matutinal crayon. Irony, skepticism, pessimism are, in any particular soil, plants of gradual growth,

low to its source the modern movement of pictorial satire. The stream of time is in this case mainly the stream of journalism; for social and political caricature, as the present century has practiced it, is only journalism made doubly vivid.

The subject indeed is a large one, if we reflect upon it, for many people would tell us that journalism is the greatest invention of our age. If this rich branch has shared the great fortune of the parent stream, so, on other sides, it touches the fine arts, touches manners and morals. All this helps to account for its inexhaustible life; journalism is the criticism of the moment *at the moment*, and caricature is that criticism at once simplified and intensified by a plastic form. We know the satiric image as periodical, and above all as punctual, as we know the printed sheet with which custom has at last inveterately associated it.

¹ Of the accompanying pictures, "Connoisseurs" is from a water-color in the gallery of the Montreal Art Association; the portrait of Daumier and "In the Court of Assizes," from the collection of Charles de Bériot, are from "L'Art"; and the others are from "La Charivari."

COQUEREL.

HONORÉ DAUMIER.

and it is in the art of caricature that they flower most aggressively. Furthermore, they must be watered by education,—I mean by the education of the eye and hand,—all of which takes time. The soil must be rich, too; the incongruities must swarm. It is open to doubt whether a pure democracy is very liable to make this particular satiric return upon itself; for which it would seem that certain complications must not be wanting. These complications are supplied from the moment a democracy becomes, as we may say, impure, from its own point of view; from the moment variations and heresies, deviations, or perhaps simple affirmations of taste and temper begin to multiply within it. Such things afford a *point d'appui*; for it is evidently of the essence of caricature to be reactionary. We should hasten to add that its satiric force varies immensely in kind and in degree, according to the race, or to the individual talent, that takes advantage of it.

I used just now the term pessimism; but that was doubtless in a great measure because I have been turning over a collection of the

wonderful drawings of Honoré Daumier. The same impression would remain with me, no doubt, if I had been consulting an equal mass of the work of Gavarni, the wittiest, the most literary and most acutely profane of all mockers with the pencil. The feeling of the pessimist abides in all these things, the expression of the spirit for which humanity is definable primarily by its weaknesses. For Daumier these weaknesses are hugely ugly and grotesque, while for Gavarni they are either rather basely graceful or touchingly miserable; but the vision of them in both cases is close and direct. If, on the other hand, we look through a dozen volumes of the collection of "Punch" we get an equal impression of hilarity, but we by no means get an equal impression of irony. Certainly the pages of "Punch" do not reek with pessimism. Leech is almost positively optimistic; there is at any rate nothing infinite in his irreverence: it touches bottom as soon as it approaches the pretty woman or the nice girl. It is such an apparition as that that really, in Gavarni, awakes the scoffer. Du Maurier is as

VICTOR HUGO.

graceful as Gavarni, but his sense of beauty conjures away almost everything save our minor vices. It is in the exploration of our largest ones that Gavarni makes his principal discoveries of charm or of absurdity of attitude. None the less, of course, the general inspiration of both artists is the same: the desire to try the innumerable different ways in which the human subject may *not* be taken seriously.

If this view of him, in its plastic manifestations, makes history of a sort, it will not in general be of a kind to convert those persons who find history sad reading. The writer of the present lines remained unconverted, lately, on an occasion on which many cheerful influences were mingled with his impression. They were of a nature to which he usually does full justice, even overestimating, perhaps, their charm of suggestion; but, at the hour I speak of, the old Parisian quay, the belittered print-shop, the pleasant afternoon, the glimpse of the great Louvre on the other side of the Seine, in the interstices of the sallow *estampes* suspended in window and doorway — all these elements of a rich actuality availed only to mitigate, without transmuting, the general vision of a high, cruel pillory which I extracted,

piece by piece, from musty portfolios. I had been passing the shop when I noticed in a small *vitrine*, let into the embrasure of the doorway, half a dozen soiled, striking lithographs, which it took no more than a first glance to recognize as the work of Daumier. They were only old pages of the "Charivari," torn away from the text and rescued from the injury of time; and they were accompanied with an inscription to the effect that many similar specimens of the artist were to be seen within. To apprehend this circumstance was to enter the shop, and to find myself promptly surrounded with bulging portfolios and tattered relics. These relics — crumpled leaves of the old comic journals of the period from 1830 to 1855 — are neither rare nor expensive; but I happened to have lighted on a particularly copious collection of them, and I made the most of my small good fortune, in order to erect it, if possible, into a sort of compensation for my having missed, unavoidably, a few months before, the curious exhibition "de la Caricature Moderne" held for several weeks, just at hand, in the École des Beaux-Arts. Daumier was said to have appeared there in considerable force; and it was a loss not to have had that particular opportunity of filling one's mind with him.

There was perhaps a perversity in having wished to do so, strange, indigestible stuff of contemplation as he might appear to be; but the perversity had had an historical growth. Daumier's great days were in the reign of Louis Philippe; but in the early years of the

THE PRODIGY AT THE AGE OF SIX.

Second Empire he still drove his coarse, formidable pencil. I recalled, from a juvenile consciousness, the last failing strokes of it. They used to impress me with their abnormal blackness as well as with their grotesque, magnifying movement, and there was something in them that rather scared a very immature admirer. This small personage, however, was able to perceive later, when he was unfortunately removed from the chance of studying

to make up for my want of privilege by prolonged immersion. I did not take home all the portfolios from the shop on the quay, but I took home what I could, and I went again to turn over the remaining piles of superannuated paper. I liked looking at them on the spot; I seemed still surrounded by the artist's vanished Paris and his extinct Parisians. Indeed no quarter of the delightful city probably shows, on the whole, fewer changes from the

A FRENCHMAN PAINTED BY HIMSELF.

them, that there were various things in them besides the power to excite a vague alarm. Daumier was perhaps a great artist; at all events unsatisfied curiosity increased in proportion to that possibility.

The first complete satisfaction of it was really in the long hours that I spent in the shop on the quay. There I filled my mind with him, and there, too, at no great cost, I could make a big parcel of these cheap reproductions of his work. This work had been shown in the *École des Beaux-Arts* as it came from his hand; M. Champfleury, his biographer, his cataloguer, and his devotee, having poured forth the treasures of a precious collection, as I suppose they would be called in the case of an artist in a higher line. It was only as he was seen by the readers of the comic journals of his day that I could now see him; but I tried

aspect it wore during the period of Louis Philippe, the time when it will ever appear to many of its friends to have been most delightful. The long line of the quay is unaltered, and the rare charm of the river. People came and went in the shop (it is a wonder how many, in the course of an hour, may lift the latch even of an establishment that pretends to no great business). What was all this small, sociable, contentious life but the great Daumier's subject-matter? He was the painter of the Parisian bourgeois, and the voice of the bourgeois was in the air.

M. Champfleury has narrated Daumier's life, in his lively little "*Histoire de la Caricature Moderne*," a record not at all abundant in personal detail. The biographer has told his story better perhaps in his careful catalogue of the artist's productions, the first sketch of

which is to be found in "L'Art" for 1878. This copious list is Daumier's real history; his life can have been little else than his work. I read in the interesting publication of M. Grand-Carteret ("Les Mœurs et la Caricature en France, 1888") that our artist produced nearly four thousand lithographs and a thousand drawings on wood, up to the time when failure of eyesight compelled him to rest. This is not the

otherwise vocal than in the emission of the rich street-cry with which we used all to be familiar and which has vanished with so many other friendly pedestrian notes. The elder Daumier wrought verses as well as window-panes, and M. Champfleury has disinterred a small volume published by him in 1823. The merit of his poetry is not striking; but he was able to transmit the artistic nature to his son, who, becoming promptly conscious of it, made the inevitable journey to Paris in search of fortune.

The young draughtsman appeared to have missed, at first, the way to this boon; inasmuch as in the year 1832 he found himself condemned to six months' imprisonment for a lithograph disrespectful to Louis Philippe. This drawing had appeared in the "Caricature," an organ of pictorial satire founded in those days by one Philipon, with the aid of a band of young mockers to whom he gave ideas and a direction, and two or three others, of whom Gavarni, Henry Monnier, Decamps, Grandville were destined to make themselves a place. M. Eugène Montrosier, in a highly appreciative article on Daumier in "L'Art" for 1878, says that this same Philipon was *le journalisme fait homme*; which did not prevent him—rather, in fact, fostered such a result—from being perpetually in delicate relations with the government. He had had many horses killed under him,

CLYTEMNESTRA.

sort of activity that leaves a man much time for independent adventures, and Daumier was essentially of the type, common in France, of the specialist so immersed in his specialty that he can be painted in only one attitude—a general circumstance which perhaps helps to account for the paucity, in that country, of biography, in our English sense of the word, in proportion to the superabundance of criticism.

Honoré Daumier was born at Marseilles on the 26th of February, 1808, and he died on the 11th of the same month, 1879. His main activity, however, was confined to the earlier portion of his life of almost exactly seventy-one years, and I find it affirmed in Vapereau's "Dictionnaire des Contemporains" that he became completely blind between 1850 and 1860. He enjoyed a pension, from the state, of 2400 francs; but what relief from misery could mitigate a quarter of a century of darkness for a man who had looked out at the world with such vivifying eyes? His father had followed the trade of a glazier, but was

and had led a life of attacks, penalties, suppressions, and resurrections. He subsequently established the "Charivari" and launched a publication entitled "L'Association Lithographique Mensuelle," which brought to light much of Daumier's early work. The artist passed rapidly from seeking his way to finding it, and from an ineffectual to a vigorous form.

In this limited compass and in the case of such a quantity of production it is almost impossible to specify—difficult to pick dozens of examples out of thousands. Daumier became more and more the political spirit of the "Charivari," or at least the political pencil, for M. Philipon, the breath of whose nostrils was opposition,—one conceives from here the little bilious, bristling, ingenious, insistent man,—is to be credited with a suggestive share in any enterprise in which he had a hand. This pencil played over public life, over the sovereign, the ministers, the deputies, the peers, the judiciary, the men and the measures, the reputations and scandals of the moment, with

a strange, ugly, exaggerating, but none the less sane and manly vigor. Daumier's sign is strength above all, and in turning over his pages to-day there is no degree of that virtue that the careful observer will not concede to him. It is perhaps another matter to assent to the proposition, put forth by his greatest admirers among his countrymen, that he is the first of all caricaturists. To the writer of this imperfect sketch he remains considerably less interesting than Gavarni; and for a particular reason, which it is difficult to express otherwise than by saying that he is too simple. This was not Gavarni's fault, and indeed to a large degree it was Daumier's merit. The single grossly ridiculous or almost hauntingly characteristic thing which his figures represent is largely the reason why they still represent life, and an unlucky reality years after the names attached to them have parted with a vivifying power. Such vagueness has overtaken them, for the most part, and to such a thin reverberation have they shrunk, the persons and the affairs which were then so intensely sketchable. Daumier handled them with a want of ceremony which would have been brutal were it not for the element of science in his work, making them immense and unmistakable in their drollery, or at least in their grotesqueness; for the term drollery suggests gaiety, and Daumier is anything but gay. *Un rude peintre de mœurs*, M. Champfleury calls him; and the phrase expresses his extreme breadth of treatment.

Of the victims of his "rudeness" M. Thiers is almost the only one whom the present generation may recognize without a good deal of reminding, and indeed his hand is relatively light in delineating this personage of few

THE MATCH BETWEEN RATAFOIL AND M. BERRYER.

inches and many labors. M. Thiers must have been dear to the caricaturist, for he belonged to the type that was easy to "do"; it being well known that these gentlemen appreciate public characters in direct proportion to their saliency of feature. When faces are reducible to a few telling strokes their wearers are overwhelmed with the honors of publicity; with which, on the other hand, nothing is more likely to interfere than the possession of a countenance neatly classical. Daumier had only to give M. Thiers the face of an owl, minus the stupidity, and the trick was played. Of course skill was needed to keep the stupidity out and put something else in its place, but that is what caricaturists are meant for. Of how well he succeeded the admirable plate of the lively little minister in a "new dress"—tricked out in the uniform of a general of the First Republic—is a sufficient illustration. The bird of night is not an acute bird, but how the artist has presented the image of a witty individual! And with what a life-giving pencil the whole figure is put on its feet, what intelligent drawing, what a rich, free stroke! The allusions conveyed in it are to such forgotten things that it is strange to think the personage was, only the other year, still contemporaneous; that he might have been met, on a fine day, taking a few firm steps in a quiet part of the Champs Élysées, with his footman carrying a second overcoat and looking doubly tall behind him. In whatever attitude Daumier depicts him, planted as a tiny boxing-master at the feet of the virtuous colossus in a blouse (whose legs are apart, like those of him of Rhodes), in whom the artist represents the People, to watch the match that is about to come off between Ratapoil and M. Berryer, or even in the act of lifting the "parricidal" club of a new gagging law to deal a blow at the Press, an effulgent, diligent, sedentary muse

A BLOW AT THE PRESS.

THIERS.

(this picture, by the way, is a perfect specimen of the simple and telling in political caricature)—however, as I say, he takes M. Thiers, there is always a rough indulgence in his crayon, as if he were grateful to him for lending himself so well.

He invented Ratapoil as he appropriated Robert Macaire, and as a caricaturist he never fails to put into circulation, when he can, a character to whom he may attribute as many as possible of the affectations or the vices of the day. Robert Macaire, an imaginative, a romantic rascal, was the hero of a highly successful melodrama written for Frédéric Lemaître; but Daumier made him the type of the swindler at large, in an age of feverish speculation—the projector of showy companies, the advertiser of worthless shares. There is a whole series of drawings descriptive of his exploits, a hundred masterly plates which, according to M. Champfleury, consecrated Daumier's reputation. The subject, the legend, was in most cases, still according to M. Champfleury, suggested by Philippon. Sometimes it was very witty; as for instance when Bertrand, the muddled acolyte or scraping second fiddle of the hero, objects in relation to a brilliant scheme which he has just unfolded, with the part Bertrand is to play, that there are constables in the country, and he promptly replies, "Constables? So much the better—they'll take the shares!" Rata-

poil was an evocation of the same general character, but with a difference of *nuance*—the ragged political bully, or hand-to-mouth demagogue, with the smashed tall hat, cocked to one side, the absence of linen, the club half way up his sleeve, the straddle and pose of being gallant for the people. Ratapoil abounds, in the promiscuous drawings that I have looked over, and is always very strong and living, with a considerable element of the sinister, so often, in Daumier, an accompaniment of the comic. There is an admirable page—it brings the idea down to 1851—in which a sordid but astute peasant, twirling his thumbs on his stomach and looking askance, allows this political adviser to urge upon him in a whisper that there is not a minute to lose—to lose for action, of course—if he wishes to keep his wife, his house, his field, his heifer, and his calf. The canny skepticism in the ugly, half-averted face of the typical rustic, who considerably suspects his counselor, is indicated by a few masterly strokes.

This is what the student of Daumier recognizes as his science, or, if the word has a better grace, as his art. It is what has kept life in his work so long after so many of the occasions of it have been swept into darkness. Indeed, there is no such commentary on renown as the "back numbers" of a comic journal.

RATAPOIL AND THE PEASANT.

CASMAJON RATAPOIL.

They show us that at certain moments certain people were eminent, only to make us unsuccessfully try to remember what they were eminent for. And the comparative obscurity (comparative, I mean, to the talent of the caricaturist) overtakes even the most justly honored names. M. Berryer was a public servant of real distinction and the highest utility; yet the fact that no one to-day devotes many thoughts to him seems to be positively emphasized by this other fact that we pore over Daumier, in whose plates we happen to come across him. It reminds one afresh how Art is an embalmer, a magician, whom one cannot speak too fair. People duly impressed with this truth are sometimes laughed at for their superstitious tone, which is pronounced, according to the fancy of the critic, mawkish, maudlin, or hysterical. But it is really difficult to see how any insistence on the importance of art can overstate the plain facts. It prolongs, it preserves, it consecrates, it raises from the dead. It conciliates, charms, bribes posterity; and it murmurs to mortals, as the old French poet sang to his mistress, "You will be fair only so far as I have said so." When it whispers even to the great, "You depend upon me, and I can do more for you, in the long run, than any one else," it is scarcely too proud. It puts method, and power, and the strange, real, mingled air

of things into Daumier's black sketchiness, so full of the technical *gras*, the "fat" which French critics commend and which we have no word to express. It puts power above all, and the effect which he best achieves, that of a certain simplification of the attitude or the

"BEAUTIFUL LADY, ACCEPT MY ARM!"

gesture to an almost symbolic immensity. His persons represent only one thing, but they insist tremendously on that, and their expression of it abides with us, unaccompanied with timid detail. It may really be said that they represent only one class—the old and ugly. So that there is proof enough of a special faculty in his having played such a concert, lugubrious though it be, on a single chord. It has been made a reproach to him, says M. Grand-Car-

WOMEN SOCIALISTS.

teret, that "his work is lacking in two capital elements—*la jeunesse et la femme*"; and this commentator resents his being made to suffer for the deficiency—"as if an artist could be at the same time deep, comic, graceful, and pretty; as if all those who have a real value had not created for themselves a form to which they remain confined and a type which they reproduce in all its variations, as soon as they have touched the esthetic ideal which has been their dream. Assuredly, humanity, as this great painter saw it, could not be beautiful; one asks one's self what a maiden in her teens, a pretty face, would have done in the midst of these good, plain folk, stunted and elderly, with faces like wrinkled apples. A simple accessory most of the time, woman is for him merely a termagant or a blue-stocking who has turned the corner."

When the eternal feminine, for Daumier, appears in neither of these forms he sees it in

Madame Chaboulard or Madame Fribochon, the old snuff-taking, gossiping portress, in a nightcap and shuffling *savates*, relating or drinking in bewildering wonders. One of his masterpieces represents three of these dames, lighted by a guttering candle, holding their heads together to discuss the fearful earthquake at Bordeaux, the consequence of the government's allowing the surface of the globe to be unduly dug out in California. The representation of confidential imbecility could

not go further. When a man leaves out so much of life as Daumier,—youth and beauty and the charm of woman and the loveliness of childhood and the manners of those social groups of whom it may almost be said that they *have* manners,—when he exhibits a deficiency on this scale it might seem that the question was not to be so easily disposed of as in the very non-apologetic words I just quoted. All the same (and I confess it is singular), we may feel what Daumier omitted and yet not be in the least shocked by the claim of predominance made for him. It is impossible to spend a couple of hours with him without assenting to this claim, even though there may be a weariness in such a panorama of ugliness and an inevitable reaction from it. This anomaly, and the challenge to explain it which appears to proceed from him, make him, to my sense, remarkably interesting. The artist whose idiosyncrasies, whose limitations, if you will, make us question and wonder, in the light of his fame, has an element of fascina-

tion not attaching to many a talent more obviously charming. If M. Eugène Montrosier may say of him without scandalizing us that such and such of his drawings belong to the very highest art, it is interesting (and Daumier profits by the interest) to put one finger on the reason why we are not scandalized.

I think this reason is that, on the whole, he is so peculiarly serious. This may seem an odd ground of praise for a jocose draughtsman, and of course what I mean is that his comic force is serious. This is a very different thing from such a force being absent. This essential sign of the caricaturist may surely be anything it will so long as it is there. Daumier's figures are almost always either foolish, fatuous politicians, or frightened, mystified bourgeois; yet they help him to give us a strong sense of the nature of man. They are sometimes so serious that they are almost tragic; the look of the particular pretension, combined with inanity,

THE EARTHQUAKE AT BORDEAUX.

is carried almost to madness. There is a magnificent drawing of the series of "Le Public du Salon," old classicists looking up, horrified and scandalized, at the new romantic work of 1830, in which the faces have an appalling gloom of mystification and platitude. We feel that Daumier reproduces admirably the particular life that he sees because it is the very medium in which he moves. He has no wide horizon; the absolute bourgeois hems him in, and he is a bourgeois himself, without poetic ironies, to whom a big cracked mirror has been given. His thick, strong, manly touch stands, in every way, for so much knowledge. He used to make little images, in clay and in wax (many of them still exist), of the persons he was in the habit of putting forward, so that they might constantly seem to be "sitting" for him. The caricaturist of that day had not the help of the ubiquitous photograph. Daumier painted actively, as well, in his habitation, all dedicated to work, on the narrow island of St. Louis, where the Seine divides, and where the monuments of old Paris stand thick and the types that were to his purpose pressed close upon him. He had not far to go to encounter the worthy man, in the series of "Les Papas," who is reading the evening paper at the café with so amiable and

placid a credulity, while his unnatural little boy, opposite to him, finds sufficient entertainment in the much-satirized "Constitutionnel." The bland absorption of the papa, the face of the man who believes everything he sees in the newspaper, is as near as Daumier often comes to positive gentleness of humor. Of the same family is the poor gentleman, in "Actualités," seen, in profile, under a doorway where he has taken refuge from a torrent of rain, who looks down at his legs with a sort of speculative contrition and says, "To think of my having just ordered two pairs of white trousers." The *tout petit bourgeois* palpitates in both these sketches.

I must repeat that it is absurd to pick half a dozen at hazard, out of five thousand; yet a few selections are the only way to call attention to his strong drawing. This has a virtuosity of its own, for all its hit-or-miss appearance. Whatever he touches—the nude, in the swimming-baths on the Seine, the intimations of landscape, when

his *petits rentiers* go into the suburbs for a Sunday—acquires relief and character. Docteur Véron, a celebrity of the reign of Louis Philippe (he made his fortune by some much advertised curative compound, was a Mæcenas of the hour, and also director of the opera, and wrote the "Mémoires d'un Bourgeois de

OLD CLASSICISTS.

CONNOISSEURS.

Paris") — this temporary "illustration," who was ignobly ugly, would not be vivid to us to-day had not Daumier, who was often effective at his expense, happened to have represented him, in some crisis of his career, as a sort of naked inconsolable Vitellius. He renders the human body with a cynical sense of its possible flabbiness and an intimate acquaintance with its structure. "Une Promenade Conjugale," in the series of "Tout ce qu'on voudra," portrays a hillside, on a summer afternoon, on which a man has thrown himself on his back to rest, with his arms locked under his head. His fat, full-bosomed, middle-aged wife, under her parasol, with a bunch of field-flowers in her hand, looks down at him patiently and seems to say, "Come, my dear, get up." There is surely no great point in this — that is, the only point is life, the glimpse of the little snatch of poetry in prose. It is a matter of a few broad strokes of the crayon; yet the pleasant laziness of the man, the idleness of the day, the fragment of homely, familiar dialogue, the stretch of the field with a couple of trees merely suggested, have a communicative truth.

I perhaps exaggerate all this, and in insisting upon the merit of Daumier may appear to make light of the finer accomplishment of several more modern talents, in England and

France, who have greater ingenuity and subtlety and have carried qualities of execution so much further. In looking at this complicated younger work, which has profited so by experience and comparison, it is inevitable that we should perceive it to be infinitely more cunning. On the other hand Daumier, moving in his contracted circle, has an impressive depth. It comes back to his strange seriousness. He is a draughtsman by race, and if he has not extracted the same brilliancy from training, or perhaps even from effort and experiment, as some of his successors, Charles Keene, for instance, or the wonderful, intensely modern Caran d'Ache, does not his richer satiric and sympathetic feeling more than make up the difference?

However this question may be answered, some of his drawings belong to the class of the unforgettable. It may be a perversity of prejudice, but even the little cut of the "Connoisseurs," the group of gentlemen collected round a picture and criticizing it in various attitudes of sapience and sufficiency, appears to me to have the strength which abides. The criminal in the dock, the flat-headed murderer, bending over to speak to his advocate, who turns a whiskered, professional, anxious head to caution and remind him, tells a large, terrible,

IN THE COURT OF ASSIZES.

story and awakes a recurrent shudder. We see the gray court-room, we feel the personal suspense and the immensity of justice. The "Saltimbanques," reproduced in "L'Art" for 1878, is a page of tragedy, the finest of a cruel series. M. Eugène Montrosier says of it that "The drawing is masterly, incomparably firm, the composition superb, the general impression quite of the first order." It exhibits a pair of lean, hungry mountebanks, a clown and a harlequin beating the drum and trying a comic attitude, to attract the crowd at a fair, to a

poor booth in front of which a painted canvas, offering to view a simpering fat woman, is suspended. But the crowd does not come, and the battered tumblers, with their furrowed cheeks, go through their pranks in the void. The whole thing is symbolic and full of grimness, imagination, and pity. It is the sense that we shall find in him, mixed with his homelier extravagances, an element prolific in indications of this order that draws us back to Daumier.

Henry James.

TO THE TSAR.

O THOU into whose human hand is given
A godlike might, who, for thy earthly hour,
Above reproof, self-counseled and self-shriven,
Wieldest o'er regions vast despotic power;
Mortal, who by a breath,
A look, a hasty word, as soon forgot,
Commandest energies of life and death,—
Midst terrors dread that darkly multiply,
Wilt thou thy vision blind, and listen not
Whilst unto Heaven ascends thy people's cry?

In vain, in vain! The injuries they speak
Down unto final depths their souls have stirred:
The aged plead through them, the childish-weak,
The mad, the dying,—and they shall be heard!
Thou wilt not hear them; but,
Though Heaven were hedged about with walls of stone,
And though with brazen gates forever shut,
And sentried 'gainst petitions of despair,
'T were closely guarded as thy fearful throne,
That cry of helpless wrong should enter there!

From sunless casemates by the Neva shore,
From parching steppes where lifeless waters flow,
From polar wastes, from mines where men explore
Grief's inner mysteries, that cry of woe
Moves trembling unto God:
And thou who, like Siberian tiger caged,
Must secret journey o'er thy native sod,
In bomb-proof chambers masked 'gainst perils dim
That threaten thee from wretched ones enraged—
Dost thou not falter at the thought of Him?

O Majesty! 'T is great to be a king,
But greater is it yet to be a man!
The exile by far Lena perishing,
The captive in Kara who bears thy ban,
Ransomed at length and free,
Shall rise from torments that make heroes strong—
Shall rise, as equal souls, to question thee;
And for defense there nothing shall endure
Of all which to thy lofty state belong,
Save what thou hast of human, brave, and pure.

Cæsar, thou still art man, and servest a King
Who wields a power more terrible than thine:
Slow, slow to anger, and long-suffering,
He hears his children cry and makes no sign:
He hears them cry, but, oh!
Imagine not his tardy judgments sleep,
Or that their agonies He doth not know
Who hidden waste where tyrants may not see!
Eternal watch He over them doth keep:
Eternal watch—and Russia shall be free!

THE "MERRY CHANTER."

BY FRANK R. STOCKTON,

Author of "The Lady, or the Tiger?" "Rudder Grange," "The Hundredth Man," etc.

X.

LORD CRABSTAIRS AND THE
BUTCHER MAKE AN
AGREEMENT.

CAPTAIN BODSHIP.

WHEN Dolor Tripp came on deck after breakfast on the morning of her arrival on board the *Merry Chanter* she was in a state of intense delight with her surroundings. She was going to sea in a ship! She had been on the bay in a

boat, but never on the sea in a ship! And what was this for—and that? And how different the air was, even such a little way from shore!

When Doris told her how we came to own the *Merry Chanter*, and had talked to her about the four captains, and about the butcher, and about Lord Crabstairs, and about the schoolmaster, Dolor Tripp declared that that ship was the most interesting place she had ever been in in her whole life.

She was in no hurry to start, and was perfectly willing to wait for the tide. Being on board the ship was joy enough for the present. She asked questions about every part of the vessel; and although the four captains would have been the proper persons to answer these questions, these experienced mariners were not allowed the opportunity of so doing. Lord Crabstairs and the butcher always happened to be near at hand when Dolor Tripp wanted to know anything; and sometimes both answered her question in the same instant, while sometimes one got a little ahead of the other.

Towards noon, however, I noticed that Dolor Tripp was walking about the after portion of the ship accompanied only by Lord Crabstairs, and soon afterwards I found that he and the butcher had come to an agreement on the subject. A chalk line had been drawn

across the deck midway between the bow and the stern, and it had been settled that Lord Crabstairs should explain to Dolor Tripp everything aft of that line, while the butcher should have the privilege of being her guide over that portion of the schooner which lay forward of the line. By this amicable arrangement annoying interferences would be avoided.

Lord Crabstairs, with his glowing, ruddy face, and his sparkling blue eyes, was in a very good humor as he told his companion everything he knew about the after portion of the ship, and a great deal, I am sure, that he did not know. But want of knowledge did not interfere in the least with the fluency of his merry talk, nor with her enjoyment.

For some time the butcher had been below, but now he came up and informed Doris and me that he had been consulting with Captain Cyrus and getting as much information as possible in regard to foremasts and bowsprits, with their attachments and surroundings, so that when his turn to guide the young woman should come he would be able to give her points that might be depended upon. When he and Lord Crabstairs had tossed up for the two portions into which the ship had been divided by the chalk line he had been very glad that the bow end had fallen to him.

"Passengers," said he, "are mostly at sterns, and bows are newer to them. And, besides, the *Merry Chanter* is on my end, and I intend to come out strong on that dilapidated old party. I think she's the kind of young woman to take to things that are on the romantic."

But he did not intend to begin with her as soon as Lord Crabstairs had finished. No, indeed! He was too deep for that! He would take her when she was fresh, and not so bored with ropes and spars that she did not wish to hear such things even so much as mentioned.

It was yet early in the afternoon, and we were enjoying ourselves idly on deck, some reading, some smoking and talking, and nearly all of us in the shade of the mainsail, which had been partly hoisted to serve the purpose of an awning. Even the butcher was content to gaze quietly out at sea, for in his opinion Dolor Tripp had not yet sufficiently recovered from her ordeal of the morning properly to

enjoy his interesting accounts of the nautical objects forward of the chalk line. Suddenly there came from landward a shrill voice; and the voice cried, "Do—lo—r!"

Instantly we all sprang to our feet, bobbed under the boom, and ran for the stern of the schooner. On shore, close to the water's edge, stood a woman in a black-and-white sunbon-

ward, and hailed her sister. "I-do-not-know," she cried. "It-depends-on-flour."

"What-flour?" screamed Lizeth.

Dolor Tripp turned inquiringly. "Minnesota Family Joy," said I, for want of better information to give.

"Min-ne-so-ta-Fam-i-ly-Joy," screamed Dolor Tripp.

THE PROMENADE BATH.

net, who was easily recognized by those who had seen her before as Lizeth of the poultry-yard.

Again came the voice across the water: "Dol—or! Are you on that ship?"

Dolor Tripp stood on tiptoe and showed herself well above the bulwarks. "Don't you see me, Lizeth?" she cried.

The distance between the ship and the shore was not great; and as there was but little wind the clear, high voices of the sisters were distinctly heard across the intervening space.

"Where-are-you-going?" cried Lizeth.

"I-am-going-to-Boston," replied her sister.

"How-long-do-you-expect-to-stay?" cried Lizeth.

Dolor Tripp turned to Doris. "How long do you think," she said, "that the ship will stay in Boston? You know I want to come back in it."

"I really do not know," was the answer; "but we shall certainly stay long enough to take on board some barrels of flour."

Then Dolor Tripp turned her face shore-

Lizeth did not immediately resume her questions, but after a few moments' thought she cried, "Why-don't-you-start?"

"There-is-some-thing-the-matter-with-the-tide," replied Dolor Tripp.

Here there was another pause in this high-strung conversation, and several persons on board the *Merry Chantier* looked at one another and smiled.

Lizeth now called out again, "Will-you-get-me-in-Boston-four-yards-of-the-inch-wide-black-and-white-ribbon?"

"I-will!" cried Dolor Tripp. "Does-Al-wilda-know-I've-gone?"

"Yes," called back Lizeth. "She's-begun-painting-you-on-the-dining-room-wall. You-are-stretched-out-drowned-on-the-sea-shore. Your-face-is-all-soaked-and-there's-little-slimy-green-weeds-flappin'-against-it. She-was-just-beginnin'-to-paint-a-puddle-under-you-when-I-came-away. Good-bye!"

"Now, is n't that mean?" said Dolor Tripp, turning a troubled countenance towards us, and then, suddenly recollecting herself, she

called after her departing sister a shrill "Good-bye!"

"I notice," remarked the butcher, as he cast a severe look shoreward, "that she did n't say anything about the weeds and the puddle till she'd got in her black-and-white ribbon."

In order to dissipate from her mind all thoughts of the dismal picture of herself which was in course of creation upon the dining-room wall of her home, the butcher now invited Dolor Tripp to allow him to show her that portion of the *Merry Chanter* which lay forward of the chalk line. The invitation was accepted, and from the general appearance of things forward I think that Dolor Tripp's enjoyment was troubled by no visions of soaked countenances.

The captains were on the forecastle, and as they all knew something about Dolor Tripp or her family, they had frequent snatches of talk with her. Lord Crabstairs and the schoolmaster took to wandering about the bow, but the former never uttered a word. He had agreed that the butcher should take charge of the lady on this part of the ship, and he religiously forbore to speak.

When the butcher and his fair companion leaned over the extreme bow, and he began to describe and descant upon the wooden figure of the *Merry Chanter*, Doris, who had gone forward, requested permission to listen, which being cheerfully granted, we all gathered about the speaker.

It is astonishing how well that butcher talked about our old figure-head. He let himself out splendidly about roaring winds and mountain waves, and driving rain and freezing sleet, and banks of blinding fog, and yet ever that right arm, or what there was left of it, was stuck straight out, and that head was thrown back boldly, and that mouth was open ready for song, or shout, or to take in sea-water, as the case might be.

"He has been through it all, time and again," said the butcher, in conclusion, "and he is ready for it all over again, fair weather or foul, as long as those iron bolts through his body hold him fast to the ship."

"I love him already," cried Dolor Tripp; "and as soon as we begin to plow the waves I am going to stand in front here and see him do those things."

"Of course," remarked Captain Timon, "that will depend on the principal owner"—waving his hand towards Doris. "I have heard her say that she wanted to stand abaft the figure-head when there happened to be a good sea on."

"Oh, there will be room for us both," said Doris, who had already begun to take very kindly to Dolor Tripp.

XI.

THE PROMENADE BATH.

THE next morning after breakfast Captain Timon made a little speech to the assembled ship's company. "I feel bound," he said, "to tell you all that I've been disapp'inted in the wind and the tide. They are two things, as everybody knows, which won't wait fur no man, but they 're willin' enough to make any man wait fur them, and that 's not what I call the square thing."

"You are right there, Captain," said Lord Crabstairs; "but the rascals have been at it all their lives, and it is too late to try to reform them."

"This schooner," continued the captain, "draws a leetle more water than we thought she did. You see none of us ever sailed in her before, and she draws a leetle more water than we thought she did. And then ag'in there 's a leetle less water in this bay than there generally is at this season. You see when we anchored here to get water out of that spring we did n't know that the ship drew so much and the bay was so low."

"Then," interrupted Lord Crabstairs, "you should get more water out of your spring and pour it into your bay."

Captain Timon joined in the laugh that followed this remark, and then went on:

"What we want is a high wind, pretty nigh to a gale, comin' in from sea along with the flood tide. That will give us enough water to get out of this bay, and then we 're all right. That half-gale from the sou'east is what we 're a-waitin' fur."

"That sort of gale," said the butcher, "most generally comes in the fall of the year."

"That is autumn, is n't it?" cried Lord Crabstairs. "Now, really, that is three months off!"

"If you 'd sailed the sea as much as we have," said Captain Timon, addressing the butcher, "you 'd have known that them gales blows whenever they 've a mind to. That 's their rule; whenever they 've a mind to. Now there 's just two things we can do; and one of them is to get a vessel that don't draw so much water; Cap'n Teel has got one to hire. She 's a sloop, and a good one. He can bring her round here, and we can put our stores into her and sail to Boston without no trouble at all."

At this point there was a general outcry. "Sail in another ship!" cried Doris. "Never! It is not the voyage to Boston I care about; it is the voyage there in our *Merry Chanter*."

I joined in the remonstrance. Lord Crabstairs vowed that he was in no hurry, and could wait for a wind as long as anybody else. And Dolor Tripp asserted with considerable warmth

that if she could not sail behind that bold, wooden singer of the sea she did not wish to sail at all.

The butcher had been gazing intently upon first one and then another of us; and when Dolor Tripp had said her say he spoke out fully and definitely. "I stick to the ship," said he.

The schoolmaster made no remark. He was not now so uneasy as he had been at first, but it was plain enough that he wished to sail away, no matter in what vessel.

"Well, then," now continued Captain Timon, "as none of you seems to want to leave the schooner, there 's another thing you can do. You can just make yourselves comfortable and wait fur the gale with a flood tide. Some of you can take the boat and go fishin'; some of you can walk about on shore; and if any of you wants to hire a horse you can do it over there in the village. If there 's a special high tide when you are not aboard we 'll just run the schooner out into deeper water and fire a gun and wait fur you."

This plan was instantaneously agreed upon, and to prove that we were perfectly contented with the *Merry Chanter*, we all set about to amuse ourselves.

Lord Crabstairs went to look after his poultry. These were mostly scattered about the deck, none of them having courage to fly overboard; but some had gone out on the bowsprit, and the truant cock was still in the rigging. His master had vainly endeavored to coax him down, and was obliged to scatter his corn on the maintop, where it was contentedly pecked up. Doris applied herself to the care of her little chicks and their mother; three of the captains went ashore in the boat; the butcher was making some remarks to me in regard to the improbability of the schooner's moving from her present position without leaving behind her her hold, her paving stones, and her barnacles; and what Dolor Tripp was looking at in the water I do not know, but suddenly her little boots in which she was standing tip-toe slipped backward, and in an instant she disappeared over the side of the vessel.

I gave a shout and rushed for the spot where she had been leaning over the bulwark. Doris, startled by the great splash, was by my side in a moment. Looking down with pallid faces we saw below us what appeared like the surface of a boiling pot some five feet wide. Out of the tossing turmoil of the water now arose the dripping head, shoulders, and arms of Dolor Tripp, who had succeeded in struggling to her feet and who stood upright, puffing and blowing the water from her mouth, wildly waving her hands, and endeavoring to scream.

In the next instant there were two great splashes, and the butcher and Lord Crabstairs

went overboard. Each of them went under water for an instant, and then emerging upright they swashed towards the dripping maiden and each took her by an arm.

"You are as safe now," exclaimed Lord Crabstairs, sputtering as he spoke, "as if you were high and dry on shore."

"Unless we sink in the sand," said the butcher.

But Dolor Tripp paid no attention to similes and suppositions. "Oh, get me out!" she cried. "Get me out!"

Those of us who were on deck soon discovered that it would not be easy to get her out. There was one broad ladder with hand-rails by which we descended into or ascended from the one boat which belonged to the *Merry Chanter*, and this ladder had been taken ashore in the boat by the three captains who had gone for fuel, and who proposed to use it when sawing off such lower branches of trees as might be small enough to suit their purpose. The idea that anybody might want the ladder while they were gone never entered the minds of these wood-cutting mariners.

Captain Teel, who was left on board, was not very fertile in expedients. He proposed hauling up the young woman by means of a rope; and when the butcher declared that if this were done she would be cut to pieces by the barnacles, the captain suggested that if a spar were put out at an angle, with one end held down to the bottom and the other resting on the side of the vessel, she might climb on board without touching the barnacles.

This proposition meeting with no approval, the captain stated that the proper thing to do was to put a block-and-tackle out at the end of a boom and haul her up that way, but that as he was the only seaman on board he did not like to undertake this job by himself. He might put a barrel of fish on board that way, but it would take a good deal of careful hauling and steering to prevent a dangling young woman from getting bumped. He rather guessed that the boat would be back pretty soon, and that the best thing to do would be to wait for it.

This seemed like hard lines for Dolor Tripp, and I suggested that the three should wade to shore.

"They can't do that," said Captain Teel. "The water is deeper nearer shore than it is just here. If they go a dozen yards from the schooner it will be over their heads. We 've made soundin's."

"I suppose," said Doris to the group in the water, "that you will have to wait till the boat comes; but you ought to walk about to keep from taking cold."

"Very good," said Lord Crabstairs; and re-

leasing his hold upon Dolor Tripp, he offered his arm in the usual fashion. The butcher, on her other side, did the same, and the three began their walk through the water.

"You can go all around the ship," said Captain Teel, "if you don't get too far away from her, and I guess you'll find the bottom pretty hard and smooth."

The tide was very low, the water being not more than waist-deep for the men and below the shoulders of Dolor Tripp; but it was quite deep enough to make walking a very slow performance. But as the young woman put perfect faith in the ability of her protectors, and as the two men were greatly pleased to have this opportunity of aiding and protecting her, the spirits of the little party recovered their usual level as they pushed their way through the water. On deck Doris and I, with Captain Teel and the schoolmaster, kept pace with them, the latter carrying a plank which he intended to hurl to or upon Dolor Tripp in case of danger, such as a tidal wave or an attack by sharks.

"I like it ever so much!" cried Dolor Tripp to Doris. "It is a promenade bath. The water is warm and lovely."

Reaching the bow of the ship, Dolor Tripp looked up at the Merry Chanter.

"I never expected," she said, "to be under him and look at him from the sea. I wonder if I could climb up to him by this anchor-chain?"

"Don't try it, miss," said Lord Crabstairs. "If you ever climb up to anybody, don't let it be to a wooden-headed old party like that."

"When it comes to that sort of thing," said the butcher, "the climbing will be the other way."

Perhaps Dolor Tripp did not understand this remark, for she made no answer to it. As they moved on she said:

"How gently these little waves lap up against us! Does either of you gentlemen believe in mind waves?"

"I don't know what they are," answered the butcher.

"If you mean a wavering of the mind," answered Lord Crabstairs, "I have had it often; particularly when I bought my last cow. I wavered between Alderney and Ayrshire for nearly a month, and, after all, I bought a Devon."

"Oh, it is n't anything like that," said the young woman. "It is a sort of understanding between minds that are far away from each other. It comes along in a sort of airy waves something like these ripples, I suppose, and the thoughts and feelings of one friend go to another ever so far off."

"Oh, I know what it is!" cried Lord Crab-

stairs. "You can do it with snails. You go to China and take a she-snail with you, and I stay here with a he-snail, or vice versa. I can go to China with either and you can keep the other—"

"Do they have to be a married couple, to begin with?" interrupted the butcher.

"What! The people?" cried Lord Crabstairs.

"No, the snails," said the butcher.

"Yes," replied the other. "I forgot to say they must be a pair, so that there shall be a sympathy between them." Then, again addressing the lady, "You have one snail and I the other one, and we've got the whole world between us. Whichever of us wishes to communicate with the other takes a pin and jabs his or her snail, as the case may be, and in that very same instant the other snail wiggles."

"Horrible!" cried Dolor Tripp. "If I had to do that I would never communicate."

"I don't believe it hurts them," said Lord Crabstairs. "The least little bit of a prick will do. And we could get up a jab alphabet: one short jab, a long jab, two short jabs, with a rest between them—three long jabs, a rest and a short jab, and so on."

"I never would do it," said Dolor Tripp, firmly. "I would n't even watch wiggles that were made by pins in China."

The butcher did not wish to be left out of this conversation. "That must be pretty much the same thing," he said, "as is the case with the legs of frogs. You catch a dozen frogs and put their hind legs on a plate, all skinned and ready to be cooked, arranged in a circle with their toes pointing out like the spokes in a wheel, and then you sprinkle some salt on them and every one of those legs begins to kick. If you never saw it before you'll drop the plate."

"That is not like my snails at all!" cried Lord Crabstairs. "A person in China could n't sprinkle salt on frog-legs here. If he were near enough to do that he might as well talk. I don't see any sense in that sort of thing, even allowing that your frog-legs do kick."

"I don't see any sense in the other sort of thing," said the butcher, "even if your snails do wiggle."

At this Dolor Tripp declared that her correspondence should always be either by letter or by telegraph; and she began to wonder when the boat would return. We all strained our eyes shoreward, but nothing could be seen of the nautical wood-cutters, and the three in the water were obliged to continue their stroll around the vessel.

Captain Teel now made a joke which for some time had been resolving itself into form in his mind. "She calls it a promenade bath,"

he said with a subdued giggle, "but to me it looks a good deal more like a promenade baptize. That butcher in his shirt looks just like a minister with a pair of uncommon sinners."

I had noticed that every time the party passed under the bow the butcher looked very attentively at his disengaged arm, which hung down by his side. Having caught my eye, he now turned back a little and held up his hand with his forefinger and thumb separated about two inches. He then pointed towards the surface of the water and then let his arm drop again.

The meaning of this pantomime was very plain to me. He had been measuring the depth of the water by some mark on his sleeve, and the tide had risen two inches. He wanted me to know that he was getting uneasy. I began to grow uneasy also. I would have been better pleased had not the butcher always chosen me as the recipient of his forebodings.

But there was no reason for anxiety, for, as the hour for dinner drew nigh, the three captains emerged from the woods, two of them carrying the ladder and the other a bundle of sticks. Dolor Tripp and her companions were then near the bow of the vessel, and concealed from view of the persons on shore. By the time the boat had nearly reached the schooner the three water-walkers came around the bow, and there never were more astonished mariners than our captains when they beheld the three heads and shoulders which apparently floated towards them. Captain Cyrus, who held the tiller, was so startled that he nearly fell overboard, and in their sudden consternation the two others allowed a few words of the swearing variety to escape from their lips—the first we had heard from them since they had entered our service.

"Now you see," said Lord Crabstairs to Dolor Tripp, "if those sailors had taken a snail with them and we had had a snail, we could have let them know what was the matter, and they would have turned back immediately and taken us out of the water. Every ship should carry a lot of snails in case the people on board get separated."

The butcher shrugged his shoulders, but evidently saw no way of bringing his frogs' legs to the fore.

Our friends were soon on board and in dry clothes; and when the butcher appeared on deck he took me to one side and remarked: "As I was walking round this ship I made up my mind it would n't be long before her barnacles grew down into the sand bank—that is, if they grow that way; and when that happens, and taking into consideration the seventy cart-loads of paving stones in her hold, she 'll

have a pretty strong foundation. But of course there's no use saying anything of that kind to the ladies, especially if they're beginning to feel as if they'd like to be getting on to Boston."

XII.

DOLOR TRIPP TAKES US UNDER HER WING.

THE gloomy remarks of the butcher in regard to the permanency of the *Merry Chanter's* position had a certain effect upon me. I did not agree with him, for I had full faith in the knowledge and experience of our skipper, and believed that when the exceptional gale and the exceptional tide came along together our ship would float off the sand bank and sail out of Shankashank Bay. But the continual allusions of the butcher to our barnacles and our seventy cart-loads of paving stones could but depress me. It would require such a very high tide and such a very strong gale to move us. As we had started for Boston, I wanted to go there.

Doris, to my surprise, appeared to have become reconciled to the delay. Of course, as she had started for Boston, she wanted to go there; but, as she several times remarked, she did not wish to be unreasonable. She knew there were many delays connected with voyages on sailing vessels, such as calms, head winds, and the like, and she supposed the cause of our present detention was equivalent to a calm. With this view Captain Timon coincided.

She had begun to feel at home in Shankashank Bay, and so long as she had to stay she determined to make the best of it. And in this resolve she was joined by the rest of the ship's company.

Lord Crabstairs could sing a good song, and he sang a great many. The butcher had a deep and earnest voice, and with this he joined in choruses. The rest of us also did our duty in this line according to our abilities. The schoolmaster conducted spelling-bees; Doris told stories, which she did excellently well; and I delivered one lecture on "The Analysis of Lava." The only person, however, who appeared to be much interested in the subject was Lord Crabstairs, who inquired if there were any old volcanoes near Boston. I think this question was inspired by a glimmer of hope in regard to the lifting of the hereditary debts of his family; for when I told him that there were no volcanoes, new or old, near the port to which we were bound, he fixed his eyes upon the back of Dolor Tripp, and I am sure gave no further thought to lava.

On the second day after the water promenade a picnic on shore was proposed; and immediately after dinner the two ladies, with myself, the butcher, Lord Crabstairs, and the

schoolmaster, went on shore. The latter declined at first to be of our party, for fear that Mrs. Bodship might catch sight of him; but as the butcher lent him a gown and a high silk hat, he was convinced that he might go with us without danger of being recognized—at least at a distance. He took with him the sandpiper in its cage; for although the bird was well on its way to recovery, he considered it not yet able to take care of itself.

Our plan was to go some distance inland, eat our supper at an appropriate rural spot, and, returning to the shore at the close of the day, take a moonlight row on Shankashank Bay. This was to be long or short according to our pleasure, and when it was over we would return to the *Merry Chanter*. We invited any of the captains who chose to accompany us, but they all declined. The exceptional gale might come in with the tide, and in that case they should all be on board to take the schooner out into deeper water.

We rambled about two miles inland, and our little excursion was enjoyed by all of us until we were preparing to return to the shore after having eaten our supper. Then a sudden rain-storm burst upon us, and we ceased to enjoy the excursion. Hastily gathering up our baskets and wraps, we ran for the nearest house; but as this was about a quarter of a mile away, we were well wet before we got there.

Even when we reached it we found it a poor place of refuge. It was a very small house, and there was nobody at home but a boy and girl, who, I am sure, would not have admitted us if we had knocked at the main door. But as we rushed pell-mell into the kitchen from the back of the house, they had no option in regard to our entrance. The girl, however, locked the door of the front or best room so that we should not go in there with our wet feet and clothes, and we were obliged to bestow ourselves as well as we could in the little kitchen, in which there was one chair. There was no fire, and the girl declared there was no need of making one until her mother came home with the supper, and that now she would not come until the rain was over. Had we been able to discover any fuel we would have made the fire ourselves; but as we saw none, we merely stood about and grumbled.

The heavy clouds, which had come up so fast from behind the woods in which we had supped, brought darkness upon us at least an hour before we expected it, and the rain continued to fall steadily. When we had spent half an hour or more in the dismal little kitchen Dolor Tripp spoke up.

"It will never do to stay here," she said. "We shall take our deaths of cold. Our house is not a mile away, and the best thing we can

do is to go there. We are so wet now that we might as well be wetter, and when we get there we can warm and dry ourselves and stay until the rain is over."

This suggestion was accepted instantly, and heaping coals of fire upon the heads of the youngsters by giving them some small change, we tramped out into the storm. Dolor Tripp declared that dark as it was she knew she could find the way, for the road to her house was a moderately direct one, having but few turns; and, supported by Lord Crabstairs and the butcher, she led the way.

The road might have been direct enough and smooth enough if we could have kept in the middle of it; but the sides on which, without intending it, we did most of our walking were very rough, and as we frequently ran against the fences on either side, Dolor Tripp declared that she believed that the roads were a good deal narrower by night than by day. But during our slow and stumbling progress we cheered ourselves with two reflections—we were getting nearer and nearer to a sheltering roof, and the exercise was keeping us from taking cold.

After walking for what seemed to me a very long time, Dolor Tripp remarked that she believed that she had passed a fork in the road where we should have turned to the right, and that we must go back a little. We went back; but after stumbling and splashing and peering about for nearly a quarter of an hour, our guide said that she now believed we had not passed the fork, and we might as well keep on.

We kept on and on and on, and at last we came to a fork,—which the butcher discovered,—and then we turned to the right. The rain now began to slacken, the clouds grew a little thinner, and a diluted and shadowed moonlight enabled us better to find our way. I asserted that I believed it would be well to change our course, and, instead of going to the Tripp house, turn shoreward and get back to the schooner as soon as possible.

This proposition, however, met with no favor. The others declared that as the road to the shore would from this point lead us over fields and sand hills we should be lost, and should miserably perish; whereas, from the Tripp house to the boat-landing we all knew the way, which, moreover, we need not take until we had dried ourselves and rested.

We therefore pressed on; and as we could now see the roadway, which, although sloppy, was comparatively smooth, we made fair progress, and after a time the house of our destination loomed up dark before us. As we made our way to the front gate Dolor Tripp remarked: "Of course they are abed and asleep, for they

always go to bed early, and the gate must be locked."

"But I hope they will get up and open it," said I.

"Not Alwilda and Lizeth," she said. "You would n't think that if you knew them. They would n't unlock the gate after dark, even if they were up; and as to getting out of bed to do it, they'd let Queen Victoria stand here and wait till morning."

For some time I had been in a bad humor, and I now felt very much provoked. "It might have been well," I said, "if you had thought of all this before you brought us here."

"I did, partly," said Dolor Tripp. "That is, I thought it would be just as well that they should be in bed and asleep when we got here, for I know Alwilda will talk dreadfully to me about going to Boston, and perhaps talk me out of it; but I did n't happen to think that if they were not up we might not get in."

"There is no need bothering about the gate," quickly spoke up the butcher. "I can make an opening in this fence and not hurt it, either. And when we get inside the yard I expect we can find some window or door unfastened. There always is in country houses."

Dolor Tripp replied that if he did not hurt the fence she thought that would be a good plan, and in a few minutes the butcher had felt along the fence and found a place where the pales were somewhat loose, by reason of age. He and Lord Crabstairs then pulled five or six of them from their bottom fastenings and pushed them to one side, so that the party easily entered.

The butcher enjoined us to make as little noise as possible. It was natural that he should not wish to wake up a woman who might talk Dolor Tripp into not going to Boston. Then he said he would go by himself round the house and try the shutters and doors.

"You need n't do that," said Dolor Tripp. "There is n't a door or a window on the lower floor that is n't bolted, or locked, or barred, or screwed up."

There was a little murmur among us. The rain had almost ceased, but we were tired, wet, and miserable, and what we wanted above all things was to rest ourselves before a fire. The situation was disheartening, and as for Doris and me, we did not care whether the sisters were wakened or not so that we got in and were warmed.

"I'll knock at the door," said I, "and make some one come down and open it."

Dolor Tripp held up a warning hand. "Don't do that," she said. "Alwilda has a gun. I've thought of a way to get in. Do you see that pine tree at the corner of the house? That is the tree that I expected the burglars

to climb up when I used to sit and watch for them. And if a burglar could do it, I should think some one else could; and then he could easily push up the sash of that window and get in, and go through the room into the hall and down the stairs, and take down the bar from this door and unlock it, and let us in."

"I'll do it!" said the butcher the moment she had finished speaking; and without delay he advanced towards the tree.

"I would climb up and go in myself," said Lord Crabstairs, "but I am not sure that I understand these American houses."

The butcher took off his gown, which clung to him like a wet shroud, and casting it upon the grass he began to ascend the tree. This he did easily and rapidly, the horizontal branches affording him convenient hold for foot and hand. Very soon he was inside the house, and we listened anxiously, fearing that we might hear a noisy stumbling and the report of Alwilda's gun. But we heard no noise at all; and after what seemed an unnecessarily protracted period of waiting, the front door quietly opened.

"I did n't strike the stairs at first," whispered the butcher, "and I went too far along that upper hall; but when I came against a door that was partly open I knew I was wrong, and turned back."

"Mercy!" gasped Dolor Tripp. "That was their room!"

We all now entered, and the butcher gently closed the door behind us. There was an unshuttered window at the other end of the hall through which came enough dim light to enable us faintly to discern one another and surrounding objects.

"I'll go first," whispered Dolor Tripp, "and take you to the old part of the house."

So saying she led us, all stepping as softly as we could, to a transverse hall, and along this to a large open door, through which we passed and went down three steps into another hall. This was very short; and opening a door at the end of it Dolor Tripp ushered us into a large room, into which the moonbeams, now grown brighter, came through a small unshuttered window high up in the wall.

Dolor Tripp, who seemed to be used to doing things in semi-darkness, took down an iron candlestick from the mantelpiece, and asked if anybody had a match. One was immediately produced by Lord Crabstairs and the candle was lighted.

"Now," said she, holding the light above her head, "this is the kitchen of the old house. Part of the old house was torn down to make room for the new one, which is pretty old itself, but this kitchen was left. If some one will close that door we shall be entirely shut off from

the rest of the house, and then we need not be so particular about keeping quiet."

I did not care a snap whether this part of the house was old or new, but I saw before me a great old-fashioned fireplace with some charred logs lying upon the iron andirons, and at one end of the hearth a pile of firewood. This was what we had come for. We fell to work, and in ten minutes a great fire was blazing and crackling, the wet wraps of the ladies were removed, and we all were gathered around the hearth, which fortunately was large enough to accommodate the six of us. It is astonishing how the genial heat dried our shoes and clothes and raised our spirits.

The schoolmaster and the butcher sat at the corners of the fireplace, and they were very well placed indeed. The former took off his gown and hung it on a crane that extended from one side of the great fireplace. He wished to have it dry enough to put on when he went out. It was not probable that Mrs. Bodship would be rambling about the country at night, but he wanted to feel quite safe.

"Now, then," said Doris, "if we only had some good hot tea we ought to be perfectly happy."

"And something to eat," added Lord Crabstairs. "I, for one, am half famished."

"You can have both tea and something to eat," said Dolor Tripp. "We have used this kitchen as a storeroom for the things we buy in quantities. In that cupboard is a box of tea, and there is sugar and salt and spices, and a barrel of flour."

"We can't do anything with flour and salt without waiting ever so long," said Doris.

"I feel as if I could eat them without baking," said Lord Crabstairs.

"You need n't do that," said Dolor Tripp. "I can go quietly to the other end of the house, where the pantry is. There is always something to eat there. But first let us boil the kettle. If you, sir, will move your gown a little farther to the back of the crane there is a kettle here which we can hang over the fire."

Under her direction the butcher, with as little noise as possible, pumped some water from a cistern under the kitchen, and when the kettle was filled and over the fire the two ladies got down some cups, saucers, and a tea-pot from the shelves of a dresser which seemed to be filled with old-time pottery.

Then Dolor Tripp started to go to the pantry. "I will blow out the candle," she said, "and take it with me. Then I will light it when I get there. They are very hard to wake, but a light passing through the house might do it. You folks won't mind sitting here in the firelight?"

Of course we did not mind, and Doris offered to go with her. The two opened the kitchen door and went out into the little hall. In a moment they returned.

"What do you think," said Doris, in an excited undertone; "the door at the top of the steps that leads into the main building is fastened, and we cannot open it!"

In great surprise we all rose to our feet and looked towards Dolor Tripp that she might tell us what to think. "Is there a spring-lock on the door?" I asked.

"No," said she, "there is no spring-lock, and we did not close the door after us. We shut only this kitchen door. But I know who did it," she added, quietly. "It was the ghost. It is one of its ways to lock and bolt doors."

XIII.

THE PIE GHOST.

"THE ghost!" exclaimed Doris, with a quick grasp upon the arm of Dolor Tripp.

"I was sure of it!" said the butcher, looking straight in front of him and speaking very decidedly. "I saw something white moving in the front hall as I came down the stairs. I knew it for a ghost, but I did n't say anything, for I did n't suppose it would meddle with six people."

"Fiddle-faddle!" said Lord Crabstairs. "There are no such things as ghosts." And with this opinion I coincided. The schoolmaster said nothing. He resumed his seat at the side of the fireplace and rearranged his gown upon the crane, so as to expose all parts of it to the heat. It might be necessary to put it on suddenly.

"There is no mistake about this ghost," said Dolor Tripp. "If you will all sit down till the kettle boils I will tell you about it."

We resumed our seats in front of the fire, and the butcher put on some fresh sticks.

"It has been in this house," said Dolor, still holding the unlighted candle, "ever since I first came here, a little girl only ten years old. I soon began to see it, though I don't believe it often saw me."

"Did n't it frighten you nearly to death?" asked Doris.

"No," replied the other. "At first I thought it belonged to the house just as much as any of the other queer things which I found here, and there seemed to be no reason why I should be frightened at one thing more than another."

"What did your sisters say about it?" asked Doris.

"They did n't say anything," replied the other. "I soon began to believe that they did n't know anything about it, and I was afraid

that if I told them they would have something done to drive it out of the house."

We all looked at her in amazement. "And you did not want that?" asked Lord Crabstairs.

"No, indeed," replied Dolor Tripp. "I used to like to watch for it. I would go into different parts of the house at night and watch for it, hoping it would come by. Sometimes weeks and weeks would pass without my seeing it, and then I would get a glimpse of it on two or three nights in succession."

"What did it look like?" asked Doris.

"Its head was light or whitish, and below it gradually melted down into darkness."

"That was it," said the butcher. "That is exactly like the thing I saw."

"And you never, never told your sisters," said Doris, "that they were living in the house with a ghost?"

"No, indeed!" replied Dolor Tripp. "You see, before we came here we lived in a horrid little house in the town, and when it was decided by the court that this place belonged to us nobody was so glad as I was. So, as I told you, I did not want Alwilda and Lizeth to do anything to drive the ghost away; but what I was most afraid of was that they might find that they could n't get rid of it, and would go away themselves. I would n't have that happen for anything in the world."

"And so," said Doris, "as the burglars would not come you did n't want to lose the visits of a ghost."

"Perhaps so," replied Dolor Tripp. "And now the kettle is boiling, and we can have some tea, if we can't get anything else."

"As for ghosts," interjected Lord Crabstairs, "I never have believed in them, and never shall. But I do know that I am as hungry as a wolf; and if you'll allow me, miss, I'll push open that door, no matter who fastened it on the other side, and I'll go with you to the pantry, or anywhere else where there's bread and meat, and defend you against all comers, ghost or otherwise."

"Oh, you must not do that!" exclaimed Dolor Tripp. "The door would be broken, and Alwilda and Lizeth would surely wake up."

"As for believing in ghosts," said the butcher, "a good deal depends upon who does the believing. If you've never had a chance of seeing ghosts, sir, you are out of the race."

The candle was now lighted, and cups of hot tea were served by the ladies. I hurriedly drank a cup and then began to consider the situation. I went to the door at the top of the steps and tried it, thinking perhaps there might be a mistake in regard to its being fastened. But there had been no mistake. It was locked, and the key was on the other side. I did not

like to be fastened up against my will in any place or by any agency.

I now insisted that we should leave this place without delay, by a window if there was no other outlet, and make our way to our boat.

"Oh, you can't get out," said Dolor Tripp, "until he unfastens the door. The window sashes are all nailed and screwed fast, and the outside shutters and that back door are padlocked. Alwilda and Lizeth are very particular about having this kitchen secure from burglars. But you need n't worry. That door will be opened before long. The ghost always does that after making you wait a little while."

"I think it is rather jolly," said Doris, "to have a ghost for a jailer, though I can't really say I should like to have him come in and bring us a jug of water and a loaf of bread."

"If he will do that," said Lord Crabstairs, "I'll believe in him; although I don't care for the water, and should like him to fetch some meat or cheese with the bread."

Doris suddenly turned towards the schoolmaster. "What have you done with the sandpiper?" she said.

The butcher started. "You are not thinking of eating him?" he asked.

"Oh, no," said Doris, with a laugh. "We have not got so low as that yet, although I must admit that I also am awfully hungry. But talking of things to eat made me think of the bird, and I wondered what had become of it."

"I left the cage," said the schoolmaster, "just outside by the front door. I put my hat over it to keep the rain off the sandpiper."

Lord Crabstairs smote his knees with his hands and laughed. "Why, man," he cried, "that tall silk hat has blown forty miles across country by this time!"

The butcher looked at him severely. "That's all right!" he said. "I should like to know how it could get out of this yard with such a high fence and no gate open. I don't believe it's raining, anyway; so you may feel sure, ma'am, that the sandpiper is comfortable."

At this moment there was a little noise at one of the windows, and, turning my eyes in that direction, I saw the lower sash raised a couple of inches. I was about to spring towards the window when Doris, who had followed my glance, caught me by the coat.

Instantly we all rose to our feet, and as we looked at the window, beyond which we could see nothing, something like a young moon began to protrude itself through the opening under the sash. In a moment the lunar apparition had greatly increased in size and was a half-moon.

Dolor Tripp now made a quick step forward.

"Keep back, all of you," she said. "I know

THE PIE GHOST.

what it is." And going to the window she took hold of the moon, and, drawing it into the room, she held it up to us in all the glory of its fullness.

"A pumpkin pie!" exclaimed Doris.

We gathered about it. It was of the largest size and as yellow as gold. "Oh, delicious!" cried Doris. "Somebody get a knife."

"But where did it come from?" I asked.

"From the ghost, of course," replied Dolor Tripp. "That is one of its ways. It leaves pies about. Several times when it has locked me into a room I've just waited quietly until I found the door unfastened, and there outside, just where I would n't step into it, there would be a little pie."

"A lovely ghost!" cried Lord Crabstairs. "I am converted. I believe in him. But this is n't a pie, it's a tart. Pies are made of meat."

"No, they are not," said the butcher; "at least, not punkin pies. I should think I ought to know what things are made of meat."

"And I ought to know what things are made of fruits and vegetables," retorted Lord Crabstairs. "That is a tart!"

"I'll toss up to see who is right," said the butcher.

"Done!" said Lord Crabstairs, producing a penny.

"Heads!" cried the butcher.

It was tails.

"All right," said the butcher. "I'll take some of it, but all the same I never imagined

that I should live long enough to eat punkin tart!"

Dolor Tripp quickly cut the pie into six parts, but I would have none of it. I do not believe in ghosts, and will not eat food brought by them. I went to the window and endeavored to raise the sash higher, but could not do so. With all my strength I could not increase the width of the narrow aperture. One of the shutters was open, but the shadow of the main building and a growth of evergreen bushes made everything dark immediately outside.

I left the window, and walking quietly out of the kitchen into the little hall, I again tried the door at the top of the steps. To my delight it was unfastened. I stepped gently back, and looking in at the kitchen door I caught the eye of the butcher, who was finishing his piece of pie. Without attracting the attention of the others, who were making some fresh tea, he came to me.

I whispered to him to follow. We went up the steps, and through the door. We groped our way along the passage, turned into the main hall, opened the front door, and went out.

"It is no ghost," I said. "Let us go around the house and catch him!"

"I began to have my doubts," said the butcher. "The pie was too real."

As quietly as possible we walked along the front of the house and around the end of it,

returning by the back towards the old kitchen. The moon gave us light enough to see our way until we reached the shaded corner by the window; but when we had slowly and gently pushed through the evergreens we found ourselves in almost total darkness, the little light that came from the candle within amounting to almost nothing. But although we could not expect to see an approaching figure, we might hear one, and we stood silently and waited.

But we did not wait long. Down from some region above came a light, misty spot like a will-o'-the-wisp. When it was about five feet from the ground it moved towards the kitchen window. I do not know what the butcher thought, but at this moment it occurred to me that perhaps after all it might be well not to interfere with this apparition. We really had no right to interfere and we were ourselves intruders upon the premises. And whether it were a ghost, or a man, or a woman, there was something in my nature, naturally sensitive, which prompted hesitation before actively interfering with the pursuits of another.

But I had no time properly to revolve this subject in my mind. The butcher reached out one hand and took me by the coat-sleeve. Following the impulse thus given I moved with him towards the window, our feet making no noise upon the soft grass.

Against the faint light in the room, on the side of the window where the shutter was opened, we could see the top of a strangely formed head raised just high enough above the window-sill to enable its owner to look inside. The ghost was watching our friends!

There was a quick movement of the apparition; the butcher had seized it. In the next instant I also laid hold of it. Within my grasp I felt an arm, a human arm quite firm and solid. Not a word was spoken; there was no struggle, no noise. Silently the butcher and I pulled our captive away from the window, through the overhanging evergreen boughs, and out into the moonlight.

There we discovered that we held a man, quite a small man, with a white cap on his head.

"Well, now," said he, looking from one to the other of us, "you have caught me, have n't you? And I must say, you did it pretty neat. I knew it was risky, foolin' with sech a big party, but for the life of me I could n't help it. Never sech a chance turned up before in this house!"

"But who are you?" said I.

"You are a stranger to me," replied the little man, "and you would n't know who I was if I told you. Now, this gentleman knows me, and I know him."

"You don't mean to say," exclaimed the butcher, "that you are —"

"Yes, I am," interrupted the other.

"And you are the ghost?"

"Now, tell me," asked the little man, "did she take me for a ghost? I always hoped she would, but I could n't help feelin' sort of on-certain about it."

"She certainly did," answered the butcher.

"That 's what I call real jolly!" said our prisoner, rubbing his hands. "Let's go in, and have it all out. I guess I 've served my time as a spook, and might as well come down to the level of common people."

As the butcher had released his hold of our prisoner, I did so likewise. The little man now started off, and went around the house to the front door. We followed, and he led us into the hall and along the passage to the kitchen. Entering abruptly he stopped near the door, and exclaimed in a cheery voice, and without removing his cap: "Now, ladies and gentlemen, here 's your ghost! What do you think of him?"

The party had been anxiously discussing our absence, and Lord Crabstairs and the school-master were about to start out to look for us. They now all stood in amazement, gazing wide-eyed at the new-comer.

Suddenly Dolor Tripp stepped forward. "Griscom Brothers!" she exclaimed.

"Yes," said the little man, "I am Griscom Brothers."

"In the name of common sense," said Doris, "please tell me what you two are talking about? Is this the pie ghost?"

"Yes, madam," said Griscom Brothers. "And not only pie but bread, both wheat and Boston-brown, with rye to order; cakes of all kinds, especially home-made ginger; and family bakings and roasts on reasonable terms. In a word—Griscom Brothers."

"Of the village over here," added Dolor Tripp, in further explanation.

"Griscom Brothers," said the butcher, in a tone of confident affirmation.

All this was as surprising to me as it was to the others. As for Lord Crabstairs, he stood up very straight with his feet wide apart, and stared at Griscom Brothers.

"Now, really!" he exclaimed. "It is Brothers, is it? And the ghost of a baker besides!"

"No, sir," spoke up quickly the little man. "I may be a baker ghost, but I 'm not the ghost of a baker; not yet."

"Are you two in one?" asked Lord Crabstairs. "If not, where is the other one of you?"

"My brother," said the little man, "who, with me, gave our business its firm name, is not now living."

"Then," said Lord Crabstairs, "Griscom Brothers is half dead, and has a right to be a half ghost."

"Aha!" said the little man. "That's about right. Half the time I'm a baker, and half the time a ghost. And now, then, if you folks care to hear all about it, I'm ready to talk."

"Care to hear!" said Dolor Tripp. "I'm on pins and needles to hear!"

The fire was now built up afresh, and again we placed ourselves on our chairs, stools, and boxes about the hearth, Griscom Brothers

having a place in the middle, between Dolor Tripp and Doris. I happened to notice that in this arrangement the schoolmaster was left out, and was standing back of our half-circle. But as the schoolmaster was evidently a humble-minded person and did not appear to object to his position, I thought it wise not to disturb the company by interrupting the story which the baker had just begun.

(To be continued.)

Frank R. Stockton.

A GOD OF THE AZTECS.

[The Aztecs chose a youth without blemish, gave him a palace and household, and worshiped him as a god for a year, and then sacrificed him to the god he represented.]

MY fawn, my bride of an hour,
Dark as a dusky cloud,
Lithe-limbed, shadowy-browed,
Why do you droop and cower
As the languid lilies nod
With the weight of the sunset shower?
Is it sad, my fawn, my flower,
To be the bride of a god?

Have you left the garden gloom,
To be sad here for my sake —
To sit in the pillared room,
With your tender, tearful gaze;
Have you left the garden ways
And the women half awake —
My silent, statuesque women —
As cool and calm as the lake
That they lave the languid limb in?

Do you find me fair, my flower,
That you look with troubled eyes —
Fashioned without a flaw
For a god and a sacrifice?
I walk in the morning hour
And the people gather in awe,
The people gather and gaze
As I walk in the crowded ways;
The flowers are on my head,
The flowers are under my feet;
I touch my lute in the street,
And the throng with the lute are led.

Do you shrink from the scent of the flowers?
Do you start at the lute's soft sound?
Do you count the passing hours —
The hours of my pomp and pride —
Do you think of the day, my bride,
That the circling stars bring round,
The day when my feet shall ascend
Where the altar-stone is laid —
The day when my hand shall rend
The lute whereon I have played —
When I lay my godhood down
With the robes that the god arrayed,
And part my blossoming crown,
And fling the flowers to the gale

From the temple tops, for a token
That the pride of man shall be broken,
And the beauty of man shall fade,
And the life of man shall fail —
When we wind with steps unsteady
Up the sides of the pyramid,
When we wind, now seen, now hid
From the eyes of the gazing city —
While the black-robed priest stands ready
With the sullen fire in his eyes,
With the knife for the sacrifice —
The priest who has outlived pity?

Do you start, and tremble, and shiver
As you lie on my heart, my bride?
Do you fancy how it will quiver
As it quivers against your own,
Rent from the shuddering side,
Held up to the sun on high —
Cast on the altar-stone?
And is it so sad, my bride,
To have been a god — and to die?
I am fair, my flower, my fawn,
I am strong and supple and slim —
I must die in my perfect dawn,
With the bowl of life at the brim,
Ere the foot can gather a stain
From the earth it has scarcely trod,
Or the eye begin to dim,
Or the blood begin to wane
From body, and brow, and limb
That have borne the name of a god!

My heart shall break on the altar,
And yours shall break for this!
I will drain your love like wine,
At the single draught of a kiss,
And grow too strong to falter
For the thought of the things I miss;
And upon your lips resign
The less for the larger bliss —
The smiles that might have been mine
For one of your tender tears,
And a life of common years
For a year of the life divine!

Helen Thayer Hutcheson.

ANDREW JOHNSON. (FROM A PHOTOGRAPH BY BRADY.)

ABRAHAM LINCOLN: A HISTORY.¹

THE FOURTEENTH OF APRIL—THE FATE OF THE ASSASSINS —THE MOURNING PAGEANT.

BY JOHN G. NICOLAY AND JOHN HAY, PRIVATE SECRETARIES TO THE PRESIDENT.

THE FOURTEENTH OF APRIL.

THE 14th of April was a day of deep and tranquil happiness throughout the United States. It was Good Friday, observed by a portion of the people as an occasion of fasting and religious meditation; but even among the most devout the great tidings of the preceding week exerted their joyous influence, and changed this period of traditional mourning into an occasion of

general and profound thanksgiving. Peace, so strenuously fought for, so long sought and prayed for, with prayers uttered and unutterable, was at last near at hand, its dawn visible on the reddening hills. The sermons all day were full of gladness; the Misereres turned of themselves to Te Deums. The country from morning till evening was filled with a solemn joy; but the date was not to lose its awful significance in the calendar: at night it was claimed once more, and forever, by a world-wide sorrow.

¹ Copyright by J. G. Nicolay and John Hay, 1886. All rights reserved.

The thanksgiving of the nation found its principal expression at Charleston harbor. A month before, when Sherman had "conquered Charleston by turning his back upon it," the Government resolved that the flag of the Union should receive a conspicuous reparation on the spot where it had first been outraged. It was ordered by the President that General Robert Anderson should, at the hour of noon on the 14th day of April, raise and plant on the ruins of Fort Sumter the identical flag lowered and saluted by him four years before. In the absence of General Sherman the ceremonies were in the charge of General Gillmore. Henry Ward Beecher, the most famous of the anti-slavery preachers of the North, was selected to deliver an oration. The surrender of Lee, the news of which arrived at Charleston on the eve of the ceremonies, gave a more transcendent importance to the celebration, which became at once the occasion of a national thanksgiving over the downfall of the rebellion. On the day fixed, Charleston was filled with a great concourse of distinguished officers and citizens. Its long-deserted streets were crowded with an eager multitude and gay with innumerable flags, while the air was thrilled from an early hour with patriotic strains from the many bands, and shaken with the thunder of Dahlgren's fleet, which opened the day by firing from every vessel a national salute of twenty-one guns. By eleven o'clock a brilliant gathering of boats, ships, and steamers of every sort had assembled around the battered ruin of the fort; the whole bay seemed covered with the vast flotilla, planted with a forest of masts, whose foliage was the triumphant banners of the nation. The same chaplain¹ who had officiated at the raising of the flag over Sumter, at the first scene of the war, now offered a prayer; Dr. Richard S. Storrs and the people read, in alternate verses, a selection of psalms of thanksgiving and victory, beginning with these marvelous words which have preserved for so many ages the very pulse and throb of the joy of redemption:

When the Lord turned again the captivity of Zion, we were like them that dream.

Then was our mouth filled with laughter, and our tongue with singing: then said they among the heathen, The Lord hath done great things for them.

The Lord hath done great things for us; whereof we are glad.

Turn again our captivity, O Lord, as the streams in the south.

They that sow in tears shall reap in joy.

He that goeth forth and weepeth, bearing precious seed, shall doubtless come again with rejoicing, bringing his sheaves with him.

¹ The Rev. Matthias Harris.

² Gen. E. D. Townsend, afterwards Adjutant-General, U. S. A.

And at the close, before the Gloria, the people and the minister read all together, in a voice that seemed to catch the inspiration of the hour:

Some trust in chariots, and some in horses: but we will remember the name of the Lord our God.

We will rejoice in thy salvation, and in the name of our God we will set up our banners.

General Townsend² then read the original dispatch announcing the fall of Sumter, and precisely as the bells of the ships struck the hour of noon, General Anderson, with his own hands seizing the halyards, hoisted to its place the flag which he had seen lowered before the opening guns of rebellion. As the starry banner floated out upon the breeze, which freshened at the moment as if to embrace it, a storm of joyful acclamation burst forth from the vast assembly, mingled with the music of hundreds of instruments, the shouts of the people, and the full-throated roar of great guns from the Union and the captured rebel forts alike, on every side of the harbor, thundering their harmonious salute to the restored banner. General Anderson made a brief and touching speech, the people sang "The Star-Spangled Banner," Mr. Beecher delivered an address in his best and gravest manner, filled with an earnest, sincere, and unboastful spirit of nationality; with a feeling of brotherhood to the South, prophesying for that section the advantages which her defeat has in fact brought her; a speech as brave, as gentle, and as magnanimous as the occasion demanded. In concluding he said, and we quote his words, as they embodied the opinion of all men of good will on this last day of Abraham Lincoln's life:

We offer to the President of these United States our solemn congratulations that God has sustained his life and health under the unparalleled burdens and sufferings of four bloody years, and permitted him to behold this auspicious consummation of that national unity for which he has waited with so much patience and fortitude, and for which he has labored with such disinterested wisdom.

At sunset another national salute was fired; the evening was given up to social festivities; the most distinguished of the visitors were entertained at supper by General Gillmore; a brilliant show of fireworks by Admiral Dahlgren illuminated the bay and the circle of now friendly forts, at the very moment when at the capital of the nation a little group of conspirators were preparing the blackest crime which sullies the record of the century.

In Washington also it was a day, not of exultation, but of deep peace and thankfulness. It was the fifth day after the surrender of Lee; the first effervescence of that intoxicating success had passed away. The President had,

with that ever-present sense of responsibility which distinguished him, given his thoughts instantly to the momentous question of the restoration of the Union and harmony between the lately warring sections. He had, in defiance of precedent and even of his own habit, delivered to the people on the 11th, from the windows of the White House, his well-considered views as to the measures demanded by the times. His whole heart was now enlisted in the work of "binding up the nation's wounds," of doing all which might "achieve and cherish a just and lasting peace." Grant had arrived that morning in Washington and immediately proceeded to the Executive Mansion, where he met the Cabinet, Friday being their regular day of meeting. He expressed some anxiety as to the news from Sherman, which he was expecting hourly. The President answered him in that singular vein of poetic mysticism which, though constantly held in check by his strong common sense, formed a remarkable element in his character. He assured Grant that the news would come soon and come favorably, for he had last night had his usual dream which preceded great events. He seemed to be, he said, in a singular and indescribable vessel, but always the same, moving with great rapidity towards a dark and indefinite shore; he had had this dream before Antietam, Murfreesboro', Gettysburg, and Vicksburg. The Cabinet were greatly impressed by this story; but Grant, the most matter-of-fact of created beings, made the characteristic response that "Murfreesboro' was no victory, and had no important results." The President did not argue this point with him, but repeated that Sherman would beat or had beaten Johnston; that his dream must relate to that, as he knew of no other important event which was likely at present to occur.¹

The subject of the discussion which took place in the Cabinet on that last day of Lincoln's firm and tolerant rule has been preserved for us in the notes of Mr. Welles. They were written out, it is true, seven years afterwards, at a time when Grant was President, seeking reelection, and when Mr. Welles had followed Andrew Johnson into full fellowship with the Democratic party. Making whatever allowance is due for the changed environment of the writer, we still find his account² of the day's conversation candid and trustworthy. The subject of trade between the

States was the first that engaged the attention of the Cabinet. Mr. Stanton wished it to be carried on under somewhat strict military supervision; Mr. Welles was in favor of a more liberal system; Mr. McCulloch, new to the Treasury, and embarrassed by his grave responsibilities, favored the abolition of the Treasury agencies, and above all desired a definite understanding of the purpose of the Government. The President, seeing that in this divergence of views among men equally able and honest there lay the best chance of a judicious arrangement, appointed the three Secretaries as a commission with plenary power to examine the whole subject, announcing himself as content in advance with their conclusions.

The great subject of the reestablishment of civil government in the Southern States was then taken up. Mr. Stanton had, a few days before, drawn up a project for an executive ordinance for the preservation of order and the rehabilitation of legal processes in the States lately in rebellion. The President, using this sketch as his text, not adopting it as a whole, but saying that it was substantially the result of frequent discussions in the Cabinet, spoke at some length on the question of reconstruction, than which none more important could ever engage the attention of the Government. It was providential, he thought, that this matter should have arisen at a time when it could be considered, so far as the Executive was concerned, without interference by Congress. If they were wise and discreet, they should reanimate the States and get their governments in successful operation, with order prevailing and the Union reestablished, before Congress came together in December. The President felt so kindly towards the South, he was so sure of the Cabinet under his guidance, that he was anxious to close the period of strife without overmuch discussion. He was particularly desirous to avoid the shedding of blood, or any vindictiveness of punishment. He gave plain notice that morning that he would have none of it. "No one need expect he would take any part in hanging or killing these men, even the worst of them."³ Frighten them out of the country, open the gates, let down the bars, scare them off," said he, throwing up his hands as if scaring sheep. "Enough lives have been sacrificed; we must extinguish our resentments if we expect harmony and union."⁴ He depre-

¹ This story is told by the Hon. Gideon Welles in an article printed in "The Galaxy" for April, 1872. It was frequently told by Charles Dickens with characteristic amplifications. See also "The Life of George Eliot."

² "The Galaxy," April, 1872.

³ Welles, in "The Galaxy."

⁴ Near the close of the war his old friend, Joseph Gillespie, asked him what was to be done with the

rebels. He answered, after referring to the vehement demand prevalent in certain quarters for exemplary punishment, by quoting the words of David to his nephews, who were asking for vengeance on Shimei because "he cursed the Lord's anointed": "What have I to do with you, ye sons of Zeruiah, that ye should this day be adversaries unto me? Shall there any man be put to death this day in Israel?"

cated the disposition he had seen in some quarters to hector and dictate to the people of the South, who were trying to right themselves. He regretted that suffrage, under proper arrangement, had not been given to negroes in Louisiana, but he held that their constitution was in the main a good one. He was averse to the exercise of arbitrary powers by the Executive or by Congress. Congress had the undoubted right to receive or reject members; the Executive had no control in this; but the Executive could do very much to restore order in the States, and their practical relations with the Government, before Congress came together.

Mr. Stanton then read his plan for the temporary military government of the States of Virginia and North Carolina, which for this purpose were combined in one department. This gave rise at once to extended discussion, Mr. Welles and Mr. Dennison opposing the scheme of uniting two States under one government. The President closed the session by saying the same objection had occurred to him, and by directing Mr. Stanton to revise the document and report separate plans for the government of the two States. He did not wish the autonomy nor the individuality of the States destroyed. He commended the whole subject to the most earnest and careful consideration of the Cabinet; it was to be resumed on the following Tuesday; it was, he said, the great question pending—they must now begin to act in the interest of peace.

These were the last words that Lincoln spoke to his Cabinet. They dispersed with these words of clemency and good-will in their ears, never again to meet under his wise and benignant chairmanship. He had told them that morning a strange story, which made some demand upon their faith, but the circumstances under which they were next to come together were beyond the scope of the wildest fancy. The day was one of unusual enjoyment to Mr. Lincoln. His son Robert had returned from the field with General Grant, and the President spent an hour with the young soldier in delighted conversation over the campaign. He denied himself generally to the throng of visitors, admitting only a few friends.

Schuyler Colfax, who was contemplating a visit overland to the Pacific, came to ask whether the President would probably call an extra session of Congress during the summer. Mr. Lincoln assured him that he had no such intention, and gave him a verbal message to

the mining population of Colorado and the western slope of the mountains concerning the part they were to take in the great conquests of peace which were coming. In the afternoon he went for a long drive with Mrs. Lincoln. His mood, as it had been all day, was singularly happy and tender. He talked much of the past and the future; after four years of trouble and tumult he looked forward to four years of comparative quiet and normal work; after that he expected to go back to Illinois and practice law again. He was never simpler or gentler than on this day of unprecedented triumph; his heart overflowed with sentiments of gratitude to Heaven, which took the shape usual to generous natures, of love and kindness to all men.

From the very beginning of his Presidency Mr. Lincoln had been constantly subject to the threats of his enemies and the warnings of his friends. The threats came in every form; his mail was infested with brutal and vulgar menace, mostly anonymous, the proper expression of vile and cowardly minds. The warnings were not less numerous; the vaporings of village bullies, the extravagances of excited secessionist politicians, even the drolling of practical jokers, were faithfully reported to him by zealous or nervous friends. Most of these communications received no notice. In cases where there seemed a ground for inquiry it was made, as carefully as possible, by the President's private secretary and by the War Department, but always without substantial result. Warnings that appeared to be most definite, when they came to be examined proved too vague and confused for further attention. The President was too intelligent not to know he was in some danger. Madmen frequently made their way to the very door of the Executive offices and sometimes into Mr. Lincoln's presence.¹ He had himself so sane a mind, and a heart so kindly even to his enemies, that it was hard for him to believe in a political hatred so deadly as to lead to murder. He would sometimes laughingly say, "Our friends on the other side would make nothing by exchanging me for Hamlin," the Vice-President having the reputation of more radical views than his chief.

He knew indeed that incitements to murder him were not uncommon in the South. An advertisement had appeared in a paper of Selma, Alabama, in December, 1864, opening a subscription for funds to effect the assassination of Lincoln, Seward, and Johnson before the

¹ All Presidents receive the visits of persons more or less demented. Mr. Hayes, when about to retire one day from his working-room, asked his messenger if there was any one waiting to see him. "Only two," the attendant replied, "and one of them is crazy."

"Send in the sane one," said the President. A grave-looking man was introduced, who announced himself as the emperor of the world. The President rang the bell, and told the messenger if that was his idea of sanity to send in the maniac.

inauguration.¹ There was more of this murderous spirit abroad than was suspected. A letter was found in the Confederate Archives² from one Lieutenant Alston, who wrote to Jefferson Davis immediately after Lincoln's reelection offering to "rid his country of some of her deadliest enemies by striking at the very heart's blood of those who seek to enchain her in slavery." This shameless proposal was referred, by Mr. Davis's direction, to the Secretary of War; and by Judge Campbell, Assistant Secretary of War, was sent to the Confederate Adjutant-General indorsed "for attention." We can readily imagine what reception an officer would have met with who should have laid before Mr. Lincoln a scheme to assassinate Jefferson Davis. It was the uprightness and the kindness of his own heart that made him slow to believe that any such ignoble fury could find a place in the hearts of men in their right minds. Although he freely discussed with the officials about him the possibilities of danger, he always considered them remote, as is the habit of men constitutionally brave, and positively refused to torment himself with precautions for his own safety. He would sum the matter up by saying that both friends and strangers must have daily access to him in all manner of ways and places; his life was therefore in reach of any one, sane or mad, who was ready to murder and be hanged for it; that he could not possibly guard against all danger unless he were to shut himself up in an iron box, in which condition he could scarcely perform the duties of a President; by the hand of a murderer he could die only once; to go continually in fear would be to die over and over. He therefore went in and out before the people, always unarmed, generally unattended. He would receive hundreds of visitors in a day, his breast bare to pistol or knife. He would walk at midnight, with a single secretary or alone, from the Executive Mansion to the War Department, and back. He would ride through the lonely roads of an uninhabited suburb from the White House to the Soldiers' Home in the dusk of evening, and return to his work in the morning before the town was astir. He was greatly annoyed when, late in the war, it was decided that there must be a guard stationed at the Executive Mansion, and that a squad of cavalry must accompany him on his daily ride—but he was always reasonable and yielded to the best judgment of others.

Four years of threats and boastings, of alarms that were not founded, and of plots

that came to nothing, thus passed away; but precisely at the time when the triumph of the nation over the long insurrection seemed assured, and a feeling of peace and security was diffused over the country, one of the conspiracies, not seemingly more important than the many abortive ones, ripened in the sudden heat of hatred and despair. A little band of malignant secessionists, consisting of John Wilkes Booth, an actor, of a famous family of players, Lewis Powell, alias Payne, a disbanded rebel soldier from Florida, George Atzerodt, formerly a coachmaker, but more recently a spy and blockade runner of the Potomac, David E. Herold, a young druggist's clerk, Samuel Arnold and Michael O'Laughlin, Maryland secessionists and Confederate soldiers, and John H. Surratt, had their ordinary rendezvous at the house of Mrs. Mary E. Surratt,³ the widowed mother of the last named, formerly a woman of some property in Maryland, but reduced by reverses to keeping a small boarding-house in Washington. Booth was the leader of the little coterie. He was a young man of twenty-six, strikingly handsome, with a pale olive face, dark eyes, and that ease and grace of manner which came to him of right from his theatrical ancestors. He had played for several seasons with only indifferent success; his value as an actor lay rather in his romantic beauty of person than in any talent or industry he possessed. He was a fanatical secessionist; had assisted at the capture and execution of John Brown, and had imbibed, at Richmond and other Southern cities where he had played, a furious spirit of partisanship against Lincoln and the Union party. After the reelection of Mr. Lincoln, which rang the knell of the insurrection, Booth, like many of the secessionists North and South, was stung to the quick by disappointment. He visited Canada, consorted with the rebel emissaries there, and at last—whether or not at their instigation cannot certainly be said—conceived a scheme to capture the President and take him to Richmond. He spent a great part of the autumn and winter inducing a small number of loose fish of secession sympathies to join him in this fantastic enterprise. He seemed always well supplied with money, and talked largely of his speculations in oil as a source of income; but his agent afterwards testified⁴ that he never realized a dollar from that source; that his investments, which were inconsiderable, were a total loss. The winter passed away and nothing was accomplished. On the 4th of March, Booth was at the Capitol and created a disturbance by trying to force his way through the line of policemen who guarded the passage through which the President walked to the east front of the building.⁵ His

⁴ Pitman, p. 45.

⁵ He was seized and held back by John W. Westfall, of the Capitol Police.

intentions at this time are not known; he afterwards said¹ he lost an excellent chance of killing the President that day. There are indications in the evidence given on the trial of the conspirators that they suffered some great disappointment in their schemes in the latter part of March, and a letter from Arnold to Booth,² dated March 27, showed that some of them had grown timid of the consequences of their contemplated enterprise and were ready to give it up. He advised Booth, before going further, "to go and see how it will be taken in R—d." But timid as they might be by nature, the whole group was so completely under the ascendancy of Booth that they did not dare disobey him when in his presence; and after the surrender of Lee, in an access of malice and rage which was akin to madness, he called them together and assigned each his part in the new crime, the purpose of which had arisen suddenly in his mind out of the ruins of the abandoned abduction scheme. This plan was as brief and simple as it was horrible. Powell, alias Payne, the stalwart, brutal, simple-minded boy from Florida, was to murder Seward; Atzerodt, the comic villain of the drama, was assigned to remove Andrew Johnson; Booth reserved for himself the most difficult and most conspicuous rôle of the tragedy; it was Herold's duty to attend him as a page and aid in his escape. Minor parts were assigned to stage carpenters and other hangers-on, who probably did not understand what it all meant. Herold, Atzerodt, and Surratt had previously deposited at a tavern at Surrattsville, Maryland, owned by Mrs. Surratt, but kept by a man named Lloyd, a quantity of ropes, carbines, ammunition, and whisky, which were to be used in the abduction scheme. On the 11th of April Mrs. Surratt, being at the tavern, told Lloyd to have the shooting irons in readiness, and on Friday, the 14th, again visited the place and told him they would probably be called for that night.

The preparations for the final blow were made with feverish haste; it was only about noon of the 14th that Booth learned the President was to go to Ford's Theater that night. It has always been a matter of surprise in Europe that he should have been at a place of amusement on Good Friday; but the day was not kept sacred in America, except by the members of certain churches. It was not, throughout the country, a day of religious observance. The President was fond of the theater; it was one of his few means of recreation. It was natural enough that, on this day of profound national thanksgiving, he

should take advantage of a few hours' relaxation to see a comedy. Besides, the town was thronged with soldiers and officers, all eager to see him; it was represented to him that appearing occasionally in public would gratify many people whom he could not otherwise meet. Mrs. Lincoln had asked General and Mrs. Grant to accompany her; they had accepted, and the announcement that they would be present was made as an advertisement in the evening papers; but they changed their minds and went north by an afternoon train. Mrs. Lincoln then invited in their stead Miss Harris and Major Rathbone, the daughter and the stepson of Senator Harris. The President's carriage called for these young people, and the four went together to the theater. The President had been detained by visitors, and the play had made some progress when he arrived. When he appeared in his box the band struck up "Hail to the Chief," the actors ceased playing, and the audience rose, cheering tumultuously; the President bowed in acknowledgment of this greeting and the play went on.

From the moment Booth ascertained the President's intention to attend the theater in the evening his every action was alert and energetic. He and his confederates, Herold, Surratt, and Atzerodt, were seen on horseback in every part of the city. He had a hurried conference with Mrs. Surratt before she started for Lloyd's tavern. He intrusted to an actor named Matthews a carefully prepared statement of his reasons for committing the murder, which he charged him to give to the publisher of the "National Intelligencer," but which Matthews, in the terror and dismay of the night, burned without showing to any one.³ Booth was perfectly at home in Ford's Theater, where he was greatly liked by all the employees, without other reason than the sufficient one of his youth and good looks. Either by himself or with the aid of his friends he arranged his whole plan of attack and escape during the afternoon. He counted upon address and audacity to gain access to the small passage behind the President's box; once there, he guarded against interference by an arrangement of a wooden bar to be fastened by a simple mortise in the angle of the wall and the door by which he entered, so that the door could not be opened from without. He even provided for the contingency of not gaining entrance to the box by boring a hole in its door, through which he might either observe the occupants or take aim and shoot. He hired at a livery stable a small, fleet horse, which he showed with pride during the day to barkeepers and loafers among his friends.

The moon rose that night at ten o'clock.

DIAGRAM OF THE BOX IN FORD'S THEATER.
(COPIED FROM THE DRAWING IN THE WAR DEPARTMENT.)

A few minutes before that hour he called one of the underlings of the theater to the back door and left him there holding his horse. He then went to a saloon near by, took a drink of brandy, and, entering the theater, passed rapidly through the crowd in rear of the dress circle and made his way to the passage leading to the President's box. He showed a card to a servant in attendance and was allowed to pass in. He entered noiselessly, and, turning, fastened the door with the bar he had previously made ready, without disturbing any of the occupants of the box, between whom and himself there yet remained the slight partition and the door through which he had bored the hole. Their eyes were fixed upon the stage; the play was "Our American Cousin," the original version by Tom Taylor, before Sothorn had made a new work of it by his elaboration of the part of *Dundreary*. No one, not even the comedian on the stage, could ever remember the last words of the piece that were uttered that night—the last Abraham Lincoln heard upon earth. The whole performance remains in the memory of those who heard it a vague phantasmagoria, the actors the thinnest of specters. The awful tragedy in the box makes everything else seem pale and unreal. Here were five human beings in a narrow space—the greatest man of his time, in the glory of the most stupendous success in our history, the idolized chief of a nation already mighty, with illimitable vistas of grandeur to come; his beloved wife, proud and

happy; a pair of betrothed lovers, with all the promise of felicity that youth, social position, and wealth could give them; and this young actor, handsome as Endymion upon Latmos, the pet of his little world. The glitter of fame, happiness, and ease was upon the entire group, but in an instant everything was to be changed with the blinding swiftness of enchantment. Quick death was to come on the central figure of that company—the central figure, we believe, of the great and good men of the century. Over all the rest the blackest fates hovered menacingly—fates from which a mother might pray that kindly death would save her children in their infancy. One was to wander with the stain of murder on his soul, with the curses of a world upon his name, with a price set upon his head, in frightful physical pain, till he died a dog's death in a burning barn; the stricken wife was to pass the rest of her days in melancholy and madness; of those two young lovers, one was to slay the other, and then end his life a raving maniac.

The murderer seemed to himself to be taking part in a play. The fumes of brandy and partisan hate had for weeks kept his brain in a morbid state. He felt as if he were playing Brutus off the boards; he posed, expecting applause. Holding a pistol in one hand and a knife in the other, he opened the box door, put the pistol to the President's head, and fired; dropping the weapon, he took the knife in his right hand, and when Major Rathbone sprang to seize him he struck savagely at him. Major Rathbone received the blow on his left arm, suffering a wide and deep wound. Booth, rushing forward, then placed his left hand on the railing of the box and vaulted lightly over to the stage. It was a high leap, but nothing to such a trained athlete. He was in the habit of introducing what actors call sensational leaps in his plays. In "Macbeth," where he met the weird sisters, he leaped from a rock twelve feet high. He would have got safely away but for his spur catching in the folds of the Union flag with which the front of the box was draped. He fell on the stage, the torn flag trailing on his spur, but instantly rose as if he had received no hurt, though in fact the fall had broken his leg, turned to the audience, brandishing his dripping knife and shouting the State motto of Virginia, "Sic Semper Tyrannis,"¹ and fled rapidly across the stage and out of sight. Major Rathbone had shouted, "Stop him!" The cry went out, "He has shot the President!" From the audience, at first stupid with surprise

¹ Mr. Leopold de Gaillard, writing on the 29th of April, 1865, refers to these words of Booth, which he calls a "stupid phrase" and not American in char-

acter. "I remember," he adds, "but one assassination adorned with a Latin quotation, but it took place in Florence, and in the sixteenth century. Lorenzo

and afterwards wild with excitement and horror, two or three men jumped upon the stage in pursuit of the flying assassin; but he ran through the familiar passages, leaped upon his horse, which was in waiting in the alley behind, rewarded with a kick and a curse the call-boy who had held him, and rode rapidly away in the light of the just risen moon.

The President scarcely moved; his head drooped forward slightly, his eyes closed. Colonel Rathbone, at first not regarding his own grievous hurt, rushed to the door of the box to summon aid. He found it barred, and on the outside some one was beating and clamoring for entrance. He opened the door; a young officer named Crawford entered; one or two army surgeons soon followed, who hastily examined the wound. It was at once seen to be mortal. It was afterwards ascertained that a large derring bullet had entered the back of the head on the left side, and, passing through the brain, had lodged just behind the left eye. By direction of Rathbone and Crawford, the President was carried to a house across the street and laid upon a bed in a small room at the rear of the hall, on the ground floor. Mrs. Lincoln followed, half distracted, tenderly cared for by Miss Harris. Rathbone, exhausted by loss of blood, fainted, and was carried home. Messengers were sent for the members of the Cabinet, for the Surgeon-General, for Dr. Stone, the President's family physician; a crowd of people rushed instinctively to the White House and, bursting through the doors, shouted the dreadful news to Robert Lincoln and Major Hay, who sat gossiping in an upper room. They ran downstairs. Finding a carriage at the door, they entered it to go to Tenth street. As they were driving away, a friend came up and told them that Mr. Seward and most of the Cabinet had been murdered. The news was all so improbable that they could not help hoping it was all untrue. But when they got to Tenth street and found every thoroughfare blocked by the swiftly gathering thousands, agitated by tumultuous excitement, they were prepared for the worst. In a few minutes all who had been sent for, and many others, were gathered in the little chamber where the Chief of the State lay in his agony. His son was met at the door by Dr. Stone, who with grave tenderness informed him that there was no hope. After a natural outburst of grief young Lincoln devoted himself the rest of the night to soothing and comforting his mother.

The President had been shot a few minutes past ten. The wound would have brought in-

treacherously killed his cousin, Alexander de Medicie, who was in reality a tyrant, and left in writing near the body the line of Virgil on Brutus: *Vincet Amor patria*

FORD'S THEATRE

TENTH STREET, ABOVE E.

SEASON II WEEK XXXI NIGHT 196
WHOLE NUMBER OF NIGHTS, 498.

JOHN T. FORD PROPRIETOR AND MANAGER
(Also of Holiday St. Theatre, Baltimore, and Academy of Music, Phila.)

EDWIN ADAMS

FOR TWELVE NIGHTS ONLY.

FACSIMILE OF A PLAY-BILL FOUND IN PRESIDENT LINCOLN'S BOX AFTER THE ASSASSINATION. THE ORIGINAL IS OWNED BY E. A. EMERSON, OF LYNNCHBURG, VA.

J. A. Case, of Brooklyn, also has a play-bill, given to A. K. Brown by John T. Ford, the proprietor of Ford's Opera House in Washington, who noted on it that it was found under President Lincoln's chair.—EDITOR.

laudumque immensa Cupido. It was the thirst of fame which was the real incentive to these savage deeds." [Gazette of France, April 30, 1865.]

stant death to most men, but his vital tenacity was extraordinary. He was, of course, unconscious from the first moment; but he breathed with slow and regular respiration throughout the night. As the dawn came, and the lamplight grew pale in the fresher beams, his pulse began to fail; but his face even then was scarcely more haggard than those of the sorrowing group of statesmen and generals around him. His automatic moaning, which had continued through the night, ceased; a look of unspeakable peace came upon his worn features. At twenty-two minutes after seven he died.¹ Stanton broke the silence by saying, "Now he belongs to the ages." Dr. Gurley kneeled by the bedside and prayed fervently. The widow came in from the adjoining room supported by her son and cast herself with loud outcry on the dead body.

THE FATE OF THE ASSASSINS.

BOOTH had done his work efficiently. His principal subordinate, the young Floridian called Payne, had acted with equal audacity and cruelty, but not with equally fatal results. He had made a shambles of the residence of the Secretary of State, but among all his mangled victims there was not one killed. At eight o'clock that night he received his final orders from Booth,² who placed in his hands a knife and revolver, and a little package like a prescription, and taught him his lesson. Payne³ was a young man, hardly of age, of herculean strength, of very limited mental capacity, blindly devoted to Booth, who had selected him as the fitting instrument of his mad hatred. He obeyed the orders of his fascinating senior as exactly and remorselessly as a steel machine. At precisely the moment when Booth entered the theater, Payne came on horseback to the door of Mr. Seward's residence on Lafayette Square.⁴ Dismounting, he pretended to be a messenger from the attending physician, with a package of medicine, and demanded immediate access to the sick-room of the Secretary. Mr. Seward had been thrown from his carriage a few days before and his right arm and jaw were fractured. The servant at the door tried to prevent Payne from going up the stairs, but he persisted, and the noise the two men made in mounting brought Frederick Seward out into the hall. The Secretary had been very restless and had with difficulty at

last been composed to sleep. Fearing that this restorative slumber might be broken, Frederick Seward came out to check the intruders. He met Payne at the head of the stairs, and after hearing his story bade him go back, offering himself to take charge of the medicine. Payne seemed for an instant to give up his purpose in the face of this unexpected obstacle, but suddenly turned and rushed furiously upon Frederick Seward, putting a pistol to his head. It missed fire, and he then began beating him on the head with it, tearing his scalp and fracturing his skull. Still struggling, the two came to the Secretary's room and fell together through the door. Frederick Seward soon became unconscious and remained so for several weeks, being perhaps the last man in the civilized world who learned the strange story of the night. The Secretary lay on the farther side of the bed from the door; in the room was his daughter and a soldier-nurse named Robinson. They both sprang up at the noise of the disturbance; Payne struck them right and left out of his way, wounding Robinson with his knife; then rushed to the bed and began striking at the throat of the crippled statesman, inflicting three terrible wounds in cheek and neck; the Secretary rolled off between the bed and the wall. Robinson had by this time recovered himself and seized the assassin from behind, trying to pull him away from the bed. He fought with the quickness of a cat, stabbing Robinson twice severely over his shoulder, in spite of which the nurse still held on to him bravely. Colonel Augustus Seward, roused by his sister's screams, came in his nightdress into the room, and seeing the two forms in this deadly grapple thought at first his father was delirious and was struggling with the nurse; but noting in a moment the size and strength of the man, he changed his mind and thought that the nurse had gone mad and was murdering the Secretary. Nothing but madness was at first thought of anywhere to account for the night's work. He seized Payne, and after a struggle forced him out of the door—the assassin stabbing him repeatedly about the head and face. Payne broke away at last and ran rapidly downstairs, seriously wounding an attendant named Hansell on the way. He reached the door unhurt, leaped upon his horse, and rode leisurely away out Vermont Avenue to the eastern suburb. When surgical aid arrived, the quiet house, ordinarily so

and Leale; Major John Hay, A. A. G.; and Maunsell B. Field. Mr. Nicolay was in Charleston at the flag-raising over Sumter.

² Doster's speech, Pitman, p. 314.

³ His true name was Lewis Thornton Powell.

⁴ Now the residence of James G. Blaine, Secretary of State.

¹ The persons about the deathbed of the President, besides his wife and son, were Vice-President Johnson, all the Cabinet with the exception of Mr. Seward, viz: Stanton, Welles, McCulloch, Usher, Dennison, and Speed; Generals Halleck, Meigs, Farnsworth, Augur, and Todd; Senator Sumner; Rev. Dr. Gurley; Schuyler Colfax; Governor Farwell; Judges Cartter and Otto; Surgeon-General Barnes; Drs. Stone, Crane,

decorous and well ordered, the scene of an affectionate home life and an unobtrusive hospitality, looked like a field hospital; five of its inmates were bleeding from ghastly wounds, and two of them—among the highest officials of the nation—it was thought might never see the light of another day; though all providentially recovered.

The assassin left behind him in his flight his bloodstained knife, his revolver,—or rather the fragments of it, for he had beaten it to pieces over the head of Frederick Seward,—and his hat. This last apparently trivial loss cost him and one of his fellow-conspirators their lives; for as soon as he had left the immediate scene of his crime, his perceptions being quickened by a murderer's avenging fears, it occurred to him that the lack of a hat would expose him to suspicion wherever he was seen; so instead of making good his escape, he abandoned his horse and hid himself for two days in the woods east of Washington. Driven by hunger he at last resolved to return to the city, to the house on H street which had been the headquarters of the conspiracy. He made himself a cap from the sleeve of his woolen shirt, threw over his shoulder a pickax he had found in a trench, and coming into town under cover of the darkness knocked about midnight at Mrs. Surratt's door. As his fate would have it, the house was full of officers who had that moment arrested all the inmates and were about to take them to the office of the provost-marshal. Payne thus fell into the hands of justice, and the utterance of half a dozen words by him and the unhappy woman whose shelter he had sought was the death warrant of both. Being asked by Major Smith to give an account of himself, he said he had been hired by Mrs. Surratt to dig a drain for her. She was called out and asked if she knew him. Not being aware of what he had said, she raised her right hand, with uncalled-for solemnity, and said, "Before God, I do not know him, never saw him, and never hired him." These words, the evidence of a guilty secret shared between them, started a train of evidence which led them both to the scaffold.

Booth was recognized by dozens of people as he stood before the footlights and brandished his dripping dagger in a Brutus attitude. His swift horse quickly carried him beyond the reach of any haphazard pursuit. He gained the navy-yard bridge in a few minutes, was hailed by a sentry, but persuaded the sergeant of the guard that he was returning to his home in Charles County and that he had waited in

Washington till the moon should rise. He was allowed to pass, and shortly afterwards Herold came to the bridge and passed over with similar explanations. A moment later the owner of the horse which Herold rode came up in pursuit of his animal. He, the only honest man of the three, was turned back by the guard—the sergeant felt he must draw the linesomewhere. The assassin and his wretched acolyte came at midnight to Mrs. Surratt's tavern. Booth, whose broken leg was by this time giving him excruciating torture, remained outside, on his horse, and Herold went in, shouting to the inn-keeper to give him "those things." Lloyd, knowing what was meant, without a word brought the whisky, carbines, and field-glass which the Surratts had deposited there. Booth refused his gun, being unable in his crippled condition to carry it. Herold told Lloyd they had killed the President, and they rode away, leaving Lloyd, who was a sodden drunkard and contrabandist, unnerved by the news and by his muddy perception of his own complicity in the crime. He held his tongue for a day or two; but at last, overcome by fear, told all that he knew to the authorities. Booth and Herold pushed on through the moonlight to the house of an acquaintance of Booth, a rebel sympathizer, a surgeon named Samuel Mudd. The pain of his broken bone had become intolerable and day was approaching; aid and shelter had become pressingly necessary. Mudd received them kindly, set Booth's leg, and gave him a room where he rested until the middle of the afternoon; Mudd had a crutch made for him, and in the evening sent them on their desolate way to the South.

If Booth had been in health there is no reason why he should not have remained at large a good while; he might even have made his escape to some foreign country, though, sooner or later, a crime so prodigious will generally find its perpetrator out. But it is easy to hide among a sympathizing people. Many a Union soldier, escaping from prison, has walked hundreds of miles through the enemy's country relying implicitly upon the friendship of the negroes. Booth, from the hour he crossed the navy-yard bridge, though he met with a considerable number of men, was given shelter and assistance by every one whose sympathies were with the South. After parting with Dr. Mudd, he and Herold went to the residence of Samuel Cox,¹ near Port Tobacco, and were by him given into the charge of Thomas Jones, a contraband trader between Maryland and Richmond, a man so devoted

¹ What Booth and Herold were about during the week between the 15th and the 22d of April was not brought out upon the trial of the conspirators, but Mr. George Alfred Townsend, while making the ex-

tensive and careful studies for his historical novel, "Katy of Catocin," reconstructed the entire itinerary of the assassin, and published an admirably clear account of it in THE CENTURY MAGAZINE for April, 1884.

to the interests of the Confederacy that treason and murder seemed every-day incidents to be accepted as natural and necessary. He kept Booth and Herold in hiding, at the peril of his own life, for more than a week, feeding and caring for them in the woods near his house, watching for an opportunity to ferry them across the Potomac. He did this while every woodpath was haunted by Government detectives, while his own neighborhood was under strong suspicion, knowing that death would promptly follow his own detection, and that a reward was offered for the capture of his helpless charge which would make a rich man of any one who gave him up. So close was the search that Herold killed the horses on which they had ridden out of Washington for fear a neigh might betray them.

With such devoted aid Booth might have wandered a long way; but there is no final escape but suicide for an assassin with a broken leg. At each painful move the chances of discovery increased. Jones was indeed able, after repeated failures, to ferry his fated guests across the Potomac. Arriving on the Virginia side, they lived the lives of hunted animals for two or three days longer, finding to their horror that they were received by the strongest Confederates with more of annoyance than enthusiasm — though none indeed offered to betray them. At one house, while food was given him, hospitality was not offered.¹ Booth wrote the proprietor a note, pathetic in its attempted dignity, inclosing five dollars — “though hard to spare” — for his entertainment. He had by this time seen the comments of the newspapers on his work, and bitterer than death or wounds was the blow to his vanity.² He confided his feelings of wrong to his diary:

I struck boldly, and not as the papers say; I walked with a firm step through thousands of his friends; was stopped, but pushed on. A colonel was at his side. I shouted *Sic Semper* before I fired. In jumping broke my leg. I passed all his pickets. Rode sixty miles that night, with the bone of my leg tearing the flesh at every jump.

On Friday the 21st he writes:

After being hunted like a dog through swamps, woods, and last night chased by gun-boats till I was forced to return, wet, cold, and starving, with every man's hand against me, I am here in despair. And why? For doing what Brutus was honored for — what made Tell a hero.

He goes on comparing himself favorably with these stage heroes, and adds:

I struck for my country and that alone — a country that groaned beneath his tyranny and prayed for this end; and yet now behold the cold hand they extend to me.

He was especially grieved that the grandiloquent letter he had intrusted to his fellow-

actor Matthews — and which he in his terror had destroyed — had not been published. He thought the Government had wickedly suppressed it; he was tortured with doubts whether God would forgive him, whether it would not be better to go back to Washington and “clear his name.” “I am abandoned, with the curse of Cain upon me, when, if the world knew my heart, that one blow would have made me great.” With blessings on his mother, upon his wretched companion of crime and flight, upon the world which he thought was not worthy of him, he closed these strange outpourings, saying, “I do not wish to shed a drop of blood, but I must fight the course.”

The course was soon ended. At Port Conway, on the Rappahannock, Booth and Herold met three young men in Confederate uniforms. They were disbanded soldiers; but Herold, imagining that they were recruiting for the Southern army, told them his story with perfect frankness and even pride, saying, “We are the assassins of the President,” and asked their company into the Confederate lines. He was disappointed at learning they were not going South, but his confidence was not misplaced. The soldiers took the fugitives to Port Royal, and tried to get shelter for them, representing Booth as a wounded Confederate soldier. After one or two failures they found refuge on the farm of a man named Garrett on the road to Bowling Green.

On the night of the 25th of April a party under Lieutenant E. P. Doherty arrested, in his bed at Bowling Green, William Jett, one of the Confederate soldiers mentioned above, and forced him to guide them to Garrett's farm. Booth and Herold were sleeping in the barn. When called upon to surrender, Booth refused, and threatened to shoot young Garrett, who had gone in to get his arms. A parley took place, lasting some minutes. Booth offered to fight the party at a hundred yards, and when this was refused cried out in a theatrical tone, “Well, my brave boys, prepare a stretcher for me.” Doherty then told him he would fire the barn; upon this Herold came out and surrendered. The barn was fired, and while it was burning, Booth, who was clearly visible by the flames through the cracks in the building, was shot by Boston Corbett, a sergeant of cavalry, a soldier of a gloomy and fanatical disposition, which afterwards developed into insanity.³ Booth was hit in the back of the neck, not far from the place where he had shot the President. He lingered about three hours in great pain, conscious but nearly inarticulate, and died at seven in the morning.

¹ Trial of J. H. Surratt, p. 402.

² Ibid., p. 310.

³ He is still living, 1889, in an insane asylum in Kansas.

The surviving conspirators, with the exception of John H. Surratt, were tried by a military commission¹ sitting in Washington in the months of May and June. The charges against them specified that they were "incited and encouraged" to treason and murder by Jefferson Davis and the Confederate emissaries in Canada. This was not proved on the trial: the evidence bearing on the case showed frequent communication between Canada and Richmond and the Booth coterie in Washington, and some transactions in drafts at the Montreal Bank, where Jacob Thompson and Booth both kept their accounts. It was shown by the sworn testimony of a reputable witness that Jefferson Davis at Greensboro', on hearing of the assassination, expressed his gratification at the news; but this, so far from proving any direct complicity in the crime, would rather prove the opposite, as a conscious murderer usually conceals his malice.² Against all the rest the facts we have briefly stated were abundantly proved, though in the case of Mrs. Surratt the repugnance which all men feel at the execution of a woman induced the commission to unite in a recommendation to mercy, which President Johnson, then in the first flush of his zeal against traitors, disregarded.³ Habeas corpus proceedings were then resorted to, and failed in virtue of the President's orders to the military in charge of the prisoners. The sentences were accordingly executed: Mrs. Surratt, Payne, Herold, and Atzerodt were hanged on the 7th of July; Mudd, Arnold, and McLaughlin were imprisoned for life at the Tortugas, though the term was afterwards shortened, and Spangler, the scene shifter at the theater, was sentenced to six years of jail. John Surratt escaped to Canada, lay in hiding some months in a monastery, and in the autumn sailed for England under an assumed name. He wandered over Europe, enlisted in the Papal Zouaves, deserted and fled to Egypt, where he was detected and brought back to Washington in 1867. His trial lasted two months and ended in a disagreement of the jury.

THE MOURNING PAGEANT.

RECOUNTING the fate of these wretched malefactors has led us far afield. We will now

return to the morning of the 15th of April and sketch, in brief and wholly inadequate words, the honors which the nation paid to its dead. The appalling news spread quickly over the country; millions of citizens learned at their breakfast tables that the President had been shot and was dying; and two hours after his death, when a squad of soldiers were escorting his mortal remains to the Executive Mansion, the dreadful fact was known at all the great centers of population. This was the first time the telegraph had been called upon to spread over the world tidings of such deep and mournful significance; it was therefore the first time the entire people of the United States had been called to deplore the passing away of an idolized leader even before his body was cold in death. The news fell with peculiar severity upon hearts which were glowing with the joy of a great victory. For the last four days, in every city and hamlet of the land, the people were breaking forth into unusual and fantastic expressions of gaiety and content; bonfires flamed through the nights; the days were uproarious with the firing of guns; the streets were hung with flags and wreaths, and whatever decorations could be on the instant improvised by a people not especially gifted with the scenic sense; and committees were everywhere forming to arrange for elaborate and official functions of joy. Upon this mirth and expansion the awful intelligence from Washington fell with the crushing and stunning effect of an unspeakable calamity. In the sudden rigor of this unexpected misfortune the country lost sight of the vast national success of the past week; and it thus came to pass that there was never any organized expression of the general exultation or rejoicing in the North over the downfall of the rebellion. It was unquestionably best that it should be so; and Lincoln himself would not have had it otherwise. He hated the arrogance of triumph; and even in his cruel death he would have been glad to know that his passage to eternity would prevent too loud an exultation over the vanquished. As it was, the South could take no umbrage at a grief so genuine and so legitimate; the people of that section even shared, to a certain degree, in the lamentations over the bier of one whom in their

¹ This commission was composed of officers not only of high rank and distinction, but of unusual weight of character. They were Generals David Hunter, Lew Wallace, August V. Kautz, A. P. Howe, R. S. Foster, J. A. Ekin, T. N. Harris, Colonels C. H. Tompkins and D. R. Clendenin. The Judge Advocate and Recorder was Joseph Holt, assisted by the Hon. John A. Bingham and Colonel H. L. Burnett.

² Mr. Davis, in his "Rise and Fall of the Confederate Government," contradicts this evidence of Mr. Lewis F. Bates. He admits, however, that the dispatch, being read in his presence to the troops with him, elicited

cheers, "as was natural at news of the fall of one they considered their most powerful foe"; and he adds, "For an enemy so relentless, in the war for our subjugation, we could not be expected to mourn." When captured by General Wilson he affected to think he cleared himself of all suspicion in this regard by saying that Johnson was more objectionable to him than Lincoln—not noticing that the conspiracy contemplated the murder of both of them.

³ See argument of Pierrepont on trial of John H. Surratt, p. 77.

inmost hearts they knew to have wished them well.

There was one exception to the general grief too remarkable to be passed over in silence. Among the extreme radicals in Congress Mr. Lincoln's determined clemency and liberality towards the Southern people had made an impression so unfavorable that, though they were naturally shocked at his murder, they did not among themselves conceal their gratification that he was no longer in their way. In a political caucus, held a few hours after the President's death, they resolved on an entire change of the Cabinet, and a "line of policy less conciliatory than that of Mr. Lincoln; . . . the feeling was nearly universal"—we are using the language of one of their most prominent representatives¹—"that the accession of Johnson to the Presidency would prove a godsend to the country." The next day the Committee on the Conduct of the War called on the new President, and Senator Wade bluntly expressed to him the feeling of his associates: "Johnson, we have faith in you. By the gods, there will be no trouble now in running the Government."² Before many months passed away they had opportunity to learn that violence of speech was no guarantee of political consistency.

In Washington, with this singular exception, the manifestation of the public grief was immediate and demonstrative. The insignia of rejoicing at once disappeared, and within an hour after the body of the President was taken to the White House the town was shrouded in black. Not only the public buildings, the stores and shops, and the better class of residences were draped in funeral decorations, but a still more touching proof of the affection with which the dead man was regarded was seen in the poorest class of houses, where the laboring men of both colors found means in their penury to afford some scanty show of mourning. The interest and the veneration of the people still centered in the White House, where, under a tall catafalque in the east room, the late Chief of the State lay in the majesty of death, and not at the modest tavern on Pennsylvania Avenue where the new President had his lodging. At eleven o'clock Chief-Justice Chase administered the oath of office to Andrew Johnson in the presence of a few witnesses. He immediately summoned the Cabinet for a brief meeting. Mr. William Hunter was appointed Acting Secretary of State during the interim of the disability of Mr. Seward and his son, and directed to communicate to the country and the world the change in the head of the Government brought about

by the last night's crime. It was determined that the funeral ceremonies in Washington should be celebrated on Wednesday, the 19th of April, and all the churches throughout the country were invited to join at the same time "in solemnizing the occasion" by appropriate observances. All of pomp and circumstance which the Government could command was employed to give a fitting escort from the White House to the Capitol, where the body of the President was to lie in state. A splendidly appointed force of cavalry, artillery, and infantry formed the greater part of the procession, which was completed by delegations from Illinois and Kentucky as mourners, the new President, the Cabinet, the ministers of foreign powers, and all the high officers of the nation, legislative, judicial, and executive. The pall-bearers comprised the leading members of both houses of Congress and the officers of the highest rank in the army and navy.

The ceremonies in the east room were brief and simple. The Rev. Dr. Hall of the Church of the Epiphany read the burial service. Bishop Simpson of the Methodist Church, distinguished equally for his eloquence and his patriotism, offered a prayer, and the Rev. Dr. P. D. Gurley, at whose church the President and his family habitually attended worship, delivered a short address, commemorating, in language notably free from courtly flattery, the qualities of courage, purity, and sublime faith which had made the dead man great and useful. The coffin was carried to the funeral car, and the vast procession moved to the Capitol amid the tolling of all the bells in Washington, Georgetown, and Alexandria, and the booming of minute-guns at Lafayette Square, at the City Hall, and on the hill of the Capitol. To associate the pomp of the day with the greatest work of Lincoln's life, a detachment of colored troops marched at the head of the line. In the rotunda, under the soaring dome of the Capitol, the coffin rested during the day and night of the 19th and until the evening of the next day. The people passed by in thousands to gaze on the face of the liberator—which had taken on in death an expression of profound happiness and repose, like that so often seen on the features of soldiers shot dead in battle.

It had been decided from the first that the President was to be buried at Springfield. Whenever a President dies, whose personality, more than his office, has endeared him to the people, it is proposed that his body shall rest at Washington; but the better instinct of the country, no less than the natural feelings of the family, insist that his dust shall lie among his own neighbors and kin. It is fitting that Washington shall sleep at Mount Vernon, the Adamses at Quincy, that even Harrison and

¹ George W. Julian, "Political Recollections," p. 255.
² *Ibid.*, p. 257.

Taylor and Garfield, though they died in office, should be conveyed to the bosom of the States which had cherished them and sent them to the service of the nation. So Illinois claimed her greatest citizen for final sepulture amid the scenes which witnessed the growth and development of his unique character. The town of Springfield set apart a lovely spot in its northern suburb for his grave and appropriated \$20,000—a large sum considering the size and wealth of the town—to defray the expenses of his funeral. As soon as it was announced that he was to be buried in Illinois every town and city on the route begged that the train might halt within its limits and give its people the opportunity of testifying their grief and their reverence. It was finally arranged that the funeral cortège should follow substantially the same route over which Lincoln had come in 1861 to take possession of the place to which he had given a new dignity and value for all time.

Governor Brough of Ohio and Mr. John W. Garrett of Baltimore were placed in general charge of the solemn journey. A guard of honor consisting of a dozen officers of high rank in the army and navy¹ was detailed by their respective departments, which received the remains of the President at the station in Washington at eight o'clock on the morning of Friday, the 21st of April, and the train, decked in somber trappings, moved out towards Baltimore. In this city, through which, four years before, it was a question whether the President-elect could pass with safety to his life, the train made a halt; the coffin was taken with sacred care to the great dome of the Exchange, and there, surrounded by evergreens and lilies, it lay for several hours, the people passing by in mournful throngs. Night was closing in, with rain and wind, when the train reached Harrisburg, and the coffin was carried through the muddy streets to the State Capitol, where the next morning the same scenes of grief and affection were seen. We need not enumerate the many stopping-places of this mournful pageant. The same demonstration was repeated, gaining continually in intensity of feeling and solemn splendor of display, in every city through which the procession passed. At Philadelphia a vast concourse accompanied the dead President to Independence Hall: he had shown himself worthy of the lofty fate he courted when, on that hallowed spot, on the birthday of Washington, 1861, he had said he would rather be assassinated than give up the principles embodied in the Declaration of Independence.

THE FUNERAL CAR. (AFTER A PHOTOGRAPH BY P. RELVEA.)

Here, as at many other places, the most touching manifestations of loving remembrance came from the poor, who brought flowers twined by themselves to lay upon the coffin. The reception at New York was worthy alike of the great city and of the memory of the man they honored. The body lay in state in the City Hall and a half-million of people passed in deep silence before it. Here General Scott came, pale and feeble, but resolute, to pay his tribute of respect to his departed friend and commander.

The train went up the Hudson River by night, and at every town and village on the way vast crowds were revealed in waiting by the fitful glare of torches; dirges and hymns were sung as the train moved by. Midnight had passed when the coffin was borne to the Capitol at Albany, yet the multitude rushed in as if it were day, and for twelve hours the long line of people from northern New York and the neighboring States poured through the room.

Over the broad spaces of New York the cortège made its way, through one continuous crowd of mourners. At Syracuse thirty thousand people came out in a storm at midnight to greet the passing train with fires and bells and cannons; at Rochester the same solemn observances made the night memorable; at Buffalo—it was now the morning of the 27th—the body lay in state at St. James's Hall, visited by a multitude from the western countries. As the train passed into Ohio the crowds increased in density, and the public grief seemed intensified at every step westward; the people of the great central basin seemed to be claiming their own. The day spent at Cleveland was unexampled in the depth of emotion it brought to life, the warm devotion to the memory of the great man gone which was exhibited; some of the guard of honor have said that it was at that point they began to appreciate the place which Lincoln was to hold in history. The authorities, seeing that no building could accommodate the crowd which was sure to come from all over the

THE MONUMENT AT SPRINGFIELD. (AFTER A PHOTOGRAPH TAKEN BY J. A. W. PITTMAN FOR J. C. POWER.)

State, wisely erected in the public square an imposing mortuary tabernacle for the lying in state, brilliant with evergreens and flowers by day, and innumerable gas jets by night, and surmounted by the inscription, *Extinctus amabitur idem*. Impressive religious ceremonies were conducted in the square by Bishop McIlvaine, and an immense procession moved to the station at night between two lines of torchlights. Columbus and Indianapolis, the State capitals of Ohio and Indiana, were next visited. The whole State, in each case, seemed gathered to meet their dead hero; an intense personal regard was everywhere evident; it was the man, not the ruler, they appeared to be celebrating; the banners and scrolls bore principally his own words: "With malice towards none, with charity for all"; "The purposes of the Lord are perfect and must prevail"; "Let us resolve that the dead shall not have died in vain"; and other brief passages from his writings. On arriving in Chicago, on the 1st of May, amid a scene of magnificent mourning, the body was borne to the court-house, where it lay for two days under a canopy of somber richness, inscribed with that noble Hebrew lament, "The beauty of Israel is slain upon thy high places." From all the States of the Northwest an innumerable throng poured for

these two days into Chicago, and flowed, a mighty stream of humanity, past the coffin of the dead President, in the midst of evidences of public grief which was all the more genuine for being quiet and reserved.

The last stage of this extraordinary progress was the journey to Springfield, which began on the night of the 2d of May and ended at nine o'clock the next morning — the schedule made in Washington twelve days before having been accurately carried out. On all the railroads centering in Springfield the trains for several days had been crowded to their utmost capacity with people who desired to see the last of Abraham Lincoln upon earth. Nothing had been done or thought of for two weeks in Springfield but the preparations for this day; they were made with a thoroughness which surprised the visitors from the East. The body lay in state in the Capitol, which was richly draped from roof to basement in black velvet and silver fringe; within it was a bower of bloom and fragrance. For twenty-four hours an unbroken stream of people passed through, bidding their friend and neighbor welcome home and farewell, and at ten o'clock on the 4th of May the coffin lid was closed at last and a vast procession moved out to Oak Ridge, where the dead President was committed to the soil of the State which had so loved and honored him. The ceremonies at the grave were simple and touching. Bishop Simpson delivered a pathetic oration; prayers were offered and hymns were sung; but the weightiest and most eloquent words uttered anywhere that day were those of the Second Inaugural, which the committee had wisely ordained to be read over his grave, as the friends of Raphael chose the incomparable canvas of the Transfiguration as the chief ornament of his funeral.

An association was immediately formed to build a monument over the grave of Lincoln. The work was in the hands of his best and oldest friends in Illinois, and was pushed with vigor. Few large subscriptions were received, with the exception of \$50,000 voted by the State of Illinois and \$10,000 by New York; but innumerable small contributions afforded all that was needed. The soldiers and sailors of the nation gave \$28,000, of which the disproportionately large amount of \$8,000 was the gift of the negro troops, whose manhood Lincoln had recognized by putting arms in their hands.¹ In all \$180,000 was raised, and the monument, built after a design by Larkin G. Mead, was dedicated on the 15th of October, 1874. The day was fine, the concourse of

¹ Besides contributing thus generally to the Springfield monument, the freed people gave another touching instance of their gratitude by erecting in a public square on Capitol Hill in Washington a noble group

in bronze, including Lincoln, and entitled "Emancipation." The subscription for this purpose was started by a negro washerwoman. The statue is by Thomas Ball.

people was enormous; there were music and eloquence and a brilliant decorative display. The orator of the day was Governor Oglesby, who praised his friend with warm but sober eulogy; General Sherman added his honest and hearty tribute; and General Grant, twice elected President, uttered these carefully chosen words, which had all the weight that belongs to the rare discourses of that candid and reticent soldier:

From March, 1864, to the day when the hand of the assassin opened a grave for Mr. Lincoln, then

President of the United States, my personal relations with him were as close and intimate as the nature of our respective duties would permit. To know him personally was to love and respect him for his great qualities of heart and head, and for his patience and patriotism. With all his disappointments from failures on the part of those to whom he had intrusted commands, and treachery on the part of those who had gained his confidence but to betray it, I never heard him utter a complaint, nor cast a censure, for bad conduct or bad faith. It was his nature to find excuses for his adversaries. In his death the nation lost its greatest hero; in his death the South lost its most just friend.

PURSUIT AND DEATH OF JOHN WILKES BOOTH.

[JOHN WILKES BOOTH was my schoolmate in Maryland, many years ago; and by a strange coincidence three of my particular friends were concerned, in one way or another, with his pursuit and death. Two of them were Confederate officers—Major M. B. Ruggles, son of General Daniel Ruggles of the old army, and Lieutenant A. R. Bainbridge, both of whom, with Captain Jett, also of Mosby's command, met Booth and Herold in their flight and aided them to cross the Rappahannock. The other friend is Captain E. P. Doherty, who commanded the detachment of the 16th New York Cavalry that captured the fugitives. From the lips of all three I have heard accounts of the incidents that they witnessed, and the narratives that follow are given in the words of Major Ruggles and Captain Doherty.¹—PRENTISS INGRAHAM.]

MAJOR RUGGLES'S NARRATIVE.

T the close of the civil war Colonel Mosby, to whose command I belonged, surrendered to General Hancock, at Millwood, Virginia. In company with two comrades, A. R. Bainbridge, now in business in New York, and William Jett, now dead, I started for my home in King George County, Virginia. We had heard from United States officers of the assassination of Mr. Lincoln, and that the assassin had been captured in Washington, and little dreamed, when we rode up to the bank of the Rappahannock River, that we were there to come face to face with John Wilkes Booth.

Port Conway is on the King George side of the river, there about three hundred yards wide, and opposite Port Royal. The ferry was owned by a man named Rollins, but the scow was run—that is, poled across—by Peyton Washington, a negro. The scow was on the

other side of the river when we rode up, and I observed there a wagon, drawn by two very wretched-looking horses. In the wagon were two men. On seeing us approach, one of them came towards us, and, finding that we were Confederate soldiers, said that his name was Boyd, and that his brother had been wounded severely in the leg while escaping from prison, where they had been for some time. He furthermore said that their negro driver, Lucas, refused to take them any farther, and that they were anxious to get on their way, and asked our aid. I at once said we would help them; and while discussing the speedy coming of the scow, the other got out of the wagon, and walking with evident pain, with the aid of a rude crutch, came towards us. He apparently mistrusted his companion, for as he came forward he said, "I suppose you have been told who I am?" Thinking he meant that Herold had told us they were Confederate soldiers, escaped from prison, I answered in the affirmative. Instantly he dropped his weight back upon his crutch, and drawing a revolver said sternly, with the utmost coolness, "Yes, I am John Wilkes Booth, the slayer of Abraham Lincoln, and I am worth just \$175,000 to the man who captures me."² We were greatly surprised, and yet the coolness of the man won our admiration; for we saw that he was wounded, desperate, and at bay. His face was

¹ The proofs of this article have been read and corrected (Nov., 1889) by Colonel Ingraham, Major Ruggles, Lieutenant Bainbridge, and Captain Doherty.—EDITOR.

² The reward as offered was \$100,000 by the U. S. Government, and \$25,000 each by three of the States.

haggard, pinched with suffering, his dark eyes sunken, but strangely bright, and though he had shaved off his mustache, upon his lip and face was a beard of some ten days' growth.

In response to his defiant words I said that we had been told that Lincoln's slayer had been captured; but that, though we did not sanction his act as an assassin, we were not men to take "blood money"; and that having promised his friend, who proved to be Herold, to take them across the river to a place of safety, we would do so. Though it is contrary to the general belief of the people of the North, I believe that had the war then been going on, Booth, instead of finding an asylum in the South, would have been taken and surrendered to the United States by the Confederate Government.

Booth replaced his weapon at my words, and, thanking us, said he was utterly unable to walk. I dismounted, and we lifted him upon my horse—a fact that seemed to give the saddle and bridle a great pecuniary value, as I learned through correspondence with Mr. Barnum; though they were never exhibited as relics, and are now at my brother's home in Virginia, there kept as souvenirs of my "days with Mosby."

¹ Colonel John J. Garnett, who at the close of the war was with General Joseph E. Johnston as Chief of Artillery, received from Lieutenant Bainbridge, whom he has known for many years, the following additional particulars of the intercourse of the three Confederate officers with Booth and Herold: "Captain Jett was well acquainted in Caroline County, on the opposite side of the river, and he told Booth, with our approval, that he would find a place of safety for him. 'God bless you, sir!' said Booth, his face winching with the pain of his disabled leg. When Booth realized that we were kindly disposed, he threw off all reserve and became quite communicative. Booth was dressed in a dark suit of clothes that looked seamed and ravelly, as if from rough contact with thorny undergrowth. On his head was a seedy looking black slouch hat, which he kept well pulled down over his forehead. The lame foot was entirely free from all covering, save a black stocking. The shoe which was on it was entirely cut away at the top, the heel only being covered with leather. The foot was much swollen, and seemed to trouble him greatly. The crutch he carried was rough-hewn and ungainly. His long dark mustache swept over his mouth in a straggling, unkempt manner, although it was evident that he had tried to preserve its shape by frequent handling. Indeed, during all the time he sat with us he was constantly pulling it into shape. His beard, of a coal-black hue, was of about two weeks' growth and gave his face an unclean appearance. Over his shoulders drooped a long gray shawl, which he said had served him well in covering the tell-tale initials 'J. W. B.' done in Indian ink on his right hand. These letters he showed to us to establish his identity. Strung over his shoulders by a long strap were a pair of large field glasses, which he said had not been of much use to him, because he had 'been forced to keep under cover too much.' . . . The wind lulled after we had waited a long time, and the ferryman came over for us. Captain Ruggles helped Booth to mount his horse, and together we went over to Port Royal, a village opposite Port Conway. The ferryman eyed us all very closely and we said but very little. Booth sat squarely on his horse, looking expectantly

Booth and Herold both seemed to be the worse for their exposure and hardships of the past few days. Booth wore a black soft hat, dark clothes, one cavalry boot,—the one on his wounded leg having been cut off,—and his weapons were a carbine, two revolvers, and a knife, the blade of the latter bearing the stain of blood, for with it he had wounded Major Rathbone. I noticed that his wounded leg was greatly swollen, inflamed, and dark, as from bruised blood, while it seemed to have been wretchedly dressed, the splints being simply pasteboard rudely tied about it. That he suffered intense pain all the time there was no doubt, though he tried to conceal his agony, both physical and mental.

When the scow arrived Peyton Washington ferried us across the river. After a ride of three miles we came to the Garrett farm, where we asked for shelter for the fugitives, which was granted. We also remained all night near Garrett's, sleeping in the woods, and the next day Herold went with us to Bowling Green, where we left Jett.¹

The next day, Herold having decided upon the best course to pursue in his flight, Bain-

towards the opposite shore, and when the boat struck the wharf he lost no time in landing. I could see that his spirits were improving, and he laughed heartily when we surrounded him in a group. 'I'm safe in glorious old Virginia, thank God!' he exclaimed. 'Now, boys,' said Jett, 'I propose to take our friend Booth up to Garrett's house. I think they'll give him shelter there and treat him kindly.' 'Whatever you deem best to do with me, my friends,' replied Booth, 'I'll agree to be satisfied.' 'Jett understands this country,' said Captain Ruggles, 'and I think that it will be well to act as he directs.' 'I'm in your hands,' said Booth; 'do with me, boys, as you think best.' 'Well,' said Jett, 'I want to do the best I can for you; and I think our plan is to escort Mr. Booth up to Garrett's, tell the family who he is, and trust to their hospitality to see him kindly cared for until such time as he sees fit to seek other quarters.' After a few minutes' further conversation we left the wharf and started through Port Royal on the road to Garrett's farm. His house was some distance from the main road, and when we reached the gate leading into the farm Herold, who said that he wanted to go with us as far as Bowling Green to buy a pair of shoes, remained with me, while Jett and Ruggles accompanied Booth to the house. Garrett's residence was in the style at that time in vogue among Southern planters. It was a large, wooden framed building, with broad porches on every side. It stood on a hill, from which sloped in every direction broad rolling fields, fair in their verdure as ever greeted the eye of man. When Booth was a few rods distant in the lane from where Herold and I were standing, he suddenly wheeled his horse about, and lifting his slouch hat from his head waved it towards us and shouted back: 'Good-by, old fellow. Good-by, Lieutenant; come and see me again. I shall always be pleased to see you both.' 'I'll be with you soon, John,' returned Herold; 'keep in good spirits.' 'Have no fear about me, Herold,' Booth replied; 'I am among friends now'; with which he turned his horse, and followed at a gallop after Jett and Ruggles, who were far in advance of him. Booth impressed me at that moment as the most reckless man I had ever met. Without a parole as I

bridge and myself accompanied him back to Garrett's. We found Booth lying on the grass, in front of the house, and sitting by his side I heard from his lips his version of the tragic conspiracy, his fatal shot, his motives, escape, and flight up to his coming to the Garretts'. In answer to my questions he spoke quietly, repressing now and then a groan of pain, and showing emotion and stern defiance at times. He said, in substance, that the plot had been to capture Mr. Lincoln and carry him a prisoner into the Confederacy, for he believed that by such an act the war could be brought to an end, as the South could dictate terms with such a hostage. Failing in this, he decided at the last moment, as it were, to strike deadly blows at Mr. Lincoln, Mr. Seward, and General Grant. In the plot to kill, Payne¹ alone was implicated with him, not even Herold knowing what was to be done. Atzerodt knew nothing of the intended assassination, nor did, according to Booth's statement to me, any other, excepting Payne. The name of Mrs. Surratt was not mentioned by him. He said

that Payne was to strike a death blow at Secretary Seward, and he, favored by the fact that President Lincoln and General Grant were to attend the theater together, was to kill both of them. General Grant's having been called away alone saved his life, for, said Booth, "I would have made no failure with either, as I had laid my plans for success only." That Andrew Johnson might appear to be implicated in the plot of assassination, Booth said that he had left that morning a note at the hotel where the Vice-President lived, to compromise him. He had no idea, he said, from the information received about Washington, that the war had really ended; for had he not believed that it would have been kept up by the South, he would not have struck the blow as he did. After getting safely out of Washington his intention was to cross the line, as quickly as possible, into the Confederacy. Joining Herold at a rendezvous, they had ridden hard through the night to gain a place of safety; but having a broken leg, and learning after several days, through the papers, that the war

was, and in my own country, amid scenes with which I had been familiar since childhood, I did not feel that I was perfectly safe. If he felt any premonitions of danger, as I certainly felt that in his position he should, he gave no signs of them. He seemed as light-hearted and careless as a schoolboy just released from his studies. Herold and I went on to Bowling Green, where we remained all night, stopping at the house of a Mr. Clark. Jett and Ruggles, after escorting Booth up to Garrett's house and seeing him well disposed, went on to Bowling Green, where they stopped with Mr. Goldman, for whose daughter Jett had tender feelings. On the following day I learned of Johnston's surrender, and decided to go back to my home in King George County and settle down to the life of a peaceful citizen. I met Jett and Ruggles and told them of my intention, and they concluded to do likewise. I inquired for Booth, and in what shape they had left him, and Willie Jett told me that he did not think under the existing state of affairs the Garretts liked to harbor Booth in their house. 'And yet,' said Jett, 'they did not like to turn him away.' After a little persuasion Mr. Garrett agreed to allow him to remain on his place, although he felt that he would be running a big risk in doing so. 'He'll be well taken care of, never fear,' said Jett, who decided to remain at Goldman's house for a few days. Captain Ruggles and I went on the next morning towards Port Royal together, Herold accompanying us as far as Garrett's gate, where we left him. He told us that he was going right up to join Booth, and that he would stick by him to the death. Just before reaching Port Royal I met a soldier of my command, who told me that if we had not got our paroles, and did not want to be captured, to turn back. 'For,' said he, 'the town is full of Yankees in search of Booth, who, they say, crossed the river yesterday.' We turned immediately and rode back to Garrett's. As we approached the front gate Booth was lying on the lawn in front of the house. As soon as he recognized us he arose, and hobbling towards us said, 'Well, boys, what's in the wind now?' We told him the enemy was upon his trail, and advised him to seek shelter in the woods. I remember pointing to a thick piece of woodland some distance from the house, and saying: 'Booth, get over there at once,

and hide yourself. In those wooded ravines you will never be found.' 'Yes,' said Ruggles, 'get there as quickly as you can, and lose no time about starting.' Booth turned around to look for Herold, but he was nowhere in sight, as indeed was no one else. He then straightened himself up to his full height, and replied: 'I'll do as you say, boys, right off. Ride on! Good-by! It will never do for you to be found in my company.' Then biting his lips, as if he had conceived a desperate resolve, he said, 'Rest assured of one thing, good friend, Wilkes Booth will never be taken alive.' The ferryman at Port Conway had recognized Jett, and when Lieutenant Doherty arrived there with his troops, and described the men they were pursuing, he knew at once that he had assisted them across the river the day before. He told the officers that he had taken five men across, three of whom were Confederate soldiers, one of whom he knew to be Captain Jett, as he had often taken him across. If he had only stopped there all might have been well so far as Booth was concerned, for some time. But the ferryman was frightened. He thought if he did not tell all he knew he would be arrested as an accomplice in the assassination of Lincoln, so he volunteered the information that Captain Jett had a sweetheart at Bowling Green, and that in all probability he would be found there. The people of the South conceived the idea that Captain Jett deliberately betrayed Booth. Nothing could be farther from the truth. Had they been in his place, I make bold to say they would have acted as he did. It was *his* life or Booth's. The latter had no hopes; but Jett, with a parole in his possession, had, so far as he knew, a long life of happiness before him. Lieutenant Doherty and his troops were hot upon the assassin's trail, and were not to be denied their prey. Poor Jett had only one alternative, and that was to become their guide, and I am sure he did so unwillingly. He has been dead many years, and I know that he was loyal to the cause he espoused, and fought gallantly for it to the end. He guided the troops back to Garrett's, and he afterward told me that he had hopes that Booth might have been warned in time to escape, as indeed he had been by us."—EDITOR.

¹ Payne was a deserter from a Confederate Florida regiment.

was really at an end, he determined to make his way to the silver mines of Mexico, feeling that the South would be no place of refuge for him. It has been said that Booth had plenty of money with him; but he showed me three five-dollar bills, all that he had, excepting a bill of exchange; while Herold had not as much. I asked him why he did not attempt to get to Europe, and his answer was that there was no asylum for such as he where monarchs ruled, as they feared their own lives might be in danger from the example he had set.

It is generally believed that Herold shot his own and Booth's horse; but Booth told me that after weighting them down they led them into the Potomac the night they embarked in the boat to cross, and drawing their heads over the gunwale cut their throats and saw them sink from sight. This would account for the fact that their bodies were never found.¹

Booth seemed to feel that he had been spurred on to the deed through a duty he owed the country to bring the war to an end, and he said that he would never be taken alive. If he had not broken his leg he could readily have distanced all pursuit. He was without doubt disappointed at the reception he met in Virginia, and said that he was prepared to meet any fate. The calm courage of the man in the midst of his great peril, and while racked by suffering, impressed me in spite of myself, for there was no braggadocio about him; simply a determination to submit to the inevitable, parleying when it should become necessary to do so. The few extracts he read me from his diary showed this.

From the examination I made of his broken leg, aided by some experience I had had with wounds, I feel confident that amputation would have been necessary to save his life, and perhaps that would not have prevented a speedy death.

Soon after my long conversation with Booth, Bainbridge and myself bade him and Herold good-by and went on our way, remaining that night in the pines, and next day going to Robb's, where we learned that a company of United States cavalry were scouring the country and had captured the fugitives in Garrett's barn. Knowing the barn well, and judging from all the circumstances connected with the burning of it, I feel convinced that Sergeant Boston Corbett has a reputation undeserved as the slayer of Mr. Lincoln's assassin. From the spot where Sergeant Corbett was he could not have seen Booth where he stood, and certainly could

not have been able to shoot him in the back of the head. Having asked Captain Doherty to fall back fifty paces with his men and give him a chance to come out, and very properly and naturally being refused his request by that gallant officer, deserted by Herold, the barn on fire, and seeing that he must perish in the flames or be taken to Washington and hanged, Booth, hopeless, alone, and at bay, placed his pistol to the back of his head, and took his own life. No one saw Corbett fire, and one chamber of Booth's revolver held in his hand was empty, and I am by no means alone in the belief that he killed himself.

Learning that Jett was a prisoner, and that we were to be arrested, tried, and hanged, as aiders and abettors, Bainbridge and myself stood not on the order of going, but went at once. Making our way into Essex County and crossing to Westmoreland, we went to our home up in King George County. Some ten days after, I was arrested at night by a squad of United States cavalry. Bainbridge was also captured. We were taken to Washington and placed in the Old Capitol Prison. We were not alone in our misery, however, for Dr. Stewart, at whose house Booth had stopped, William Lucas, the negro who had driven him to the ferry, and a number of others, were there, among them being Jett, who had escaped from Captain Doherty, and had been recaptured at his home in Westmoreland County.

From Booth's own words to me as he lay on the grass in front of Garrett's house, I feel assured that in the excitement of the times there were some innocent ones who were punished for the crimes of Booth and Payne.

After the trial, by a strange mistake I was sent to Johnson's Island, where as a Confederate prisoner I had passed half a year; but after a few days spent there I was returned to Washington, and after taking the oath of allegiance I was released.

M. B. Ruggles.

CAPTAIN DOHERTY'S NARRATIVE.

ABOUT the hour of 4 P.M. April 24, 1865, when Booth and Herold were taken by their newly made Confederate friends to the Garrett farm, where Booth was killed and Herold captured, I was seated, with another officer of the 16th New York Cavalry, on a bench in the park opposite the White House. There I received the following orders from a messenger:

HEADQUARTERS, DEPARTMENT OF WASHINGTON, April 24, 1865. Commanding Officer 16th New York

of the horses of the Federal cavalry as they went scouting through the country, and I was afraid that ours might answer them and betray our whereabouts, so I asked Herold to shoot them, which he did."—EDITOR.

¹ Lieutenant Bainbridge is positive that he heard Booth say: "After we had been three days in the pines, I deemed it advisable to act on Jones's advice and kill our horses. I could hear in the distance the neighing

Cavalry. Sir: You will at once detail a reliable and discreet commission officer with twenty-five men, well mounted, with three days' rations and forage, to report at once to Colonel L. C. Baker, Agent of the War Department, at 211 Pennsylvania Ave. Command of General C. C. Augur.—J. C. SEWELL, A. A. A. Gen'l.

In accordance with the foregoing order First Lieutenant E. P. Doherty¹ is hereby detailed for the duty, and will report at once to Colonel Baker, 211 Pennsylvania Ave.—N. B. SWITZER, Colonel 16th New York Cavalry, Bvt. Brig. Gen'l, U. S. A.

I proceeded to the barracks, had "boots and saddles" sounded, and in less than half an hour had reported to Colonel Baker. I took the first twenty-five men in the saddle, Sergeant Boston Corbett being the only member of my own company. Colonel Baker handed me photographs of the assassins of President Lincoln. He told me no troops had yet been in Fredericksburg, but that I must reach that vicinity with all dispatch. He introduced me to E. J. Conger and L. B. Baker, of the detective force, and said they would accompany me. I proceeded down to the Sixth street wharf, where I found the steamer *John S. Ide*, and directed Captain Wilson to move down to Aquia Creek and to Belle Plain. After the detachment had landed I directed the captain of the boat to move off to a place of safe anchorage and await my return. Should I not return before 6 P. M. on the 26th he was to go back to Washington and report to Captain Allen, assistant quartermaster. I proceeded directly south until I struck the main road to Fredericksburg. Here I halted at 4 A. M. A negro informed me that a regiment of cav-

alry had passed to Fredericksburg the previous evening, going along on the north side of the Rappahannock River. I then determined to push down and go up on the south side, where no troops had been.

The detectives asked for a detail of four men and a sergeant to scour the country, while I with the rest of the men continued on towards the Rappahannock. The detectives returned about 3 P. M. without any clue to the whereabouts of the assassins. I went to the ferry at Port Conway and saw Mrs. Rollins, the ferryman's wife, and another woman sitting on the steps of the ferry-house. Drawing Booth's picture from my pocket I showed it to them, and inferred from their looks that Booth was not far distant. One of them said that Booth and Herold had been brought there in a wagon the evening before by a negro named Lucas, who would carry them no farther. While they were bargaining with her husband to take them to Orange Court House, three Confederate soldiers, Ruggles, Bainbridge, and Jett, rode up and they entered into conversation. By and by they were all taken over the ferry. Booth was put on Ruggles's horse and they proceeded towards Bowling Green.

I at once sent the bugler to Sergeant Corbett, telling him to mount the detachment, which I had left a mile behind, feeding, and move down as quickly as possible. Mrs. Rollins went for her husband, who was fishing, and I sent him for the scow, which was on the other side of the river. During his absence the command arrived at the ferry and we were soon over the

¹ The following is taken from the report of Generals Joseph Holt, Judge Advocate, and E. D. Townsend, Adjutant-General, U. S. A., to the Secretary of War, Mr. Stanton, on the subject of the arrest of those engaged in the assassination of President Lincoln, which was transmitted to Congress: "The parties who made the arrest of Booth and Herold were a detachment of the 16th New York Cavalry (consisting of Lieutenant E. P. Doherty, commanding, and two sergeants, seven corporals, and seventeen privates), accompanied by E. J. Conger and L. B. Baker, two employees in the detective service of Colonel L. C. Baker, Provost-Marshal, etc., the officer who originated and directed the expedition, though not personally accompanying it. . . . The military element of the expedition for the arrest of these criminals Booth and Herold is therefore believed to have been that which was essential to its success, and without which its results could not have been attained. As the commander of the detachment employed upon this important duty, Lieutenant Doherty was solely responsible for its discipline and efficiency. He is found to have been active and energetic, and it is believed to be established by the weight of testimony that it was he who personally made the actual seizure of Herold. It was he, too (in conjunction with Mr. Baker), who obtained the first reliable information which rendered the capture of the criminals almost certain; and though, in the direction of the investigation, the initiative would seem more frequently to have been taken by Conger, yet Lieutenant Doherty is shown to have acted and been recognized as the commander of

the expedition in the only written instructions which appear to have been issued during the march, to wit, those given by him to the master of the steamer which conveyed the party to and from Belle Plain. Upon the whole, therefore, it is concluded that as such commander he may properly be awarded the one-tenth portion of the whole amount which is payable by law to the commanding officer of a vessel immediately engaged in the capture of a prize, and his share will therefore be \$7500. The services of Messrs. Conger and Baker upon this expedition were, no doubt, of great value; and, inasmuch as these parties immediately represented the views and intentions of Colonel Baker, their part in carrying out the original plan was particularly important. It is understood that their expenses incurred upon this duty have been reimbursed, and that they have also been paid, or are entitled to be paid, for their general services, as detectives at this period, at the rate of \$150 per month. They should, however, both be liberally, and, as it is thought, equally compensated; and it is concluded that of the amount offered as reward there may properly be paid to each the sum of \$4000."

Sergeants Corbett and Wendell each received \$2-545.68; each of the seven corporals received \$2291.09; and each of the seventeen privates \$2036.53. Of the \$75,000 thus distributed as a reward for the arrest of Booth and Herold, Colonel L. C. Baker received the share that "would be payable to the commander of a squadron, by a separate ship of which a prize had been taken," that is, one-twentieth, or \$3750.—EDITOR.

river. I arrested Rollins the ferryman, and took him as guide to Bowling Green. At dark we passed the Garrett farm, not then dreaming that the assassins were concealed there. Arriving at Bowling Green, I surrounded Goldman's Hotel. After some hesitation the door was opened by Mrs. Goldman. I inquired of her who were the male inmates of the house. She replied that there was only her wounded son, and I directed her to show me his room, telling her that if my men were fired on I should burn the building and take the inmates prisoners to Washington. She took me up one flight of stairs to her son's room, and as I entered Captain Jett sprang from his bed, half-dressed. Her son lay on another bed, wounded. Jett admitted his identity, and drawing Mr. Stanton's proclamation from my pocket I read it to him, and then said, "I have known your movements for the past two or three days, and if you do not tell me the truth I will hang you; but if you give me the information I want, I will protect you." He was greatly excited, and told me that he had left Booth at Garrett's house, three miles from Port Conway, the evening before, and that Herold had come to Bowling Green with him, and returned that morning. I had Jett's horse taken from the stable, and, placing a guard over him, we retraced our steps towards Garrett's. It was now about midnight, and my men, having been out since the 24th without sleep and with very little food, were exhausted; those who had been left on the edge of the town had fallen asleep. I had some difficulty in arousing them, but when they learned that we were on Booth's track new life seemed to be infused into them. I placed Corbett in the rear with orders to allow no man to fall out of line. Upon reaching Garrett's orchard fence I halted, and in company with Rollins and the detectives took a survey of the premises. I had the fence taken down. I told off six men, gave out the countersign of "Boston," and sent the six men as a patrol in rear of the out-buildings, with instructions to allow no one to pass through the field or to approach them without the countersign. The gates in front of Garrett's house were quietly opened, and in a minute the whole premises were surrounded. I dismounted, and knocked loudly at the front door. Old Mr. Garrett came out. I seized him, and asked him where the men were who were there yesterday. He replied that they had gone to the woods when the cavalry passed the previous afternoon. While I was speaking with him some of the men had entered the house to search it. Soon one of the soldiers sang out, "O Lieutenant! I have a man here I found in the corn-crib." It was young Garrett, and I demanded the whereabouts of the fugitives. He replied, "In the

barn." Leaving a few men around the house, we proceeded in the direction of the barn, which we surrounded. I kicked on the door of the barn several times without receiving a reply. Meantime another son of Garrett's had been captured. The barn was secured with a padlock, and young Garrett carried the key. I unlocked the door, and again summoned the inmates of the building to surrender. After some delay Booth said, "For whom do you take me?" I replied, "It does n't make any difference. Come out." He said, "I am a cripple and alone." I said, "I know who is with you, and you had better surrender." He replied, "I may be taken by my friends, but not by my foes." I said, "If you don't come out, I'll burn the building." I directed a corporal to pile up some hay in a crack in the wall of the barn, and set the building on fire. As the corporal was picking up the hay and brush Booth said, "If you come back here I will put a bullet through you." I then motioned to the corporal to desist, and decided to wait for daylight and then to enter the barn by both doors and overpower the assassins. Booth then said, in a drawling voice, "O Captain! there is a man in here who wants to surrender awful bad." I replied, "You had better follow his example and come out." His answer was, "No, I have not made up my mind; but draw your men up fifty paces off and give me a chance for my life." I told him I had not come to fight; that I had fifty men, and could take him. Then he said, "Well, my brave boys, prepare me a stretcher, and place another stain on our glorious banner."

At this moment Herold reached the door. I asked him to hand out his arms; he replied that he had none. I told him I knew exactly what weapons he had. Booth replied, "I own all the arms, and may have to use them on you, gentlemen." I then said to Herold, "Let me see your hands." He put them through the partly opened door and I seized him by the wrists. I handed him over to a non-commissioned officer. Just at this moment I heard a shot, and thought Booth had shot himself. Throwing open the door, I saw that the straw and hay behind Booth were on fire. He was half-turning towards it.

He had a crutch, and he held a carbine in his hand. I rushed into the burning barn, followed by my men, and as he was falling caught him under the arms and pulled him out of the barn. The burning building becoming too hot, I had him carried to the veranda of Garrett's house.

Booth received his death-shot in this manner. While I was taking Herold out of the barn one of the detectives went to the rear, and pulling out some protruding straw set fire

to it. I had placed Sergeant Boston Corbett at a large crack in the side of the barn, and he, seeing by the igniting hay that Booth was leveling his carbine at either Herold or myself, fired, to disable him in the arm; but Booth making a sudden move, the aim erred, and the bullet struck Booth in the back of the head, about an inch below the spot where his shot had entered the head of Mr. Lincoln. Booth asked me by signs to raise his hands. I lifted them up and he gasped, "Useless, useless!" We gave him brandy and water, but he could not swallow it. I sent to Port Royal for a physician, who could do nothing when he came, and at seven o'clock Booth breathed his last. He had on his person a diary, a large bowie knife, two pistols, a compass, and a draft on Canada for £60.

I took a saddle blanket off my horse, and, borrowing a darning needle from Miss Garrett, sewed his body in it. The men found an old wagon, and impressed it, with the negro driver. The body was placed upon it, and two hours

after Booth's death I was on the way back to Belle Plain, where I had left the steamboat.

I had released Rollins and sent him ahead to have his ferry-boat ready to take us across the river. About 6 p. m. I reached the boat, and found the captain preparing to return to Washington. We reached Washington at 2 A. M., April 27. I placed the body of Booth and the prisoner Herold on board the monitor *Montauk*, after which I marched my worn-out command up through the navy yard to their quarters.

The next morning an autopsy was held, and measures were taken to identify the body of Booth. The portion of the neck and head through which the bullet had passed was cut out, and is to-day preserved in the National Museum of Anatomy at Washington. The body was buried in a cell in the Penitentiary, where it remained nearly four years, with the bodies of the other assassins. It was then given to his friends, and now lies in a cemetery in Baltimore.

Edward P. Doherty.

THE WINTER FIELDS.

WINDS here, and sleet, and frost that bites like steel.
 The low, bleak hill rounds under the low sky.
 Naked of flock and fold the fallows lie,
 Thin-streaked with meager drift. The gusts reveal
 By fits the dim, gray snakes of fence that steal
 Through the white dusk. The hill-foot poplars sigh,
 While storm and death with winter trample by;
 And the iron fields ring sharp, and blind lights reel.
 Yet, in the lonely ridges, wrenched with pain,
 Harsh, solitary hillocks, bound and dumb,
 Grave glebes, close-lipped beneath the scourge and chain,
 Lurks hid the germ of ecstasy, the sum
 Of life that waits on summer, till the rain
 Whisper in April and the crocus come.

Charles G. D. Roberts.

SANCHO MITARRA.

OME years ago I passed my summer vacation in the north of Spain, studying the battle-grounds of the last Carlist war. Sketching and collecting notes, I loitered about the picturesque towns which, by the loss of their ancient charters, had paid so high a price for their loyalty to Don Carlos, until eventually I reached Irún, where I remained a week. During the daytime the large, low-studded eating-room of the inn was entirely deserted, but towards evening quite a number of men were in the habit of dropping in singly or in groups, and a few minutes later the noise became deafening. Among these guests I noticed especially a fine-looking, rather silent person, who, to judge from the deference with which the others treated him, must have been a local celebrity. His face was apparently cut in two by an irregular scar, rather frightful to look at until he smiled, when the ugly purplish lines seemed to disappear in the wrinkles about his mouth. I was anxious to get a good sketch of him, but succeeded only after many unsatisfactory attempts, and I was about to close my book when a young man who had been looking over my shoulder exclaimed :

"Ah, *Señor*, what would I not give for that portrait !"

"*Caballero*," I answered, "it is yours ; and I esteem the compliment of your request so far above the value of the drawing that you must allow me to consider myself your debtor." My real pay lay in the pleasure this answer gave me, and I felt kindly towards the man who had afforded me an opportunity of making such orthodox use of my Spanish.

So we fell into conversation, and before leaving he handed me his card, on which I read the name *Simón Muñoz*, and below, in brackets, the word *poeta*. He was assistant editor of the local paper, knew everybody, and seemed astonished when, having told me the name of the man with the scar, I asked further about him. "Is it possible," he said, "that you have not heard of Sancho Mitarra ? In that case, sir, you must allow me to offer you a little sketch which I have written about him, in exchange for the portrait which you so generously gave me."

The next morning the manuscript was brought up to my room with my chocolate,

and as a heavy rain confined me to the house, I translated it into English. It was as follows :

I.

OVER a thousand years ago, or, to be more pedantic, A. D. 872, the Gascons, being unable to obtain a consul from France and unwilling to elect one at home, sent over into Castile for Sancho García, called Sancho Mitarra, or the Terrible. As king of Pampeluna and Navarre he ruled over them for nearly forty years, gaining great renown not only as a brave Christian soldier in his wars against the Moors, but as a wise and strong-handed ruler at home. From this good king Sancho Mitarra the brass-founder of Irún is directly descended, as it were easy to prove by the old chronicles of Navarre ; but as he is a republican on principle, it gives him less pleasure to reflect upon the distinction of his ancestors than upon the sturdiness of a family that has endured a thousand years without a break.

Indeed, as for his being descended from a king, it seems difficult to understand how it could be otherwise. For, supposing that Sancho had been the only one in Spain thirty generations ago, and that each of his descendants had produced but two children, a simple calculation shows that there should be one thousand and seventy-three odd millions of these descendants in the world to-day. Now, as the population of Spain is less than twenty millions, every inhabitant must have some fifty-three or more claims to royal ancestry — a fact which might in some cases account for the list of titles borne by our more modest grandees of the first class.

It is equally indisputable that no fortune, however great, could bear subdivision on such a magnificent scale ; hence the poverty, shared by Sancho's father with so many other distant members of the royal family, seems reasonable enough. This worthy citizen was by trade a fisherman, part owner and captain of the *Guerendiaín*, a stanch but ugly vessel belonging to the Basque cod fleet. His house was in the oldest quarter of the town behind the church, and in the dirty kitchen, redolent of the mingled perfumes of tar, garlic, and tobacco-smoke, old Mitarra told strangely incredible tales of the "Américas" beyond the sea. The priest, the postmaster, the captain of the customs, and a couple of retired smugglers were wont to meet there at all hours of the day when

the old man was at home, but usually only after the evening *puchero*,¹ when the family was alone.

Among these good people Sancho grew up, though it can hardly be said that he developed, until, about the time he was twelve years old, the quiet town was thrown into a state of consternation by the news that the whole fleet had been lost off the Banks. The sailor had left but little money — indeed barely enough to support his widow; and thus Sancho had to give up tossing knives and playing ball for the less gentlemanly but more practical employment of blowing the bellows in his uncle's smithy, which enabled him to contribute towards the family expenses. If it be argued that his appetite was altogether out of proportion to his contributions, it were but right to give him credit for a cheerful disposition, a coaxing laugh which compelled sympathy, and a merry wit, always at the service of the household. And whoever has lived on meager fare and in the shadow of sorrow will testify that a merry company around the pot makes as good a sauce as hunger.

Matters went on smoothly for a few years following the old fisherman's disappearance, and indeed up to the date of Sancho's sixteenth birthday, when coming of age suddenly, as it is the custom for kings and possibly for their descendants to do, the ambition of conquest began to disturb his dreams. He renounced the hammer and anvil as being inconsistent with the pursuit of glory, and having successively exacted tribute from the sea in the shape of fish and from the mountains in the shape of game, he finally joined the brotherhood of the *contrabandistas*, among whom he made not a little money. During the periodical intervals of rest that followed each expedition he fell in love with a beautiful, poor, but haughty girl, Elvira Almalta of Ragoza, whom he besought to become his wife. But dazzled by the brilliant life of the great bull-fighters whom she had often admired, the girl had long before vowed to marry no man who had not acquired renown in the arena,—the renown most dear to Spanish hearts,—and Sancho then and there resolved that Spain should ring again with the glory of Mitarra. He had succeeded with so little effort in everything that he had hitherto undertaken, that the new problem before him neither awed nor troubled him; and with his characteristic impetuosity he prepared to leave on the morrow for Pampeluna, where the great Lagartijo was at home. The postmaster gave him some sound advice; the priest his blessing and an antique drawing, representing bull-fighters attending mass before the *corrida*; while Elvira gave him

her promise (conditionally) and a kiss. With these presents, and an immense fund of confidence in his own resources, Sancho started on his apprenticeship.

For more than a year nothing was heard from the young man directly. Under an assumed name he appeared in several minor bull-fights in remote provincial towns, and there he probably acquitted himself so well as to compel the notice of the great Frascuelo; for when the now-famous corrida of the 9th of August was advertised throughout the country, Elvira's toreador-errant was announced on the play-bills under his own name of Sancho Mitarra.

II.

It is a gala day. A great lady, the greatest in the land, has brought her infant son to witness his first bull-fight and learn early in life to accept the tribute of blood shed in his honor. Cloth of gold and crimson velvet hang in heavy folds from the front of the governor's gallery, and glorious silken banners, embroidered with the royal arms, flap lazily on each side of the wooden box which a poet-laureate might mistake for a throne. Gorgeous uniforms mingled with dazzling costumes make a background fit for a king's portrait, and to right and left, as far as the shade tempers the heat of the summer afternoon, the magnificent fancy of old Spain shines forth once again after years of courteous oblivion. The stage setting seems perfect. The play that is to be enacted belongs to the repertory of a forgotten, so-called barbarous age, and the audience has arrayed itself accordingly; perhaps as an apology for its presence, perhaps to bear out the illusion of a revival, perhaps merely because its gold and crimson harmonizes with the gold of the sunlight on the yellow sand, and the crimson of the blood that is to flow.

Facing the picturesque wisdom of the realm, that shines in dignified magnificence on the shady side of the circus, the picturesque and ragged populace, brilliant only by its apt wit, undulates impatiently beneath the glaring sun — Don Quixote and Sancho Panza types of a past age, if you will, but also types of modern Spain, no more obsolete than the bloody game which both await.

In the dazzling arena below, a fife-and-drum band walks solemnly round and round heedless of well-aimed oranges or equally well-pointed gibes. In the droning buzz of ten thousand talking people the rumble of the drums is completely lost, and the thin, clear, querulous notes of the pipers sound ridiculously weak and unsuited to the occasion — a discord which establishes the reality of the scene, destroying the illusion of a perfect stage per-

¹ Species of boiled meat with vegetables.

formance, but investing it with the keen interest of an event in real life. All along the corridor that surrounds the arena, separating the *valla* from the wall above which the public is seated, the privileged amateurs are eagerly discussing the chances of the fight, prophesying the behavior of each bull, and betting on the number of passes before the final stroke. The cornet of the band blows a preliminary blast and the music bursts forth; the ring is hurriedly cleared, and in two lines the *cuadrilla* make their entrance, to right and left. For a brief moment the chattering of the audience ceases, and in the partial silence each *toreador*, preceded by his shadow, gravely struts across the sand to his appointed place. An *alguazil*, dressed in black velvet, gallops in at the head of a short mounted procession and urges his chestnut horse to rear, while the crowd jeers at him for his theatrical prowess. The key of the *toril* gleams for a moment in the air and disappears in the horseman's pointed felt hat. A clatter and a scurry—a few taunting cries—a clashing of the closing gates—and the formalities of the overture are over.

Before a battle, before a duel, or before a bull-fight there is always one moment of silent *recueillement* during which the contestants, veterans or raw recruits, instinctively weigh the chances. God only knows the issue, and during this last respite man realizes the possibility of the immediate future. Even the *espada*, Frascuelo, Lagartijo, or Mazantini, acknowledges to himself that there is a certain solemnity in this gambling with death; before the public he drapes his gorgeous *capa* about him in pretty falling folds; secretly he crosses himself, and the public, whose wonderful intuition justifies the saying *vox populi, vox Dei*, appreciates the hidden anxiety without heeding the ostentatious affected indifference.

Vaya! The gate is open, the suspense is over. The angry animal dashes in furiously,—smooth-limbed, deep-chested, superbly strong and defiant,—and the multitude heave a sigh of relief. The duel is begun. Fifteen weak, intelligent, skillful animals dressed in gold and silver and silk against a single one in somber satin—a large, lithe-flanked monster ignorant of its might and confident in its ignorance.

Among the *chulos* facing the bull Sancho stands in green and gold. It is his first appearance before a picked audience, and he feels nervous, yet confident of distinguishing himself if only the opportunity offers. In the farthest box on the shady side he recognizes his mother and Elvira in the front row; behind them the postmaster, the collector of customs, and, unless he is much mistaken, his old friend the priest, nodding at him from behind Elvira's

fan. But he has no leisure now to look up at them, for the bull is near him. He throws out his mantle, the animal charges, misses, and passes on, while the handsome boy, avoiding the thrust of the long, polished horns, stands draped in the gaudy silk. He has barely moved, and the crowd cries, "Well done!" but forgets him again as the bull charges the nearest *picador*, raising steed and rider from the ground.

As the play proceeds the excitement grows, and the bull-fighters, spurred on by the despotic fancy of the public, vie with one another in daring and skill. Poor Sancho, alas, is doomed to disappointment. He handles his *capa* perfectly; plants his *banderillas* gracefully, correctly, fearlessly, yet not more so than the others in the ring. With them he receives a passing tribute of applause; but as one bull after another is goaded into fury, and finally backed up against the fence to be killed, the great *espada* alone earns the wildly enthusiastic approbation of the audience. Sancho realizes that he is yet a novice and that fame is not for the obscure; he feels that he could kill the bull as gracefully as the great man upon whom all honors and presents are showered; but he must bide his time and rise upon the ladder of renown rung by rung. What he has done was well done, but it is nothing that will be remembered. In the morrow's papers his name will appear only as one of the *cuadrilla*; the criticism of the connoisseurs will not condescend to notice him, and Elvira will still answer, "Not yet." Five bulls have been dispatched, but one remains; and Opportunity with her short front hair has placed only the bald part of her cranium within his reach. Like all men of a sanguine temper, he is easily depressed; and as the doors of the *toril* open for the entrance of the sixth bull, Sancho has well-nigh lost all hope and interest in the game.

The bull is small, dark robed, well armed, and bears the brand of Veragua: in a few bounds he reaches the center of the arena and pauses to look around. The glaring light after the darkness of his cage, the noisy clamoring of ten thousand excited spectators, and these two-legged moving things in gaudy colors, the like of which he has never seen before, arouse his curiosity and astonish him. By the nervous twitching of his tail and the quick, sharp movements of his head it is evident that he is no "coward." The *toreadores* instinctively recognize him for an exceedingly dangerous adversary, and so it is with more than ordinary prudence that they spread their *capas* before him and run away. But all this fails to move him: slowly and steadily he advances, looking at the man, not at the rag. Now it is Sancho's turn. The bull throws up his head, stops, then plunges forward with such light-

"SANCHO TURNS, STANDS, AND STRETCHES OUT ONE HAND."

ning-like rapidity that the boy feels it is too late to run. The long, smooth horns are already on each side of him; and, scarcely realizing what he is doing, Sancho leaps forward upon the animal's back, and a second later to the ground. How they applaud, how they yell! But he has no time to think, for the bull is coming at him again, heedless of the others who seek to intercept him, and now Sancho knows that the animal has singled him out and that the fight is merely a duel between them. The case is rare, but he has heard of such; the danger is great, but he is not afraid; the chances of his escaping unscathed are few, but he feels confident and happy, for at last his opportunity has come. He flings away his useless *capa* and turns to run, not towards the refuge, the *burladero*, but straight towards the center of the arena, while the older men shake their heads: a clever bull and a rash youth, there is but one

ending to that tale, and a sad one at best. The spectators are beginning to understand, and hold their breath. During the race across the sand not a sound is heard in the vast amphitheater, but the men lean forward and the women hold their fans up to their faces ready to shut out the sight. Suddenly, in the very center of the arena, Sancho turns, stands, and stretches out one hand with a commanding gesture, and the bull, hesitant and startled, stops dead in his wild rush onward, and, stemmed on his outstretched forelegs, gazes in amazement at the slim figure that defies him. Ha! what a glorious group! Strength, grace, beauty, courage, and such movement, suddenly fixed as though in bronze! And now it is gone, as the first low growl of admiration bursts into a thunder of the wildest, most frantic applause. The ten thousand spectators rise as one man to their feet; the "sun" and the "shade"

are equally carried away by emotion, and the most dignified *grandees* reëcho the very cries of the masses. Even the *cuadrilla* forgets itself, and the bull, bewildered by the extraordinary clamor, wheels about and dashes at the nearest *picador*, hurling man and horse against the *tablas* in his mad onslaught. He has killed them both, but what is that to him or to the

is offered an opportunity for distinction; and even on Elvira, whose lover is now surpassing the ideal *torero* of her dreams.

Again, as Sancho takes his seat facing the bull, a solemn hush prevails, and the silence seems to be more impressive for the clamor that preceded. The older bull-fighters, with their *capas* unfolded, stand ready for an emergency.

"LA SILLA!"

crowd! As he turns he still sees before him the thing in green and gold, and the next moment the sharp-pronged *banderillas* are quivering in his flesh.

"*La silla! la silla!*"¹ yells the crowd. Its kindly sympathy for the skillful boy has made room for a less generous curiosity. Sancho has proved himself to be a master, now let him show what he can do. If he has in him the elements of a great bull-fighter let him be tested. It is cruel to demand "*la silla*" with such a bull, but Sancho now belongs to the public, and an excited, bloodthirsty crowd knows neither sympathy nor sentimentality. If he succeeds, the greater be his honor; if he fails — well then, he should not have led them to suppose him greater than he was. In this moment of over-excitement the injustice, the cruel selfishness of the argument, are lost even on Sancho, intoxicated with applause and suddenly earned success; even on his mother, too Spanish to think of danger when her son

He raises his arms and poises the sharp-pronged darts; a dash, a plunge, a few half-smothered cries, and the chair flies upward through the air to alight forty feet away, while Sancho seems to be standing on the very spot he occupied before the charge. The green and gold ribbons dangling from the bull's neck alone show how sure was the boy's aim and how steady his hand. A murmur of incredulity, more flattering than the deafening tumult that follows, sweeps over the benches, and hats, fans, jewels, and cigars rain down into the ring. All restraint seems loosened; all timidity gone from the most timid; young girls, with flushed faces and flashing eyes, laugh hysterically and call out the hero's name. Even the haughty Elvira rises, unclaps her bracelet, and leaning forward with a cry that tells Sancho how real is his dream, she flings the token far out on the sand, where, heedless of all danger, the boy kneels and kisses the precious gift; for by this sign he knows that she has yielded.

¹ The *torero* sits in a chair (*silla*) and awaits the bull's charge; he holds the *banderillas* (sharp-pronged darts with barbed points) before him and in a sitting

posture plants them in the bull's shoulder, a most dangerous feat. Nearly all who attempt it rise before the bull is near them.

Once more he miraculously avoids the bull, who charges at him from behind, and panting, exhausted, but inexpressibly happy, he leans against the *valla*, listening absent-mindedly to the compliments showered upon him. His part in the performance is over, for the cowed animal now sullenly faces his tormentors on the spot where he has chosen to die, and the espada is advancing, sword in hand, to give him the *coup de grâce*. But, to the surprise of all, he passes by the bull, and taking Sancho by the hand he offers him the muleta. One bull more or less is of little importance to his glory, and should this boy become a great man he will remember his master's kindness gratefully; if, on the other hand, the future does not justify the day's promise, the bravos of the crowd that applaud his generosity are as pleasing to him now as had they been delayed a minute to applaud his skill.

And now the parts are reversed. The man attacks, the bull defends himself; he is weary with the gigantic efforts of the last half-hour, weary with loss of blood, weary of attacking an ever-vanishing foe. Sullenly, with lowered head and watchful eyes, he follows the undulating motion of the red rag before him and listlessly attempts to reach it with his horns. A sharp prick on the nose once more rouses his rage; for the last time he charges; the long, flexible blade is buried in his flesh, and as his strength flows away with his life's blood the brave beast slowly kneels before his conqueror. The day is done, and Sancho turns to offer the bull to his lady, thus moving a step nearer to his fallen foe — dying, but alas, not dead. In his impatient joy he has forgotten that that last moment before death is the most dangerous of the fight. Even as he raises his hand towards Elvira's box he is hurled to the ground, and as the two heroic animals sink quivering together on the sand, a mighty, passionate roar bursts from the fickle multitude: "*Toro, toro! Bravo, toro!*"

III.

FOR many months Sancho was confined to his bed unable to move, for, besides the great gash across his face, he had received two deep and dangerous wounds, and during this long time both Elvira and his friends were constantly at his bedside. It was then that he read "*Don Quixote*," a work which made such

an impression upon his mind that to this day you will rarely meet him without a volume in his pocket, though he knows the greater part of it by heart. Nor is it doubtful that he then acquired the philosophy of contentment which is such a noticeable trait in his character, as well as his love for good Spanish literature, of which his knowledge is extraordinary in a man of his schooling.

When he had recovered sufficiently, he was married in the old church by the house, and the wedding was an occasion for great rejoicing in Irún. Many members of the cuadrilla, as one of which Sancho's name had become known throughout the length and breadth of Spain, were present at the banquet following the ceremony, and which was offered by the town. Old Salazar, as a representative of the profession, made an elaborate speech in which he said, that having begun his career in so brilliant a fashion, it was Sancho Mitarra's duty to continue and become, as he naturally must, the greatest torero the world had ever seen. Certainly no man, Pepe Hillo and el Tato included, had done more in a single day than had Sancho Mitarra, whom he was proud to call his friend, and whom as an older man he felt authorized to question about his future plans.

"Friends," answered the bridegroom, as he laid his hand on Elvira's head, "I went into the arena not to fight bulls, but to satisfy the lady of my heart; and now, 'as we have loaves, let us not go looking for cakes.' Glory is a fine thing, no doubt, but we cannot leave it to our children. Like truth, it lies at the bottom of a deep well; and, as the proverb says, 'The pitcher that goes often to the well is sure to lose either handle or spout,' a proof of which I shall carry on my face until the curate can do me more good than the baker. As for riches, 'four yards of Cuenca frieze are warmer than four of Segovia broadcloth,' and while counting the cobwebs on the ceiling I figured that I could earn the frieze more surely in a modest shop than the broadcloth in the amphitheater. Thus, friends, let no man be disappointed in my resolution to become a brass-founder, for every one is as God has made him, and oftentimes a great deal worse."

Which accounts for Sancho's wearing a blouse instead of a gold-embroidered jacket.

John Heard, Jr.

WHAT IS THE REAL SHAPE OF THE SPIRAL NEBULÆ?

NE of the greatest works of the two Herschels, father and son, was the exploration of the region of the nebulae. When they began their labors, less than one hundred such objects were known.

Sir John Herschel's catalogue contains more than five thousand nebulae, and of these more than four thousand were discovered by the Herschels alone. Such amazing activity in mere discovery did not leave much leisure for a minute study of the details of nebulous structure. Although the nebulae in general had been

grees to the highly complex forms of some of the larger nebulae. These two figures will, however, serve excellently to exhibit the type of spiral nebulae.

When the great telescope of the Lick Observatory was installed in the summer of 1888 some of the first objects examined were of this class. Although many new details were added to those previously known, no real new light was thrown on the constitution and character of the class of spiral nebulae. Also many of the so-called planetary nebulae — objects usually circular or elliptic with a disk somewhat resembling that of a planet — were carefully

FIGURE 1. SPIRAL NEBULA.

FIGURE 2. SPIRAL NEBULA.

FIGURE 3. HELIX NEBULA.

divided into classes by Sir William Herschel, and although a few of the more important ones had been carefully studied by Sir John, it was not until after the mounting of Lord Rosse's great reflector that the systematic study of the minute structure of special nebulae was fairly begun. And one of the first-fruits of the establishment of this great telescope was the discovery of quite a new class of these objects — the spiral nebulae.

It was found by Lord Rosse that many nebulae had all their parts disposed in true spirals, and it was also found that many other nebulae of the brighter and more interesting kind — the great nebula of Orion among them — also had many of their principal features disposed in spirals. The best drawings of such objects that we possess are due to Mr. Lassell, who constructed with his own hands several splendid reflecting telescopes, and who used them with a skill and insight which many a professional astronomer may envy. Figures 1 and 2 give representations of spiral nebulae of pronounced type, taken from the collection of drawings made by Mr. Lassell at Malta. From simple shapes like these we can pass by insensible de-

studied. One of these, as is shown in figure 3, yielded very novel results.

To the Herschels, and to all previous observers, this nebula had presented the aspect of a pale blue elliptical disk, evenly illuminated over all its surface, with a faint dot of a central star or nucleus. The great power of the Lick telescope quite changed all that and gave us new details which have made this one of the most interesting objects in the heavens. The central star — which has a reddish tinge — was there; but the pale uniform elliptic disk was resolved into two interlacing hoops or rings of nebulosity. Although these were projected on the flat ground of the heavens, and although there seemed to be no possible way of absolutely demonstrating our conclusions, we did not hesitate to announce this as the first known nebula of an entirely new class and species — as a nebula whose parts were undoubtedly arranged in space in the form of a helix. No one can study this nebula through the great telescope without feeling certain that he is actually seeing something like the true shape of the object, and that it is in fact what we have called it, a helix nebula, and the first of its

class. There was no doubt that the spiral nebulæ were also the projections of helixes, but there was not the slightest evidence to demonstrate their real shape in space. All that was known was that they were seen as spirals, and that *some* helical shape projected on the background of the sky must produce their spiral form.

The discovery of the helix nebula (figure 3) naturally led to the search for a method which might enable one, in some cases at least, to determine the actual situation of the different branches of a nebula in space of three dimensions, from the meager data afforded by the projection of these branches upon the background of the sky. In general, this problem is hopelessly insoluble by our present means. I have, however, obtained some most interesting results for one class of nebulæ at least, and perhaps the method employed is capable of still wider applications.

To understand the method let us first get a clear conception of the manner in which we see any distant heavenly body, as a nebula, for example. Every point of the nebula is constantly giving off its feeble light in straight lines — rays of light — in every possible direction. Most of these rays pass to other parts of space than ours, but a certain number of them are directed towards the solar system (A in figure 4). These rays alone come to the eye and are alone effective in making the picture

parallel rays coming from all those points of the nebula which are turned towards us. The angle between the axes of the outside bundles of these rays corresponds to the angular diameter of the nebula, and this angle is usually very small.

Suppose, for example, that the nebula as it really exists in space is a circle; and that the edge—the rim—of the nebula is turned towards the earth. We shall see such a shape as a straight line. Just as in this case so in others. In figure 4 the eye at A will receive a cylinder formed by parallel rays from the nebula at α' or α'' and will project the directions of those rays backward upon the ground of the sky into a curve like *a*. The only thing that we know, in general, about a nebula is that its projection on the background of the sky is a curve, like *a*, for example. And the shape *a* is what we see in our telescopes, or it is what a photograph of the region will show us. We have to conceive, then, a real nebula of unknown form situated somewhere in space between the eye and the background of the sky; of bundles of parallel rays of light from this real nebula reaching the earth at A; and, finally, of these rays projected backward to the real concave of the heavens and meeting this background in a projected curve *a*, which is the nebula as it appears to us and as it is depicted in drawings. Looking at it geometrically, the curve *a*, whatever it is, circle, ellipse, spiral, must be considered as the base of a sort of cylinder; and the rays reaching from *a* to A must be considered as the elements of the cylinder, which taken all together form its surface. If the base *a* is a circle, we have the ordinary cylinder; if it is an ellipse or other closed curve, still we have a cylinder; if the base *a* is not a closed curve but an open one, like a spiral, still we have a cylindrical surface or sheet. This surface may be highly complicated; parts of it may intersect and cross in an involved fashion, depending on the curve of its base; but, finally, we have always the cylindric sheet or surface, with the projection *a* of the nebula at one end of it, and the eye A at the other, and with straight lines between *a* and A. For example, the cylinder B*b* of the same figure shows a more complex cylindrical sheet than the one first drawn, corresponding to a more complex projected curve *b*. Every nebula drawing then must be conceived as the base of some projecting cylinder. The case is very different for one of the nearer heavenly bodies—as Jupiter, for example. Here we actually see all the details of the surface, and know that it is a sphere and not a flat disk by determining the time of rotation of these spots and markings.

Let us consider the two projecting cylinders of figure 4 a little more closely. It is clear that it is only the *surface* of the cylinder which cor-

FIGURE 4. SHOWING TWO DRAWINGS OF DIFFERENT NEBULÆ, *a* AND *b* THEIR PROJECTING CYLINDER.

on our retina which corresponds to a particular nebula. The source of light is so distant that all the rays from each point of the nebula are absolutely parallel. The moon is the nearest celestial body, and yet rays which pass from each point of the lunar disk over the 240,000 miles between the moon and the earth are, for all practical purposes, exactly parallel. Still more must we regard the rays from every point of even the nearest nebula as parallel. The picture on the retina of our eye is thus formed by bundles of

responds to the drawing *a* or *b*. The interior volume has nothing to do with the matter. Moreover it is clear that the surface of the cylindric sheet corresponds *exactly* to the drawing. And in this way: *any* curve drawn on the surface of the cylinder A must be projected back on the sky in one and the same curve *a*. Draw any curve whatever on the surface of the cylinder and in general it will be projected back on the sky in the one curve *a*.

or ribbons of nebulous matter twisted about a central nucleus and seen by us in the form of a spiral curve. There are many other classes of nebulae, as those with circular or oval disks—the planetary nebulae; those consisting of one or two straight parallel rays; those disposed in oval rings, etc. We are now concerned only with the spiral nebulae, and figures 1 and 2 are the most striking of these which we may select as types.

FIGURE 5. THREE VIEWS OF THE MODEL OF THE TYPE-HELIX.

This means that no matter what shape the real nebula α' or α'' may have in space, provided only that it lies on the surface of this cylinder, we can see it projected on the background of the sky in only one curve; namely, in *a*. Exactly in the same way, *any* curve on the surface of the cylinder B can be projected on the sky into only one drawing as *b*. β' and β'' are two such curves, but it is clear that there may be an infinite number of them. Any one out of this infinite number, provided only that it is drawn on the surface of the cylinder, must be projected back into the single curve *b*, and it can be projected into no other.

This is all that we know, in general, about a nebula: we have made a drawing of it, or it has been photographed, and we have the picture *a* or *b*. About the real shape of the nebula itself we know next to nothing. It may have almost any fantastic shape. Almost any; but finally there is a limitation. The nebula must lie on the surface of its projecting cylinder. If it fulfills this one condition, it may be, for all that we know, *any* one of the myriad curves which can be so drawn.

The problem to be solved is to determine, if possible, which one of these myriad curves we must choose to represent the real nebula in space. This problem has never been solved, and, in general, it is probably quite insoluble.

In a very particular case it has received a solution, and perhaps the method of solution may be capable of wider application. The particular case in question is that of the spiral nebulae. These are usually elongated strings

We must recollect that the representations of nebulae in this article are taken from drawings, and that, like all drawings, they are subject to errors due to imperfect telescopic, visual, and artistic powers.

Photographs of nebulae are subject to a different and less hurtful class of errors, and they are quite free from anything like personal bias or opinion; and therefore they are much better data than drawings. But only a very few of the spiral nebulae have yet been photographed, and hence I am obliged to be content with these drawings, which are the best we have, and to wait until the great telescope of the Lick Observatory and other photographic instruments have provided us with more accurate delineations. With the best data available we may proceed to make the best solution possible of our problem, which is to find out the real situation in space of the various branches of the spiral nebulae.

We have the drawings *a*, *b*, etc. What are the true curves in space? Recollect that any curve on the surface of the cylinder A will produce the curve *a*, and that any curve on the cylinder B will produce *b*, and so on. Notice also that, in general, the surfaces of such projecting cylinders as A, B, etc. must be very different, because the pictures of the nebulae *a*, *b*, etc. are so utterly dissimilar.

Suppose that we could find a pair of curves, *a*, *b*, whose cylinders, A, B, were of such a shape that the same curve *can* be drawn on their surfaces, then there is at least a probability that this particular curve is in fact the

true shape of this pair of nebulae. If, again, we can find another nebula, *c*, whose cylinder, *C*, is so similar in shape to that of *a* that like curves can be drawn on the three surfaces, *A*, *B*, *C*, then there is a still greater probability that the identical curve on these three surfaces is in fact the true shape of these three nebulae in space. If we find yet another nebula, *d*, whose cylinder, *D*, is of such a shape that we can also draw the same curve on its surface, then once more there is a much higher probability that we have found the real shape of all four nebulae, *a*, *b*, *c*, *d*. As we get more and more examples all fulfilling the same condition, the probability that we have really obtained the veritable shape of the nebulous form in space is very rapidly increased; and by finding enough examples we may increase the probability to essential certainty.

We can attack the problem practically by seeking to form a wire model of such a shape that when it is held at different angles and in varying positions it can be made to cover accurately the outlines of each drawing of each nebula. The model must be changed and corrected in many trials, but finally I have found that it is possible to construct a helix or corkscrew-like curve, such that it can be projected into nearly every one of the multifarious forms assumed by the different spiral nebulae. At first sight it would seem strange that one such helix was enough, but in fact it is. All the spiral nebulae seem to be of the same type. Each of them is nothing more than a different view, a different projection, of one and the same parent curve. This curve is a true helix of not very complex form. It is shown in figure 5. Looking directly down upon it we have the left-hand position in the figure, and two views from the east and north sides respectively are shown beside the first. After constructing such a model as this, by many trials, it was applied to all the drawings of spiral nebulae which we possess, and it has been found to fit them accurately within the limits of precision of the drawings themselves.

With more accurate drawings the model or type-helix will have to be slightly modified, but I think we may now for the first time say that the situation of the different parts of a nebula in space is known. We have previously not known this for any nebula.

This result may have the most interesting and far-reaching consequences. We shall be able to fix the directions of the axes of each of the spiral nebulae and to say how they lie in space. Are they all parallel? do they all point

FIGURE 6. PROJECTIONS OF THE TYPE-HELIX ON A PLANE.

to some central point? or, as is most likely, are they entirely arbitrary in direction? What is the law of force by which the surrounding particles are attracted to, or repelled from, the central nucleus of the nebula? Is there a resisting medium surrounding these bodies? Are they in motion? Some of the parts of each nebula must be approaching us, some receding from us. Is it possible to make our spectroscopic observations sufficiently delicate to decide between these two directions with the clues afforded by our knowledge of their real shape? These and many similar questions at once suggest themselves with regard to each individual nebula. And some of these can certainly be answered, as respects some particular nebulae. The answers so obtained will have the most important bearing on the larger question of the mode of formation of the solar system. In the spiral nebulae we have an example of the working of the nebular hypothesis on a comprehensible scale, and we may hope to make some further steps onward by the light of the knowledge which seems now to be opening to us by the application of an unexpectedly simple method.

Edward S. Holden.

THE NATURE AND METHOD OF REVELATION.

II.—THE GRADUALNESS OF REVELATION.

FIRST the blade, then the ear, then the full corn in the ear." This picture Jesus himself drew of the foreseen diffusion of his kingdom. The kingdom was to be "as if a man should cast seed upon the earth." He plants it and leaves it; he sleeps and rises, "night and day." Meantime the seed springs up and grows, "he knoweth not how." It goes through, one after another, the stages of development up to the ripeness of the fruit. A parable, it need not be said, is framed to illustrate one point, and is not to be pressed beyond the intended scope. As rain and sunshine are required for the growth of wheat, so we are taught elsewhere that divine influences are needful, and are never disconnected from the operation of the truth in the minds of men. There is enough complementary teaching of Jesus to preclude any mistake, or one-sided view, in this direction. Yet the parable shows the confidence of Jesus in the perpetuity and progress of his kingdom. There resides in it, so he declared, a self-preserving, self-developing life. The seed, once planted, might be left with entire unconcern as to its growth. In these days, when "development" is a word on every tongue, we are often told that the conception of nature and natural law is foreign to the Scriptures. No assertion could be more mistaken. Even on the first page of the Bible, although the design there is to set in the foreground the creative agency of God, we read that the earth was bidden to bring forth the grass, the herb, and the fruit tree, each yielding "after his kind," "whose seed is in itself." In the parable of Jesus of which we are speaking, it is said that "the earth bringeth forth fruit of herself"—that is, to transfer the Greek term into English, "automatically." That epithet is chosen which denotes most exactly a self-acting, spontaneous energy, inherent in the seed which Jesus, through his discourses, his acts of mercy and power, and his patience unto death, was sowing in the world. This grand prophetic declaration, uttered in a figure so simple and beautiful, in the ears of a little

company of Galileans, was to be wonderfully verified in the coming ages of Christian history.

It is not, however, the progress of Christianity since it was fully introduced by Christ and the Apostles that we have now to consider. The development of the understanding of Christianity on the side of doctrine and of ethics, the advance to a more and more just and enlightened comprehension of the Christian religion, the unveiling of the riches of meaning involved in it, is a fascinating theme. But all this belongs under the head of the *interpretation* of Christianity, that term being used in a broad sense. The religion of the Gospel means vastly more to-day than it was ever perceived to mean before. This enlarged meaning, however, is not annexed to it or carried into it, but legitimately educed from it, through the ever-widening perceptions of Christian men whom the Spirit of God illuminates. The starry heavens are now what they were of old; there is no enlargement save that which comes through the increased power and use of the telescope. The globe on which we dwell to-day is the same that it was twenty centuries ago. Yet during the past ages there has been a progressive advance in astronomical and geographical discovery. No one commits the blunder of confounding discovery with creation.

What we have to speak of now is development and progress in the contents of revelation itself, in the interval between its remotest beginnings and the epoch when the Apostles finally handed it over in its ripe, consummated form to the Church, to be thereafter promulgated in the world. Of divine revelation itself the saying is likewise true: "First the blade, then the ear, then the full corn in the ear." The fact that revelation was progressive, that it went forward like the advance from dawn to noonday, may suggest the hasty, unwarranted conclusion that it was a natural process merely. Some will be quick to leap to this rash inference. As regards natural religion, the fact that creation is found to have been progressive, that unsuspected links are found to unite its consecutive stages, that the tendency of science is to lay bare a certain continuity in nature, leads the shortsighted to ignore the supernatural altogether. They imagine that there is no need to call in God to explain nature except where breaks are met

in the chain of mechanical causation. It is enough, they imagine, to be able to trace back the planetary system to a fiery vapor preceding it, as if the existence, or the order, or the beauty, of the astronomic system were thereby explained. If it be true that the plants in their multiplied species or "kinds" spring out of a few primitive germs, or out of only one, the evidence of forethought and will-power in the organization of the vegetable kingdom is not in the least weakened. Nor would it be effaced if the spontaneous generation of the living from the lifeless were an ascertained fact of science. It is the fruit of that same unreflecting tendency to dispense with God where there is observed an orderly progress of phenomena, which leads to the ignoring or denial of the supernatural in connection with the gradually developing religion of redemption. The critical researches of the time ferret out bonds of connection between successive stages of religious and moral teaching in the sacred volume. As in geology, there is less need than was formerly thought to fall back on the supposition of catastrophes along the path. The rudiments of what once seemed an utterly new form or phase of doctrine are detected at a point farther back. Behind the most impressive inculcations of truth are found the more or less unshapen materials out of which they were framed. The statue is followed back through the different sets of workmen to the quarry where the marble was hewn out of its bed. Before the Lord's Prayer was given by the Master some of the petitions contained in it had lain, like grains of gold dispersed in a sand-heap, in the arid waste of rabbinical teaching. The first effect on a novice in literary studies of looking behind Shakspeare's plays to the tales out of which they were woven, is to lessen in some slight degree his previous impression of the poet's originality. In a much greater degree is this effect produced by the first view of the spoils of the past which Milton gathered — from Homer, the Greek tragedians, Dante — and incorporated into his poems. That revealed religion *is* revealed, and is not the product of human genius, despite the gradual unfolding of it and the coherence of its parts, becomes more and more evident the more thoroughly the characteristics of it are appreciated. Its unique character finds no explanation in native tendencies of the Semitic race. History belies such a solution, of which Renan is one of the later advocates. This can be said while it is conceded that there were, no doubt, qualities in the Hebrew people which caused them to be selected as the recipients of revelation, and as witnesses for God to the rest of mankind. When we contemplate the true religion in its long, con-

tinuous advance upward to its culmination in the Gospel of Christ,—when we survey this entire course of history as a connected whole,—we are struck with the conviction of supernatural agency and authorship. When the outcome appears at the end in Jesus Christ and his work, light is thrown back on the divine ordering of the long series of antecedent steps. The accompaniment of miracle is a crowning token, reënforcing all other proofs of the supernatural, and confirming faith by an argument to the senses.

In glancing at the historic process of revelation, as that is disclosed by the scriptural documents, there is one transition which none can overlook. It is the contrast, on which the Apostle Paul builds so much, between law and gospel, the old covenant and the new. It is true that the Old Testament is not wanting in proclamations of the merciful character of God. The Apostle Paul himself insists that the Old Testament religion was, in its very foundation, a religion of promise, and that law came in to fill an intermediate space and to do a subsidiary office, prior to the realization of the promise. His doctrine is, moreover, that even the Gospel contains a new disclosure of God's righteousness, which was made necessary by his having passed over human sins in the period of comparative ignorance. The Atonement prevents the misconstruction which the divine forbearance in dealing with law-breakers in the earlier times might have occasioned. Still, the earlier revelation of God was predominantly a manifestation designed to impress on those to whom it was made his justice and unsparing abhorrence of transgression. Only as far as ill-desert is felt can pardon be either given or received. An education of conscience must precede a dispensation of grace. The later revelation was one of forgiving love. The superiority of Christianity to the Old Testament religion is the subject of the Epistle to the Hebrews. Its author will show that Christ is the "mediator of a better covenant"—a covenant with "better promises." "For," he pointedly remarks, "if that first covenant had been faultless," there would have been no occasion and no room for the second. The world-embracing compass of God's love, its inclusion of the Gentile races, was one of the prime elements in the Gospel. This was the "mystery" which had been hid from "ages and generations." The ordinary meaning of the term "mystery," in the New Testament writings, is not something which is still unknown, or inscrutable, but something which had before been concealed from human knowledge, but had now been brought to light. And the term is specially applied to the purpose of God to show

mercy to the world of mankind — a purpose which had been concealed from men, or at best but obscurely divined.

What precisely was the conception of God which was entertained in the earliest periods of Hebrew history is a subject of debate. There are questions which will be settled variously, according to the different views which are adopted respecting the date and relative authority of the documents. That the process of expelling the vestiges of polytheism and image-worship from the practices of the Israelitish people was accomplished slowly is sufficiently clear. The assumption, involved in language uttered by the heathen, that the gods of other nations than Israel are real beings, and exercise power, although it may be less than the power of Israel's God, determines nothing as to the doctrine of Israel's own accredited teachers. But Jethro, although a Midianite prince, was the father-in-law of Moses, and we find him saying, "Now I know that the Lord is greater than all gods." Jephthah says to a Moabite king: "Wilt thou not possess that which Chemosh thy god giveth thee to possess? So whosoever the Lord our God hath dispossessed from before us, them will we possess." Even Solomon wavered in his beliefs on this subject. Side by side with the altars of Jehovah, he built altars to foreign gods. Even in the early Church the idea prevailed that the deities of the heathen were demons — really existing, but evil and inferior in power. It would be natural for the less instructed Hebrews to imagine that there was some sort of territorial limit to the jurisdiction of the God whom they worshiped. An indistinct idea of this kind is at least a natural explanation of the story of the attempted flight of the prophet Jonah to Tarshish, which lay on the western border of the Mediterranean. There is a curious disclosure of a natural feeling in the fact recorded, without censure or comment of any sort, of Naaman, the Syrian captain. He craved permission to take into Syria two mules' burden of earth, — the sacred soil of Israel, — that upon it he might offer sacrifice to Jehovah. Some scholars there are who consider the earliest belief of the descendants of Abraham to have fallen short of a positive monotheism, and to have been rather a monolatry — the worship of one God, to the exclusion of all other worship, but without an explicit disbelief in the existence of other divinities who have respectively their own earthly realms to govern. Then the progress of faith would include, first, the idea of the God of Israel as more powerful than all other deities, and then, later, the ascription to him of almightiness, and the distinct conviction that all other gods are fictitious beings. But the scriptural evidence in favor

of this succession in the phases of faith is scanty. We are speaking now, not of the populace, but of their more enlightened and steadfast guides. The path from a more narrow conception of God to a pure and absolute monotheism is supposed by some to have been through a deepening ethical idea of the attributes of Israel's God. Wellhausen writes: "Jehovah became the God of Justice and Right; as God of Justice and Right, he came to be thought of as the highest, and at last as the only, power in heaven and earth." The reader of statements of this kind should bear in mind that we are in a field where prepossession and theory play a great part. If it could be established that Jehovah at the outset was regarded as simply the tribal god, the sovereign protector of that one people, while the other nations were imagined to have each its own guardian divinity; yet the expansion of this primitive notion into the pure and lofty conception of the only true and living God, the world's creator and ruler, which is presented in soul-stirring language by the most ancient prophets, is a marvel. The transformation is really insoluble on any naturalistic theory. Even on the supposition that there was this gradual uplifting of religion from the low plane on which all pagan nations stood, and that the notion of a mere local divinity, of limited control, gave way to the majestic conception of one Lord of heaven and earth, the maker of all things, the ruler of nations, the universal sovereign — no conclusion would be so reasonable as that God Almighty took this method of gradually disclosing his being and attributes to that portion of the human race from whom, as from a center, the light of the true faith was eventually to radiate to the rest of mankind.

The universal providence of God is a cardinal element in Christian theism. Nothing is independent of him. There is no province set apart from his control, where rival agencies hold sway and thwart his designs. We can easily understand why, in the early stages of revelation, all emphasis should be laid on the sovereign power of God, and why a clear separation of his direct efficiency from his permissive act should be reserved for a later day. It was always taught, indeed, and holds true for all time, that according to a law of habit, of which the creator of the soul is the author and sustainer, sin engenders further sin. A self-propagating power inheres in transgression. In numberless examples it is observed that sin is thus the penalty of sin. It is true now, as it was always true, that a loss of moral discernment and a fixedness of perverse inclination are an ordained effect of persistent evil-doing. The law which entails this result is but another

name for a divine operation. Hence it is a false and superficial theology which will find no place for "judicial blindness" and for a "hardening of heart" that deserves to be called a judgment of God. So far the Scriptures of the New Testament are in full accord with the Scriptures of the Old. But there are certain forms of representation which, in the introductory periods of revelation, go beyond these statements, and ascribe to God a positive and immediate agency in the production of moral evil. Sometimes the hardening of the heart is spoken of as if it were the end which is directly aimed at. Such passages, taken by themselves, would warrant the harshest doctrine of reprobation which hyper-Calvinism has ever broached. The proper treatment of such passages is not—certainly not in all cases—to pronounce them hyperboles. It is not through unnatural devices of interpretation that we are to rid ourselves of the difficulty which passages of this nature occasion. The reference of them to a fervid rhetoric—in various instances, to say the least—may not be the right solution. We are rather to see in them that vivid idea of God's limitless power and providence which has not yet arrived at the point of qualifying the conception by theological discriminations. If it be asked how it was possible to reconcile the perception of the ill-desert of sin with the ascription of it to God's causal agency, the answer is that the inconsistency was not thought of. Reflection was required before the inconsistency referred to could become an object of attention, and the need of removing it be felt. In more than one philosophical system—for example, in Stoicism—there is found an earnest ethical feeling, which condemns wrong action, side by side with a metaphysical theory as to the origin of evil, which logically clashes with such an abhorrence of it. The two judgments do not jostle each other, because they are not brought together in the thoughts of those who entertain them. Where there is more reflection in the matter, as in Spinoza and his followers, it is still possible to keep up a degree of moral disapproval along with a theory which really ought to banish it as absurd. In the ancient Scriptures, and occasionally in the New Testament, especially in passages cited from the Old, the evil-doing and perdition of classes of men, their misunderstanding and perversion of the truth, are set forth as ends in themselves. Being involved in the circle of occurrences which are comprised in the general scheme of Providence, they are no surprise to him who carries it forward. They were foreseen and taken into the account from the beginning. It was arranged that they should be overruled and made the occasion of good. Their relation to Providence

is emphasized in speaking of them as being directly aimed at and pursued, so to speak, on their own account. As we follow down the progress of revelation, we see that needful distinctions are more frequently made, and more carefully insisted on. In the second book of Samuel (xxiv. 1) it is said that God "moved" David against Israel, with whom he was displeased, and bade him go and number the people. The impulse or resolution of David, on account of which David was subsequently struck with compunction, is there said to have emanated directly from God himself. But in the later history (1 Chronicles, xxi. 1), in the record of the same transaction, we read that it was Satan who "provoked David to number Israel." The earlier writer does not hesitate to describe God's providential act as if it were the direct product of his preference, an explicit injunction, and the fact of David's repentance for doing the act does not present to the writer's mind any difficulty. The chronicler, from a later point of view, sets forth the act of David in such a way as to exclude, if not to guard against, the supposition that God prompted it.

The gradualness of the disclosure of the merciful character of God is one of the most obvious features of revelation. One part of this disclosure pertains to the heathen, and to the light in which they are regarded. It was natural that the contempt and loathing which idolatry and the abominations of paganism excited in the heart of the pious Israelite—feelings which the Mosaic revelation developed and stimulated—should be felt towards heathen worshippers themselves. The hatred thus begotten awakened an impatient desire that the divine vengeance should fall upon them. An impressive rebuke of this unmerciful sentiment, and what is really a distinct advance in the inculcation of an opposite feeling, is found in the book of Jonah. There are reasons which have availed to satisfy critics as learned and impartial as Bleek, who are influenced by no prejudice against miracles as such, that this remarkable book was originally meant to be an apologue—an imaginary story, linked to the name of an historical person, a prophet of an earlier date, and was composed in order to inculcate the lesson with which the narrative concludes. This was the opinion, also, of the late Dr. T. D. Woolsey. One thing brought out by the experience of Jonah is that so great is God's mercy that even an explicit threat of dire calamities may be left unfulfilled, in case there intervene repentance on the part of those against whom it was directed. The prophet who was exasperated at the sparing of the Ninevites was taught how narrow and cruel his ideas were, by the symbol of the

gourd "which came up in a night, and perished in a night." He was incensed on account of the withering of the gourd which had shielded his head from the sun. The Lord referred to Jonah's having had pity on the gourd, and said: "And should not I spare Nineveh, that great city, wherein are more than sixscore thousand persons that cannot discern between their right hand and their left hand; and also much cattle?" This humane utterance, in which compassion is expressed even for the dumb brutes, is memorable for being one of the most important landmarks in Scripture, since it marks a widened view of God's love to the heathen. To illustrate this truth the narrative was written, and towards it as onward to a goal it steadily moves.

The truth of a righteous moral government over the world pervades revelation from the beginning. Obedience to law will not fail of its due reward; guilt will be punished in a just measure. But under the Old Testament system, nearly to its close, the theater of reward and penalty was confined to this world. The horizon was practically bounded by the limits of the earthly life. It was here, on earth, that well-doing was to secure the appropriate blessing, and sin to encounter its meet retribution. The Israelite, like other men of antiquity, was wrapped up in the state. He felt that his weal or woe hinged on the fortunes of the community in whose well-being his affections were, in a degree beyond our modern experience, absorbed. The prophets never ceased to thunder forth the proclamation that the fate of the community would be surely, in the providence of God, determined by its fidelity or its disloyalty to its moral and religious obligations. If they deserted God, he would forsake them. The people were to be rewarded or punished, blessed or cursed, as a body. And so in reality their experience proved. Moreover, as regards the single family, and the individual, the tendencies of righteous action, under the laws of Providence, were then, as always, on the whole favorable to the upright in heart. The arrangements of Providence were in their favor. But in process of time it became more and more painfully apparent that this rule was not without numerous exceptions. The righteous man was not uniformly prospered. He might be poor, he might be oppressed, he might be condemned to endure physical torture, he might perish in the midst of his days. On the other hand, the wicked man was often seen to thrive. His wealth increased. He grew in power and influence. His life was prolonged. How could the justice of God be defended? How could the allotments of Providence—this disharmony between character and earthly fortune—be vindicated? This problem became the

more anxious and perplexing as the minds of men grew to be more observant and reflective. How to explain the lack of correspondence between the condition and the deserts of the individual? This problem is the groundwork of the book of Job. A righteous man is overwhelmed by calamities, one after another. His lot is to himself a dark and terrible mystery. But his consolers, when they break silence, solve it in the only way known to their theology. Such exceptional suffering implies an exceptional amount of guilt. Job must have been a flagrant transgressor. Of this fact his dismal situation is proof positive. The wrath of Jehovah is upon him. Conscious of the injustice of the allegation brought against him, yet unable to confute the logic of it, Job can do nothing but break out in loud complaints extorted by his anguish and the bewilderment into which he is thrown. He cannot see any equity in the lot which has befallen him. His outcries give vent to a pessimistic view of the world and of the divine management of it. Another interlocutor brings forward the inscrutable character of God's doings. What more vain and arrogant than for so weak and helpless a creature as man to pretend to sound the unfathomable counsels of the Almighty, and to sit in judgment on his ordinances? This, of course, is a rebuke, but contains no satisfactory answer to the questions which the distress of Job wrings from him. But the real answer is given. Afflictions may have other ends than to punish. They may be trials of the righteousness of a servant of God. They are a test to decide whether it springs out of a mercenary motive. Hence, it is not to be inferred that his sufferings are the measure of his ill-desert. Thus a distinct advance is made in the theodicy. New vistas are opened. Pain has other designs and uses besides the retributive function. Yet at the end Job's possessions and his earthly prosperity are all restored to him. The feeling that even here on earth there must be, sooner or later, an equalizing of character and fortune is not wholly given up.

It was revealed, then, to the religious mind, that suffering, besides being inflicted as the wages of sin, might be sent to put to the test the steadfastness of the sufferer's loyalty to God, to prove the unselfishness of piety, by showing that it might survive the loss of all personal advantages resulting from it, and to fortify the soul in its principle of obedience and piety. But relief from perplexity in view of the calamities of the righteous came from another source. This was the perception of the vicarious character of the righteous man's affliction. This idea emerges to view in a very distinct form in the great prophets. The pious portion of Israel, the kernel of the people,

suffer not for their own sake, but on account of the sins of the nation, and as a means of saving it from deserved penalties and from utter destruction. This view is brought out by Isaiah in his description of the servant of Jehovah. The conception is gradually narrowed from Israel as a whole, or the select portion of Israel, and becomes more concrete; so that in the fifty-third chapter the sufferer is an individual, the Messianic deliverer. It is declared that the popular judgment respecting the sufferer, which attributes to him personal guilt, and sees in his lot the frown of God, is mistaken. Penalties are laid on him, he is taking on himself penalties which not he, but others, deserve to bear. How this principle of vicarious service is illustrated in the life and death of Jesus, and how abundantly it is set forth in the New Testament, it is needless to say. Who had sinned, the blind man or his parents, that he was born blind? His blindness, Jesus replied, was not a penalty for the sin of either. This problem of the distribution here on earth of suffering in discordance with desert, of which we are speaking, had new light shed upon it by the gradually developing faith in the future life; but of this point I will speak further on. In general, the contrast between the common run of Old Testament descriptions of the reward of the righteous, and of the New Testament declarations on the same theme, is very marked. In the Old Testament it is riches, numerous children, safety of person and of property, which are so often assured to the righteous. The words of Jesus are, "In the world ye shall have tribulation." Yet the essential character of God, the eternal principle of justice that will somehow and somewhere be carried out in the government of the world, is at the root the same in both dispensations.

He who would appreciate the progress of revelation has only need to compare the silence as to a hereafter and the gloom that encompasses the grave—characteristic features of ancient Scripture—with the definite assurances and the triumphant hopes which are scattered over the pages of the New Testament. On this subject we can trace the advance from the night to the brightening dawn and from the dawn to midday. The hopes and aspirations of the ancient Israelites were bounded by the limits of the present life. Their joys and sorrows were here; here, as we have seen, were their rewards and punishments. It is true that they did not positively believe their being was utterly extinguished at death. On the contrary, they found it impossible so to think. There was some kind of continuance of their being, vague and shadowy though it was. When it is said of the worthies of old that they died and were "gathered to their fathers," it is not

to their burial—certainly not alone to their burial—that the phrase points. It was used of those who died far away from their kindred. A continued subsistence of some sort is implied in it. Necromancy was a practice which was forbidden by law, and the need of such a law proves that the belief and custom prohibited by it had taken root. The story of the appearance of Samuel, and the occupation of the witch of Endor, show at least a popular notion that the dead could be summoned back to life. Sheol, the Hades of the Israelites, was thought of as a dark, subterranean abode, a land of shades, where existence was almost too dim to be denominated life. There was nothing in this unsubstantial mode of being to kindle hope, or to excite any other emotion than that of dread. In the poetical books Sheol is personified and depicted as full of greed, opening her mouth "without measure," and swallowing up all the pomp and glory of man. In a splendid passage of Isaiah, Sheol is represented as disturbed by the approach within her gloomy domain of the once mighty King of Babylon, and as stirring up the shades, the dead monarchs, to meet him. They exult over his downfall and death, crying, "Is this the man who made the earth to tremble, who made kingdoms to quake, who made the world as a wilderness and broke down the cities thereof?" But this is only a highly figurative delineation of the humiliating fall and death of the arrogant, dreaded sovereign. It is not until we have passed beyond the earlier writings of the Old Testament that we meet, here and there, with cheerful and even confident expressions of hope in relation to the life beyond death. In the later Psalms there is an occasional utterance in this vein. The sense of the soul's communion with God is so uplifting as to forbid the idea that it can be broken by death. Jesus refers to the Old Testament declaration that God is the God of Abraham, Isaac, and Jacob as a sufficient warrant for the belief in the continued, immortal life of those who stood in this near, exalted relation to the Eternal One. What other—at least, what higher—evidence of immortality is there than is derived from the worth of the soul, and what indication of its worth is to be compared with its capacity to enter into living fellowship with God? How can a being who is admitted to this fellowship be left to perish, to exist no more?

Besides this connection of faith in future life with the relation of the righteous and believing soul to God, the demand for another state of being to rectify inequalities here arose by degrees in religious minds. The strange allotment of good and evil, whereby the good man, and not the bad man, was often seen to be the sufferer, and the holy were found to be maligned

and the victims of oppression, led to the expectation of a life beyond, where this confusion would be cleared up and an adjustment be made according to merit. The moral argument, which Kant, and others before and since, have presented as the ground for believing in a future state, was a revelation from God to the Hebrew mind, and not the less so because this belief stood connected with experiences and perceptions that went before. There is a familiar passage in the book of Job in which the hope of a reawakening from death is perhaps expressed. It is the passage beginning, "I know that my Redeemer"—or Vindicator—"liveth." The confessions of hopelessness in earlier portions of the book, the impassioned assertions that there is nothing to be looked for beyond death, are to be counted in favor of the other interpretation, according to which the vindication which Job expected he looked for prior to his actual dissolution. On the contrary, however, it is not improbable that the foresight of an actual reawakening to life is represented as having flashed upon his mind, displacing the former despondency. Certain it is that distinct assertions of a resurrection appear, here and there, in the later Scriptures. For, in the biblical theology, it is the deliverance of the whole man, body as well as soul, which in process of time comes to be the established belief. It is closely associated with the conviction that in the triumph and blessedness of the kingdom the departed saints are not to be deprived of a share. It was not a belief derived from the Persians, but was indigenous among the Hebrews,—an integral part of revelation,—however it may have been encouraged and stimulated by contact with Persian tenets. Not to refer to statements, relative to a resurrection, of a symbolical character,—such as the vision of dry bones in Ezekiel,—we find in the twenty-sixth chapter of Isaiah a passage which is explicit, and, as it would seem, is to be taken literally. In the Revised Version the passage reads, "Thy dead shall live; my dead bodies shall arise." There is a critical question, it should be stated, as to the date of the chapter in which these words occur. In the Psalms there are not wholly wanting passages of a like purport. In the book of Daniel the resurrection of both the righteous and the wicked Israelites is very definitely predicted. As is well known, the resurrection was an accepted doctrine of orthodox Jews in the period following that covered by the canonical books. In the New Testament immortality, and with it the resurrection, stands in the foreground. Through the death and resurrection of Jesus there comes a new illumination, a signal disclosure of God's purpose of grace and of the blessed import of

eternal life; so that death is said to be "abolished" and life and incorruption "brought to light" (2 Tim. i. 10).

When we leave theology for the domain of ethics, the progressive character of revelation is capable of abundant illustration. The Sermon on the Mount has for its theme that fulfillment of law, that unfolding of its inner aim and essence, which Christ declared to be one end of his mission. Morality is followed down to its roots in the inmost dispositions of the heart. The precepts of Jesus are a protest against the Pharisaical glosses which tradition had attached to Old Testament injunctions. It is "the righteousness of the Scribes and Pharisees" which is pointedly condemned. It is still an unsettled question, however, whether the reference to what had been said by or to "them of old time" was intended to include Old Testament legislation itself, as well as the perverse, arbitrary interpretations which had been attached to it by its theological expounders. Plainly the injunction of Jesus to love the enemy, as well as the neighbor, goes beyond the directions in Leviticus (xix. 17, 18): "Thou shalt not hate thy brother in thine heart. . . . Thou shalt not take vengeance, nor bear any grudge against the children of thy people, but thou shalt love thy neighbor as thyself." Here nothing is said of any except the "neighbor." The prohibition is limited to the treatment of national kinsmen. That the general obligation to the exercise of good-will towards wrong-doers and foes, wherever they may be, and to the cultivation of a forgiving temper towards all men, finds in the Gospel an unprecedented expansion and emphasis is evident to all readers of the New Testament. A supplication for the pardon of enemies forms a part of the Lord's Prayer. The hope of personal forgiveness is denied to those who are themselves unforgiving. The example of Jesus, and the pardon offered to the most unworthy through him, are a new and potent incentive to the exercise of a forgiving temper.

A glance at the ideals of ethical worth in the early ages of Israel is enough to show how sharply they contrast with the laws of Christ and the type of character required and exemplified in the New Testament. It was once said by an eminent divine that the patriarchs, were they living now, would be in the penitentiary. Polygamy and other practices the rightfulness of which nobody then disputed, the wrongfulness of which nobody then discerned, are related of them, and related without any expression of disapproval. Whoever has not learned that practical morality, the ramifications of a righteous principle in conduct, is a gradual growth, and that even now,

after the generic principles of duty have been set forth in the Gospel, and a luminous example of the spirit in which one should live has been afforded in the life of Jesus, the perception of the demands of morality advances from stage to stage of progress, is incompetent to take the seat of judgment upon men of remote ages. Not long ago, a letter of Washington was published in which directions are given for the transportation to the West Indies and sale there of a refractory negro who had given him trouble. The act was not at variance with the best morality of the time. The letter is one that deserves to cast no shade on the spotless reputation of its author. Yet a like act, if done to-day, would excite almost universal reprobation. To reproach the worthies of Old Testament times as if they lacked the vital principle of unselfish loyalty to God and to right, as they understood it, is not less irrational than to deride the habitations which they constructed or the farming tools which they used to till the ground. It is not the less imperatively required of us, however, to recognize the wide interval that separates the ancient conceptions of morality from those of the Gospel. Jael, the wife of Heber the Kenite, entered, heart and soul, into the cause of Israel in the mortal struggle with the Canaanites. In lending aid to the cause which she espoused she did an act of atrocious cruelty and treachery. She enticed Sisera into her tent, and when he was reposing drove a tent-pin through his head. Yet for her deed she is lauded in the song of Deborah the prophetess (Judges v.), "Blessed above women shall Jael be, the wife of Heber the Kenite!" Almost the same words were addressed to the Virgin Mary (Luke i. 42), "Blessed art thou among women!" What an infinite contrast between the two women to whom this lofty distinction is awarded! Nothing is better fitted to force on us the perception of the gradualness and the continuity of revelation.

We meet in the Psalms with imprecations which are not consonant with the spirit of the Gospel. They belong on a lower plane of ethical feeling. It is one thing to experience a satisfaction in the just punishment of crime. It is accordant with Christianity to regard with conscientious abhorrence iniquity, whether we ourselves or other men are the sufferers by it. Indifference to base conduct, be the root of this state of mind a dullness of the moral sense, or false sentiment, is, to say the least, not less repulsive, and may be more demoralizing, than the fires of resentment which nothing but fierce retaliation can quench. But the spirit of revenge is unchristian. Christianity teaches us to distinguish between the offense and the offender: the one we are to hate;

the other we are forbidden to hate. Moreover, Christianity never loses sight of the possibilities of reformation in the case of wrong-doers. The Christian considers what an individual might be, not merely what he now is. The benevolent feeling, therefore, is not allowed to be paralyzed by the moral hatred which evil conduct naturally and properly evokes. As regards personal resentment, the Christian disciple is cautioned never to forget his own ill-desert and need of pardon from God, and the great boon of forgiveness in the reception of which the Christian life begins. These qualifications and correctives of passion were comparatively wanting in the earlier dispensation.

It is impossible to refer all the imprecations in the Psalms to a feeling of the authors in relation to the enemies of God and of his kingdom. Respecting such even, Jesus invoked not vengeance. He rebuked his disciples when they proposed to call down fire from heaven to destroy the inimical Samaritans (Luke ix. 55). No devices of interpretation can harmonize with the precepts of Christ such expressions as are found in the 109th Psalm: "Let his children be fatherless, and his wife a widow. Let his children be vagabonds, and beg. . . . Let the extortioner catch all that he hath. . . . Let there be none to extend mercy unto him. Neither let there be any to have pity on his fatherless children." The wrath of the author of this lyric against the cruel and insolent one who "persecuted the poor and needy man, and the broken in heart, to slay them," it is fair to assume was merited. The sense of justice and the holy anger at the root of these anathemas are in themselves right. They are the result of a divine education. But they take the form of revenge — a kind of wild justice, as Lord Bacon calls it. The identification of the family with its head is one of "the ruling ideas" of antiquity. It appears often in the methods of retribution which were in vogue in the Old Testament ages. It gave way partly, and by degrees, under that, progressive enlightenment from above through which individual responsibility became more distinctly felt and acknowledged, both in judicial proceedings and in private life.

It is the characteristic of Old Testament laws and precepts that in them bounds are set to evils the attempt immediately to extirpate which would have proved abortive. Something more than this must be said. There was lacking a full perception of the moral ideal. In the Old Testament expositions of duty, as we have already seen, there is an approach towards that radical treatment of moral evils which signalizes the Christian system. An additional example of this feature of the preparatory stage of revelation may be found in the last chapter

of the book of Proverbs. There "Lemuel," the name of a king, or a name applied to one of the kings, is apostrophized. He is exhorted to practice chastity and temperance. "It is not for kings, O Lemuel, it is not for kings to drink wine; nor for princes strong drink: lest they drink, and forget the law, and pervert the judgment of any of the afflicted." What better counsel could be given? The judge on the bench must have a clear head. But the counselor, in order to strengthen his admonition, proceeds to say: "Give strong drink unto him that is ready to perish." So far, also, there is no exception to be taken to the wisdom of his precept. The Jews had a custom, resting on a humane motive, to administer a sustaining stimulant or a narcotic to those undergoing punishment, in order to alleviate their pains. Something of this kind was offered to Jesus on the cross. But the counselor does not stop at this point. He says: "Give strong drink unto him that is ready to perish, and wine unto those that be of heavy hearts. Let him drink, and forget his poverty, and remember his misery no more." There need be no hesitancy in saying that this last exhortation is about the worst advice that could possibly be given to a person in affliction, or dispirited by the loss of property. The thing to tell him, especially if he has an appetite for strong drink, is to avoid it as he would shun poison. Yet our remark amounts to nothing more than this, that the sacred author sets up a barrier against only a part of the mischief which is wrought by intemperance. His vision went thus far but no farther. It is a case where, to quote a homely modern proverb, "Half a loaf is better than no bread." It would be a great gain for morality and for the well-being of society if magistrates could be made abstinent.

On this general subject there is no more explicit criticism of Old Testament law than is contained in the words of Jesus respecting divorce. The law of Moses permitted a husband to discard his wife, but curtailed his privilege by requiring him to furnish her with a written statement which might serve as a means of protection for her. This statute, as far as the allowance to the man which was included in it is concerned, is declared by Christ to have been framed on account of "the hardness of heart" of the people. It fell below the requirement of immutable morality. It was a partial toleration of an abuse which it was then impracticable to seek to cut off altogether. But Christianity lifted the whole subject to a higher level. It presented a profounder view of the marriage relation. It superseded and annulled the Mosaic enactment.

The advance of the New Testament revelation in its relation to the Old has become, in

these days, obvious. But the New Testament revelation, in itself considered, was not made in an instant as by a lightning-flash. It did not come into being in all its fullness in a moment, as the fabled Minerva sprung from the head of Jove. As in the case of the earlier revelation, the note of gradualness is attached to it. The fundamental fact of Christianity is the uniting of God to man in the person of Jesus Christ. Peter's confession respecting his person is the rock on which the Church was founded. The Epistle to the Hebrews opens with the following striking passage (as given in the Revised Version): "God, having of old time spoken unto the fathers in the prophets by divers portions and in divers manners, hath at the end of these days spoken unto us in his Son." The former revelations were made through various channels, and were besides of a fragmentary character. They paved the way for the final revelation through the Son, whom the writer proceeds to liken, in his relation to God, to the effulgence of a luminous body. But modern exegesis and modern theological thought, while leaving untouched the divinity of Jesus, and even, for substance, the Nicene definitions of it, have brought into clear light that progressive development of the Saviour's person of which the Incarnation was the starting-point. Not until his earthly career terminated and he was "glorified" was the union of God and man in his person in its effects consummated. More was involved in his being in the "form of a servant" than theology in former days conceived. Nothing is more clear from his own language respecting himself, as well as from what the Apostles say of him, than that there were limitations of his knowledge. On a certain day Jesus started from Bethany for Jerusalem. He was hungry. Seeing at a distance a fig tree with leaves upon it, he went towards it, expecting to find fruit—it being a tree of that kind which produces its fruit before putting out the leaves. But when he came to it his expectation was deceived; "he found nothing but leaves." Jesus said that he did not know when the day of judgment would occur. Apart from conclusive testimonies of this character, it is evident from the whole tenor of the Gospel histories that he was not conscious of the power to exercise divine attributes in their fullness of activity. The opposite idea gives a mechanical character to his actions and to most of his teachings. How, if he was all the while in the exercise of omniscience, could he "marvel" at the unbelief of certain of his hearers? That when he was a speechless babe in his mother's arms he was consciously possessed of infinite knowledge, is an impossible conception. And the difficulties of such a conception are only lessened in degree at any other subsequent day while he was "in the

flesh." When we behold him at the last, prior to the crucifixion, we find his soul poured out in the agonizing supplication: "If it be possible, let this cup pass from me." The supposition of a dual personality in Christ is not less contrary to the Scriptures and to the Creed of the Church than it is offensive to common sense and to philosophy. Yet he was conscious of his divine nature and origin, and the unfolding within him of this unassailable conviction kept pace with the development of his human consciousness. The dawning sense of the unique relation in which he stood to God comes out in his boyhood, in the words addressed to his mother when he was found with the doctors in the temple, "Wist ye not that I must be in my Father's house?" And the limitations of Jesus must not be exaggerated or made the premise of unwarranted inferences. He knew the boundaries of his province as a teacher and never overstepped them. Just as he refused to be an arbiter in a contest about an inheritance, saying, "Who made me a judge or a divider over you?"—so did he abstain from authoritative utterances on matters falling distinctly within the sphere of human science. No honor is done to him, and no help afforded to the cause of Christianity, in attributing to him scholastic information which he did not claim for himself and which there is no evidence that he possessed. It is not less important, however, to observe that, notwithstanding the limits that were set about him by the fact of his real humanity, and as long as he dwelt among men, there was yet an inlet into his consciousness from the fountain of all truth. "No one knoweth the Son, save the Father; neither doth any know the Father, save the Son, and he to whomsoever the Son willeth to reveal him" (Matt. xi. 27). His knowledge differed in its source, in its kind and degree, from that of all other sons of men. "The words that I say unto you I speak not from myself: but the Father abiding in me doeth his works." The divine in him was not a temporary visitation, as when the Spirit dwelt for a brief time—sojourned, one may be permitted to say—in the soul of a prophet like Isaiah. Even then God spoke through the prophet, and the mind of the prophet might for the moment become so fully the organ of God that he spoke through the prophet's lips in the first person. But in Christ there was an "abiding" of the Father. The union was such that the whole mental and moral life of Jesus was an expression of God's mind and will. "He that hath seen me hath seen the Father." As conscience in me is the voice of another, yet is not distinct from my own being, so of Christ is it true that the Father was in him—another, yet not another. And this union, although real from the begin-

ning, culminated in its effects not until a complete ethical oneness was attained, at the end of all temptation and suffering—the oneness which found utterance in the words, "Howbeit not what I will, but what thou wilt." This was the transition-point to the perfect development of his being, which is styled his "glorification." As the risen and ascended Christ, he can be touched with sympathy with the human infirmities of which he has had experience, at the same time that he can be present with his disciples wherever they are—can be in the midst of the smallest group of them who are met for worship.

From Jesus himself we have a distinct assurance that the revelation which he was to make was not to end with his oral teaching. Near the end of his life he said to the Disciples, "I have yet many things to say unto you, but ye cannot bear them now." They were not ripe for the comprehension of important truth, which therefore he held in reserve. The Holy Spirit was to open their eyes to the perception of things which they were not yet qualified to appreciate. The communication of the Spirit ushered in a new epoch. Then the Apostles took a wider and deeper view of the purport of the Gospel. We find in the Epistles an unfolding of doctrine which we discover in the germ in the conversations and discourses of Jesus. It was impossible, for example, that the design of his death could be discerned prior to the event itself, and as long as the Disciples could not be reconciled even to the expectation of it. In isolated sayings of Jesus, in particular in what he said at the institution of the Lord's Supper, the Atonement is taught. The giving of his life, he said on another occasion, was to avail, in some way, as a ransom. But it was not until the cross had been raised that the doctrine of the cross was made an essential part of Christian teaching, and the great sacrifice became a theme of doctrinal exposition. By this subsequent teaching a void which had been left in the instructions of the Master was filled. In his teaching there were two elements, standing, so to speak, apart from each other. On the one hand, he set forth the inexorable demands of righteous law. In this respect no portion of the older Scriptures, in which law was so prominent a theme, is equally adapted to strike the conscience with dismay. On the other hand, there was in the teaching of Jesus the most emphatic proclamation of God's compassion and forgiving love. These two sides of the Saviour's teaching are connected and harmonized in the apostolic exposition of the Atonement.

The Apostles themselves, individually, as regards their perceptions of truth, their insight

into the meaning of the Gospel, and its bearings on human duty and destiny, did not remain stationary. How they attained to a more catholic view of the relation of the Gentiles to the Gospel and to the Church must form the subject of a special discussion. Apart from this subject, where their progressive enlightenment is so conspicuous a fact, there can be no doubt that from day to day they grew in knowledge. If we were in possession of earlier writings from the pen of the Apostle John, we might expect that marked differences would appear between them and the Gospel and the First Epistle, which were written when "the Son of Thunder" had ripened into the octogenarian apostle of love. The Apocalypse, so far as the style of thought is concerned, whatever judgment may be formed on other grounds, may quite conceivably have been written two or three decades prior to the date of the Gospel

by the same author. When the earliest writings of Paul, the Epistles to the Thessalonians, are compared with his latest writings — with the Pastoral Epistles and the Epistles to the Colossians and Ephesians — we not only find perceptible modifications of tone, but, in the later compositions, we find also views on the scope of the Gospel — what may be termed the universal or cosmical relations of the work of redemption — such as do not appear in his first productions. As a minor peculiarity, it may be mentioned that when he wrote to the Thessalonians he seems to have expected to be alive when the Lord should come in his Second Advent, while in his latest epistles this hope or expectation has passed out of his mind. As the Gospel and the First Epistle of John are the latest of the Apostolic writings, it is permissible to regard them as the fullest and ripest statement of the theologic import of the Gospel.

George P. Fisher.

PROFESSOR JAMES BRYCE, M. P.,

AUTHOR OF "THE AMERICAN COMMONWEALTH."

BY common consent, no Englishman of the present generation knows America so well, or has formed so just and far-seeing an impression of her institutions, as James Bryce. His personal acquaintance with the United States is limited, notwithstanding, to three holiday visits paid to this country in the intervals of professional activity. Mr. Bryce has many friends on both sides of the Atlantic, but, politician and author as he is, he shrinks with unusual timidity from any personal approach of the interviewer. His private life is little known because he has declined to permit it to be observed; and in giving some small sketch of his career we have been obliged to content ourselves with barren materials. The author of "The Holy Roman Empire" and "The American Commonwealth" is too modest to allow even his friends to persuade him that they wish to know something of his inner life or of the development of his intellectual powers. If this sketch of his career is slight, let it be appreciated that Mr. Bryce has not merely contributed nothing to make it fuller, but has done all that lay in his power to persuade us that it was altogether needless and superfluous.

James Bryce was born at Belfast, in the north of Ireland, of a Scottish father and an Ulster

mother, on the 10th of May, 1838. His father being an LL. D. of Glasgow, it was natural that he should receive his early education, first at the high school and then at the university of that city. He early showed a vigorous understanding and a rare power of application, gained a scholarship at Trinity College, Oxford, and began that connection with the latter university which has lasted now for nearly thirty years. Mr. Bryce, who is many things besides, is primarily and characteristically an Oxford don. He carries about with him a flavor of scholastic life into all his practical concerns, and is now perhaps the most complete specimen of the English university politician. He took his bachelor's degree, and was elected a Fellow of Oriel, the college which Newman and the Tractarian movement had long before made famous, in 1862. He now settled down, at the age of twenty-four, into an Oxford don, whose peculiar existence entails a feverish round of lectures and committees, board meetings and council meetings for eight months of the year, and leaves the remaining four open for extensive travel. Mr. Bryce, whose physique has always been sturdy and active, early became a mountaineer, and some of the more remarkable of his adventures have found their way into chronicle.

His literary life opened in 1864, when he published a prize essay on "The Holy Roman Empire." This was a little volume of a kind

such as is seldom heard of outside the walls of the university. Such essays are commonly found to be, if erudite, yet second-hand, and if elegant, yet juvenile and unimpressive. The volume of the young Fellow of Oriol was an exception. Rarely has the earliest production of a writer in prose attracted or deserved so much notice. It was exceedingly novel in theme; it was sound in matter and brilliant in style; and what was intended for a board of examiners found its welcome in the general world of readers. The object of "The Holy Roman Empire" was to describe that institution or system from a new point of view, as the marvelous offspring "of a body of beliefs and traditions which has almost wholly passed away from the world." The book is, nevertheless, rather a narrative than a dissertation, and with what may be called the theory of the empire is combined an outline of the political history of Germany and of some phases of medieval Italy. This treatise enjoyed a genuine and even a sustained success, and to the fourth edition, which appeared in 1873, the author made great additions, with a supplementary chapter on Prussia. "The Holy Roman Empire" has been translated into German and Italian; the latter version was made by the distinguished historian, Count Ugo Balzani.

The eminent success of this first effort led many of the young scholar's associates to believe that history would be the ultimate aim of his ambition. Yet the readers of "The Holy Roman Empire" might have perceived that its author approached history mainly from the point of view of a jurist. In fact, his design was to make himself a proficient in the practical and theoretical study of the law, and to this end for the next two years he worked hard, both at Oxford and at Lincoln's Inn in London. At the unusually early age of thirty-four his ambition was rewarded by a chair in his own university—that of Civil Law. The Regius Professorship of Civil Law at Oxford is one of the oldest in Europe, dating from 1546, and it is this ancient and honorable office which Mr. Bryce has now held for nearly twenty years. His first act on receiving the appointment from the Crown was to start for his earliest visit (1870) to the United States. For the next ten years the career of Bryce was that of an active and laborious university professor, and he was visible to the world at large only on occasion of his adventurous vacation rambles, of which he gave several public accounts. He became an active member of the Alpine Club; in 1871 he climbed the Schreckhorn, as in 1867 he had scaled the Maladetta. One year he visited Spain; on another occasion he ran through Transylvania and Poland; in 1873 he published, in the "Cornhill Magazine," his

"Impressions of Iceland," an article which attracted an unusual amount of attention. By far the most interesting and unique of his traveling experiences, however, is still his tour in western Asia, in 1876.

In company with a relative, Mr. Bryce proceeded to Russia in the summer of that year, visited the fair of Nizhni Novgorod, and towards the end of August sailed down the Volga towards the mysterious East. It was not a happy moment for an Englishman to choose for a visit to Russia. The Russian natives were greatly exasperated against the English, whom they looked upon as abettors and accomplices of the Turk; the Bulgarian massacres of May not having yet produced the English indignation meetings of September. Nevertheless, the travelers were, on the whole, treated generously and kindly. They passed through to the extreme south of the country, crossed the Caucasus, and entered Transcaucasia under the very shadow of the highest mountain of Europe, Mount Kazbek. From the city of Tiflis they proceeded, in September, through Armenia to the town of Erivan, and from that point performed a feat in alpine traveling which was really remarkable and at that time unprecedented in local annals—the ascent of Mount Ararat. It had even become almost an article of faith with the Armenian Church that the silver crest of this exquisite mountain was inaccessible. Mr. Bryce set out to conquer these virginal snows on the 11th of September, 1876, under the escort of six Cossack troopers, and beneath such tropic heat as he had never before endured. One by one his Slavonic attendants, as well as his Kurdish guides, forsook him, and at a height of 13,600 feet the English mountaineer found himself ascending alone. He accomplished the ascent, of which he has given an account which is the most eloquent and most picturesque piece of prose in his writings. Two days afterwards an Armenian gentleman presented him to the Archimandrite of Etchmiadzin, and said, "This Englishman says he has ascended to the top of Massis" [Ararat]. The venerable man smiled sweetly. "No!" he replied, "that cannot be. No one has ever been there. It is impossible." From Erivan the travelers returned to Tiflis, turned east to the Black Sea at Poti, and took steamer along the northern coast of Asia Minor to Constantinople. Mr. Bryce's account of this interesting journey was delayed by a domestic sorrow—the death, as he put it, of "one whose companion he had been in mountain expeditions from childhood, and to whom he owes whatever taste he possesses for geographical observation and for the beauties of nature." Late in 1877 was published the volume called "Transcaucasia and Ararat," which combined notes of the journey with

copious topographical observations and political reflections.

In 1880 a change came over Professor Bryce's manner of life. He had long taken a warm and liberal interest in public affairs, and he now became a practical politician. He entered the House of Commons as member for the Tower Hamlets, a constituency which he continued to represent for nearly five years and which he has been able to address in German. In 1885 he was elected for the Scotch borough of South Aberdeen, and was reelected, unopposed, to serve in the present Parliament. During Mr. Gladstone's last brief period of power Mr. Bryce held office as Under Secretary of State for Foreign Affairs. But before this he had given his close attention to the study of American institutions. In 1881 he made a second and in 1883 a third visit to the United States. In 1884 he began to write that compendium of well-arranged information which, under the title of "The American Commonwealth," was published in 1889. In 1888-89 Mr. Bryce visited India, his book being issued during his absence. An account of his activity as a professional politician would hardly be in its right place in so slight a sketch as the present. But it is only right to give him special credit for his activity in bringing before Parliament the importance of the question of

preserving common rights, in which he has done eminent service. He is prominent, also, as a defender of the rights of literary property, and as a parliamentary representative of that important institution the Incorporated Society of Authors. He was in the chair at the dinner given by that body to the authors of America in 1888, when Mr. James Russell Lowell made one of his finest speeches. In politics Mr. Bryce is a Liberal of the advanced, but not revolutionary section. He has kept very closely in touch with Mr. Gladstone, and is one of those Liberal politicians, now becoming a small body, who have never swerved to the right or to the left in their personal allegiance to the leader. He has even accepted the principle of home rule for Ireland. At various points, but particularly in his convictions in regard to the Eastern question, Mr. Gladstone has found, perhaps, no follower who has given the subject so much study and yet whose judgment is so identical with his own as Mr. Bryce. Historian, jurist, politician, traveler, university reformer, there can be no question but that James Bryce has dissipated his extraordinary talents over too many widely divergent provinces of mental action to attain the credit he might have conquered in any one, but in his versatility — and he is sound even in versatility — he is one of the most "all-round" men of his generation.

X.

TOPICS OF THE TIME.

Ballot Reform Practically Accomplished.

THE complete success of the new Massachusetts ballot act, at its first trial in the election of last November, made it certain that what had previously been known as the Australian system was destined within a few years to become the American system. As Mr. Henry George, who witnessed the working of the new law in Boston, said, after the election was over, "The new system more than fulfilled every anticipation of its friends, and falsified every prediction of its enemies." This was a terse statement of what had happened. The first trial had swept away at a single stroke every argument which had been raised against the Australian method. It had previously been said by the opponents of it, whenever they were told that it had been in successful operation in Australia for thirty years, in England for eighteen years, and in Canada for sixteen years, that the experience of those countries furnished no evidence that the system was adapted to American needs; that the multiplicity of candidates at our elections would lead to such long and complicated ballots that the voter would take so much time in marking them, and would get so confused by the number of names, that either the election would be defeated, or large numbers of voters would be disfranchised.

This argument of "complications" and "confusion" was advanced persistently and in countless forms, but at bottom it was always the same; the system was too involved, too "theoretical" and "visionary" for practical American needs.

When it succeeded in municipal elections in Louisville, Kentucky, and in Milwaukee, Wisconsin, the opponents of it said that those were no tests, since only local candidates were chosen. When in October last it had its first trial in the first election which Montana held as a State, and succeeded again, these opponents said that this could not be regarded as a test, because Montana was a sparsely settled community, and there was no need of haste in depositing or counting the votes. When at the same time it was tried in the chief cities of Tennessee, where there was a large illiterate colored vote, and again succeeded perfectly, the old argument of a simple municipal ticket was advanced as sufficient to meet the case. When a modified form of the system was tried in the same month in Connecticut at a State election, and like all previous trials proved successful, it was said that the reason was that this was not the "complicated" Australian plan, but a simple method which had been advocated by the opponents of the Australian plan as more practicable. They overlooked the fact that more defects were discovered in the working of this "simple" law than had

been revealed in all the previous trials of the various Australian laws put together.

But the Massachusetts test met and overthrew all points of criticism. The law was a thoroughgoing application of the Australian system. In all important principles it was a copy of the bill which was drafted by the committee of the Commonwealth Club of New York City in the winter of 1887, and which became the basis of the two so-called Saxton bills that Governor Hill vetoed in 1888 and in 1889. These principles are secret voting in compartments, exclusively official ballots, printed and distributed at public expense, and nominations by means of petitions or nomination papers, as well as by regular party organizations and conventions. The names of all candidates were to be printed on the same ballot, and the voter must indicate his choice by an X opposite the name of each candidate for whom he wished to vote. Governor Hill and his imitators in opposing these principles had objected most strongly to the exclusive official ballot, the grouping of all names upon one ballot, and the marking of that ballot by an election official to prevent imitations. These were the principles upon which the general charge of "complications" rested. There was nothing said by Governor Hill in his two veto messages in opposition to the Saxton bills which was not aimed at one of these principles. His contention was that in the large cities these provisions would lead to endless delays and complications, would open the door to fraud, would furnish easy means for defeating the secrecy of the ballot, would aid rather than prevent bribery, and would disfranchise thousands of voters.

When tried in the city of Boston every one of these objections was proved to be absolutely groundless; that was the testimony of everybody who witnessed the working of the law. It was shown that all classes of voters had no difficulty in using the system; that "heelers," "workers," "bulldozers," and all the other annoying concomitants of elections in American cities had disappeared as if by magic; that bribery had been abolished; that voting was so easy that three minutes was the average time in which the voter prepared and deposited his ballot, instead of the ten minutes provided by the law; that during voting-hours the polling-places were as orderly as a prayer-meeting, and, finally, that the counting was almost as quickly done as it had been under the old method. In every other part of the State the same demonstration was made, and when the polls closed on election night there could not be found in the State of Massachusetts a single opponent of the Australian system. As one of the bitterest opponents of it said after witnessing its operation: "It is as easy as rolling off a log."

The wonder is, not that the system succeeded, but that we have been content to get along for so many years without it. As a matter of fact we have had nothing which could properly be called a system. We have been getting on in many States, including New York, literally with no legal provision whatever for the furnishing of ballots. The law directs how the ballots shall be printed, but makes it nobody's duty to supply them. Our voters get them where they may, have no assurance that they are honestly printed, or represent what they purport to represent, and advance to the polls to deposit them, in our large cities, through a

crowd of loafers and "heelers" to a room filled with a similar crowd and reeking with tobacco smoke, vulgarity, and profanity. Nobody can truthfully call that a "system."

Under the Australian method the voter is taken charge of from the moment he enters the polling-booth, is guarded against annoyances of all kinds, is helped in every way to prepare his ballot, has a path marked out for him to follow in depositing it, and a separate door for him to depart from when his work is done. He could not go astray if he tried. That such a system as this should be called "complicated" is, in the light of experience, an absurdity. It is small wonder that the success of the Massachusetts law has created so general a demand for similar laws that it is a safe prediction to make, that within five years every State in the Union will have adopted a similar statute. There were nine States which had such laws at the close of 1889, and two others which had imitations; and it is not improbable that in a majority of the States our next national election will be conducted under the Australian system. That will be a reform advance as invaluable in its effects as it has been speedy in accomplishment.

Value of the Small Colleges.

No part of Mr. Bryce's "American Commonwealth" shows a keener insight into American needs than his chapter upon our universities. He is able to perceive at once the weak point in the criticism which is so often heard, to the effect that we have too many small colleges and not enough great universities. Like any other observing foreigner who has visited this country, he heard this criticism more generally than any other, for it is the one most often made, both by those who have thought a little upon the subject and by those who have thought upon it not at all. Mr. Bryce says (Vol. II., p. 552):

The European observer . . . conceives that his American friends may not duly realize the services which these small colleges perform in the rural districts of the country. They get hold of a multitude of poor men, who might never resort to a distant place of education. They set learning in a visible form, plain, indeed, and humble, but dignified even in her humility, before the eyes of a rustic people, in whom the love of knowledge, naturally strong, might never break from the bud into the flower but for the care of some zealous gardener. They give the chance of rising in some intellectual walk of life to many a strong and earnest nature who might otherwise have remained an artisan or storekeeper, and perhaps failed in those avocations.

That is as true as it is well said. We have quoted only a few lines from a chapter which every friend of education ought to read entire. No man can estimate the service which the small colleges of the country have done by setting up "learning in a visible form" in so many parts of the land. Our educated class would otherwise be no more than a fraction of what it is to-day. American boys are proverbially ambitious of learning, and in thousands of them the spark has been kindled by the presence of the small college near their homes. They could not afford to go miles away to a great university, but they can live at home and walk daily to the small college. In every part of the land where such an institution exists it acts as a perpetual inspiration. When the elder son of a family goes to college, his example becomes at once the model for

the younger sons. The tuition is usually low; the ability to live at home instead of having to board brings the education which the college has to offer within the means of any boy who has in him the stuff of which a real man is made. Thousands of American boys have paid their way through these colleges by teaching school and by various kinds of manual labor in vacation time.

Of course the education afforded is limited. It bears no comparison with that obtainable in the largest American colleges, to say nothing of that to be had in the great European universities. But between it and no college education at all the distance is enormous. In some respects the quality of it is inferior to none which is given anywhere. The personal contact between teacher and pupil is closer in the small college than in the large, and wherever there is found in one of them a true teacher, a man of large soul, quick sympathies, and high ideals, who has the indescribable and invaluable gift of touching and opening the minds of youth—wherever there is a college with such a man there is a great university in the highest sense of the word. One such teacher, it matters little what he teaches, can make a college a power in the land. It is our conviction that there are many of these teachers scattered throughout the 345 colleges which we have in the United States, and that there is not in the land a more potent influence for the highest good of the nation.

Statistics show that our colleges, great and small, contain about 70,000 students, and that more than 10,000 degrees are conferred each year. There are thus sent forth into the world 10,000 young men—the statistics given do not include women—in whose minds a love of learning has been kindled. It may be that in the majority of cases there will be little growth towards higher learning after the college precincts are abandoned; but in all cases some influence has been exerted. These 10,000 men will not be so easily misled by false doctrines and fallacious theories as they would have been had they never gone to college. In every community in which they pass their lives their influence will be exerted on the side of progress and in favor of the more liberal ideas which find the light there. Among the 10,000 there will be a few in whose larger and more fertile minds the seed of knowledge will continue to grow until it bears fruit. Among them there may be one whose voice or pen shall prove of highest value to his fellows for many years to come.

There never was a time when our country needed the services of these college-bred men so much as it does to-day. We shall always have in this land of inexhaustible resources enough of men who will devote all their energies to the accumulation of wealth and to the increase of our material prosperity. To counteract them we need and shall continue to need the restraining influence of those who are willing to devote themselves to what Lowell calls the "things of the mind." The country must have some men who can resist the temptation to devote their lives to mere money-getting, not because they would not like to have the freedom and power which money gives, but because they love knowledge more. Our colleges alone can supply these men, and they are supplying them, and are thus of inestimable service to the Republic.

The Care of the Yosemite Valley.

A COMPETENT judge has characterized the announced policy of an active member of the Yosemite Valley Commission to "cut down every tree [in the valley] that has sprouted within the last thirty years" as a policy "which, if it were carried out, would eventually result in an irreparable calamity—a calamity to the civilized world." This member is represented as declaring that his policy has the support of the commission: it remains to be seen whether his associates will follow such fatuous leadership. But the history of the Yosemite makes it only too probable that a crisis in its management is near at hand.

The American people are probably not aware of their proprietorship in the Yosemite. In 1864, by act of Congress, the valley and the grounds in the vicinity of the Big Trees of Mariposa were granted to the State of California "with the stipulation nevertheless that the said State shall accept this grant upon the express conditions that the premises shall be held for public use, resort, and recreation; shall be inalienable for all time," etc. Thus is recognized by law the moral claim of all humanity to an interest in the preservation of the wonders of the world. A citizen of New York is as much one of the owners of the Yosemite as a citizen of California, and his right to be heard in suggestion or protest is as undoubted. There are, unfortunately, few resident Californians who are well acquainted with the valley. An actual count has indicated that one-half of the visitors are foreigners, chiefly Englishmen, while one-fourth are from the Eastern States. The opinion of these "outsiders" might be supposed to have a special value, being disconnected with the local dissensions which have gathered about the valley. And yet disinterested endeavors made in a private and respectful manner to arouse the authorities to the destructive tendencies which are evident to people of experience and travel are denounced by certain members of the commission in the most violent and provincial spirit. This spirit has been widely remarked by travelers, and is candidly recognized by many Californians and deplored as doing much to retard the growth of the State.

It is unfortunate that the first public presentation of the subject and the resultant investigation by the legislature of California were complicated by personal, political, and commercial considerations to such an extent as to obscure the important point—Has the treatment of the Yosemite landscape been intrusted to skillful hands? We have before us the report of this investigation, together with a large number of photographs showing the condition of portions of the valley before and after the employment of the ax and the plow. Without going into the details of the alleged abuses, monopolies, rings, and persecutions, it is easy to see in the above testimony and photographs abundant confirmation of those who hold that the valley has not had the benefit of expert supervision. In saying this we are not impugning the good faith of past or present commissions or commissioners, appointed for other reasons than their skillfulness in the treatment of landscape. They are certainly to be acquitted of any intention to injure the valley: that would be unbelievable. It is no reproach to them that they are not trained foresters. Their responsibility, however, does not end

there: it is, in fact, there that it begins; for, in the absence of knowledge of a professional nature, it should be their first aim to obtain the very best man or men available to do this work. No such expert is too good or too expensive, and no claim upon the budget of California should have precedence of this. If the commissioners have not money enough for this expenditure, it is part of their duty as holders of a great trust to arouse a public sentiment which shall procure the proper appropriation. The press of the country, which is never backward in such matters, would lend an effective support to the demand for funds for this most necessary expert care.

Here, however, is the crucial point. The commission may follow the leadership of those who see no need of experts and have no faith in them. They may think it more desirable to improve a trail than to preserve the sentiment for which the trail exists. Perhaps, in their interest in safe and rapid transportation, they may even carry out the project attributed to the governor of California, of building a tramway along the valley! We prefer to believe that, aware of the endless trouble, confusion, and clashing of one commission with another, and of the members of each with their associates, they will awake to the necessity of procuring from a competent person a definite plan for the treatment of the landscape and artistic features of the valley. It is fortunate that there are several such men now living. A large part of the business of their profession is to contrive expedients for lessening the misfortune into which gentlemen of education and culture, supposing themselves to have a special aptitude for the work, have carried themselves in undertaking what they have regarded as very simple improvements. To contrive means and methods by which that which is most distinctly valuable to the

world in the Yosemite can be perpetuated, and to provide means by which the world can conveniently and effectively make use of it,—which means shall be in the least degree possible conspicuous, incongruous, and disturbing to the spirit and character of the scenery,—is a problem that no amateur ought to dabble with.

Should the commission not be inclined to this obvious duty, the better sentiment of California might well be organized to procure the amendment of the law by which the commission is appointed. Eight men named by the governor,—none of them for attainments in the profession of forestry,—meeting but twice a year, serving without pay and liable to removal, are not likely to constitute a commission of skill and responsibility. What is needed, after a definite plan, is fitness of qualification and permanence of tenure in its administrators. We believe a large sentiment in California would support a bill for the recession to the United States with an assurance of as capable administration in government hands as now characterizes the Yellowstone Park. Among the chief of California's many attractions are the Spanish missions, Lake Tahoe, and the Yosemite and Big Grove grant. The missions are dropping into a needless decay, the ravages of the lumberman are spoiling the beautiful shores of Tahoe, while the Yosemite, which should be the pride and nursing of the State, finds in her neglect and doled expenditures the indifference which popular tradition ascribes only to a step-mother. It is to the interest of the valley, the commissioners, the State, the nation, and the world that California should adopt an intelligent and generous policy towards the Yosemite with a view to placing it in skillful hands and devising a permanent plan which shall take it, once for all, out of the reach of the dangers by which it is now seriously threatened.

OPEN LETTERS.

Destructive Tendencies in the Yosemite Valley.

LETTERS FROM VISITORS.

I.

AT the meeting, in June last, of the commissioners who manage the Yosemite Valley, a project was set afoot to obtain from the National Government the grant of a large addition to the land now held in trust by the State of California under the act of 1864, deeding to that State the Yosemite Valley and the Mariposa Big Tree Grove. The plan to extend the grant is at this writing not worked out in detail. There is, however, a most pertinent and important question which offers itself *pari passu* with the general idea of a widening of the limits of the grant. It is this: Has the past management of the Yosemite Valley been good or bad? has it been characterized by a fit appreciation of the dignity and beauty of the subject to be treated? or has it been conceived and executed on a low plane, either of intelligence or of taste?

Until that question shall have been answered with candor and impartiality it will scarcely be worth the while to suggest or discuss the details of any plan for an extension of the grant. During the year now gone the management of the valley has been most bitterly

criticized in the columns of some of the California newspapers. If such utterances were to be accepted as conclusive evidence, there would be but one judgment to be rendered—that the management of the valley was in hands wholly vile, and that to increase the power for harm held by such hands, by enlarging the domain submitted to their control, would be an act of criminal folly.

Fortunately and unfortunately for the peace of mind of those who know and love the greatest treasure of our national scenic gallery, many of the newspaper comments have been of an exceedingly ill-advised description—fortunately, because it is a comfort to know that the situation is not nearly so bad as it has been represented to be; unfortunately, because there are in truth good reasons for vigorous protest against certain parts of the management of the valley, and those reasons have been buried almost out of sight in the newspaper columns under a mass of intemperate, indiscriminate, and sensational denunciation, to no small extent incited by business rivalries and personal jealousies.

Brushing away the impeding rubbish of abuse, one comes to the solid and salient fact that the management of the Yosemite has been a woful failure in respect

of the preservation of the natural loveliness of meadow and woodland. It is not necessary to agree with the sweeping assertion that "the valley has been converted into a hideous hay ranch"; but it is too evidently true that the artistic instinct—if it has ever existed in connection with the management of the valley—has been sacrificed to the commercial, and the conservation of natural beauty has been outweighed too frequently by the supposed necessity of providing mules, horses, and horned cattle with pasturage and hay at the least possible cost to the owners of those beasts.

But the work of the plowshare and of other aids and abettors of commercial agriculture is of less serious import—being primarily less objectionable and also more easily rectified when harmful—than is the absolutely shocking use that has been made of the wood-chopper's ax—deadliest foe, in reckless or ignorant hands, of woodland beauty; deadly unless guided by a mind of most rare attainments in the craft of artistic forestry. There are places in the valley where one is forced to wonder why the axes themselves did not turn and smite the men who were putting them to such base uses. This stupid application of the woodman's tool is not a thing of yesterday. It began with the white man's occupation of the valley. It has been continued under all administrations. During the last year it received a check; but under the system by which the Yosemite is governed there is no saying when the work of the devourer of beauty may not again flourish.

No intention herein exists of decrying the use of the ax, or even of fire, within limitations. Nature indeed is the sole truly great artistic forester; yet the conditions of nature in the Yosemite Valley are such that human agencies must, for human convenience and enjoyment, tamper to some extent with nature's work. But active and unnecessary aggressions have been made on the charms of both woodland and open meadow of a sort that admit of no variety of opinion or taste. The offenses thrust themselves with violence upon the notice of the most transitory observer, and become positively burdensome to one who prolongs his stay in the valley. So far, then, has the administration of the grant been a failure, and the inevitable inference is that any extension of the grant should be made with caution, and not at all unless accompanied with a radical reform in the system of control.

It is simply a waste of time to attempt—as was done last winter during an investigation of the affairs of Yosemite by committees of the California legislature—to fasten upon individuals the blame for the past desecration of the valley's beauty. The roots, trunk, branches, and foliage of the wrong are in the system of management. The individual wrong-doers—whether commissioners, guardians, wood-choppers, stable-boys anxious to feed their mules cheaply, or whoever else—are merely the natural fruitage of such a system. Let us see what that is.

The valley is managed by a board of commissioners, of which board the governor of California, whoever he may be, is ex-officio president. There are eight other commissioners, each of whom serves during four years; but they are appointed four at a time, biennially, the appointment being made by the governor of the State. The commissioners serve without

pay other than a small allowance for actual expenses when attending meetings of the board. The meetings are semi-annual, and one of them must take place in the valley. Under the commissioners is a guardian, who receives a small salary, who has no right of initiative, and who is practically merely a watchman and foreman of laborers. It would appear that the bare announcement of such a system would be enough to secure its condemnation as unwieldy, unjust, and totally ineffective to fix responsibility in any certain place. The wonder is that the results of the system have not been tenfold worse than they are.

A small commission, well salaried, and of which one member might with advantage be a man eminent in the profession of landscape gardening and artistic forestry, could fairly be expected to do away with the present causes of complaint—or at least to apply remedies where the evil is not past remedy. There is, however, no need for entering through this letter into a definite and detailed plan of reformation. If the active interest of the clientele of *THE CENTURY* can be aroused,—and that body comprises an exceedingly great proportion of visitors to the valley, past, present, and prospective,—surely that influence should be able not only to enforce its demand for reform, but also to procure the adjustment of a wiser system of management for the Yosemite than any that the present writer claims to be able to offer.

George G. Mackenzie.

WAWONA [BIG TREE GROVE], CALIFORNIA.

II.

I ENTERED the Yosemite Valley one Sunday afternoon in June, 1889, and rode immediately to the Stoneman House, at the farther end of the valley. My impression on arriving at that point was far from agreeable. At my left was the Yosemite Fall; at my right was the hotel with its expectant waiters; while in front and near at hand was a long, low, frontier-town saloon, vulgar and repulsive in every detail, and so out of harmony with its grand surroundings as to shock the dullest sensibilities.

I was anxious to look upon the valley alone, and therefore took a saddle-horse, and without even a guide rode over it and climbed its trails, standing upon the highest summits and visiting the most concealed recesses. As I rode over the floor of the valley I was more and more impressed with the lack of design or even of ordinary skill in its laying out and management which was everywhere apparent. The drives are as good as can be expected; no fault can be found with their construction, if the shortest route between two points is all that is desired. But this is not all. The floor of the valley is so level that no special skill in road-making is required. What is needed is a cultivated taste; an eye which can take in the grand frame of carved and etched rock and the beautiful picture which nature has spread between the imposing walls; and a trained taste which can combine the latter with the former, so that each shall enhance and contribute to the grandeur and beauty of the other.

Apparently no effort has been made in laying out the drives to reveal by unexpected turns the startling beauties of rock or river or waterfall. A few bridges cross the swiftly flowing river, but these are

bridges of convenience. They are not placed where they will furnish the finest views, and architectural merit or harmony with the surroundings evidently had no place in the mind of their builder.

As to foot-paths, there were none. The visitor can "cut across lots," unless fences prevent; but as for walks, or paths laid out with artistic design, to afford pleasant surprises by openings through which delightful views may be obtained, or leading to shady nooks among the giant pines, or to rare points of observation, they do not exist. The impression is forced upon the mind that pedestrians are not wanted, and this is further demonstrated by the fact that in all this valley there is no seat, nor arbor, nor place of any kind where the visitor may sit and enjoy the wonderful scenery, unless perchance he sit upon the stump of some giant tree which has been felled by ignorance or folly.

The decaying stumps of magnificent pines and oaks, standing alone or in groups in so many and such peculiar places, so impressed me as representing successive stages of destruction, and useless and wanton destruction, that I made a special visit to the guardian of the valley to inquire why it was so. The explanation was simple: "There is no plan for the improvement or care of the valley: each guardian has his own idea; each board of commission has some idea, ill defined, that something ought to be done, and often individual members of the commission have their own ideas in regard to what should be done in the way of trimming, cutting, etc. New commissioners appoint new guardians, and each guardian follows in the footsteps of his predecessor by doing as his own judgment dictates."

This was the explanation of the guardian, and in the light of this explanation I can see how giant trees could be felled to suit the taste or convenience of hotel keepers, how guardians could trim shrubs and lop the branches of trees, or even fell and destroy giant trees as they are moved by the spirit.

In one part of the valley I saw a large piece of ground, entirely cleared of trees, which had been fenced in and was used as a pasture for horses. If this cleared spot could have been used as a park, where natural grasses and wild flowers of the valley should be encouraged to grow, it would have been a source of constant delight to both educated and ignorant visitors. At the last meeting of the commissioners this fence was ordered to be removed at the expiration of the lease now in operation. But why should a considerable fraction of a public reservation of hardly more than eight square miles ever have been given over to the raising of hay or to be trampled by horses?

In another part of the valley wild azaleas were growing and blossoming in such luxuriance as to excite the attention of the most commonplace observer; and yet I saw a number of cows tramping through them and feeding on the tender shoots. Venturesome ladies came to the hotel with arms full of the beautiful blossoms and branches. If this be permitted, in a little time cows and tourists will entirely destroy these rare plants, as so many have been destroyed.

Now what can be done, and what ought to be done? Anything desirable can be done, because the valley is absolutely in the control of the State. First, there should be a carefully prepared plan adopted by the commission and having the force of law, and which

should be followed by commissioner and guardian, and not a limb should be cut, nor a tree felled, nor a path made, nor a road graded, except as this plan should prescribe. In this way river and rock, trees and shrubs, walks and drives, would gradually grow into perfect harmony. Every stump should be dug up, every fence in the valley should be removed, and pigpens, saloons, and tin cans placed where they will be rarely seen, and not allowed to occupy conspicuous places in the valley.

Not an animal of any kind should be allowed to be at large in the valley, and not a fence should be allowed as a cottage inclosure. Animals are necessary, but they should be fed and cared for in stables and not allowed to run at large. There must be cottages for those who live in the valley, but cottage-gardens need not be inclosed if there are no animals to destroy them, and if uninclosed they would add variety and picturesqueness if properly cared for on a definite plan.

There were nearly one hundred visitors in the valley at the time I was there, most of them persons whose taste had been cultivated by travel and observation. I heard many criticisms from them in regard to the management of the valley. The rocks cannot be removed and the waterfalls cannot be defaced; but the floor of the valley, with its beautiful trees and rare shrubs and blossoming plants, can be so injured by improper cutting as to render the natural features less beautiful and destroy to a great extent the pleasure of the views.

A class of people known as "campers," that is, people who travel with their own teams, enter the valley in large numbers, and this class, being unwatched, are the source of a great deal of damage to shrubs and smaller trees, both by cutting, by hitching their teams, and by the careless use of fire. This class cannot be excluded, and it would not be well to exclude them if it were possible; but the strictest rules should be made in regard to them and the most careful watch should be kept over them. To do this it might be necessary to have a small force of mounted police, but the result would more than compensate for the outlay.

If the commissioners could be made to see what an immense advantage and relief to them a carefully prepared plan of improvements would be, I feel sure they would secure the services of some competent man and have such a plan prepared at once.

If the present system be continued, the complaints which are now whispered will be spoken with such force and volume as to ring in the ears of the public and literally compel the National Government to retake what it has placed as a trust in the hands of the State of California.

Lucius P. Deming.

[JUDGE OF THE COURT OF COMMON PLEAS.]

NEW HAVEN, CONN.

III.

In June, 1889, in company with Mr. John Muir, the well-known California naturalist, I made a visit of eight days to the Yosemite Valley, to the upper Tuolumne Cañon, and to the peaks and meadows of the high Sierras which form the headwaters of these parallel gorges. The wonders of the Yosemite—confessedly supreme in American scenery—are hardly more unique and

marvelous than the little-known cataracts of the Tuolumne River, in one of which, along a sloping descent a thousand feet in length, the force of the torrent, striking the pot-holes of the granite, throws up not fewer than a dozen sparkling water-wheels from fifteen to twenty-five feet in diameter. This cañon, now impassable to all but the mountaineer, and with great difficulty traversed even on foot, is but eighteen miles, as the crow flies, from the Yosemite, and must eventually become easily accessible to the visitor to that region. The trip from the valley to the head of the Tuolumne series of cataracts occupies a horseman two days, part of the way by the old Mono trail, and is a continuous panorama of wild and lonely beauty of cliff and forest. The only sign of the depredations of man is seen in the barren soil fairly stippled by the feet of the countless herds of sheep which have denuded these mountain meadows and forests of the luxurious flowers, breast-high, which overspread them but a few years ago.

Fresh from the impression of the beauty of nature in its wildest aspects, and of how that impression can be impaired by the intrusion of man, we descended again to the level floor of the Yosemite to see once more from below the wonders we had seen from above. What most impresses one in the valley is the close congregation of its wonders. Here, indeed, Ossa is piled upon Pelion. Along a winding gorge, less than ten miles in length and from half a mile to two miles in width, between walls rising almost sheer to the height of three thousand feet, is a series of wonders, the sight of any one of which would be compensation for the uncomfortable and fatiguing trip from the foothills. Lake, river, forests, waterfalls, headlands — there is nothing that is not unique, nothing that is not great.

Common sense would seem to dictate that in making this wonderland accessible to visitors, the treatment of the floor of the valley from the start should have been put in the hands of the very best experts, with a view not only to preserve and enhance the composition, unity, and natural charm of the pictures presented to the eye, but to see that nothing be done to disturb the rare sentiment of the scene. The unthinking may sneer at sentiment, but in such matters the sentiment is everything — the first consideration, the only "sense." Without encroaching upon it, there is still abundant room for practical and necessary adjustments, and that these may not clash with the sentiment is the chief concern of the expert who has to make nature esthetically available by man.

Now let us see what has been done to disturb the sentiment of Yosemite Valley. In the first place the situation and surroundings of the chief hotel, the Stoneman House, are strangely commonplace and repellent. At one side, within a stone's-throw, is a marshy field of stumps; in front is an uninteresting stretch of badly treated open forest, the floor of which, said to have been once covered with beautiful flowers, is now nearly bald with thin weeds. Unfortunate as is the situation of the hotel, the services of a landscape expert would very much have reduced the offensiveness of this view. The building itself is of the cheap summer-resort type, and was so badly constructed that it has recently been declared dangerous by the new commission. It is perhaps well that it is not more conspic-

uously placed, though it has been so highly thought of that trees have been injuriously trimmed up that it may be seen by approaching stages, and that these in turn may be seen by its guests. Much worse features of this neighborhood are a saloon at one side of it and on the line of its front, and a pig-sty in the rear of the house, which is sometimes so offensive that guests of the hotel have been forced to leave the piazzas.
